S.S. Empress of Canada, Launching	566, 511, 630
S.S. Montcalm, Launching	454, 565
Pacific Coast steamships to be converted to burn coal	691
Pacific Ocean service	321, 410
Services and shipbuilding	82, 109
Canal estimates 1920-21	280
Canal traffic statistics	514, 572, 683
Champlain, s.s.	220, 272, 333, 409
Coal exportation prohibited	514
Cunard, Anchor and Anchor-Donaldson Lines—	
Appointments	489
Atlantic services	110, 635
Customs requirements re coastwise entrances and clearance	53
D	
Demountable wooden ships	393
Detroit River navigation regulations	271
Direction finding stations, radiotelegraph	
413, 517, 576	
Dominion Marine Association—	
Customs requirements re coastwise entrances and clearances	53
Dues on Quebec ships at U.S. ports	691
Freeboard regulations on Great Lakes	691
Grain handling charges against ships	689
Meetings	159
St. Lawrence River pilotage	32
Overhead wires across Welland canal	691
Dominion Shipbuilding & Repair Co.'s affairs	575
Drydock	
Esquimalt, B.C.	269, 576
Louisburg, N.S.	51, 271
Toronto	514

Vancouver, B.C.	
136, 211, 410, 413, 456, 523, 680	
Victoria, B.C.	206
Drydocks, estimates	336
E	
Esquimalt drydock	269, 576
F	
Fisheries control transferred to Marine and Fisheries Department	467
Fisheries protection tugs on Lake Erie	411
Fort William, Ont., grain shipments from	
48, 107, 577	
Freeboard regulations on Great Lakes	681
Furness Withy & Co.'s report	684
G	
German ships interned in South America, repair of	42
Grain elevators, Government, for Atlantic ports	164
Grain handling charges against ships	689
Grain shipped from Fort William and Fort Arthur, Ont.	48, 107, 577
Grain shipments, U.S. embargo ex Canadian ports	518
Grand Trunk Pacific Coast Steamship Co.—	
Appointments	601
Wreck of s.s. Prince Rupert	630, 682
Great Lakes & St. Lawrence navigation	623
Great Lakes ice conditions	211
Great Lakes levels and drydock estimates	336
Gulf of St. Lawrence Shipping & Trading Co.'s services	107
H	
Halifax Graving Dock expropriation	214, 272, 410, 468
Hamilton harbor development	93
Harbors and rivers estimates	331
Hudson Bay levels and drydock estimates	336
Hudson Bay navigation	461
Hudson's Bay Co.'s steamships	38
Hydrographic surveys in 1920	292

Canadian Railway and Marine World

January, 1920

The 58th Broad Gauge Operating Company (Canadians), Organization and Work Overseas.

By Captain A. H. Kendall, M.C., Officer Commanding the Company.

In July, 1916, a request was received by the Dominion Government from the British Colonial Secretary to recruit for service in France, a detachment of skilled railway operating troops. On Oct. 20, 1916, the Minister of Militia recommended that a section of these troops, to be known as No. 1 Section Skilled Railway Employees, be organized, consisting of three officers, and 266 other ranks. The recommendation was approved by the Privy Council on Oct. 31, 1916. In December, 1916, the Canadian Pacific management was asked by the Militia Department to recommend a commanding officer, and on Dec. 28, 1916, A. H. Kendall, Master Mechanic, Ontario District, C.P.R., Toronto, was appointed with the rank of captain. On Jan. 3, 1917, recruiting offices were opened at various places between Winnipeg and Halifax. The unit was mobilized at Guy St. Barracks, Montreal, and was over strength early in February.

On Feb. 27, 1917, the order was received to prepare to leave for overseas, and the unit left Bonaventure station, Montreal, Mar. 1, 1917, but on account of the severe winter weather prevailing at the time, did not arrive at Halifax until Mar. 4. The unit embarked the same day on the s.s. Ausonia, and after one of the roughest trips on record, arrived at Liverpool on Mar. 15. After disembarking the unit entrained immediately for Bordon Camp in Hampshire, the principal British Railway Troops' depot, and arrived there about midnight. The following day, Mar. 16, the unit entrained for Aldershot, Hampshire, where it was attached to the Royal Engineers, and quartered in Talavera barracks. During its stay at Aldershot the unit received a short military training. Shortly after arrival, notice was received that the unit had been renamed, and would thenceforth be known as No. 12 Canadian Light Railway Operating Company, but when the authorities were further informed as to the class of men composing the unit it was again changed to the 58th Broad Gauge Operating Company (Canadians).

On Apr. 16, 1917, the company was reviewed by the G.O.C. Aldershot Command, and the Officer Commanding Royal Engineers. The next day the company entrained for Southampton, and embarked on the s.s. Archimedes which left at dusk for Le Havre, France. On account of loose mines in the channel, and enemy submarine activities, the Archimedes was ordered back, and dropped anchor opposite Netley Hospital until the following evening. The company arrived at Le Havre on the morning of April 19, where it remained at No. 5 Rest Camp until April 22, and then entrained for Audruicq, the base depot of the Railway Operating Division, R.E.

While at Audruicq some of the n.c.o.'s and men were employed in the shops on locomotive repairs. Others were sent to Le Havre to assemble, and bring up, lo-

comotives. The running men made trips over the line, and were instructed in the rules for operating over the Nord Ry. of France, and British military lines. About the end of May, 1917, a 12 in gun on railway mountings, weighing 185 tons, was derailed at Audruicq, and after it had been off the rails for 50 hours, causing much inconvenience and delay to traffic, the 58th B.G.O.C. was ordered to re-rail it which was accomplished successfully in 4½ hours. Headquarters then decided that the company would remain intact, and work as a unit. Early in June, 1917, the unit, with R.E. reinforcements, proceeded to Merris, a newly constructed British railway depot, about 300 yards west of Strazeele (Nord) station,

to Petit Pont and Romarin.

The main locomotive depot was established at Merris with subdepots at Bailleur, Steenwerck and Berguette. At Merris the number of locomotives in charge increased from 15 to 40 of various types and makes, ranging from the type 25 (0-6-0) Belgian, with no brakes on the locomotive, and hand brakes and wooden brake shoes on the tender, to the 2-8-0 Baldwins. Amongst them were locomotives from the different railways in Great Britain, a few Belgians, Baldwins and Canadians. On account of having so many different makes, it was found difficult at times to secure the required spare parts, which were ordered from the transportation stores depot.

When Merris depot was opened, there were, of course, no facilities whatever for maintaining locomotives. There were no cinder or washout pits and no shelter for locomotives, which had to be repaired in the open in all kinds of weather. Until proper water facilities could be provided, a supply was maintained by means of Merryweather pumps, and a length or two of suction hose to the nearest ditch. Coal was ordered from headquarters, and received in train load lots from Dunkirk and Dieppe. On account of the urgent demand for equipment, coal trains were unloaded as soon as possible after arrival, on to the ground. In coaling a locomotive the coal had to be man handled on to a ramp, and again to the locomotive tender. Coal trains were unloaded mostly by Chinese coolies or German prisoners. Locomotives were also cleaned and coaled by this class of labor when available. Locomotives were washed out every 10 days, on account of the bad water. When not undergoing boiler repairs or being washed out, they were kept constantly under steam, and ready for use on short notice. When possible locomotives were double crewed, but when traffic was very heavy and men were scarce, it was necessary to pool them all.

When Merris depot was finally developed, it consisted of a two track locomotive shed, about 150 x 50 ft. with repair pits the full length. The sand dryer was combined with the incinerator. A concrete washout pit was built, also a locomotive store and locomotive dispatching office. A corrugated iron machine shop about 100 x 50 ft was put up and we were able to get the following machinery,—a 50 h.p. steam engine and boiler, 20 k.w.t. electric generator, 3 engine lathes, planer, milling machine, 2 drilling machines, tool grinder, and a 500 cu. ft. capacity air compressor. We also accumulated a reserve coal dump of 3,000 tons.

Merris exchange yard consisted of 16 tracks about 1,400 ft. long. The main control (dispatching) office, connected by telephone with all stations, was also located here. As the traffic to the Merris area was for Second Army, and traf-

Captain A. H. Kendall, M.C.

with 15 locomotives, 3 Merryweather pumps, an emergency stores, a tool van, and a small supply of coal. As the preparations for the Messines offensive were under way at the time, the unit was well initiated into railway operation under active service conditions from the first day. In the Merris area the unit gradually assumed control of and operated the double track lines from Hazebrouck to Armentieres, and from Hazebrouck to Berguette and the single track lines from Berguette to Estaires, Laventie and Armentieres; Hazebrouck to Merville; Berguette to Aire; Aire to Estres, Blanche, Bailleur to Wulverghem, Messines and Ploegstraat Road; Clapham Junction to Brulozee (Kommel); Steenwerck to Neuve Eglise, and Steenwerck

In the Berguette area was for the 2nd Army. It was necessary to keep in constant touch with the headquarters of 1st Army. All the railway lines in the line of communication area were controlled by the Nord Ry. Co. of France. It was also necessary to keep in close touch with that company. As the German attacks were made ready to begin, the line from the Nord Ry. Co. to the Army Headquarters was cut. The necessary station communication was provided as follows: The station was a 6 x 10 ft. rectangular one, and was built into the ground. A dugout, 4 ft. forward lines a dugout. Telephones were installed in the station and the lines, and the lines officially handed over at an agreed time.

When a train left the dispatching station, the locomotive for emergency, there was a man in the van who acted as the rear end brakeman. Passing signals were also received from reporting stations on Nord lines. On arrival of train at Meris, the dispatching station locomotive was taken off, sent to the shop and made ready for the return trip; the crew was given rest, a hot meal and 24 hours rations. In the meantime the train was marshalled in the exchange yard, our own locomotive and crew put on and taken to destined railhead. To overcome the absence of air brakes, trains had to be made up with a brake van on each end, and sufficient cars with hand brakes properly placed to provide the necessary braking power. A small white light was placed on the front of the locomotive, and one red light on the rear of the train. The train crew consisted of a conductor and a brakeman. The conductor rode in the head end brake van, and the brakeman in the rear van. At times it was only possible to provide one man who acted as conductor, but rode in the rear van. The locomotive man, not the conductor, received all train orders from the station agent, and was primarily responsible for the train.

On Nord Ry. lines trains were handled on the automatic block system, and on Railway Operating Division lines on the station block system. The R.O.D. lines were divided into sections, and at each station hand, or at night, when possible, lamp signals were given to locomotive men in accordance with the prescribed rules, but no locomotive man was permitted to proceed into a section until he was furnished with a train order, printed in French and English, indicating either that the section was clear, or that the preceding train had left not less than 10 minutes previously. In the event of a section being occupied, it was necessary for the locomotive man to proceed at "caution," and also sign the train order, and give his copy up at the end of the section to which it referred. It was permissible to run all trains at "caution," with the exception of ambulance trains, which were handled on the absolute station block.

When railroad areas were being bombed or shelled by the enemy, especially at night, it was necessary for locomotive and train crews to be particularly on the alert, as the track and telephone lines were frequently blown up. Night operation was more difficult also on account of the almost total absence of lights in yards, etc. Locomotive men were often required to take a train over a new and unfamiliar line, without a pilot, at night, on which they would discover very heavy grades, and on descending

ways, while for brakes, and trust to luck to find their train still on the rails at the bottom. As it was not always possible to obtain pilots, men had often to start the road themselves on their first trip.

The unit soon discovered that railway lines and yards were at least one of the main objects of attack by hostile aircraft and batteries. On one occasion bombs were dropped on some ammunition sidings near Bailleul, where two trains of 88 cars, including the ammunition contained therein, were completely destroyed.

In addition to operating and controlling the lines before mentioned the unit also operated supply and ambulance trains for the area to and from the base ports, Calais and Boulogne. Troop trains were also often handled to and from reinforcement camps to railheads, and vice versa. Other traffic was brought to Meris and Berguette exchange yards by R.O.D. locomotives of other detachments, or Nord Ry. locomotives, which would be turned back with loads or empties. Foreign locomotives or crews were only allowed forward of exchange stations in cases of absolute necessity. In addition to handling regular traffic the unit was

to be seriously interfered with. At about 7 a.m. the track was cut at far back as St. Venant, and telephone lines forward of that station were put out of commission. These lines were destroyed repeatedly, and repaired as often as possible. Communication was finally maintained by means of the line from the base. At about the 10th, locomotives supplied the 368th Battery at La Gorgue, hauled the guns to Lestrum, after five shell breaks had been repaired on the way and the guns went into action immediately. In the meantime numerous trains of material and French refugees were evacuated, and trains of troops, ammunition, and ordnance brought up. At 2 p.m. our patrols reported that the enemy had crossed the line at Laventie, and was advancing rapidly on La Gorgue. The continuous shell and machine gun fire soon rendered this section of the line of little use for traffic working. Rolling stock and personnel were ordered withdrawn to Lestrum. Shortly after this move the infantry took up positions on the line of the Lawe River at Lestrum station, and the rolling stock and personnel were further withdrawn to Merville. At this time the number of casualties along the line was

Peronne Station, in France, in which the 56th Broad Gauge operating Co. (Canadians). Main Control Office was located, on Sept. 30, 1918, when 128 trains were handled in 24 hours.

required to supply locomotives for construction companies working in the area, also for gun movements. On the lines mentioned there were as many as 8 guns on railway mountings, ranging in calibre from 9.2 to 12 in. Ammunition was hauled up to them at night, and when they went into action a locomotive was required to stand by ready for use at a moment's notice. During the week ended April 4, 1918, the following loaded cars were handled by the unit. Troops and remounts, 2,318; supplies, ordnance, ammunition and general traffic, 5,072; construction material, 29; ambulance, 254; French and Belgian civil traffic, 613; a total of 8,286 loaded cars. About 50% of those returned to base were hauled back empty.

Commencing about April 9, 1918, about 4 a.m., the area in which the unit was operating was subjected to enemy shelling and bombing to an unusual degree. The railway and telephone lines were blown up continually, and some of the stations, as well as the control office at Merville, met a similar fate. The handling of traffic on the Berguette-Estaires-Armentieres line was the first

continually increasing, and as it was not advisable to run heavy ambulance trains past St. Venant, a train of flat cars was made up and sent forward as far as possible, and picked up wounded on the way back to Berguette depot, where a field dressing station was hurriedly established.

In the Bailluel area, Armentieres had by this time been captured by the enemy, and he was rapidly advancing towards Steenwerck, and pouring shells into that area. Trent ammunition depot was heavily shelled, and several hangars destroyed. While getting a train out of this dump, locomotive 721 was derailed three times, and had to pass over a damaged switch. The detachment living train at Bailleul was hit, resulting in several casualties. All rolling stock and guns were successfully evacuated from this area. The work of bringing up troops, supplies, ammunition, etc., and evacuating refugees, casualty clearing stations, R. E. parks, etc., continued with increasing vigor in the whole area until April 12, 1918, at noon, when 2nd Army Headquarters ordered the unit to evacuate at once all lines operated in that

army area. At this time the Merris depot was being subjected to a bombardment of shrapnel, high explosive and gas shells, and the track had been destroyed up to that point. The last train to leave was loaded with personnel of the unit. It was followed up immediately by an R.E. demolition party which destroyed the track and bridges west to Carlyle Junction. In less than an hour after the unit left, the enemy had passed through Merris depot, but was driven back later and the east leg of the Y formed a section of the British front line for the next few weeks.

By this time the units' living quarters at Berguette had been turned over to the Army Medical Corps for use as a field dressing station, and the railway lines and bridges had been destroyed up as far as St. Venant. On April 13, 1918, 1st Army Headquarters ordered the Berguette detachment to evacuate, and it moved only a couple of miles away to Isbergues. From this point locomotives were supplied to three siege batteries, and the steel plant at Berguette, light railway depot at La Laque, inland water transport depot at Aire, and the ammunition dump at Robeque were evacuated. Robeque dump was only 1,093 yards from the front line, and the unit was asked by Army Headquarters if we could evacuate it. A reply was given immediately in the affirmative, but there was some hesitation on the part of the army in ordering the work to be done, as there was some doubt on their part as to the advisability of having a locomotive handling traffic so near the line. The order was given, however, and the work was successfully accomplished. Over 200 cars of ammunition were taken out at night.

Ammunition, troop, supply trains, etc., were being worked continuously from base ports to Berguette, and forwarded to Bethune, Lillers, and other points along the main line, which was now continuously under shell fire. The Berguette detachment remained in the vicinity of Isbergues until June 5, 1918, when the work being done by them was turned over to the Ballastiere detachment. After the evacuation of Merris, the personnel from that area was employed at Audruicq. The running men were used

handling ballast trains construction troops, etc., and when the line was near completion a small number of leave, ambulance, ammunition trains etc., were handled. We also had fifteen 2-8-0 type Baldwin locomotives handling main traffic out of Abbeville.

On Aug. 8, 1918 His Majesty King George, desiring to see Canadian construction and operating troops at work, honored the line with a visit, and the unit made up and handled a special train for his accommodation from Conchil to Legiscourt. On Aug. 27 the unit turned over the operation of these lines to the 59th Broad Gauge Operating Company (Australians), and on the following day the unit proceeded to Chemin Vert British railway depot (Wiencourt Nord sta-

Two 20,000 gall. capacity water tanks at Omicourt, used by 58th Broad Gauge Operating Co. (Canadians). The water was pumped from 5 artesian wells bored to a depth of about 550 ft.

tion) on the Amiens-St. Quentin main line, and was there attached to the Fourth Army.

The lines taken over in this area, as fast as they were built, extended to Bray-Wormwood Scrubs - Peronne; Plateau-Trones Wood-Epehy; Peronne-Quinconce-Etricot. These lines were single track, and notwithstanding the fact that they were constructed rapidly with the quickest available material, they were required to stand up under a tremendous volume of traffic. Numerous derailments

the usual gun movements, and locomotives supplied construction companies, the unit handled the following loaded cars,—Troops and remounts, 1,127; supplies, tanks ordnance, and general traffic, 3,894; construction material, 56; ambulance, 613; a total of 5,690 loaded cars.

As the armies advanced, and new lines were rapidly taken over, it was necessary to anticipate requirements in the way of additional personnel, locomotives, locomotive supplies, coal, etc. Arrangements were made in conjunction with the R.C.E., and the R.T.C. for water supplies, yard facilities and telephone lines. The traffic department at G.H.Q. was wired the furthest points to which traffic was worked daily, and the routing of traffic for the armies was arranged accordingly.

Early in September, 1918, a detachment was sent to Chaumes, to commence operating the double track line to Peronne. On Sept. 18, a control office was established at Peronne. Trains were run up this line to Marchepot, Sept. 3; Peronne, Sept. 12; Tincourt, Sept. 14, and Roisel, Sept. 16. On the night of Sept. 20, a heavy tank movement of 36 trains for Tincourt commenced. Although the enemy shelled the track, and broke the main line at Tincourt, the movement was completed successfully. On Sept. 21 a locomotive depot was established at Peronne. On Sept. 24, Peronne yard was in working order, but there was no switching lead. At that time 60 trains were being handled daily on that line, and traffic was steadily increasing. On Sept. 26, one 14 in. and one 12 in. gun, on railway mountings, were handled to Roisel, where they went into action immediately. Two locomotives stood by to make the necessary moves. On this date men were placed on the Etricot lines to handle traffic from the Bapaume-Achiet le Grand direction. On Sept. 28, the double track was complete, and in operation as far as Roisel, and ambulance trains commenced to load at Tincourt. On Sept. 30, Peronne locomotive depot and yard were in full working order. On that date 128 trains were handled in both directions, which was the high water mark reached by the unit in handling traffic. Although Peronne had been completed, on account of the inade-

Locomotives used by 58th Broad Gauge Operating Co. (Canadians).

R.O.D. 1961 is a 2-8-0 type Great Central Ry. locomotive, used in handling ambulance trains and through traffic. R.O.D. 1459 is a 2-8-0 type Baldwin locomotive, used in through traffic.

in train and locomotive service out of that depot to forward areas, and various other places, such as Dunkirk, Rouen and Boulogne.

At this time although the majority of all the comparatively old established lines controlled by the British army had been captured by the enemy, new lines were constructed rapidly, and on June 5, 1918, the whole unit was ordered to proceed to Conchil-le-Temple, to operate for Canadian and R.E. construction companies, building the new double track line from Etaples to Conchil, and the new single track line from Conchil to Candas. This work consisted mostly of

were unavoidable, but the prompt and effective measures taken by the various construction units to repair the breaks assisted materially in reducing delays to a minimum. As no water was obtainable at Chemin Vert when that depot was taken over, two water tank trains, made up of 21 water tank cars each, were supplied. As one of these trains was made empty it was taken to Longeau, near Amiens, and refilled. A supply was later pumped from the Somme River, five miles away. Water was secured on the line by means of Merryweather pumps at various places. During the week ended Sept. 19, 1918, in addition to

quate facilities, arrangements were made for the construction of an up to date exchange yard, and locomotive depot at Omicourt, near Chaumes.

From Roisel, the line through Templeux to Bellicourt, and the line through Verdun to St. Quentin were taken over, also the line through Epehy, Gouzeaucourt and Marcoing to Cambrai. A locomotive depot, and sub-control were established at Marcoing, which was also an important junction with the line from Bapaume. When the line to Cambrai was workable, the control was moved from Marcoing, and established in the Gare du Nord at Cambrai. The loco-

British Locomotive Building—Armstrong Whitworth & Co.'s Scotswood Works, Newcastle on Tyne, England, which up to the close of the war were manufacturing shells, cartridge cases, fuses, etc., have been converted into locomotive works, with a capacity of between 300 and 400 locomotives a year, the erecting shop being capable of accommodating 50 locomotives, without tenders, at one time. The first locomotive was finished Nov. 13, being on an order of 50 from the North Eastern Ry.

Free and Reduced Railway Passenger Transportation.

The Canadian Railway War Board made the following application to the Board of Railway Commissioners on Oct. 16, 1919:—"Section 345 of the Railway Act, 1919, after enumerating certain classes of persons to whom railway companies may issue free transportation or transportation at reduced rates, provides that such transportation may in addition be given 'to such other persons as the board may approve or permit.' After very careful consideration of the subject, it appears to the Canadian Railway War Board that it is necessary and proper that in addition to the classes of persons specifically enumerated in the Railway Act, the companies should be permitted to issue free transportation to the following classes:

"(a) Immigration Department of Dominion of Canada: For such representatives of the department as may be required by the Minister or Deputy Minister.

"(b) Immigration and Customs Departments of the United States: For such representatives of the departments as may be required by the Commissioner or Deputy Commissioner of Immigration or Collector or Deputy Collector of Customs in charge of the district.

"(c) Fire rangers within their respective districts, employed or authorized by provincial governments.

"(d) Families of former and deceased employees of railways.

"(e) Former employees of transportation companies and their families.

"(f) Deputy ministers of the Federal Government departments.

"The Canadian Railway War Board, therefore, on behalf of the railways under the board's jurisdiction, respectfully requests that the Board of Railway Commissioners should, under its powers, permit the railway companies to issue free transportation to the classes of persons above named."

Chief Commissioner's Judgment—Chief Commissioner Carvell gave the following judgment, Nov. 12:—After having considered sec. 345 of the Railway Act, 1919, very carefully, I have come to the conclusion that the whole purport of the section was to give to the railway companies, within certain limits, the right to carry traffic at free or reduced rates; and to such classes of persons and, in some cases, individuals, as the companies may decide upon, subject in certain cases to the approval and permission of this board. The whole section is preceded by the following words: "Nothing in this act shall be construed to prevent." It then refers to five specific classes of persons, and a careful examination shows that there is no great change between the present act and its predecessor, excepting that in subclauses (a) and (c) a limitation is placed upon the power of the railway companies, and in subclauses (d) and (e) an extension is provided for.

Under clause (a) the most which the railway companies can do towards reduced fares for ministers of religion, etc., is to carry them at one-half the regular fare, and under clause (c) the most they can do for members of the provincial legislatures is to carry them free within points in the province to which they belong. It is not clear whether members of the press can be carried free beyond the province in which they reside, but, as there is no comma after the word "legislatures," and nothing to designate

a difference in the two classes, I am rather inclined to the opinion that the limiting words "between points within the province" apply to the latter as well as to the former. Clause (c) also extends the privilege to dependent members of the families of any persons who are entitled to free transportation under sec. 346 of this act, and clauses (d) and (e) also extend the right to employees of the Railways and Canals Department and to the Governor General and staff, etc.

This narrows the question down to the interpretation of the last line of clause (c), viz.: "or to such other persons as the board may approve or permit," and to the proviso immediately following subsection (e), both of which are to be found in the previous act. These words evidently mean something, and it is my opinion that a railway company may decide to grant the privilege of free or reduced transportation to any person, or class of persons, subject always to the approval or permission of the board, and also subject to the proviso herein referred to, which, in my opinion, is a regulating power rather than an enacting one.

To apply this opinion specifically to the request made by the Canadian Railway War Board on Oct. 16, 1919, it would seem to me that the railways would have a right, subject to our approval or permission, to grant free or reduced transportation to those parties mentioned in clauses (b), (d), and (e) as well as to all others. Thus, if the railway companies decide to grant free transportation to United States immigration and customs officials, to the families of former and deceased employees of the railways, and the families of former employees of transportation companies, then, if this board approves or permits, they will be within the law in granting such transportation.

I am not so clear as to the real intention of parliament with reference to the proviso hereinbefore referred to, because, taken in its general sense, we are given the right to extend, restrict, limit, or qualify the carriage of traffic by the companies as provided under this section, but I have come to the conclusion that this is only meant as a regulating clause, and our powers are restricted to extending, restricting, limiting, or qualifying what the companies may propose to do, and, therefore gives us no originating jurisdiction; but when the railway companies come to us, asking that certain persons or classes of persons be given the privilege of free transportation, we would have the right to extend, restrict, limit, or qualify the same. If I am right in my general interpretation of the clause, then I think we have the power either to approve or disapprove of all the requests made by the Canadian Railway War Board in its letter of Oct. 16, and, as they seem to me to be proper requests, I am in favor of approving the same and permitting the issuing of transportation as requested.

The Board's Order—The board passed general order 274, Nov. 20, 1919, as follows:—Re application of the Canadian Railway War Board, on behalf of railway companies subject to the board's jurisdiction for free transportation under sec. 345 of the Railway Act, 1919. Upon reading the application dated Oct. 16, 1919, and considering what has been urged in support thereof, it is ordered

that railway companies of Canada subject to the board's jurisdiction, be permitted, until further order, to carry free of charge the following persons, viz.: (a) Department of Immigration of Dominion of Canada: For such representatives of the department as may be required by the Minister or Deputy Minister.

(b) Departments of Immigration and Customs of the United States: For such representatives of the departments as may be required by the Commissioner or Deputy Commissioner of Immigration or Collector or Deputy Collector of Customs in charge of the district.

(c) Fire rangers within their respective districts, employed or authorized by provincial governments.

(d) Families of former and deceased employees of railways.

(e) Former employees of transportation companies and their families.

(f) Deputy ministers of departments of the Federal Government, and those having the rank of deputy ministers.

The Railway Act's Provisions—The Railway Act, 1919, provides in secs. 345, 346 and 347 as follows:

345. (1) Nothing in this act shall be construed to prevent: (a) the carriage, storage or handling of traffic, free or at reduced rates, for the Dominion, or for any provincial or municipal government, or for charitable purposes, or to or from fairs and expositions for exhibition thereat, or the carriage, free or at reduced rates, of destitute or homeless persons, transported by charitable societies, and the necessary agencies employed in such transportation, or the carriage at one-half the regular single fare of ministers of religion or persons exclusively engaged in charitable, religious, or eleemosynary work;

(b) The issuing of mileage, excursion or commutation passenger tickets, or the carriage at reduced rates, of immigrants or settlers and their goods or effects, or any member of any organized association of commercial travellers with his baggage;

(c) Railways from giving free carriage or reduced rates to their own directors, officers, agents and employees, or their families, or to former employees of any railway, or for their goods and effects, or between points within the province to members of the provincial legislatures or to members of the press, or to members of the Interstate Commerce Commission of the United States and the officers and staff of such commission, and for their baggage and equipment, or to dependent members of the families of any persons who are entitled to free transportation under section 346 of this act, and for their baggage, or to such other persons as the board may approve or permit; or,

(d) Railways or transportation companies from exchanging passes or free tickets with other railways or transportation companies for their officers, agents and employees and their families, goods and effects, or from issuing passes or free tickets to officers and employees of the Department of Railways and Canals, or their families, and their goods and effects, or a similar interchange of passes, or franks with or by telegraph, telephone and cable companies;

(e) Railways from giving free car-

to the Governor General, and staff, and baggage and equipment.

Provided that the carriage of traffic by the company under this section may, in any particular case, or by general regulation, be extended, restricted, limited or regulated by the board, and the board, in or by any order or by general regulation, may prescribe the limits to be observed by the company for the carriage of traffic at free or reduced rates under this act, and the terms and conditions applicable thereto, and the company may be held by the company of all such traffic, and all such passengers, free and reduced rate transportation, as issued or given by the company, and shall require the making of periodical returns duly verified by affidavit to the board in respect thereof; and it shall be the duty of the board to examine such return with a view to seeing that the law has been observed.

(2) Whenever the board sees fit it may require the company to grant and issue commutation tickets at such rates and on such terms as the board may order.

346. Members of the Senate and House of Commons of Canada, with their baggage and members of the board and such

officers and staff of the board as the board may determine, with their baggage and equipment, shall, on production of cards, certifying their membership or right, which shall be furnished them by the Clerk of the Senate or the Clerk of the House of Commons or the Secretary of the board, as the case may be, be entitled to free transportation on any of the trains of the company; and the company shall also, when required, haul free of charge any car provided for the use of the board.

347. Subject to the provisions of sections 345 and 346 of this act, no company shall hereafter, directly or indirectly, issue or give any free ticket or free pass, whether for a specific journey or periodical or annual pass, and no company shall otherwise arrange for or permit the transportation of passengers except on payment of the fares properly chargeable for such transportation under the tariffs filed under the provisions of this act, and at the time in effect; provided that nothing in this act shall effect the furnishing of free transportation where such is specifically required by any other public general act of the Parliament of Canada.

Impounding of Livestock—The Railway Association of Canada has issued the following circular to member railways: Impounding of livestock found running at large, on or in the immediate proximity of railway right of way, is suggested as a means of reducing loss to both livestock owners and railways through animals being struck by trains, and as a measure of safety to the travelling public. It is recommended that the railways notify the officials of municipalities wherein trouble of the kind mentioned is experienced, that the suggested action is contemplated and that co-operation of such officials be requested. At places where pounds are not provided, it may be possible to arrange with the public officials for establishment of them.

Mechanical Locomotive Firing—The G.T.R. has been making a test of a mechanically fired locomotive between Montreal and Brockville, Ont., for five round trips, with maximum tonnage. The locomotive was then transferred to the Ontario lines, for a test of five trips between Fort Erie and Sarnia tunnel, after which it was to be returned to the G.T.R. lines in New England, to which territory it belongs. In each case the test was against another locomotive of the same type, hand fired. The Locomotive Stoker Co.'s type D. duplex stoker is used on the mechanically fired locomotive.

The Alberta Truck Transportation Co. has been organized in Calgary, Alta., with authorized capital of \$150,000 to carry passengers and freight by motor truck. The routes suggested out of Calgary are to Medicine Hat, Macleod, Banff, Lethbridge and Edmonton. It was stated Dec. 6, that the service will be started as soon as the trucks can be delivered. The officers of the company are reported to be: President and General Manager, M. D. East; Vice President and Assistant General Manager, R. Park; Secretary Treasurer, J. O. Campbell.

Toronto, Yonge Street Station is the new name for the C.P.R.'s station known heretofore as North Toronto Station.

Sir Robert Borden's Address to a Railway Brotherhood at Ottawa.

The Prime Minister, in addressing the Canadian Legislative Board, International Brotherhood of Locomotive Firemen and Engineers at Ottawa, Dec. 8, 1919, said: "It is my privilege on behalf of the government to extend to you a welcome to Ottawa, and to convey our best wishes that this annual gathering may be useful and successful in every way. In the early days of my parliamentary career, I had occasion to consider very attentively the character of the organizations established by the various railway brotherhoods, and ever since I have been impressed with the thoroughness of their system, and with the fairness of their procedure for dealing with controversial questions. These organizations must necessarily exercise great power and influence in the policy which they pursue, and in the purposes which they undertake. Such power and influence carry with them a corresponding responsibility. I believe that on the whole this responsibility has been fulfilled justly and considerately, having regard to the national interests as a whole.

"History teaches us that every great war has been followed by some period of unrest and disturbance among the peoples of the belligerent nations. Such an outcome seems inevitable, and one is not surprised that such conditions prevail today, to a greater or less extent, among all the nations which have taken part in the tremendous and world wide conflict through which we have passed. While Canada has not been wholly free from these tendencies, there is reason to believe that no country in the world has suffered less from them than our Dominion. I am confident that the strong, sound, common sense of the Canadian people will support all authorities, whether federal, provincial or municipal, in maintaining public order, in the just enforcement of the law and in upholding institutions and traditions founded upon ideals of ordered liberty and progress.

"I have already spoken in parliament of the character and terms of the treaty of peace which was consummated a few months ago, and which will doubtless be ratified by the required number of belligerent nations in the early future. That treaty embodied a sincere attempt to bring together the nations of the world in such co-operation and by such methods as would greatly minimize the risk of future wars. It is impossible to imagine that the existing organization of society can be maintained, if the unmeasured destruction of human life and the maiming of countless millions, with all the tragic sorrow and sacrifice which have been the outcome of this war, are to be the sole or even the chief means of arbitrament in international disputes. If the plenipotentiaries of the allied powers had not given their best energy and their highest endeavor to prevent any such outcome in the future, assuredly they would have failed in the duty which they owe to this and future generations. No nation can divorce itself from the responsibility measured by its power and influence. More and more the oceans have become international highways. There is no hermit nation and there can be none. I venture to submit to you a conclusion which I think may be drawn from the purpose embodied in the League of Nations covenant. That covenant received the unanimous approval of plenipotentiaries representing 32 nations, in-

cluding the dominions of the British Empire. Only those who participated in the deliberations of the Peace Conference can fully realize the rivalry of ambitions, the sharp antagonisms, the intense jealousies, and the deep rooted prejudices which manifested themselves between peoples represented at the conference. Moreover there is every diversity in the standards of living, the educational and industrial development, the temperament and character of the peoples concerned. It is at once remarkable and highly encouraging that all these nations should have agreed upon the organization and the methods by which their co-operation is assured, in the endeavor to secure the world's peace so far as that is humanly possible.

"One lesson which we may learn from this relates to our own domestic concerns. In any country, but especially in a country of vast area and scattered communities, the problem of transportation is all important. The efficiency of transportation in Canada is an essential factor in the national life. Railways, waterways and highways all have their part. From conditions which have gradually developed during many years has arisen the result that about one half the total railway mileage of Canada is, or shortly will be, in the ownership of the state. You must realize, and I hope you will agree, that this condition emphasizes the importance of devising some means by which this great essential and national activity shall not be interrupted or prejudiced by disputes between employers and employed. Even as between a private corporation, operating a great public utility, and its employees there should be some more reasonable method than the imposition upon the general public of the inconvenience, the loss, and the suffering which are occasioned by strikes. If, between jealous and sometimes antagonistic nations, the principle of settling international disputes by peaceful means has been acknowledged and adopted, surely disputes between employers and employed can be investigated and adjusted by means other than those which may bring upon the whole people distress and suffering comparable to that entailed by war. So far as railways in the ownership of the state are concerned, there is one additional consideration of which you should not lose sight. Those responsible for the administration of state railways are not actuated or influenced therein by any motive of private interest. Their duty is, on the one hand to the public whom they serve, and on the other hand to the employees who also serve the same public. So that in this instance employers and employed alike serve the people as a whole.

"I commend to your most thoughtful consideration the results which have been obtained in this country by the establishing of the tribunal known as Board of Adjustment No. 1 in connection with the Canadian Railway War Board. It was constituted on Aug. 7, 1918, under an agreement made between the Canadian Railway War Board and the six leading railway brotherhoods. It consists of 12 members, 6 representing the railway companies and 6 the brotherhoods. The board has given decision in 52 cases, as well as 6 supplementary cases, or in all, 58 disputes, which have thus been settled without resort to strike. In ad-

dition about a dozen potential disputes have been adjusted through the board's good offices without the necessity of a formal hearing. Disputes have also been adjusted for organizations which were not parties to the agreement. It is open to any class of railway or transportation employees to present a case to the board, provided they agree to be bound by its decision. Is there not in this record, food for the most careful reflection and consideration as to the future determination of disputes between organization of railway employees and those responsible for the administration of the railways? In other countries there have recently been legislative proposals for the prohibition of strikes. It would not be my purpose to have the question approached in that way. The members of the railway organizations are citizens of this country, interested like others in its development, its progress and its orderly government. Any movement to make permanent, and still more efficient, the methods which have had such good results during the past 18 months, might well originate with them. This obligation is imposed, and this responsibility is created, not only by the power and influence of the organizations in question, but by the duty which their members owe to the state as good citizens. On our part we must not be unmindful of corresponding obligations. The problem of administering about 22,000 miles of railways in this country is one of exceptional moment and difficulty. Upon its successful solution probably depends the success of state ownership, not only in Canada, but upon the whole North American continent. We must give earnest attention to some means by which the employees shall have just representation in the executive administration of this great system. I have given to this question some study in the consideration of the problem as a whole and you may be assured that such a proposal will command my entire sympathy.

"I am grateful for the opportunity of addressing you, and I pray that the new year, which will shortly dawn, may bring to you and to all our people, every happiness and prosperity."

The Paris, Lyons and Mediterranean Ry. of France, as a result of successful experiments with a new process of using oil for locomotive fuel, is reported to be transforming 200 of its locomotives to oil burners.

Railway Equipment Needed—Howard Elliott, President, Northern Pacific Rd., is reported to have stated before the Association of Life Insurance Presidents, at New York, recently, that United States railways need an equipment of \$3,000,000,000 and that if provision is not made for developing railways continuously, the cost of living, instead of being reduced, will go higher.

Railway Lands Patented—Letters patent were issued during October for Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows,—

	Acres
Alberta and Great Waterways Ry.....	137.06
Canadian Northern Ry.....	795.43
Canadian Pacific Ry.....	1.31
Edmonton, Dunvegan and British Columbia Ry.....	5.95
Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co.....	6.68
Total	946.43

Orders by Board of Railway Commissioners for Canada.

28,986. Nov. 10.—Authorizing C.P.R. to build spur for Christie Henderson Co., near Hempel, Ont.

Aerial Transportation Notes.

A. S. Macdonald, formerly Manager of the British Empire Airways, is reported to have been appointed Aerial Traffic Manager for the Aircraft Transport and Travel Co. of Great Britain.

The Aero Club of France is the agency through which an offer is reported to have been made of a price of \$100,000 for the design of an aircraft that will rise and land vertically, and have a speed of 144 miles an hour.

The Eastern Canada Air Lines have applied to the St. John, N.B., commissioners for aid in securing suitable grounds in the city for an aerodrome there. The company proposes to operate aircraft from St. John, to other points in the Maritime Provinces, the Magdalen Islands, Quebec and Ontario, and the Eastern States.

A London, Eng., cable states that a weekly airship service between England and North America is contemplated by a combination of aviation firms, which are credited with the intention of acquiring the R-34 and her sister ship the R-39. It is reported that these craft are being altered to meet requirements for freight and passenger carrying.

A Western Ontario branch of the Canadian Flying Club was formed in London, Ont., Dec. 6, with Major Hume Cronyn, M.P. as President, and Ivan Hunter as Secretary. It is proposed to get an aerodrome established so that when commercial flying begins in the spring, London will be able to provide accommodation and stop over privileges for passing machines.

The Royal Canadian Mounted Police will, it is reported, be the title of the former Royal North West Mounted Police after its amalgamation with the Dominion police. It is reported that the new force will use aircraft for patrolling the thinly populated areas of the northwest. The old time romance attaining to the R.N.W.M.P. will be revived by any extensive use of aeroplanes in its work.

H. W. Brodie, General Passenger Agent, C.P.R., Vancouver, is reported to have said Dec. 15, that the hydroplane will displace the ferry transportation between the mainland and Vancouver Island within the next few years and that the possibilities of aircraft developments will make transportation companies think twice before embarking in building or buying additional steamships for such services.

Major A. G. Lincoln is reported to be travelling through the prairie provinces obtaining estimates for the Dominion Government for the inauguration of a trans-Canada air mail and express service. It is said that a station will be located between Calgary and Banff, Alta., as the taking off place for the flight across the Rocky Mountains. Captain J. F. Hobbs is reported to have been making similar investigations in British Columbia.

The Prince Edward Island Transportation Co. is a party to an application to the Halifax, N.S., City Council, for permission to build an aerodrome at Halifax. The company, which is to operate in conjunction with the De Vere Aviation School, proposes to establish air vines, with branch lines to Montreal, routes throughout the Maritime Provinces, with branch lines to Montreal, Boston and New York.

The Aerial Transport and Taxi Co. Ltd., has been incorporated under the Dominion Companies Act, with \$75,000 authorized capital, and office at Winnipeg, to maintain and operate a service of air craft of all kinds for the carriage for hire of passengers, mail, express and freight between points within or without Canada. G. A. H. Dysart, A. E. Bell, H. N. Streight and R. Tidmus, Winnipeg, are the incorporators.

Captain Ross Smith, an Australian who left London, Eng., Nov. 12, to make a flight to Australia, within 30 days, reached Port Darwin, the most northerly town on the island, Dec. 10, well within the time limit. He won the £10,000 prize offered by the Australian Government, and a \$10,000 prize offered by a London, Eng., newspaper. The route followed was via Cairo, Delhi, Rangoon, along the Malay peninsula, and the Oceanic Islands, and the distance flown is estimated at 11,500 miles.

The possibilities of Moncton, N.B., as a center for air routes, and the location of an aerodrome and aviation school are under consideration. The mayor and members of the city council received a deputation Dec. 10, when the advantages of Moncton as a center for aviation were urged. The council appointed a committee to act with the promoters in looking over sites and to report at a future meeting.

Lotbiniere and Megantic Railway Bought by Dominion Government.

The Dominion Parliament passed an act in 1918 authorizing the Governor in council to acquire, under the provisions of the statutes of 1915, chap. 16, upon such terms as might be approved the Lotbiniere and Megantic Ry., together with such equipment and properties as might be deemed necessary for its operation. The consideration to be paid for the line and for the "equipment and appurtenances" to be the value thereof as determined by the Exchequer Court. In explaining the bill, which provided also for the purchase of the Quebec and Saguenay Ry., and the line known formerly as the Quebec, Montmorency and Charlevoix Ry., also from the Quebec Railway, Light, Heat & Power Co., the Minister of Railways gave the following information relating to the L. and M.R. The capital cost of the line was \$349,208.85; and the price at which it would be taken over, subject to the finding of the Court of Exchequer, was to be \$330,000. Parliament at the same session voted \$300,000 to acquire the railway.

"(a) The line of railway commonly known as the Quebec Montmorency and Charlevoix Ry., extending from St. Paul Street in the City of Quebec, to St. Joachim, a distance of about 43 1-5 miles.

"(b) The Quebec and Saguenay, extending from its junction with the Quebec, Montmorency and Charlevoix Ry. at St. Joachim, in the County of Montmorency to Nairn Falls, in the County of Charlevoix, a distance of about 62 8-10 miles.

"(c) The Lotbiniere and Megantic Ry., extending from Lyster, in the County of Megantic, to St. Jean des Chailions in the County of Lotbiniere, a distance of about 30 miles.

ing. It was stated that here would probably be 10 machines used on the line, with 6 for training purposes.

The Aerial Transport and Taxi Co. Limited, has been incorporated under the Dominion Companies Act with an authorized capital of \$75,000 and office at Winnipeg, to operate aircraft services of all kinds for the carriage for hire of passengers, mails, express and freight between points within or without Canada, and with various other powers necessary for the carrying out of the same. The provisional directors are: G. A. H. Dysart, A. L. Dysart, A. E. Bell, H. M. Streight and R. Tidmus, Winnipeg.

Bishop-Barker Aeroplanes Ltd. has been incorporated under the Ontario Companies Act with authorized capital of \$300,000 and office in Toronto, to manufacture and deal in all kinds of goods, ware and merchandise, and in particular to make and deal in, and to operate all kinds of aircraft; to organize and carry into effect aviation and flying meetings, exhibitions, completions and contests, etc.; to maintain lines of aircraft, to carry passengers, freight and goods by aircraft; to carry on schools for the teaching of flying, and to do various other things incidental thereto. A press report states that the transfer of the Bishop-Barker Co.'s interests has been completed, that Colonel W. G. Barker, V.C., is the managing director of enterprise, and that the Armour Heights aerodromes, Toronto, have been acquired as the headquarters of the business.

"That the authority given by the said act of 1916 was not exercised, owing to certain legal difficulties which arose in connection with the Quebec and Saguenay Ry., which line has since, however, been taken over by the government under authority of the appropriation acts passed during the first session of parliament this year. The Minister, on the advice of the Deputy Minister of Railways and Canals, recommends that, in pursuance of the above mentioned act, 1915, chap. 16, authority now be given for the purchase of the Lotbiniere and Megantic Ry. at the price of \$330,000, such price to include the whole of the company's undertaking, including all real estate, tracks, buildings, franchises, rolling stock and tools, and all other property whatsoever of the company, free and clear of all encumbrances, and to be paid only after the amount has been appropriated by parliament for the purpose, and upon receipt of a deed of conveyance to be obtained through and satisfactory to the Justice Department, such conveyance to cover all the aforesaid property, free of all encumbrances and claims whatsoever; the extent of right of way including station grounds and terminals to be conveyed, to be such as may be satisfactory to the Railways and Canals Department, the said railway to be transferred to the Crown on Dec. 1, 1919, and, pending settlement, interest to be paid on the purchase price at the rate of 5% per annum from such date of final payment; the said railway to be operated as part of the Canadian Government Rys. System by the Canadian Northern Ry. board of directors. The Minister observes that the Lotbiniere and Megantic Ry. connects with the G.T.R. at Lyster Junction,

with the Canadian Government Rys. at Villeroi, and with the Quebec, Montreal and Southern Ry. at Fortierville.

"The committee concur in the foregoing recommendation and submit the same for approval."

The Quebec Railway, Light, Heat & Power Co.'s directors ratified the sale at a meeting in Montreal, Dec. 10, 1919.

The Lotbinière & Megantic Ry., which was built under a Quebec charter, extends from Lyster on the G.T.R. to St. Jean des Chailions, 30 miles. The results of its operations for the year ended June 30, 1918, were as follows:

Earnings—			
Passenger earnings	\$ 6,167.78		
Freight and switching	35,324.22		
Other earnings	15.00	\$41,507.00	
Expenses—			
Maintenance of Ways and Structures	\$11,824.11		
Maintenance of equipment..	4,279.26		

Traffic expenses	411.00		
Transportation	13,817.70		
General expenses	5,375.40	\$45,907.56	
Net operating earnings		\$ 5,599.44	
Deductions—			
Taxes		\$ 900.00	
		\$ 1,699.44	
Corporate Income—			
Rentals		\$ 2,106.96	
Net income		\$ 2,592.48	

The railway carried during the year under June 30, 1918, 11,370 passengers, and 62,867 tons of freight. The company was reported to own 4 freight locomotives, 2 first and 2 second class passenger cars, 1 box, 24 flat and 1 other car in freight service, and one caboose. The company received subsidies from the Dominion amounting to \$96,000; and from Quebec, \$126,994. In 1907, the Quebec Legislature incorporated the Quebec

Eastern Ry. to build a railway from Sherbrooke to the site of the Quebec Bridge, with power to arrange for the operation of the line into Quebec; a branch line to Lyster, with power to acquire the Lotbinière & Megantic Ry.; a branch to Lime Ridge, and unnamed branch lines. Extensions of time for the building of the lines were granted from time to time, but nothing was ever done. Several years ago the L. & M.R. was acquired by the Quebec Railway, Light, Heat and Power Co.

The Exchequer Court held several sittings towards the end of 1916, at which evidence as to the cost of the railway and its property was given.

The L. & M.R. has been operated for several years under the Quebec Railway, Light, Heat and Power Co.'s officials, G. W. Robins being the Superintendent at Lyster, Que.

Conservation of Lumber in Farm, Street and Highway Crossings.

The following committee report was presented at the Roadmaster and Maintenance of Way Association's last annual meeting in Chicago:—

It rests with the maintenance of way department men to advocate substitutes for lumber to a larger extent than the managements have yet seen fit to do, or we ourselves have recommended. For instance, only a few roads have adopted such excellent substitutes as asphalt, road oil, macadam, etc., for farm, street and highway crossings, and while concrete is not a novelty on railways, as for years past its value and usefulness have been developing, this development has been much slower in the maintenance of way department than circumstances would appear to warrant, especially in the maintenance of way department than circumstances would appear to warrant, especially in the lighter forms of construction where timber has been and is now used, such as fence, mile and whistling posts, town and county markers, chaining stakes, gate posts, pipe line supports and signal and telegraph poles. However, it will be the purpose of this report to treat only of crossings.

It was, of course, following the lines of least resistance that plank or timber was laid between and outside the rails to permit a vehicle to be driven across a railway track, and, for a more highly finished job, planks of specified thickness, length and width were made standard supplies, and laid with care and precision, fastened with 6, 8 or 10 in. spikes and the ends leveled. Because of wear and tear, derailments, heaving in winter, etc., they had to be renewed frequently. Without going into details as to the maintenance expense of wooden crossings, a report from one supervisor's division shows that it required 53,678 ft. of lumber, 3,226 lb. of crossing spikes and a labor charge of \$5,642.96 to maintain the public and private crossings on his territory for one year, the cost of the plank alone being \$1,717.70. It is not the purpose of this report to go into the details of the unit cost of maintaining single crossings, but as the subject assigned to the committee implies, to advocate the conservation of lumber by using well recognized substitutes. If on one division 53,678 ft. of lumber can be conserved, assuming that it requires 512 ft. for one single track highway crossing or twice the amount for a double track crossing, and assuming that there are

50 or more highway crossings on each of 3,000 supervisors' divisions on the railways of the country, the use of some other material than lumber would mean the conservation of 76,800,000 f.b.m., amounting to \$2,457,600. And this does not include farm crossings or streets sometimes planked solidly from one side to the other of six or more tracks.

Since maintenance is an operating expense, it has to be paid out of the income and as a crossing must be kept up continually, the method of maintaining it should be simple so as to be grasped readily by the average workman. To be practical the work should be performed with the least possible equipment and this should be of such character as will always be on hand. To be economical, the expense must be within reason and not exceed that of other methods and materials that are used for work of like nature, producing like results.

The committee recommends that, as far as possible, all rail joints be eliminated in road crossings; that good drainage be installed; that all road crossings in high speed tracks be made of crushed stone of standard size, mixed either with good road oil, bituminous, macadam, asphalt or other good substitute for lumber. In parts of the country where there is considerable frost and where tracks heave, the sealing of the crossings with these substitutes will keep out the moisture and frost, and eliminate the heaving of tracks to a considerable extent; also, the heaving of crossing planks, which is a source of danger, will be eliminated. On slow speed tracks and where heavy trucking is done in yards, etc., track should be paved.

Excellent results have been obtained in eliminating signal failures and also from the standpoint of safety from crossings constructed according to the following specifications:

Formula 1—Clean out all dirt and ballast down to 2 in. below the bottom of the ties for the full width of the crossing and for a distance of 2 ft. outside of the outside rails.

Replace all damaged rails and ties in the crossing, bond all joints, that cannot be eliminated, with 3 copper bonds per joint, put all track through the crossing in first class line and surface, thoroughly tamp them up and install good drainage.

Paint rails with asphalt, applied hot with a brush or swab, covering thoroughly the entire surface of the rail below

the under side of the head, including the under side of the base.

Pack around the rails for 8 in. on each side with a mixture of crushed stone up to ½ in. in size, and hot asphalt, tamping this mixture thoroughly to ensure a complete bond with the rail at all points.

Refill the crossing with good clean crushed stone (ballast size), up to the level of the under side of the head of the rail, rolling or tamping it thoroughly.

Cover the entire crossing with fine stone up to the level of the top of rails, sprinkling freely with a good quality of road oil while fine stone is scattered. Roll or tamp this covering thoroughly and sprinkle the entire surface with road oil.

Cost of formula 1, with road oil at 1918 prices:

Double track—	
Ballast size stone, 6.46 cu. yd. at 80c.....	\$ 5.17
½ in. size stone, 3.26 cu. yd. at 70c.....	2.28
Oil to cover 352 sq. ft., 100 gal. at 18c a gal.	18.00
	\$25.45
Planking for a similar crossing would cost \$66.	
Single track—	
Ballast size stone, 2.53 cu. yd. at 80c.....	\$ 2.02
½ in. size stone, 1.33 cu. yd. at 70c.....	.93
Oil to cover 144 sq. ft., 50 gal. at 18c a gal.	9.00
	\$11.95
Planking for a similar crossing would cost \$28.	

Formula 2—Clean out all dirt and ballast down to 2 in. below the bottom of the ties for the full width of the crossing and 2 ft. outside of the outside rails.

Replace all damaged rails and ties in the crossing, bond all joints that cannot be eliminated with 3 copper bonds per joint, put all tracks through the crossing in first class line and surface, thoroughly tamp them up and install good drainage.

Paint rails with asphalt, applied hot with a brush or swab, covering thoroughly the entire surface of the rail below the under side of the head, including the under side of base.

Pack around the rails for 4 in. with a mixture of crushed stone of ½ in. size and hot asphalt, tamping it thoroughly to ensure a complete bond with the rail at all points.

Refill the crossing with good clean crushed stone (ballast size) up to the level of the under side of the head of the rail, mixed with a good mixture of good bituminous macadam, rolling and tamping it thoroughly.

Cover the entire crossing with fine stone of ½ in. size, to the top of the

racks, thoroughly mixed with good bituminous material and rolled or tamped to the toughness.

Cost of formula 2 with bituminous at 1918 contract prices:

Double track—
Ballast size stone, 6.46 cu. yd. at 80c.....\$ 5.17
1/2 in. size stone, 3.26 cu. yd. at 70c..... 2.28
Oil to cover 352 sq. ft., at 22c..... 22.00

\$29.45

Planing for a similar crossing would cost \$28.

Single track—
Ballast size stone, 6.46 cu. yd. at 80c.....\$ 5.17
1/2 in. size stone, 3.26 cu. yd. at 70c..... 2.28
Oil to cover 352 sq. ft., at 22c..... 22.00

\$29.45

Planing for a similar crossing would cost \$28.

Formula No. 3.—Clean out the ballast, dirt, etc., for the full width of the roadway, down to 2 in. below the bottom of the ties.

Flatten all joints, or as many as possible, from the limits of the roadway.

In automatic signal or electric track circuit territory, insulate the rail on all sides, except the head, by the application of asphalt or similar insulating material.

See that all ties through the crossing are good and provided with tie plates under each rail. Tamp tracks thoroughly and see that they are put in first class condition as respects ties, line and surface.

Fill the spaces between the ties, and between the tracks, for the full width of the road between the outside ends of the outside tracks, and for the full width of the highway, with clean stone ballast thoroughly settled together, this stone of ballast size to come up to the under side of the head of the rail.

Make a concrete mixture of clean small

stone or gravel and emulsified asphalt as follows. Select a good grade of stone screenings containing particles of stone up to 1/4 in., but with the fine dust and loam screened out, or a clean fine gravel containing a very small percentage of loam makes a good aggregate. Mix 2 gall. of good no. 1 road oil with 1 gall. of cold water, or larger quantities in proportion. Use 2 gall. of the mixture to 1 cu. ft. of aggregate, and mix well until all particles are well coated with this emulsified asphalt, the same as in mixing concrete. Spread the concrete thus made over the surface of the road and roll or tamp thoroughly to the level of the tops of the rails. Better results will be obtained in the way of a smooth surface if traffic can be kept off the new surface for about 24 hours after placing. If this is not possible the surface should be watched and all ruts smoothed out until it has thoroughly hardened.

Where the existing crossing is good except for the top surface, all that is necessary is to scrape off this top surface for about 2 in. below the top of the rail and proceed as above, beginning with the last preceding paragraph.

Cost for formula 3 at 1918 prices:

Double track—
Ballast size stone, 6.46 cu. yd. at 80c.....\$ 5.17
1/2 in. size stone, 3.26 cu. yd. at 70c..... 2.28
Oil to cover 352 sq. ft., 100 gal. at 22c..... 22.00

\$29.45

Planing for a similar crossing would cost \$28.

Single track—
Ballast size stone, 2.53 cu. yd. at 80c.....\$ 2.02
1/2 in. size stone, 1.33 cu. yd. at 70c..... .93
Oil to cover 141 sq. ft., 50 gal. at 22c..... 11.00

\$13.95

Planing for a similar crossing would cost \$28.

property, and the line may be seized and sold. The Minister of Public Works shall then discharge the lien, and the balance shall be distributed among those entitled thereto under the orders of a judge of the N.B. Supreme Court. The section also authorizes the Minister of Public Works to give a good and efficient conveyance for any railway so sold.

The Caracquet and Gulf Shore Ry. bondholders have petitioned the Dominion Government to disallow the act. The petition alleges that the act is "so drastic, unjust and confiscatory in its scope and character" as to destroy the selling value of the bonds of the railway, to render valueless the assets held by trustees in the bonds, to prevent the borrowing of money for betterments, and that the expressed object in passing the act, although general in its scope, was to compel the petitioning company to bring its railway up to a higher standard of efficiency and to force it to comply with the provisions of the act. It is further alleged that the real logical effect will be to take away all security of the bondholders without compensation and "with such refined pretension as to shock the conscience of all honorable men, and to shake the confidence of foreign and domestic investors in Canadian securities." The petition was signed by Sir John Gibson, for Canadian bondholders and by C. E. Ritchie for United States bondholders. Up to the time of writing no action has been taken by the Dominion Government in request to it.

The English Channel Tunnel Project.

A London, Eng., cable of Dec. 9, gives considerable information with regard to the present position of the project for the construction of a tunnel under the Straits of Dover, to connect England and France. Sir Edward Fell, Chairman of the Channel Tunnel Committee of the House of Commons, is reported to have said the British Government is supporting the project. The railways interested are the South Eastern and London, Chatham and Dover Ry. in England and the Chemin de Fer du Nord in France. The total length of the tunnel, including approaches will be about 30 miles, and it will consist of 2 tubes, with a drainage tube underneath. Starting about three miles inland from Dover, it will follow the gray chalk bed of the channel, which does not run in a straight line across, and will emerge near Marquise, a village between Calais and Boulogne. It is stated that work will be started simultaneously in England and France, and that it is expected to be completed within five years after the start. Electricity will be used to operate the trains. The cost of the tunnel and its equipment is estimated at from \$150,000,000 to \$160,000,000.

The C.P.R. Films Prince's Tour.—The C.P.R. has taken a complete set of films of the Prince of Wales tour through Canada while passing over its line. A set of these was given to the Prince, for his own use. The films were shown by the C.P.R. at Albert Hall, London, Eng., Dec. 15, when the King and Queen, together with other members of the royal family, were present. Sir George McLaren Brown, European General Manager, C.P.R., presided over a subsequent exhibit, the proceeds of both being in aid of the London Hospitals. It is said that the films will be shown throughout the country.

Disallowance of New Brunswick Railway Legislation Asked.

The New Brunswick Legislature at its 1919 session passed an act of seven sections, relating to provincial railways, the last of which enacts that it provisions do not apply to any street railway. Sec. 1 provides that notwithstanding anything contained in the charter of any provincial railway, or any amendment thereof, or chap. 91 of the Consolidated Statutes of 1903, or of any other act affecting railways operating under provincial statutes, the tolls charged on such railway shall be subject to revision or alteration by the Lieutenant-Governor in council, or by the Board of Railway Commissioners for Canada, and names penalties for failure to comply with the terms of the section. Sec. 2 provides that all tolls proposed to be charged by any railway operating under a provincial charter must be approved by the Lieutenant-Governor in council, and names penalties for failure to comply.

The following four sections deal with another matter which is of special importance to the few companies in New Brunswick which are under provincial jurisdiction. Section 3 provides that if it shall appear to the Minister of Public Works that a railway company operating under a provincial charter is not providing proper, safe or adequate service for the public, he shall cause an investigation to be made, and of this should show that the failure to provide such service as the Minister of Public Works may deem necessary arises "either from lack of proper maintenance facilities, lack of proper equipment in the matter of locomotives, rolling stock, train and section

crows, or defects in the bridges, culverts, or any portion of the road, the Lieutenant-Governor in council shall have power to order that provision be forthwith made as necessary. Sec. 4 provides that if the investigation shows that the failure to provide adequate service is caused in whole or in part by the bridges, culverts, or any portion of the roadbed being in such a condition that freight or passenger traffic is not handled in as expeditious and safe manner as the same should reasonably be, then the Lieutenant-Governor in council shall have power to order the reconstruction or repair of any bridge or culvert or any portion of the roadbed which he may deem necessary for the safe and expeditious transportation of freight and passengers. Sec. 5 provides for the giving notice to the company affected of the work required to be done, etc., and names penalties for noncompliance with the notice. Sec. 6 provides for the enforcing of a daily service and penalties for failure to conform to requirements.

Sec. 7 is perhaps the most important in the act, as it provides that in the event of the failure of any railway company to carry out any order . . . under secs. 3 or 4 . . . and notwithstanding that a fine may have been imposed and collected for such failure, the Minister of Public Works may have such work done under his supervision and the costs of the same paid out of the revenue of the defaulting company. The section provides that in case the company's revenues are not sufficient, the unpaid balance shall be a lien on the company's

The Railway Association of Canada's Organization.

Canadian Railway and Marine World for December contained some particulars about the organization of the Railway Association of Canada, to succeed the Canadian Railway War Board.

The Constitution is as follows:

The name of this organization is The Railway Association of Canada.

The purposes of the association are, consideration and recommendation upon matters pertaining to the operation of steam railways in the Dominion of Canada. To make such representations to the Government of Canada, the Board of Railway Commissioners for Canada, or to such other public bodies or other railway associations as in the opinion of the association may be desirable in matters of common interest to member companies. To act on behalf of member railways, either jointly or severally, as may be authorized, as the executive committee may from time to time approve.

Arrangements and agreements entered into by the association, after receipt of due authority from member railways, shall be binding upon railways which give such authority, until amended or annulled in accordance with the understanding reached by the respective parties at the time of making such arrangements and agreements. In other matters the action of the association shall be recommendatory and not binding upon any member.

Its membership consists of carriers which operate steam railways in Canada, but no carrier operating less than 50 miles of road, including trackage rights, or which operates primarily as a plant facility, shall be eligible for membership. Each carrier shall be entitled to exercise the right of one membership for each 1,000 miles of road or fraction thereof operated by it, including trackage rights. The executive committee, as may be necessary, shall determine the qualifications for membership under this constitution. The executive committee may admit to the association as associate members, carriers which are not eligible for full membership.

Each membership is entitled to one vote. Where member companies have more than one vote on basis of mileage, one officer of such company may cast total vote. Associate members shall not be entitled to vote.

A carrier may withdraw from the association by formal notice after payment of assessments due; or if a carrier shall fail to pay its assessments for one year from date of first unpaid assessment, shall be excluded as a member of the association.

Its organization shall include an executive committee to consist of five members (one of whom shall be President of the association), who shall be elected at a regular session of the association, to serve for three years, and an Honorary Chairman, who shall be ex officio a member of the executive committee. Each member of the executive committee shall be president of a Canadian railway. A vacancy on the executive committee may be filled by nomination by remaining members of committee pending next regular session of the association. There shall be an operating, a traffic, a financial and a legal committee, each to consist of five members selected by the member lines. There shall be on each committee, a chairman and a vice chairman who shall be elected by a majority vote of the

members present at a meeting of the committee. Office will be held for one year. A vacancy may be filled by election at any meeting of the committee concerned.

It is the duty of the executive committee to direct general policies of the association, to pass upon recommendations and reports of committees, and, if approved, to authorize the completion of arrangements or agreements recommended by such committees. The Honorary Chairman, or, in his absence, the President, shall attend all regular sessions of the association.

It is the duty of the operating, traffic, financial and legal committees to exercise general supervision over those features of the association's work which are generally recognized as coming within the jurisdiction of the department of railway organization which corresponds to the respective committees; to make recommendations and reports to, and to give effect to instructions received from the executive committee; to appoint such sub-committees or sections as may be considered necessary to the prompt and efficient handling of the work of the association and to receive and pass upon reports and recommendations of and to direct the activities of subcommittees.

The head office of the association shall be located in Montreal.

The office work and staff of the association shall be in charge of a General Secretary appointed by the executive committee.

It is the duty of the General Secretary to keep a full and complete record of the proceedings of each meeting of the association or its committees and subcommittees; to notify members of the date and location of, and to provide copies of the proceedings of each meeting. He shall act as secretary of the several committees and subcommittees or arrange for a secretary in his absence. He shall select an Assistant General Secretary and such other assistants as the business of the association may require, subject to approval of the executive committee. The General Secretary shall also act as Treasurer of the association and shall receive, disburse and account for all monies received or expended, and shall deposit the funds of the association in such banks or places of deposit, as may be approved by the executive committee. He shall make a quarterly report of the finances in detail to the executive committee. All cheques issued by the association shall bear the signature of the General Secretary and be countersigned by a member of the executive committee.

Bylaws—Following are extracts from the bylaws:

A regular session of the association will be held on the second Tuesday of May of each year at such place as the executive committee may determine. Special sessions may be called by the General Secretary at request of the Honorary Chairman or President, or on a written request of three members. The executive committee may change the date of a regular session when in its judgment the best interests of the association will be thereby conserved. Statements of subjects which member lines may require to be presented at a regular session shall be forwarded to General Secretary not later than 30 days prior to date of meeting.

Docket of matters to be dealt with at regular session shall be sent to all member lines not later than 15 days prior to date of meeting.

Any officer or a member will be admitted to the sessions and may join in the discussion and serve on the committees and subcommittees, subject to the provisions of the constitution.

The association shall have a working fund of \$15,000, established by assessment against member railways. Assessments shall be made on the basis of half in proportion to the mileage operated (including trackage rights) and the other half in proportion to the gross earnings for the preceding fiscal year, as shown in Railway Statistics of the Dominion of Canada. The working fund shall be maintained by assessments on the above basis against member railways at the end of each quarter, to cover expenses incurred by the association during the quarter.

The fee for associate membership shall be ten dollars per annum.

Each member has the privilege of voting for five candidates for membership on each of the executive, operating, traffic, financial and legal committees. The five persons receiving the highest number of votes cast for membership, shall be declared elected. All such votes shall be by ballot prepared by the General Secretary.

Committee—The composition of the committee was given in Canadian Railway and Marine World for December. Following are the subcommittees:

The Railway Association of Canada.

TRANSPORTATION—H. T. Malcolmson, Superintendent, T., H. & B. Ry.; H. Shearer, General Superintendent, Michigan Central Rd.; C. G. Bowker, General Superintendent, G.T.R.; F. P. Brady, General Manager, Canadian National Rys.; A. Price, General Manager, C.P.R.; W. H. Farrell, General Manager, Algoma Eastern Ry.; W. A. Griffin, Superintendent of Traffic, T. & N.O. Ry.

CAR SERVICE—J. E. Duval, General Superintendent Car Service, G.T.R.; A. Hatton, General Superintendent Car Service, C.P.R.; A. E. Lock, Superintendent Car Service, T. H. & B.R.; J. P. Driscoll, General Superintendent Car Service, Canadian National Rys.; W. S. Moy, Car Accountant, Quebec Central Ry.; W. M. Huggill, Superintendent Car Service, Algoma Central & Hudson Bay Ry.; J. S. Gordon, General Manager, Quebec Oriental Ry.; C. A. Stewart, Manager, Temiscouata Ry.

ROLLING STOCK—W. H. Sample, General Superintendent Motive Power, G.T.R.; W. H. Winterrowd, Chief Mechanical Engineer, C.P.R.; W. U. Appleton, Mechanical Superintendent, Canadian Superintendent, Canadian National Rys.; H. L. Rodgers, Mechanical Engineer, T. & N.O. Ry.; W. T. Kuhn, Superintendent Motive Power, T. H. & B. Ry.; G. M. Robins, Master Mechanic, Quebec Central Ry.; G. E. Parks, Mechanical Engineer, Michigan Central Rd.; T. C. Hudson, General Master Mechanic, Canadian National Rys.

ENGINEERING—F. L. C. Bond, Chief Engineer, G.T.R.; A. F. Stewart, Chief Engineer, Canadian Northern Ry.; J. M. R. Fairbairn, Chief Engineer, C.P.R.; S. B. Clement, Chief Engineer, T. & N.O. Ry.; R. S. McCormick, General Superin-

The Prince of Wales' Tour Over the G.T.R.

When the Prince of Wales was making part of his Canadian tour over the G.T.R. lines in Ontario recently, H. R. Charlton, General Advertising Agent, G. T.R., representing President H. G. Kelley, presented him with a handsome composite picture, composed of a photograph of the then Prince of Wales (the late King Edward VII.) and staff, taken at Montreal in 1860; a photograph of the Duke and Duchess of Cornwall and York (King George V. and Queen Mary), and staff on the Victoria Jubilee Bridge, Montreal, in 1901; views of the old Victoria tubular bridge and the present Victoria Jubilee bridge; a photograph of the locomotive that pulled the royal train in 1860 and the locomotive used on the royal train in 1919. The picture is surrounded with a gold frame and enclosed in a beautiful Canadian birdseye

Canadian Pacific Railway Construction, Betterments, Etc.

West St. John Baggage Shed—We are officially advised that the baggage shed which is being built at West St. John, N.B., is 500 x 60 ft. with a covered baggage loading platform 12 ft. wide on one side and a covered passenger loading platform on the other. Both shed and platform are being built on pile foundations, and will be all timber construction. The shed will be steam heated and electrically lighted. The baggage shed will be reached from the immigration rooms on the upper floor of the present wharf shed by an enclosed overhead passage way over the tracks and an enclosed rampway down to the baggage shed floor level. Work was started Nov. 14, and it is expected to have the shed ready for use by Jan. 15. The plans were prepared under the direction of J. M. R. Fair-

Consul, Sask., easterly; mile 0 to 30; grading, 41% completed.

Leader, Sask., southerly; mile 0 to 25; grading 46% completed.

Acme-Drumheller line, Alta.; mile 0 to 37; grading, 22% completed.

The contractors for the six last mentioned lines are Stewart and Welch, Calgary, Alta.

Corinne Station—The Board of Railway Commissioners has approved plan for station building at Corinne, Sask., mile 120 from North Portal, on the line to Moose Jaw.

Acme-Empress Extension—The Board of Railway Commissioners has authorized the building of a bridge over Kneehill Creek, mile 34.21 on the Acme-Empress extension, Langdon North Branch, Alta.

Calgary Spur Line—A press report states that the Calgary, Alta., City Council proposes to apply to the Board of Railway Commissioners for an order for the electrification of the company's spur line from Twelfth Ave., along Fifth St. East.

Squillax Station—The Board of Railway Commissioners has ordered the placing of a standard portable station at Squillax, B.C., 41 miles east of Kamloops, on the main transcontinental line.

Vancouver Improvements—A press report states that the bunkers, construction tracks and construction material, together with the poles and wires at Twenty-seventh Ave., will be removed early this year. (Dec., 1919, pg. 661).

Regina Spur Lines—A press report states that the Regina, Sask., City Council has authorized the company to build a spur line to the T. Eaton Co.'s warehouse.

Lanigan Northeasterly Branch—The Board of Railway Commissioners has approved the route map of the branch from Lanigan, Sask., northeasterly from mile 26 to 32.

Rosetown Southeasterly Branch—The Board of Railway Commissioners has approved the revised location of the branch from Rosetown, Sask., southeasterly, from Sec. 22, Tp. 24, Range 16, west 3rd Meridian to Sec. 7, Tp. 24, Range 15, West 3rd Meridian, mile 40 to 43.23.

Dunelm-Instow Connection, Etc.—A press report states that a delegation from the Swift Current district interviewed D. C. Coleman, Vice President, Western Lines, Dec. 12, and asked for the construction of a line to connect Dunelm, on the Vanguard branch line, with Instow on the Weyburn-Lethbridge line, and a line from Swift Current through the Vermilion Hills to near Moose Jaw. Consideration of the request was promised.

Accident to Board of Railway Commissioners' Car—The tire of one of the rear wheels of the Board of Railway Commissioners' official car Acadia, attached to the Ocean Limited, leaving Halifax, N.S., on the Canadian National Rys., Dec. 14, came off, and a serious accident was prevented by the brakeman putting on the brake, and stopping the train on a high embankment on the shore of Grand Lake, near Windsor Jct., N.S. Hon. F. B. Carvell, Chief Commissioner; S. J. MacLean, Assistant Chief Commissioner; J. G. Rutherford, Commissioner, and several members of the staff were on board.

The Prince of Wales saying goodbye to his bodyguards on the C.P.R. at Flavell, between Colborne and Grafton, Ont., Nov. 6, 1919.

The Prince is shown talking to Constable C. Rippington. Admiral Sir Lionel Halsey (to the left in civilian clothes) is talking to Constable R. Beresford. Conductor R. Dort is also shown in the illustration.

maple box, upholstered in royal blue with a gold plate on the cover bearing an inscription.

Rear Admiral Sir Lionel Halsey, the Prince's chief of staff, wrote President Kelley as follows:—"I am writing to you on behalf of the Prince to say how much he appreciates the magnificent present, consisting of the composite picture which has been presented to him by the Grand Trunk authorities through Mr. Charlton. His Royal Highness very much appreciates this gift and he will keep it as a souvenir of a very pleasant time spent on the G.T.R. System."

Sir Lionel Halsey, also wrote Mr. Kelley as follows:—"I am most grateful to you for the kind present of the descriptive itinerary which has been made to me. The book is most beautifully got up, and besides being a work of art is most useful, and I can only say that from a staff point of view it has saved some of us an endless amount of work in ferretting out for ourselves details of the various places we visit. Whoever compiled it is, in my opinion, worthy of a very good mark. His Royal Highness desires me to thank you very much for the copy of the book which has been handed to him by Mr. Charlton."

bairn, Chief Engineer, Montreal.

Fredericton Station—A press report states that the C.P.R. proposes to build a new station at Fredericton, N.B., and that the plans provide for a brick and stone building at an estimated cost of \$50,000.

Campbellford, Lake Ontario and Western Ry.—The Board of Railway Commissioners has approved of revised location for this railway in Cobourg, Ont., from the west side of Division St., to the east side of Ontario St., mile 119.69 to 120.18.

Western Branch Lines Construction—We are officially advised that grading was done on eight branch lines or extensions during 1919 as follows:—

Russell, Man., northerly, mile 0 to 12; grading 23% completed; Northern Construction Co., Winnipeg, contractors.

Rosetown, Sask., southeasterly, mile 20.2 to 45.2; grading 56% completed; Canadian Construction Co., Winnipeg, contractors.

Lanigan, Sask., northeasterly, mile 0 to 50; grading 5% completed.

Wynmark, Sask., easterly; mile 0 to 25; grading 27% completed.

Milden, Sask., easterly; mile 0 to 34; grading 15% completed.

Mainly About Railway People Throughout Canada.

M. J. Hannon, a former roadmaster on the Michigan Central Rd., Windsor St. Thomas Division, died at Detroit, Mich., Dec. 17. He retired from active service in 1899.

Stephen Pearson Brown, Vice President Lord Mount and Hayes, Engineers, New York, was drowned in Silver Lake, Mass., Dec. 2. He was born at Dover, Me., Apr. 28, 1841, and graduated from the Massachusetts Institute of Technology, Boston, in 1860, upon which he entered, as a junior member, the firm of Collier and Brown, consulting engineers, Andover, Mass. He was, from 1904 to 1905, on the Bridgeport elevation and station construction, New York, New Haven and Hartford Ry., and in 1905 entered the United Engineering and Contracting Co.'s service, first on the Port Morris depression works, New York Central Ry., then on the St. Marys Park tunnel, and later as consulting engineer in the study of public utilities, San Juan, Porto Rico. Following this he was Chief Assistant Engineer, same company, on the cross town tunnels of the Pennsylvania Rd. in New York, where he had direct charge of all concrete and construction work, taking general charge later of all work west of Fifth Ave. In 1908-09 he was, in addition to being Chief Assistant Engineer, United Engineering and Contracting Co., designing engineer, Cuban Engineering and Contracting Co., and spent the summers of both years in Europe investigating European tunnel methods and studying hydro electric construction. From 1909 to 1912 he was Chief Engineer, Tidewater Building Co., and T. B. Bryson, on sec. 11-A-3 of the Fourth Ave., Rapid Transit subway, Brooklyn, N.Y. In Apr., 1912, he was appointed Chief Engineer, Montreal Tunnel and Terminal Co., and Managing Engineer, Montreal tunnel and terminal construction, Mackenzie, Mann and Co., Ltd. On the completion of this work in 1917, he returned to the U.S., where he offered his services in any war capacity, and was attached to the Engineering Department, for home service. On the signing of the armistice, he was appointed Vice President, Ford Bacon and Davis, engineers, New York, which position he held at the time of his death.

Lady Bury, wife of Sir George Bury, returned to Montreal, from Vancouver, early in December, to remain for about a month, after which she will return to Vancouver to spend the winter. Lady Bury, shortly after her arrival in Montreal, entertained at luncheon at Mount Royal Club, Montreal, in honor of Mrs. J. W. Stewart, of Vancouver, wife of Brig.-Gen. J. W. Stewart, railway contractor.

Sir George Bury, Vice President, Whalen Pulp & Paper Co., and formerly Vice President of C.P.R., returned to Vancouver, Dec. 16, from a business trip to Japan.

D. C. Coleman, Vice President, Western Lines, C.P.R., Winnipeg, was a guest at the 75th annual dinner of the St. Andrew's Society at Chicago, Ill., recently.

R. Creelman, Assistant Passenger Traffic Manager, Canadian National Rys., Winnipeg, was entertained to luncheon there, Dec. 24, 1919, by the local staff. Osborne Scott, General Passenger Agent, Western Lines, presided.

M. C. Dickson, formerly District Pas-

senger Agent, G.T.R., Toronto, was reported recently to be seriously ill at his home at Hamilton, Ont.

Capt. Charles P. Disney, who has been appointed acting Bridge Engineer, Eastern Lines, Canadian Northern Ry., Toronto, took a course at the Institute of Technology, Boston, Mass., and from 1902 to 1905, was with the Dominion Bridge Co., Montreal; 1905, with Structural Steel Co., Montreal; 1905 to 1914, Bridge Department, National Transcontinental Ry.; 1914 to 1915, Bridge Department, Intercolonial Ry., Moncton, N.B. From 1915 to 1919, he was on military service, and was for 18 months a sapper with the Canadian Engineers, and three years lieutenant and captain in the Royal Engineers, his service in France being continuous for four years.

Samuel Dowley, at one time an employee of the St. Lawrence and Ottawa Ry., prior to its acquisition by the C.P.R.,

Lord Mount Stephen.

First President, C.P.R. Co., 1881 to 1888. This marble bust, by Major Lumsden, for which sitting was given in London in 1918, was the original study, from which the large bronze statue in the general waiting room, C.P.R., Windsor St. station, Montreal, was modelled.

died at Prescott, Ont., Dec. 4, aged 80. He was master mechanic of the line and for a time had charge of the shops at Prescott. He was an uncle of Hon. J. D. Reid, Minister of Railways and Canals.

Sir John Craig Eaton, who has been elected a director of the Canadian Pacific Ry. Co., in place of the late W. D. Matthews, was born at Toronto, Nov. 9, 1875, and educated at the Model School, there. He commenced business life under his father, and subsequently became Vice President, and on his father's death in 1907, President of the T. Eaton Co. He was, at one time, President, Hamilton Steamboat Co., and Turbine Steamship Co., and is a director of the Dominion Bank, Sterling Bank, a member of the board of management of Victoria University, a governor of the Toronto General Hospital, and associated with numerous charitable organizations. He was created a knight bachelor in 1915.

D. E. Galloway, Assistant to President G.T.R., Montreal, has been decorated with the King Albert Medal for services in connection with Belgian relief work.

D. B. Hanna, President, Canadian Na-

tional Rys., spoke before the Hamilton Board of Trade, Hamilton, Ont., Dec. 4; the Dominion Commercial Travellers' Association, at Montreal, Dec. 22; and the Canadian Club, at London, Ont., Dec. 29.

Major C. S. L. Hertzberg, M.C., son of A. L. Hertzberg, Engineer, Ontario District, C.P.R., Toronto, and at one time in C.P.R. service, was relieved of his military duties recently, after four years service, and has taken up private practice with Major T. R. Loudon, as consulting engineers, Toronto. He was born at Toronto, June 12, 1886, and educated in the public schools, St. Andrew's College, and School of Practical Science, Toronto University, graduating in 1905. He spent summer vacations on C.P.R. location, and joined the staff in 1906, as transitman on maintenance. He subsequently was in the Trussed Concrete Steel Co.'s and Concrete Engineering Co.'s service at Toronto; and for a short time in 1908 was on electric railway maintenance with the Dominion Power and Transmission Co., Hamilton, Ont. In 1909 he was appointed Chief Engineer, of the Trussed Steel Concrete Co., Walkerville, Ont., and in 1911 was appointed Manager, Bishop Construction Co., Toronto. He commenced private practice as consulting engineer, as partner in James, Loudon and Hertzberg in 1912, and enlisted for active service in Dec., 1915, going overseas Jan. 1, 1916, as lieutenant, 7th Field Co., Canadian Engineers. He went to France in Apr., 1916, was awarded the Military Cross, Dec. 5, 1916, for work on the Somme and was wounded in Jan., 1917, and invalided to Canada in July, 1917. He afterwards served as adjutant at Spadina Military Hospital, Toronto, and was promoted captain and officer commanding Casualty Co. In July, 1918, he was transferred to No. 2 Service Company, and in Sept., 1918, to No. 16 Field Company, Canadian Engineers, as second in command and sailed from Vancouver, B.C., for Siberia with that company, Oct. 11, 1918, this being the only engineering unit with that force. During service in Siberia the company was engaged chiefly on water supply, building and repairing barracks, roads, etc. He returned to Canada in June, 1919.

W. P. Hinton, Vice President and General Manager, Grand Trunk Pacific Ry. Co., and Manager for the Receiver, has been elected a director of the company.

Sir John Jackson, C.V.O., one of the largest public works contractors, and head of Sir John Jackson Ltd., and Sir John Jackson (Canada) Ltd., died at London, Eng., Dec. 15, aged 68. Amongst some of the large works which he has carried out, are: a section of the Manchester, Eng., Ship Canal; foundations of the Tower Bridge, London, Eng.; Dover harbor, Admiralty docks at Keyham, Devonport; Admiralty harbor, St. Simons Bay, South Africa; the railway across the Andes from Arica to La Paz, South America and the great barrage across the Euphrates River, near Babylon. His company is now engaged on the Singapore harbor, irrigation works in Mesopotamia, harbor works at Victoria, B.C., etc. He was father-in-law of Col. C. W. P. Ramsey, C.M.G., formerly Engineer of Construction, Eastern Lines, C.P.R., and now in that company's operating department.

Howard G. Kelley, President, G.T.R., and Mrs. Kelley, left Montreal at the end of November, to spend December in the Bahamas.

Dr. B. Knight, who died at London Ont., Dec. 17, from a heart attack, was formerly in C.P.R. service there, in the dispatcher's office.

C. W. McHarg, station ticket agent Toronto, Hamilton and Buffalo Ry., Hamilton, Ont., has resigned from the service to enter the Firestone Tire and Rubber Co.'s service there. On behalf of the staff, he was presented with a smoking stand, Dec. 22, by G. C. Martin, General Traffic Manager.

W. D. Matthews, grain merchant, a C.P.R., director who died at Toronto, May 24, 1919, left an estate valued at \$2,291,000.

R. F. Morkill, who resigned his position as Signal Engineer, G.T.R., recently, has been appointed Continental Representative of Tyre & Co., Ltd., electrical, mechanical, railway signal and interlocking engineers, Dalston, Eng., who are about to establish a factory in France.

F. H. Phippen, K.C., left Toronto early in December, to spend some weeks in England.

H. T. Rawlings, Lake Forwarding Agent, Canadian National Rys., Cleveland, Ohio, left at the end of December, with his family, for a visit to England, expecting to return in February.

Hon. J. D. Reid, Minister of Railways and Canals, who was absent from his office at Ottawa for about two weeks, on account of ill health, returned to his duties Dec. 10.

R. A. Ross, E.E., consulting engineer, and a member of the Montreal City Administrative Committee, will be President of the Engineering Institute of Canada, for 1920.

W. A. B. Russell, Commercial Agent Grand Trunk Pacific Ry., Regina, Sask., was married at Winnipeg, Dec. 13, to Miss A. Coughlan. Prior to his appointment at Regina, Sask., he was chief clerk to Vice President and General Manager, Winnipeg. On the eve of his marriage he was presented with a cabinet of community silver, by the Winnipeg staff.

Lord Shaughnessy, Chairman, C.P.R. Co., is among those who are applying to the Quebec Legislature for the incorporation of the St. Mary's Memorial Hospital, Montreal.

Sir Alfred W. Smithers, Chairman G.T.R. Co., arrived in England, Dec. 9, after a visit to Canada, where he completed the negotiations relative to the acquisition of the G.T.R. by the Dominion.

Sir Thos. Tait, Montreal, President, Fredericton & Grand Lake Coal & Ry. Co. is a director of Pacific Coast Collieries Ltd., which controls 9,000 acres of coal lands and leases on Vancouver Island, and which recently offered for subscription, \$200,000 of first mortgage bonds.

E. N. Todd, General Foreign Freight Agent, C.P.R., Montreal, has been decorated with the King Albert Medal for his services in connection with Belgian relief work.

Guy Tombs, until recently Assistant Freight Traffic Manager, Canadian National Rys., Montreal, and now Traffic Manager, Canadian Export Paper Co. Ltd., has been made a Chevalier of the Order of Leopold II. of Belgium for his work in connection with Belgian relief.

The Farmers' Policy on the National Railways.

Hon. T. A. Crerar, M.P. for Marquette, Man., and ex-Dominion Minister of Agriculture, is reported to have said in speaking at the United Farmers of Ontario's annual meeting in Toronto, Dec. 18, that the farmers' policy in Dominion affairs, stands for public ownership in the widest sense. Canada has public ownership of railways, not from choice, but by virtue of necessity. If the Canadian National Rys. should be brought down to a proper basis of valuation, they would prove a valuable asset to the Dominion. In this regard he instanced the case of a stretch of some 250 or 300 miles in length in Western Canada whereon lie the rails of two nationally owned systems. These bits of line run through a section that involved a tremendous cost of construction and

railway. That provision should be made for the election as directors of a number of employes and superintendents of the railway, from among their number, by themselves, and that in the appointment of the remainder of the directors care should be taken to see that the chief sections of the country served by the railway are represented on the directorate."

Canadian National Railways Earnings.

	1919	1918
January	\$ 5,741,018	\$ 4,696,567
February	6,000,342	4,421,584
March	6,827,191	5,710,660
April	6,909,632	7,165,980
May	7,515,244	6,580,745

Deficit. Decrease.

Approximate earnings for Nov., 1919, \$6,092,603, against \$6,169,272 for Nov., 1918.

European Rolling Stock Building—A

recent London, Eng., cable states that Premier Lloyd George stated after a visit to Woolwich Arsenal that it would probably be developed as a railway center in order to meet the world shortage in locomotives. In this connection it is of interest to notice that the Krupp works, at Essen, Germany, turned out its first locomotive, Dec. 6. The Prussian state railways are reported to have undertaken to take 108 locomotives and 2,000 cars a year from the Krupp works, which is reported to have 3,500 engaged in rolling stock construction.

The late Sir William C. Van Horne, K.C.M.G.

Second President, C.P.R. Co., 1888 to 1899. From bronze bust by Major Lessore. Sir William sat for this bust, at his summer place, Cowanboven, St. Andrews, N.B., in 1913. It is now in Lady Van Horne's house in Montreal.

maintenance, probably the most expensive in the Dominion. There are at present on every mile outstanding securities to the value of \$90,000, on which the interest has to be paid and the securities eventually retired. He added: "Much of the line was lifted during the war, now on one railway, now on another, and I venture to predict that the rails will not be laid on that bit of line in the next 50 years. We must set our faces determinedly against political influence in the operation of these roads. It can be done, and how it can be done depends upon the attitude of our governments and upon the attitude of the people."

The following resolution was adopted without discussion:—"That the present method of the appointment of all the directors of the Canadian National Rys. by the Dominion Government is not in accordance with democratic principles, and not in the best interests of the people's

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Bagotville Ry. Co.—The Quebec Legislature is being asked to incorporate a company with title to build a railway from near Nanticoke Falls on the Quebec and Saguenay Ry. southwesterly to Bagotville. The provisional directors named on application are: J. L. Macdonald, W. Morrison, H. Fitzsimons, C. Watt, R. Miles. (Ottawa, Ont.).

Burrard Inlet Tunnel and Bridge Co.—The Dominion Parliament is being asked to extend the time for the commencement and completion of the railway, bridge and tunnel across the company is authorized to build. The company was incorporated in 1910 to build a tunnel under the First Narrows of Burrard Inlet, Vancouver, and a bridge over the Second Narrows of Burrard Inlet, for foot passengers, carriages, street railway and railway purposes, with approaches from some points on the south shore in or near Vancouver to points on the opposite shore of Burrard Inlet, so as not to interfere with navigation, and to connect the tunnel and bridge, or either, with the railways entering Vancouver to construct one or more lines not exceeding 10 miles long, a railway from the northern end of the bridge and tunnel, or either of them easterly along the shore line of North Vancouver District Municipality, to Deep Cove on the north arm of Burrard Inlet, and westerly from the north ends of the bridge and tunnel, or either of them along the shore line of the City of North Vancouver, to the Horse Shoe Bay on Howe Sound.

The company's stock is owned by the Cities of Vancouver, North Vancouver, and other local municipalities. Some years ago plans were completed for building the bridge, and some preparatory work in the way of boring for foundations was done. The war put a stop to the project, and it has since been an abeyance. In 1918 the company obtained an extension of time for two years for carrying out its project so as to keep the project alive, and give the municipalities interested an opportunity of realizing on the company's assets. (July, 1918, pg. 285).

Canadian Niagara Bridge Co.—A Bridgeburg, Ont., report stated that it was announced, Nov. 30, that the Toronto, Hamilton and Buffalo Ry. would undertake the building of an approach line from Welland for the proposed new bridge across the Niagara River at Black Creek, 6 miles from Bridgeburg, Ont. A further report stated, Dec. 5, that representatives of the C.N.B.C. has arrived at Black Creek and North Tonawanda, N.Y., and that a gang of men with drilling machinery were expected to arrive some days later to begin testing for the foundations of the shore abutments of the bridge. The latter report also stated that it was expected a start would be made on building the bridge during the summer.

The project is often described as a Canadian Pacific Ry. one, but we are officially advised that the work will be handled either by the Toronto, Hamilton and Buffalo Ry. or by the Michigan Central Rd., and more probably by the latter company, though the C.P.R. is, no doubt, interested in it. (Dec., 1919, pg. 654).

Esquimalt and Nanaimo Ry.—The contract let to the Foundation Co. of British Columbia, Limited, Vancouver,

covers the clearing of the right of way and the grading and bridging work on the branch from near Alberni to the Great Central Lake, about 10.5 miles. The track laying will probably be done by the E. and N.R. Co. in accordance with the universal practice on C.P.R. lines.

The Victoria, B.C., City Council has approved of the revised agreement with the company respecting the erection of a new bridge at Johnson St., which has been the subject of considerable negotiation for some years past. The agreement was forwarded to the British Columbia Government for approval, and when it has been finally accepted by the company, it will be submitted to the ratepayers for ratification. It is expected that this will be done early this year. (Dec., 1919, pg. 654).

Grand Trunk Ry.—The Board of Railway Commissioners has ordered the company to build a passenger shelter, and platform with shelter at the E. Clark section house, near Frome, Ont. (Dec., 1919, pg. 654).

Grand Trunk Pacific Ry.—The Board of Railway Commissioners has ordered the company to provide a stockyard at Heath, Alta., forthwith. A press report states that the territory between Edmononton and Tofteld, Alta., is rapidly filling up, and is becoming a large stock producing area. Heath, mentioned above, is about 150 miles east of Tofteld, and will probably be a center of trade for the eastern part of the area named. (Dec. 1919, pg. 654).

Kettle Valley Ry.—The Board of Railway Commissioners has approved a route map of the company's projected railway from Penticton, B.C., southerly to the International boundary, on the east side of Osoyoos Lake. The board has also approved the location plan of a line from mile 1.62 to mile 3.99 from Penticton Wharf, B.C.

We are advised that the British Columbia Government has requested the company to consider an extension of its railway south from Penticton, B.C., and that the matter is receiving the company's consideration. (Dec., 1919, pg. 654).

Lacombe and North Western Ry.—We are officially advised that that the laying of track into Rimby, Alta., was completed by the Alberta Government's Railway Department, Nov. 25, 1919. A number of residents of Bentley, heretofore the northern terminus of the line, made a trip over the line to Rimby, Nov. 25, and joined the residents there in celebrating its completion. The line is being operated into Rimby by the construction staff, a train being run in each direction three days a week.

W. Thompson, who has done a good deal of grading on the line, is reported to have said in Edmonton, Dec. 2, that the 20 mile extension, now completed, runs through one of the best farming districts in Alberta. The line now extends from Lacombe to Rimby, 36.5 miles, of which about 20 miles from Lacombe to Bentley were built about three years ago. The Alberta Government took over the line, and in the spring, 1919, called for tenders for its completion. (Dec., 1919, pg. 654).

Lievre Valley Power, Traction and Manufacturing Co.—The Quebec Legis-

lature is being asked to amend the company's charter powers by authorizing it to build a narrow gauge railway, and for other purposes. The Buckingham Electric Ry., Light and Power Co. was incorporated by the Quebec Legislature with various powers in 1895. In 1905, the legislature changed the name of the company to the Lievre Valley Power, Traction and Manufacturing Co., its powers as to railway construction being as follows, to build a single or double track railway from the City of Hull, or from a point in Hull Tp. to the mouth of the Lievre River in Buckingham Tp., Parish of L'Ange Gardien, through Buckingham, and along the Lievre River Valley to the National Transcontinental Ry. Power was given to operate the projected railway by electricity, steam or other motive power, and to generate and distribute electric power.

Normandin Farmers Railway Co.—The Quebec Legislature is being asked to incorporate a company with this title to build a railway across or near Roberval, Ashuapmouchouan, Dumeau, Dufferin, Normandin, Girard, Albanel, Racine and Dolbeau Tps., as far as Peribonka and thence southeast to the Saguenay River at deep water, at or near Saint Fulgence. The provisional directors are:—C. Lagamier, A. Villeneuve, B. Fraser, J. S. Turcotte, Normandin, Que.

Pacific Great Eastern Ry.—We are officially advised that the British Columbia Government engaged Major C. Ewart in June, 1919, to make a survey for a route for railway between Clinton and Ashcroft to connect the Pacific Great Eastern Ry. with the Canadian Northern Ry. Major Ewart left subsequently to join the C.N.R. engineering staff on the Kamloops-Kelowna line, and was succeeded by R. Brunton, who has completed the survey for the suggested line, securing a route of approximately 42 miles. Beyond the making of the survey, nothing has been done in regard to construction. (Dec., 1919, pg. 654).

The Quebec Central Ry. has under survey an extension of its line from Scotts, Que., to a connection with the Canadian National Ry., 2.5 miles east of St. Isidore, Que., 8.11 miles.

Quebec Colonization Ry.—The Quebec Legislature is being asked to incorporate a company with this title to construct a railway from Mont Laurier, Labelle County, southwesterly to the C.P.R. near Maniwaki, and running through Campbell, Kiawika, Dudley, Pope, Robertson, Boutillier, Kensington, Cameron, Wabasse, Amund, Egan, Maniwaki and Bouclille Tps., or any of them, or through unorganized territory; then from Maniwaki westerly in the direction of Lake Expansé and Lac des Quinze to the C.P.R., near Timiskaming, then southeasterly through Tabaret, Mercier and Gendreau Tps.; also to build a railway from the Coulonge River, in Pontiac County, northerly to near Nottaway on the National Transcontinental Ry., thence northerly to the Bell River north of Lake Shabogama; with connecting lines and branches. The lines to be operated by steam or electricity. Dessaulles, Garneau, Desy and Lorrain, Montreal, are attorneys for applicants.

Quebec Eastern Ry.—The Quebec Legislature is being asked to amend the company's charter by extending the time for building following projected lines to

Oct., 1925: From Sherbrooke to the Quebec Bridge; from some point on the main line to Lyster, a branch from Lime Ridge and other branch lines to connect with existing lines not exceeding 15 miles long. The company was also authorized to acquire Lotbiniere and Megantic Ry. running from Lyster to St. Jean des Chailons.

The act respecting the Quebec and Saguenay Ry. passed in 1912, provided as follows:—"The Quebec and Saguenay Ry. Co. is hereby authorized to amalgamate with, absorb and acquire, the Lotbiniere and Megantic Ry., and Quebec Eastern Ry., or either or both of said roads," etc. The present application to the legislation asks for a modification, on the suppression, of this section of the act.

Roberval-Saguenay Ry.—The Quebec Legislature is being asked to amend the company's charter of incorporation by giving it the power to build and operate by steam and electricity, or either of them, a branch line to connect any

mitting the building of branches, and by extending the time fixed for construction. The statute referred to authorized the company to build a railway from Grenville, westerly to Montebello, thence northerly along the Salmon River Valley to the west side of Lake Papineau thence northerly on the east side of the Nation River and Lake Nomining to the Rouge River Valley, and along that to the National Transcontinental Ry. Authority was also given to build branch lines, and to develop water powers at points touched by the railway. The provisional directors named in the act are: J. S. Fassett, Elmira, N.Y.; G. W. Thayer, Rochester, N.Y.; C. Adsett, Hornersville, N.Y.; W. L. Haskell, Ulysses, Pa., and Westmount, Que.; F. W. Hibbard, Westmount, Que.; and Jas. Walker, Montreal.

Sarnia, Ont.—A press report states that the building of a spur line at an estimated cost of \$37,500 is being considered by Lambton, Ont., County Council. There is a report that a steel plant is to be built near Sarnia, and this pro-

Railway Rolling Stock Orders and Deliveries.

Imperial Oil Ltd. has ordered 275 tank cars, and 25 compartment tank cars from Canadian Car and Foundry Co.

Algoma Steel Corporation has ordered 2 standard gauge car trucks, 40 tons capacity, from Canadian Car and Foundry Co.

The C.P.R., between Nov. 15 and Dec. 15, ordered a single track steel snow plough, and a double track steel snow plough, from its Angus shops, Montreal, and bought a 150 ton wrecking crane.

The C.P.R., between Nov. 15 and Dec. 15, received the following rolling stock from its Angus shops, Montreal,—10 steel tourist cars, 2 freight refrigerator cars, 1 all steel grain car, and 2 Santa Fe type locomotives.

Canadian Car and Foundry Co., between Nov. 11 and Dec. 13, made the following deliveries of rolling stock,—399 repaired box cars and 283 repaired hop-

Six Wheel (0-6-0) Switching Locomotive Canadian National Railways.

point on its actually constructed railway in Chicoutimi County with the Quebec and Saguenay Ry. at La Malbie, Que. It is also asked that the time for building this previously authorized lines shall be extended to Mar., 1922, provided that they be completed by Mar., 1925. The lines in question are from Roberval round Lake St. John to the Peribonka River and thence southerly to Jonquières; branch lines from the Ha Ha Bay Ry., and a line to the Maurice River.

The company, we are advised, has under consideration a project for the building of a line from Ha Ha Bay Jct. to Mistassini, Que., 64 miles. (Nov., 1918, pg. 488).

St. John and Quebec Ry.—We are officially advised that the entire track on the extension from Gagetown to the connection with the C.P.R. at Westfield, N.B., was laid during 1918, and that during 1919 ballasting and other finishing up work was carried out. There still remain some small works to be completed, but this is not interfering with the operation of the line. The section was taken over Oct. 1, 1919, for operation by the Canadian National Rys., which is also operating the previously completed section between Gagetown and Centerville, N.B. (Dec., 1919, pg. 655).

Salmon River and Northern Ry.—The Quebec Legislature is being asked to amend the statutes of 1905, chap. 59, by authorizing a change in the location of the main line then authorized, by per-

posal probably is for the purpose of connecting the site of the projected plant with the railways at Sarnia.

Toronto, Hamilton and Buffalo Ry.—In connection with a switch connecting the Toronto, Hamilton and Buffalo Ry. into the Canadian Westinghouse Co.'s plant at Hamilton, Ont., the Board of Railway Commissioners recently ordered the city to pay the cost of guarding the crossing of Aberdeen St. The city board of works and the board of control are reported to have decided to appeal against the order on the ground that the cost should be borne by the concerns benefitting. (Sept. 1919, pg. 491).

Toronto New Union Station.—Mayor Church of Toronto, who is a candidate for re-election, said at the nomination meeting, Dec. 23:—"The union station will be finished next year. The railway will buy the right of way from Cherry St. to Scott St. So far as the viaduct is concerned, I can only say that the city will stand out for the fulfillment of every clause of the agreement."

British Railway Management.—A London, Eng., cable of Dec. 8, states Sir Eric Geddes, Minister of Transportation, announced recently that the railway executive controlling the British railways would cease, Jan. 1, 1920, and would be replaced by an advisory board, consisting of 12 general managers, and 4 representatives of employees.

per cars, to G.T.R.; 86 repaired box cars to Grand Trunk Pacific Ry., and 11 tourist cars, to Canadian National Rys.

The Canadian National Rys. will be in the market in the near future for a large amount of rolling stock. While no appropriations have yet been made, Canadian Railway and Marine World understands that tenders will be invited shortly, involving an expenditure of approximately \$23,000,000, made up as follows: Locomotives, \$4,000,000; freight cars, \$16,000,000; passenger cars, \$3,000,000.

The Canadian National Rys. 6 flangers, being built by Preston Car and Coach Co., as mentioned in our last issue, will be of wood, with metal draft arms, similar to a 30 ton wooden box car, with 8 longitudinal sills 5 x 9 in., simplex 30 ton trucks, McCord journal boxes, and with cupola in the roof, with air operating mechanism in cupola for operating the flanger. The chief dimensions are,—

Length over end sills.....	36 ft.
Width over side sills.....	8 ft. 11 ins.
Width inside.....	8 ft. 2 in.
Height from rail to top of cupola.....	15 ft.
Center to center of body bolster.....	21 ft. 4½ in.
Height, top of rail to center of drawbar.....	2 ft. 10½ in.

The Canadian National Rys. 6 steel snow ploughs, ordered from Canadian Car and Foundry Co., as mentioned in our last issue, are of the all steel type, with drop nose and wing, and are operated by air. Ice cutters are provided on the front truck, also air operated. The

Canadian National Railways Construction, Betterments, Etc.

Sydney Terminal Facilities—A press report states that Mr. Gregory, of the Dominion Government's engineering staff has been in Sydney, N.S., taking some soundings near the old government wharf, and running some levels in the vicinity of Victoria Park, in connection with some projected improvements of the railway and shipping terminal facilities. The report states that the government has all the necessary data on hand for the construction of the terminals, and it is expected that tenders will be called for shortly for the work to be done. The government is said to have provided \$100,000 in the estimates for the erection of a new wharf to replace the old one destroyed by fire some years ago. The construction of railway facilities with the report states, involve an additional expenditure of \$500,000.

St. John Improvements—A. P. Barnhill, one of the C.P.R. directors on returning to St. John, N.B., Dec. 5, after attending a meeting of the board in Toronto, is reported to have said: "The important matter now for St. John is not so much the railway service as terminal facilities for ocean business. The railway service is here but we still lack facilities adequate for the ocean business which must soon come here. In answer to my representations that St. John is entitled to consideration in the allotment of steamships equal to that given to any other port, the fear has been expressed that there will be congestion at this port, that is, that the facilities are not adequate for the steamships which are scheduled to arrive here. While I am assured by the harbor master and by others having knowledge of our facilities that these are adequate for the present year, yet it is apparent that they must be greatly increased at once to take care of the business of the immediate future."

West River, Lachute Bridge—The Board of Railway Commissioners has authorized the rebuilding of the railway bridge across the West River, Lachute, Que.

Brockville Terminal Facilities—The old Brockville, Westport and Northern Ry., now a part of the Canadian National Ry., had its southerly terminus at Brockville, Ont., with terminal yards, etc. Now that the G.T.R. is about to be taken over by the Dominion Government, an arrangement is reported to have been concluded under which the G.T.R. terminal facilities will be utilized for both lines. It is also reported that a new station may be built and the terminal facilities enlarged.

Whitefish River Bridges—The Board of Railway Commissioners has authorized the building of bridges over the Whitefish River, at miles 18.9, 20.3 and 21.6, North Lake Subdivision, Ont.

Oakland Extension—The Board of Railway Commissioners has authorized the building of the extension of the Oakland line across 23 highways in Manitoba.

Amaranth Extension—The Board of Railway Commissioners has approved location plans for the Amaranth, Man., extension, through Tps. 21 and 22, range 11 and 12, west principal meridian, mile 59.49 to 69.73, and has authorized the building of the line across highways between those points.

Kamsack Station—The Board of Railway Commissioners has ordered the completion of additions and alterations to Kamsack, Sask., station by May 15.

Oliver-St. Paul de Metis Branch—A press report states that track has been laid to the north end of Cache Lake, mile 98.5 from Oliver, in Sec. 31, Tp. 59, Range 12, west of 4th meridian, Alta. From this point to St. Paul de Metis, 21 miles, grading is reported to be practically completed, but owing to shortage of rolling stock, the track will not be laid at present. Ballasting is reported to have been completed from mile 38.9 to 98.5. A station has been built at Railway Centre, mile 43. A station and stock pens have been built at Sinoky, mile 65, and a freight shed and stock pens at Cache Lake.

Peace River Branch—Track lying was reported to be in progress on the extension of the line from Sanguo, Alta., in the direction of Peace River, early in Dec., 1919. The line has been in operation for some years between Peace River Jct., 36 miles westerly of Edmonton, to Sanguo, 31 miles, and grading was completed in 1913 to Whitecourt. This grading was repaired during the summer of 1919. Material for laying 15 miles of track was reported to be on the right of way at the end of Nov., 1919, and it was expected that rails for an additional 18 miles would be secured from Ranfurly, Alta., on the main line, where 60 lb. rails have been replaced by 85 lb. rails.

Kamloops - Vernon - Kelowna - Lumby Branch—The route map of this branch shows a line from Kamloops Jct., on the north side of the Thompson River, entering Kamloops by a bridge over the river and proceeding along the south bank for several miles, then turning south and east, passing by Monte Lake and reaching Armstrong, then almost directly south to Vernon, and passing by the west side of Long Lake, and the east side of Woods Lake, reaching Kelowna, on Okanagan Lake. From Lumby Jct., just south of Vernon, a branch runs easterly to Lumby.

The Board of Railway Commissioners has approved the location of the following sections of the branch: Mile 14.23 to 32.96 to 56 east of Kamloops Jct.; mile 66 to 88.22 east of Kamloops Jct. From Lumby Jct. to Lumby, mile 0 to 14.23; from Lumby Jct., north to Vernon, 1.29 miles, and from Lumby Jct., south to Kelowna, 33.26 miles. These approvals cover the entire line with the exception of a section between Kamloops and mile 14.23, east of Kamloops Jct., and between mile 88.22 (near Armstrong) and Vernon. The management's desire is said to be to link up its line with and to obtain running rights over the C.P.R. between the points named. (Dec., 1919, pg. 658).

Flin Flon Mine and Projected Railway—A Winnipeg, Man., report, Dec. 18, states that nothing further has been done in connection with the proposed sale of the Flin Flon mine near Pas, Man., to Hayden Stone & Co., of Boston. Hon. E. Brown, Treasurer of Manitoba, stated that the present financial situation is responsible for the delay in the sale, but added that a sale would be made in the future though not necessarily to Hayden Stone & Co.

Arrangements for Acquisition of G.T.R. by Dominion Government.

A meeting of G.T.R. shareholders will be held in London, Eng., in the middle of January, to ratify the agreement between the company and the Dominion Government, for the acquisition of the G.T.R. system. In referring to this, the London Times says that, while nobody will pretend that the government has been generous, the terms are better than at one time seemed probable, so on the whole the arrangement must be regarded as satisfactory, and that it renders safe something like \$70,000,000 to \$80,000,000 of British capital invested in Canadian railways.

It is said that in the arbitration proceedings between the Dominion Government and the G.T.R., in respect to the acquisition of the G.T.R. system, the G.T.R. will be represented by W. H. Biggar, K.C., Vice President and General Counsel; F. H. Phippen, K.C., Toronto; A. W. Atwater, K.C., Montreal; and Eugene Lafleur, K.C., Montreal.

The Timiskaming and Northern Ontario Railway's Future.

In the course of a recent trip to Cobalt and other points in Northern Ontario, Hon. E. C. Drury, Premier of Ontario, received several delegations who presented for his consideration matters connected with the future of the Timiskaming and Northern Ontario Ry. In reply to what was suggested he is reported to have intimated at Cobalt, Dec. 8, that the Ontario Government might suggest the acquisition of the T. and N.O.R. by the Dominion Government. The T. and N.O.R., running from North Bay to Cochrane, connects the Grand Trunk lines in old Ontario, which are to be acquired by the Dominion, with the National Transcontinental Ry., which the Dominion now has. The Canadian National Railways system now has running rights over the T. and N.O.R. The Ontario Government railway might be considered a useful addition to the national system if it could be acquired on satisfactory terms.

An Ottawa dispatch of Dec. 9, stated that the Ontario Premier's suggestion did not occasion any surprise in government circles there, and that the opinion was that such a proposition would be favorably received.

Curtailment of Canadian Train Service—In connection with the coal shortage in the United States, which affected the supplies for Canada, and the general curtailment of the train service south of the border, a very general withdrawal of trains was put in effect by Canadian lines Dec. 1, and on subsequent days up to Dec. 10. The last and most important train to be affected was the C.P.R. fast train, Trans-Canada Limited, which was taken off Dec. 31. The trains affected were mostly local ones although some having U.S. connections were cut off to suit the curtailments south of the border line. The G.T.R. is reported to have had about 90 trains, and the C.P.R. 35 trains cut off. For the convenience of Christmas traffic, most of the trains cut off were operated temporarily on Dec. 24, 25 and 26. With the settlement of the strike in the United States, the possibilities of the restoration of all the services is looked for, but it is reported that it will take at least two months to clear up the situation created.

Transportation Appointments Throughout Canada.

The following appointments have been made by the Canadian National Ry. Co. and the Canadian Pacific Ry. Co. for the month of January, 1920:

Canadian National Ry. Co.—J. W. BROWN, formerly Chief Engineer, Montreal and Ottawa Divisions, has been appointed Chief Engineer, Montreal and Ottawa Divisions, for the month of January, 1920.

T. CARROLL has been appointed Supervisor of Work Equipment, with jurisdiction south of the St. Lawrence River. Headquarters, Moncton, N.B.

C. P. DISNEY, formerly in the Bridge Department, Intercolonial Ry., Moncton, N.B., and more recently in military service overseas, has been appointed Acting Bridge Engineer, Eastern Lines, Canadian Northern Ry., vice W. P. Chapman, who has been granted leave of absence, at the expiration of which he will leave the service.

G. F. FOWLER, City Passenger Agent, Hamilton, Ont., has resigned to enter White Star Line's service at Toronto.

J. MACGILLIVRAY, formerly Manager, and afterwards Receiver, Inverness Coal & Ry. Co., Inverness, N.S., is now attached to the office of the General Manager, Western Lines, C.N.R., Winnipeg, and is handling special work.

W. F. SECORD has been appointed Supervisor of Work Equipment, with jurisdiction north of the St. Lawrence River. Headquarters, Toronto.

Canadian Pacific Ry.—SIR JOHN EATON, President, The T. Eaton Co. Ltd., Toronto, has been elected a director of the C.P.R., succeeding the late W. D. Matthews.

H. L. McKEAN, heretofore, Soliciting Freight Agent, has been appointed Travelling Freight Agent, St. John, N.B., vice J. P. Doherty, resigned on his appointment as Port Agent, Canadian Government Merchant Marine, Ltd., St. John, N.B., as announced in our last issue.

Lieut.-Col. BLAIR RIPLEY, C.B.E., D.S.O., formerly Engineer of Grade Separation, North Toronto, later in military service overseas, has been appointed Engineer, Ontario District, vice A. L. Hertzberg, retired. Office, Toronto.

T. D. UTLEY, heretofore Car Inspector and relieving Car Foreman, Swift Current, Sask., has been appointed Car Foreman, Weyburn, Sask., vice F. C. Reid, transferred to Vancouver, B.C.

Canadian Pacific Ocean Services Ltd.—W. BAIRD, General Agent, Liverpool, Eng., has been appointed General Passenger Agent for Europe. Office, Liverpool, Eng.

E. T. STEBBING, heretofore Passenger Manager, Liverpool, Eng., has returned to his former position as General Agent, Passenger Department, New York.

Grand Trunk Pacific Ry.—J. T. ARMSTRONG, heretofore Chief Dispatcher, Biggar, Sask., has been appointed Chief Dispatcher, Edmonton, Alta., vice C. H. Brown, whose appointment as Assistant Superintendent, Edmonton, Alta., was announced in our last issue.

G. C. BARNETT, heretofore Roadmaster, Biggar, has been appointed Roadmaster, Biggar-Calgary, and Battleford and Cutknife Branches, Biggar, Sask., vice A. Rimstad, transferred.

J. H. GROAT heretofore Assistant Superintendent, Edmonton, Alta., has been

appointed Chief Dispatcher, Biggar, Sask., vice J. T. Armstrong, transferred to Edmonton, Alta.

A. RIMSTAD, heretofore Roadmaster, Biggar-Calgary and Battleford and Cutknife Branches, Biggar, Sask., has been appointed Roadmaster, Biggar to Wainwright, both inclusive, Biggar, Sask., vice G. C. Barnett, transferred.

W. H. TURNBULL, has been appointed locomotive foreman, Biggar, Sask., vice J. A. Moran, resigned.

Canadian National Railways Staff Concert, Etc.

The Canadian National Railways, Toronto office staff held a social evening recently, which included a concert and dances. During the evening a hand-

C. P. Disney,
Acting Bridge Engineer, Eastern Lines, Canadian Northern Railway.

somely illuminated address was presented to the President, D. B. Hanna, reading as follows:—

"We, the employees of the Toronto offices of the Canadian National Ry., take this opportunity of conveying to you an expression of our united loyalty, devotion and affection. We realize the great task you have undertaken as President of one of the largest publicly owned enterprises in the world and that the unflinching loyalty and support of all your employees are necessary to make this an unqualified success. We know that efficiency is the keynote to the ultimate success of the Canadian National Ry., and with your wonderful example of courage and devotion to duty always before us we wish to assure you that our great aim will be to assist you in making the service of this great railway one hundred percent efficient and sincerely hope that you may be spared to serve for many years as its President. 'Heaven keep ye free frae care and strife till far ayont fourscore.'"

Mr. Hanna, in replying, said he was at a loss for words to reply to such a testimonial and that it was something he would treasure more highly than anything else which could have been given him, and would be handed down to his family as an heirloom. While he did not require the address to assure him of the esprit de corps, loyalty and devotion existing between the employees of the Canadian National Ry. and himself, for he already had found it through years of service together, he appreciated this expression of it more than he could tell.

Railways Taken Over by Dominion Government.

Following is a list of railways which have been acquired by the Dominion Government, since Aug. 1, 1914, and now operated as Canadian National Railways, the dates mentioned being those on which they were taken over:—

Owned Lines:

International Ry. of New Brunswick	Aug. 1, 1914
New Brunswick and Prince Edward Island Ry.	Aug. 31, 1914
Moncton & Bouchette Ry.	June 1, 1918
Saltbury & Albert Ry.	July 1, 1918
Elgin & Havelock Ry.	June 1, 1918
St. Martins Ry.	June 1, 1918
York & Easton Ry.	June 1, 1918
Quebec & Saguenay Ry.	Sept. 1, 1919
Hudson Bay Ry.	Oct. 1, 1918

Controlled Lines:

Canadian Northern Ry. System	Nov. 20, 1918
------------------------------	---------------

Leased Lines:

St. John & Quebec Ry.	Jan. 1, 1916
Valle Railway	May 1, 1916

Dominion Engineering and Machinery Co. Ltd., has been incorporated under the Dominion Companies Act with authorized capital of \$3,000,000 and office in Montreal, to carry on the business of general engineers and contractors for the construction of public and private works and a variety of other businesses incidental thereto. The provisional are L. H. Ballantyne, F. G. Bush, G. R. Drennan, H. W. Jackson, and M. J. O'Brien, Montreal. In connection with the announcement of the incorporation of the company, there also appeared notice of the passing of a bylaw, numbered 21, increasing the number of directors from 5 to 12. The bylaw was passed at a meeting of directors Dec. 8, and the notice is signed by F. G. Bush, Secretary.

Department of the Naval Service.

NOTICE OF SALE

SEALED TENDERS addressed to the undersigned and endorsed on the envelope "Tender for C.G.S. Thirty-Three," will be received up to noon of Thursday, the 22nd day of January, 1920, for the purchase of the steamer "Thirty-Three," as she now lies at Halifax.

The length of this vessel is 90' 1", gross tonnage 79, registered tonnage 38, H.P. 21, with a speed of approximately 9 knots and is constructed of steel.

Full particulars and permission to inspect may be obtained on application to the undersigned, or to the Captain Superintendent H.M.C. Dockyard, Halifax, N.S.

G. J. DESHARATS,
Deputy Minister of the Naval Service.

Department of the Naval Service,
Ottawa, December 27, 1919.

Unauthorized publication of this notice will not be paid for.

Canadian Railway AND Marine World

President Hanna's Christmas Mes- sage to Officers and Employees.

D. B. Hanna, President, Canadian National Ry., issued the following, Dec. 24: "To officers and employees:—In this Christmas message I desire to express my hearty appreciation of the co-operative efforts of officers and employees who, with gratifying results, have worked hard to make the first year of the Canadian National Ry. one of progress and success. During the new year let us keep up the good work and show that government owned railways in Canada can be operated efficiently. I do not believe that personal incentive and ambition are eliminated from the make-up of our officers and employees because they work for the government. You may rest assured that the opportunities for promotion are yours and that good work will be recognized and rewarded. In a spirit of goodwill I extend the wish that a full measure of happiness be yours at this Christmas season and that wellbeing attend you throughout the new year."

Collection and Compilation of Transportation Statistics.

As foreshadowed in previous issues of Canadian Railway and Marine World, the collection, compilation, etc., of railway, canal, express, telegraph and telephone statistics carried on formerly in the Railways and Canals Department, by Comptroller of Statistics, J. L. Payne, has been transferred to the Trade and Commerce Department's, Dominion Bureau of Statistics, where it will be carried on under the direction of the Dominion Statistician and Comptroller of Census, R. H. Coats, B.A. The following staff have been transferred from the Railways and Canals Department to the Dominion Bureau of Statistics, viz.: J. S. Woodill, clerk, railway statistics; S. L. T. McKnight, clerk, canal statistics; C. B. Robinson, clerk, telephone and telegraph statistics; F. L. Kemp, clerk. J. L. Payne, Comptroller of Statistics, Railways and Canals Department, has not been transferred, and it is said that he will have no further connection with the work he has carried on heretofore.

In June and again in Oct., 1919, the Civil Service Commission issued the following notice inviting applications:—A railway accountant for the Transportation Division of the Dominion Bureau of Statistics, Department of Trade and Commerce, at an initial salary of \$3,000 a year. Candidates must have a thorough knowledge of railway accounting and statistics in their various phases, based on experience in large railway accounting office, preferably head office of Canadian railway; they must be qualified by education and training to undertake original investigations in different aspects of cost accounting. The position requires initiative and resourcefulness, as well as first hand knowledge of existing railway accounting systems.

We are officially advised that G. S. Wrong, of Toronto, has been appointed to the position. He was in the Hydro Electric Power Commission of Ontario's service up to May, 1918, when he enlisted and he returned to the commission's service after demobilization.

English Railways Freight Rates are reported to have been advanced recently from 60 to 70%.

Railway Finance, Meetings, Etc.

Canadian National Ry.—There has been deposited with the Secretary of State at Ottawa duplicate original of a deep of collateral trust and mortgage dated Oct. 1, 1919, between the Canadian Northern Ry., the National Trust Co., and the Crown, securing certain 5½% guaranteed secured notes of the Canadian Northern Ry.

There has been deposited with the Secretary of State at Ottawa, duplicate original of lease and assignment made between the Canadian Northern Rolling Stock Co. and the Canadian Northern Ry., and the Gerard Trust Co., dated Nov. 29, 1919, supplementary to a lease and assignment dated May 1, 1919, in connection with the Canadian Northern Equipment Trust, Series C, 1919.

The Guelph Jct. Ry.'s net earnings for the last financial period of 13 weeks, were reported, Nov. 26, to be to \$20,675, out of which the directors authorized the payment of a dividend of \$19,975 to the City of Guelph, Ont. The total amount paid to the city for the last financial year was \$69,700, or 14½% on the capital stock held by the city. For the preceding financial year the city received \$61,569.86. The line which extends from Guelph Jct. to Guelph, is leased to the C.P.R.

Ottawa Terminals Ry.—Following are the directors for the current year:—President, H. G. Kelley; Vice President, W. D. Robb; Vice President and Treasurer, F. Scott; other directors:—J. E. Dalrymple, R. S. Logan, W. H. Biggar, all being G.T.R. officers.

Timiskaming and Northern Ontario Ry.:

Passenger earnings	\$1,561.37	\$5,704.37
Freight earnings	235,167.82	204,219.57
Total earnings	\$314,729.19	\$254,923.94

Grain Inspected at Western Points.

The following figures, compiled by the Dominion Bureau of Statistics, show the number of cars of grain inspected on railways, at Winnipeg and other points in the western division, for Nov., 1919, and for two months ended Nov. 30, 1919, and Nov. 30, 1918, respectively:

	Nov. 1919	2 mons. to Nov. 30, 1919	2 mons. to Nov. 30, 1918
C.N.R.	8,848	22,593	20,107

Total	22,386	69,952	64,843

Smoke From Railways' Stationary

Plants—The Board of Railway Commissioners issued the following circular, Nov. 26, 1919:—Complaint has been made to the board of serious nuisance arising in cities by reason of the befouling of the atmosphere by dense or opaque smoke emitted from the stationary plants of railways in such municipalities. The board desires to be informed by the railway companies subject to its jurisdiction, within 30 days of the date of this circular, whether they are agreeable to the issuance of a general order extending the application of general order 18 to stationary plants, and requiring that such stationary plants be equipped so as to prevent the unnecessary and unreasonable emission of dense or opaque smoke, failing which a hearing of all parties involved will be held and a decision arrived at in the matter.

Railway Track Design and Manufacture.

By W. E. L. Dyer, A.M.E.I.C., Montreal.

The object of this paper is to outline in as few words as possible the steps taken to overcome difficulties in track construction, that have arisen from time to time, in an endeavor to keep pace with the increased loads and speeds so necessary to modern civilization. It would be impossible to give any detail and I trust these few words may give some idea of the necessity of having more co-operation between manufacturer and user. Our United States friends have several well known track societies, and their publications and standards are practically accepted as standard in Canada. This may

ment than bridges, water works and sewers combined, the subject is well worth consideration, but in this short paper it would be impossible to go into any detail and the chief points of interest only will be dwelt on.

The word tramway is of Scandinavian origin and primarily means a beam of wood, where the first reference was made in 1555. In lowland Scottish "tram" was used both as a beam of wood, and specifically of such a beam employed as the shaft of a cart, and in some places today the name is still given to wheeled vehicles used for carrying coal in min-

strengthening the casting. This rail was not satisfactory to the general public who found difficulty in crossing the flanges, and in 1789 the edge rail shown in fig. 2 was tried, the wheel being kept in place by guards of either blocks or timbers. This rail was used extensively as it did away with the faults of the first experiment.

About 1800 a complete change of design was required, owing to the introduction of flanged wheels. The first flanged wheels had a tread of 1 1/4 in. which probably established the standard track gauge of 4 ft. 8 1/2 in., as used by us today, the first flanged rails having been laid 5 ft. between flanges as mentioned above. Improved methods of manufacture allowed of rolled rails being made about 1820. These rails were supplied in 18 ft. lengths, weighing 2.8 lb. per yard and of the section shown in fig. 3, the rails being spiked to longitudinal ties. This rail was not satisfactory, owing to vehicle wheels catching in the groove and the design was altered to fig. 4, which section was used extensively on American roads.

Fig. 5 shows the first step in obtaining vertical stiffness combined with side spiking.

Important developments in rails were rapid owing to increase in wheel loads, due to the introduction of steam traction and briefly were as follows:

Flat bottom rail (fig. 6), introduced in 1830, weight 36 lb.

Bridge rail (fig. 7), introduced in 1837.

Double headed rail (fig. 8), introduced in 1837.

Bull head rail (fig. 9), introduced in 1859.

The combination of the flat bottom and bull head rails gave the T rail, as used today. The girder rail, as used on public right of way, was first patented in 1859 and successfully rolled in 1877.

Rail joints have been the chief source of revenue to patent attorneys for a number of years and it is difficult to find two people with the same ideas as to what a joint should be. The evolution of joint fastenings has advanced through four stages: 1, Spikes at the end of a rail. 2, The chair, which maintained the ends of the rail in alignment and served as a bearing plate on the joint tie. 3, The fish plate, which kept the rail in alignment and gave partial support to the head. 4, The angle bar, which combining the features of the fish plate, effected a great improvement in both the vertical and horizontal stiffness of the joint and generally speaking is the universal joint fastening of today.

Experiments are being continually tried to eliminate the joint by welding and casting, but the results obtained have up to the present not been of such a nature as to warrant a wholesale adoption. One of the largest Canadian electric railways has developed a joint which is giving very satisfactory results; their method being to bolt up the plate as tight as possible with plates slightly staggered. The plate is then electric welded top and bottom to the rail.

This does away with bonding the track and tests show a perfect joint after severe service. To take care of expansion split points are introduced at proper intervals.

The total cost of joints as described is about \$3 each for rails weighing 80 lb. per yard and increasing in proportion to the weight of rail.

Fig. 1. Plate rail, 1767, cast iron. Fig. 4. Stringer rail without groove, Fig. 7. Bridge rail, 1837, 92 lb. Fig. 2. Edge rail, 1789, cast iron. Fig. 5. Livesey rail. Fig. 8. Double head rail, 1837. Fig. 3. Stringer rail, 1800. Fig. 6. Flat bottom rail, 1830, 36 lb. Fig. 9. Bull head rail.

have its advantages, as it saves us any responsibility, but on the other hand it does away with the possibility of developing our own ideas, which are usually turned down until they revert back from other sources. This does not seem reasonable and it looks as though the Engineering Institute of Canada might take this into consideration along with its other worries. To bring this point before you, I may say that the proper construction of track and the efficient and economical maintenance involve the science of engineering, although broadly it is not recognized as such.

Of the three recognized stages having to do with tracks in service, either construction or maintenance are as much engineering as that of track location, and when one considers that track and roadbed represent a much larger invest-

ing. "Tramway" therefore is primarily either a way made with beams of wood or one intended for the use of "trams" containing coal. The usage of today has converted the meaning into the form of electric traction as applied to city traffic and with which we are all familiar.

There has been considerable experimental work done since the first beams of wood were used to lighten the labor of hauling loads, and it was not till 1767 that attempts were made to use better wearing materials, and build on a more permanent basis. The first rails were made of cast iron about 3 ft. long, the section at the middle being shown as in fig. 1, and tapering in depth to the ends, thus making each rail a small girder. The rails were placed 5 ft. between the flanges, which served the double purpose of keeping the wheels in place and

In practice the length of splice bars varies from 20 in. to 48 in. A splice less than 26 in. is considered short and one exceeding 32 in. in length is considered long. The objection to a long splice bar is that when bolted up tight proper expansion is not allowed, whereas if bolted loose, there will be trouble very shortly with loose joints.

One method of overcoming bad joints is either to mitre the railends about 55° or to lap the joints. The cost of this method would be prohibitive on straight track, but on special work this practice is usually followed by manufacturers, especially when crossings are made of manganese steel and from my experience it is about the most satisfactory way. I have checked over several lap joints after 18 months service and could not find any additional wear.

The roadbed embraces the foundation or earth support, the fill, and lastly the track. We are only interested in this paper in the roadbed in so far as it allows proper support for the tracks and that is one thing that should have consideration.

Diamond crossings are made extra heavy, to withstand excessive strain, but railways still continue to treat the foundation for the crossings as though there were no undue strains, with the result that in a number of cases failure of the track is due to failure of the foundation. Little extra expense would be occasioned to put in a solid concrete foundation at these points, with ties properly cushioned with 2 in. stone and the life of a crossing would be increased in many cases at least 25%. This point is well worth experimental work as I know one case of a crossing failure, due to foundation being too weak to stand the strain, and satisfactory results were obtained by making a reinforced concrete foundation at that point.

Special Work of Electric Railways—It is safe to say that no railway has ever been built that has not had a piece of track that required some special preparation other than that given to plain, straight track before it could be laid in place. It may further be stated that no two street intersections have the same angle combined with similar manhole locations and that railways delight to lay tracks so that curves will run through diamond crossings. It is of course impossible to change location angles to any extent, but it should be possible, with co-operation between engineers in charge of gas, water, conduit and other departments to arrive at some standards of manhole location. Most systems have a considerable percentage of their trackage made up of curves, crossings, switches, etc., and as they are made specifically to fit given locations, they are called "special work."

The possibility of standardizing intersection work is practically impossible, although several spasmodic attempts have been made from time to time, and manufacturers and railway engineers have agreed that switches and mates be standardized for length and radius and that each manufacturer be allowed to supply his own designs; without doubt this makes a very satisfactory arrangement.

It is stated by some authorities that in tracks made with rails of 5 in. or under, all curves over 500 ft. radius may be "sprung in" and that for heavier rails, such as girder rails, all curves of 1,000 ft. and over may be sprung. I am in favor of all curving being done either

with power benders or a crow, as curves from sprung rails, after one year service, usually show angle joints.

The first special work manufactured was made with as small a radius as possible, and no attempt was made to ease off the ends of the curve. Consequently switches and mates were made the same radius as the curve. This practice was hard on the tracks, and required a heavy stock of spares being always kept on hand as in many cases there would not be two switches or mates interchangeable in the same intersection. This made an impossible condition and combined with increased speed and loads intersection work began to standardize on radii and curve easements.

The first step was to compound the curves, and as speeds and weights further increased, three centered curves were used for a number of years, only to be replaced by the spiral, or a curve of constantly changing radius. The selection of a spiral is governed by three main points, viz.: 1, The radius of the main curve must be less than the preceding branch of the spiral, must be more than the next branch would be, were it produced, and should nearly equal the latter. 2, The longer the spiral the easier the entrance will be. 3, The larger number of branches, the easier on maintenance.

The manufacturer of special work has his own spiral standards and if a student wishes to get any special information he can easily obtain it from catalogues of different manufacturers. At first, special work was made by the nearest blacksmith, but today it is one of the highest branches of manufacturing skill, and very few realize that intersection work, going together on the street like a puzzle picture, has been calculated to about 10 decimal places and that not 1-32 in. variation is allowed in the joints.

Many of the larger intersections require more than a week for calculations, and after that the whole has to be designed so that the several pieces may be manufactured in sizes that can be readily handled in the shop and on the field. Maintenance engineers would prefer crossings made in one piece and the manufacturers would prefer them made in four pieces. This point has been the subject of considerable dispute between the interested parties and had the idea of single piece crossings been adhered to, the manufacturer would have been put out of business.

Special work was first built up from the rail section being laid, bolted together with corner brackets, and sometimes clipped to a bearing plate. To increase wear, the point proper was shortly afterwards machined out from blocks of tool or other toughened steel, held in place with cast iron, which was also used to hold rail ends in place, or of manganese steel.

K. W. Blackwell can be looked on as a pioneer in the introduction of steel centered frogs in Canada, he having imported the steel centers and bolted the rails in place in Montreal. These frogs, I understand, were put into service on the G.T.R., and I happened to see one after about 15 years service, which looked good for about another 15 years. However, traffic was not heavy at that point. For the cheaper types of intersection work this practice is adhered to, but with the advance of knowledge as regards manganese steel, the prospects are that eventually the entire intersection, in-

cluding the closure rails, will be made of manganese steel. At present the prices asked for this class of work have to be considered. The first cost of solid manganese is higher, but with recent improvements in production the cost can be materially reduced.

There has been, and still is, considerable difference of opinion regarding the merits of what is known as "insert work" and solid manganese steel. One conclusion arrived at, after exhaustive study of the question, is that insert work equalled, and in some cases surpassed, the serviceability of solid manganese work. This conclusion was arrived at without taking into consideration the defects in the entire piece of insert work which develop in service, but was based on the quality of steel insert as compared with solid work. Insert work may be divided into three classes so far as the insert setting is concerned, viz., that which is supported entirely in a splter bed, that which is partially supported on a machined bed and surrounded with splter, and that which is supported with a completely machined bearing.

Insert fastenings are of two kinds, those which are renewed from pavement surfaces, and those which are renewed by removing portions of the pavement. The latter type may be either bolted down, or keyed down, construction; the former may be bolted down, keyed in, or have special set screw fastenings. The purchaser of this commodity has a wide range to choose from, and as they all have certain merits and none are perfect it is practically a question of cost which type to use. The defects of insert work may be loose rails, defective body casting or inferior shop practice placing inserts; and if any of the above mentioned defects develop, the wheel loads will rapidly set up a pumping action, which will affect the roadbed, causing complete failure of the piece.

Solid manganese work does not lend itself to any such defects and a piece properly designed, of good workmanship and quality, will not require continual inspection once installed, as breakages do not occur and wear only has to be considered. The first cost of solid manganese is higher, but with recent improvements in production the cost can be materially reduced.

Special Work for Steam Railways: It is advisable at this point to draw a distinction between the two types of special work as the operating conditions are so different. Canadian railways have about 40,000 miles of track, and 11,000 turnouts and a number of crossings, to maintain. The greater number of turnouts and crossings are built up from rail.

A frog of any of the kinds in general use, is made of 4 pieces of rail properly shaped and held together by some device or arrangement of minor parts. Frogs are of two kinds, rigid or stiff rail, and spring rail frogs. Rigid frogs are the cheaper type, wearing out rapidly, while spring rail frogs are more durable, and have a life generally conceded to be three times that of a rigid frog. Manganese frogs of various designs are beginning to be used where wear warrants the expenditure, and from tests made the life of a manganese frog is at least six times that of built up work and I have known them to be in service ten times as long. There is little doubt that the built up frogs will rapidly be replaced by manganese, rigid, and spring rail frogs.

To persons not familiar with tracks,

It may be expected to say that a form of crossing of the construction of a sort of center of switches with secondary rails, but for crossing with secondary rails, and which are operated by the same mechanism as the crossing, is used. This mechanism is better in detail when shown on the track, but is not in detail in this article.

At the crossing of 2 to 4, 4 frogs are required. The center of crossing is made of steel, and the angle at which the track meets and on the track, which they are shown. In a crossing of 4 to 4, the center of crossing is made of steel, and the angle at which the track meets and on the track, which they are shown.

For angles between 15° and 35° with intermediate rails. 2. For angles 80° and less, the middle frogs are replaced by movable point frogs, operated

On checking over failures of diamonds, I have found that after about 1,000,000 wheel impacts a diamond crossing is about ready to scrap, and the results obtained are no better than a built up crossing. For angles below 75° manganese can be used economically, and the smaller the angle the longer will be the life of the crossing.

In designing manganese castings, it is advisable to have the sections checked by those familiar with the action of the metal, and numerous failures could be avoided by following these few suggestions: Make the section of uniform thickness. Avoid abrupt changes in thickness. Use parallel ribs, instead of transverse. Arrange ribs to offer the least resistance to shrinkage. Shrinkage of manganese castings will go about 1/2 in. per ft. A bead along the thin edge of casting will prevent cracks and makes for sound castings.

C.P.R. Steel Hopper. 75-Ton Grain Car.

The car illustrated on this page was built recently at the C.P.R. Angus shops, Montreal, to determine, by actual service test, the net advantages to be obtained from a grain tight, self clearing, car of maximum tonnage capacity, as compared with standard box cars of ordinary capacity.

The basis of the design for tonnage is 4 M.C.B. axles, having 6' 11" in. journals. The length was determined by the distance, center to center, of unloading hoppers in the modern elevators at Montreal and West St. John, N.B., there is one elevator having hopper centers 48ft. The height was determined by the actual cubic space required to contain the full load of wheat, plus an allowance of at least 12 in. on top to permit of full load

Steel Hopper Grain Car, 75 tons capacity, Canadian Railway.

mechanically from the signal tower. 3. For angles between 15° and 35° the crossing is made in 4 sections, the end and middle frogs meeting at joints all round. 4. For angles 35° and up the rails on the tracks subjected to heaviest traffic are continuous throughout the length of the crossing and grooves are slotted out to allow flangeway through them. These four styles are again subdivided into guarded and fourth rail types, depending on traffic conditions.

The advantage of using manganese steel for crossings is at once apparent, as the numerous bolts used in crossings will stretch in service, allowing the crossing to loosen, and unless track men are constantly shortening the bolts the crossing will quickly wear out. A manganese crossing should not be used as a wear economic for angles of from about 75° to 90°, as between these angles it is not a question of wear, but of metal fatigue.

The foregoing paper was read before the Engineering Institute of Canada's Montreal branch recently.

British Railway Rates—London, Eng. cablegram, Dec. 29.—British shippers are to pay the increased cost of railway labor. The new freight rates, which go into effect Jan. 15, show advances from 25 to 100%. Thus the commerce of the country, struggling to revive, foots the bill of higher wages and enhanced cost of material. The revised rates, the government hopes, will put the railways upon a paying basis.

The King Edward Construction Co., which has been formed to build an addition to the King Edward Hotel, Toronto, offered recently for subscription, \$1,350,000 guaranteed 7% cumulative redeemable preference shares. The C.P.R. Co. subscribed for \$75,000.

being placed in the car without trimming.

The car is all steel, with the exception of the running board and the ridge on top of the center sill. The general design is practically the same as commonly used for coal cars of equal capacity, except that this car is built with a steel roof. The roof is provided with 3 hatch openings on each side of the running board. The hoppers are arranged 4 on each side of the center sill. The hopper openings are purposely made relatively small, and the frame and slides are machined and carefully fitted. The slides are opened and closed by a rack and pinion arrangement. The slides are locked by a sealing pin passing through the slide and hopper frame. The trucks are Vulcan type, built to U.S.R.A. dimensions.

The car, having given satisfactory performance on its initial trip between Port McNicoll, Ont., and Montreal, has been placed in regular service between the

same port and West St. John, N.B. We are indebted to W. H. Winterrowd, Chief Mechanical Engineer, C.P.R., for the foregoing particulars.

Locomotive Terminal Equipment Association.

The Locomotive Terminal Equipment Association has been organized, with headquarters in Chicago, "to make surveys for, and distribute data to the public and corporations interested, concerning the equipment of locomotive terminals, in order to secure speedy, efficient and economical handling, cleaning, repairing and returning to service of locomotives; such data to be impartially secured and published, without advertisement, or a special advantage to any individual, firm or corporation that may be a member of the association." There are two classes of members; active members, consisting of individuals, firms or corporations engaged regularly in the manufacture or sale of locomotive terminal equipment, or in any way interested in the construction of locomotive terminals; and honorary members, who shall be elected by the directors, but who shall have no vote nor pay any dues or assessments. The active member's fee is \$1,000, and assessments may be made, not exceeding \$1,000 a year for each active member.

The following are the officers: President, W. R. Toppin, Manager Railroad Department, William Graver Tank Works, Chicago; Vice President and Secretary, Bruce V. Crandall, Chicago; Treasurer, J. S. Maurer, Secretary and Treasurer, National Boiler Washing Co., Chicago; General Counsel, Frank J. Loesch, 1540 Otis Building, Chicago. Other directors: Spencer Otis, President, National Boiler Washing Co., Chicago; N. S. Lawrence, Vice President and Assistant Sales Manager, Whiting Foundry Equipment Co., Harvey, Ill.; Wm. Robertson, William Robertson & Co., Chicago; R. A. Ogle, President, Ogle Construction Co., Chicago; F. W. Miller, President, F. W. Miller Heating Co., Chicago.

The association's headquarters are at 1824 Lytton Building, 14 East Jackson Boulevard, Chicago, where there is a conference room, and where data will be arranged for easy reference, so that railway officials may have every opportunity for obtaining information of every kind pertaining to the rebuilding, re-equipping and laying out of locomotive terminals.

Disposal of Worn Out Railway Ties—The Railway Association of Canada has issued the following circular to member railways: A number of complaints have reached the association that notwithstanding the existing shortage of fuel, large quantities of worn out railway ties are burned on the right of way. Coupled with this complaint is the suggestion that railways arrange to give surplus old ties to the public and thereby alleviate the fuel shortage, at least to some extent. After consideration of the matter at a recent meeting of the association, the complainants were informed that the railways have been glad to dispose of the old ties as suggested, provided this can be done without expense to the railways. It is suggested that at places where surplus worn out ties are available, notice be given the municipal officials so that if they desire to do so they may avail themselves of the opportunity to obtain them.

Freight and Passenger Traffic Notes.

The Canadian National Rys. has removed its lower town ticket office in Quebec City to 38 Dalhousie St., a few doors north of the ferry landing.

Owing to the continued increase in the cost of railway operation, no reduced fares were given the general public for the Christmas and New Year holidays.

Pacific Great Eastern Ry. traffic from Squamish, B.C., northerly is reported to have been interrupted for some days, pending the clearing out of a tunnel 18 miles out of Squamish, which caved in Nov. 29.

Alberta reports state that during Sept. and Oct., 1919, the railways handled over 800,000 tons of coal in Alberta. The outfit shipped from the mines is said to be between 500 and 1,000 tons a day in excess of the outfit for 1918.

The G.T.R., which was compelled to reduce its passenger train service, Nov. 30, on account of the coal situation, resumed its full service, Dec. 28, and all trains which has had been temporarily cut off were restored.

The Board of Railway Commissioners has authorized the Canadian Northern Western Ry. (Canadian National Rys.) to carry freight for its Hanna-Medicine Hat branch from Bonar to Saskatoon, Sask., for four months from Nov. 15, 1919.

Following is a comparative statement of the number of loaded cars hauled over Quebec Bridge for the week ended Nov. 29:

	1919	1918
From Bridge Station to Chaudiere Jct.	124	359
From Chaudiere Jct. to Bridge Station	359	230

The Board of Railway Commissioners has recommended the Dominion Government to sanction an agreement between the Edmonton, Dunvegan and British Columbia Ry. and the Alberta and Great Waterways Ry. respecting the joint use and operation of each company's terminal property at Edmonton, Alta.

Quebec City residents are reported to be agitating for a sleeping car for that city to be attached to the westbound Ocean Limited train, on the Canadian National Rys. Intercolonial section. At present, it is stated, travellers going into Quebec City from the Maritime Provinces, have to get off the train at Lévis at 4 a.m.

The Edmonton, Dunvegan and British Columbia Ry. is reported to have carried out from Edmonton, Alta., during the 11 months ended Nov. 30, 1919 the following freight: Settlers effects, 527 cars; cattle, 709 cars; horses, 300 cars; sheep, 19 cars, and to have carried in and transferred to other railways at Edmonton, the following freight: Hay, 1,150 cars; wheat, 296 cars; oats, 414 cars; barley, 49 cars; cattle, 243 cars.

The Canadian National Rys. has arranged an exchange system with the G.T.R., under which additional facilities are offered passengers who desire to travel between eastern and western Canada via Montreal and Toronto. Travellers now have a choice of routes and may travel on "The National" train via North Bay and Cochrane or on train 1, via Capreol and Port Arthur. "The National" leaves Toronto 9.15 p.m., Monday, Wednesday and Friday, arriving Winnipeg 6 p.m., Wednesday, Friday and Sunday. Train 1 leaves Toronto 9.15 p.m., Tuesday, Thursday and Saturday, arrives Winnipeg 6 p.m., Thursday, Saturday and Monday. Both these trains

carry standard and tourist sleeping cars, dining car, first class and colonist coaches. This exchange system of tickets provides a daily, except Sunday, service from Toronto to Winnipeg.

The Chief Railway Commissioner, Hon. F. B. Carvell, is reported to have said at a sitting of the Board of Railway Commissioners in Winnipeg, Dec. 1, in connection with a complaint as to alleged insufficient accommodation on a Canadian National Rys. branch line: "In view of the fact that the cost of operating railways has more than doubled in the last two and a half years, and that the expense to the railways has increased by \$60,000,000, the people may as well realize that they cannot have excessive railway accommodation, such as a train a day or two trains a day, unless they are prepared to pay for it."

The car ferry steamship Prince Edward Island, operating between Tormentine, N.B., and Port Borden, P.E.I., is reported to have made 288 trips in the 48 days from Oct. 1 to Nov. 21, 1919, an average of 3 round trips a day. The number of cars ferried across was 2,865, an average of 59 a day. On the third rail district of the P.E.I.R., there were 1,297 cars handled, of which 738 were received from and 559 forwarded to the mainland; while from the narrow gauge districts there were 1,440 cars forwarded to Port Borden and there transhipped to standard gauge cars, and 78 narrow gauge cars were loaded at Port Borden with freight from the mainland, during the period named.

The Edmonton, Dunvegan and British Columbia Ry., and its subsidiaries—the Alberta and Great Waterways Ry., and the Central Canada Ry.—put a new schedule of passenger trains in operation out of Edmonton, Alta., Nov. 30. A train leaves Edmonton at 3 p.m., Mondays and Thursdays, arriving at McLennan, 7.30 a.m., Spirit River, 2.20 p.m., and Peace River 1.30 p.m., on Tuesdays and Fridays. The return train leaves Peace River, 3.30 p.m., Spirit River 3.00 p.m., and McLennan, 11.20 p.m., Tuesdays and Fridays, and arrives in Edmonton, 2.50 p.m., Wednesdays and Saturdays. A train leaves Spirit River at 2.30 Tuesdays and Fridays, arriving at Grande Prairie at 8 p.m., the same days; and a train leaves Grande Prairie at 8 p.m., arriving at Spirit River 1.30 p.m. Tuesdays and Fridays. A train leaves Edmonton at 8.20 a.m. on Mondays and Thursdays, arriving at Lac la Biche at 6.30 p.m., and returns thence at 6.30 a.m. Tuesdays and Fridays, arriving at Edmonton, at 4.30 the same evenings.

United States National Accident Prevention Drive—The U.S. Railroad Administration has received a report from its safety section, showing the standing of all roads under Federal control, during the National Accident Prevention Drive from Oct. 18 to 31, 1919. The Grand Trunk Western Lines Rd. had 0.011 casualties per 100 employees during the drive, which is the lowest rate of any road having as many employees. The Atlantic Coast Line, with 24,307 employees, made a record of 0.012 casualties per 100 employees, which is the next best record. The Grand Trunk Western Lines Rd. has 1,001 miles of track and 9,699 employees, only 2 of whom were injured during the period mentioned.

Electric Railway Department

Taxation of Electric Railway Substructures and Superstructures in Ontario.

Under the Ontario Assessment Act, prior to the Ontario Legislature's last session, general taxable distribution was made between the kinds of assessment of electric and steam railway companies' properties. Previous to this year, a number of appeals were presented by the *Casara* and *Northern Ry.* Tax Department on behalf of the *Niagara, St. Catharines & Toronto Ry.*, a C.N.R. subsidiary company, on the grounds that the substructures and superstructure of an electric railway, when situated on the company's private right of way, was exempt from taxation. The grounds of the company's appeal were substantiated under sec. 44 of the Ontario Assessment Act, R.S.O., 1914, chap. 195, which provides that, "The property by paragraph 5 of clause (h) of sec. 2 of the act declared to be land . . . owned by companies operating steam and electric railways, etc., shall be assessed in the ward in which the head office of such companies or person is situate, and in assessing such property, whether situate or not situate, on a highway, street or road or other public place, shall be assessed at its actual cash value as the same would be appraised upon sale to another company, possessing similar rights and franchises."

The property referred to in paragraph 5 of clause (h) of sec. 2, is described under this particular section as being "All structures, fixtures, affixed to any highway, lane or other public communication."

The company, therefore, contended that the intention of the act was merely to assess the structures and fixtures, situate on a highway as declared by sec. 44 above referred to, and to exempt in a similar manner to steam railway lands, structures and superstructures situate on a private right of way. The matter was finally disposed of on appeal to the county judge in the case of *Grantham Municipality*, where it was held that the ambiguous subsec. 3 of sec. 44, providing for the assessment of lands described under paragraph 5 of clause (h) of sec. 2 (superstructure situate on a public highway), would also include superstructure situate on a private right of way by virtue of the fact that the subsection ambiguously read, "The superstructure and substructure on any highway" should be assessed whether situate on any highway or not (private right of way), at its actual cash value as the same would be appraised upon sale to another company possessing similar rights and franchises. The decision of the county judge in this matter meant that where steam was the motive power, the superstructures and substructures situate on a private right of way were exempt from taxation under sec. 47 of the act (which specifically held this class of property exempt from taxation), while similar property of a railway operated by electricity would be held assessable.

Finally, the attention of the Ontario Government was drawn to the unfair discrimination and an amendment was passed at the Legislature last session providing that "Notwithstanding anything contained in this section or any other section of this act, the structures, substructures, superstructures, rails, ties,

poles and wires of an electric railway, shall be liable to assessment in the same manner and to the same extent as those of a steam railway are under the provisions of sec. 47 and not otherwise."

Irrespective of this amendment, the City of Toronto again assessed the *Toronto Suburban Ry. Co.*, another C.N.R. subsidiary, for substructure, superstructure and machinery, etc., situate on the private right of way of the company. The C. N. R. Tax Commissioner, T.G. Watson, prosecuted the appeal before the court of revision on June 2. The assessment, however, was confirmed and further appeal was made to the county judge. The principal grounds of the appeal are as follows:

The amendment passed, at the legislature's last session, to sec. 44, relating to the assessment of electric railway companies, provides that, "The structures, substructures and superstructures, etc., of an electric railway company shall be liable to assessment and taxation in the same manner and to the same extent as those of a steam railway are under the provisions of sec. 47 and not otherwise."

Sec. 47 of the Assessment Act provides in subsec. (a) that the roadway or right of way of a railway company shall be assessed at its actual cash value, not including the structures, substructures and superstructures, rails, ties and poles, and other property thereon and subsec. (c) provides that the structures, substructures and superstructures, rails, ties and poles upon, in, over, under or affixed to any highway, shall be assessed at their actual cash value as the same would be appraised upon sale to another company possessing similar rights and franchises.

Subsec. 3 of sec. 47 provides that, "Notwithstanding anything in this act contained, the structures, substructures and superstructures, rails and other property on railway lands and used exclusively for railway purposes or incidental thereto (except station, freight sheds, offices, warehouses, elevators, round-houses and repair shops), shall not be assessed."

Further, it is provided, under subsec. 5 of sec. 47, that, "A railway company assessed under this section shall be exempt from assessment in any other manner for municipal purposes, except for local improvements."

The *Toronto Suburban Ry. Co.*'s appeal in the City of Toronto was filed on the two grounds: First, that the recent amendment to the Assessment Act, providing that the assessment of electric railway companies should be made in the same manner and to the same extent as the property of a steam railway under sec. 47 of the act, above referred to, would exclude from taxation the substructures, machinery, etc., of the company, situate on lands owned by the company in a similar manner as the exemption granted the same class of property of a steam railway. Further appeal was prosecuted on the grounds that the *Toronto Suburban Ry.* would be exempt from business taxes under the recent amendment to sec. 44, which provides that an electric railway shall be assessed in the same manner and to the same extent as steam railways under sec. 47 of the act.

Subsec. 5 of sec. 47 provides that, "A railway company assessed under this section shall be exempt from assessment in any other manner for municipal purposes except local improvements." This subsection has always excluded, without question, the lands of a railway company from business taxes, and it was, therefore, submitted that an electric railway company under the recent amendment is entitled to a similar exemption.

The act itself seems perfectly clear on this point, and on equitable grounds, it would seem reasonable that all railway companies, whether operated by steam or electricity, should be granted the same basis of assessment. On appealing before the court of revision for the City of Toronto, the court was somewhat divided in opinion. The assessment was finally confirmed and further appeal was, therefore, made to the county judge.

The matter came before County Judge Coatsworth towards the end of October, when he at first decided to confirm the assessment and then, by request, consented to reserve decision. It appears that he is of the opinion that the company's transformers are not in the nature of a structure and are, therefore, correctly assessable under the provisions of the 1919 amendment to sec. 44 of the Ontario Assessment Act.

County Judge Coatsworth finally held that the *Toronto Suburban Ry. Co.*'s transformers could not be defined as structures under the 1919 amendment to the Assessment Act which provides that, "The structures, substructures and superstructures, etc., of an electric railway company shall be liable to assessment in the same manner and to the same extent as those of a steam railway company are under sec. 47 of the act."

In this particular case, the *Toronto Suburban Ry.* is not the owner of the building containing the transformers, and there was, therefore, no appeal by the railway as to the assessment of the building. The *Grand River Ry.* has appeals pending in *Preston* and *Kitchener*, where the power houses are assessed. It would seem that these buildings would be exempt from assessment under sec. 47 of the Assessment Act which declares that "Structures of a railway company shall be exempt, except stations, freight sheds, offices, warehouses, elevators, hotels, round houses, machine, repair and other shops."

Service at Cost Defeated in Minneapolis—The Minneapolis, Minn., City Council passed an ordinance, Sept. 4, 1919, granting a new franchise to the *Minneapolis St. Ry.* (Twin City Rapid Transit Co.), on a cost of service basis. The franchise was submitted to the ratepayers on Dec. 9 for ratification and was defeated by a vote of 30,546 to 23,161.

Hydro Electric Power Commission of Ontario's Power Canal—In connection with the construction of the new *Chippawa Power Canal*, the Hydro Electric Power Commission of Ontario received tenders to Dec. 22 for the erection of the steel superstructure for a bridge to carry the *Michigan Central Rd.* tracks across the canal at *Montrose, Ont.*

The Hydro Electric Power Commission of Ontario's Electric Railway Projects.

The Ontario Premier, Hon. E. C. Drury, received a delegation of representatives of municipalities interested in hydro electric power and railway projects in Toronto, Dec. 12, and in reply to their representations, is reported to have said, among other things: "There is absolutely no friction between Sir Adam Beck and myself. It might not be wise at present to appoint him permanently as chairman of the commission. An arrangement will be made to suit Sir Adam."

The development has been the work of one man and we want it to be so that when that one man is taken from us the great work can go on. In regard to the proposed hydro radial railways, the situation has changed recently. The G.T.R. is about to become part of the Canadian National Railways. Some of the projected electric railways would parallel G.T.R. branches. I want to be assured that there will be no duplication.

The United Farmers of Ontario adopted the following resolution at their meeting in Toronto, Dec. 18:—"We view with alarm the proposed policy of hydro radials, involving expenditure of millions of dollars and intending in many instances the duplication of present railways, and be it resolved that the legislature be requested to move slowly in this matter."

In connection with the building of the projected Toronto-Hamilton Electric Ry., under the Hydro Electric Power Commission of Ontario's plans, a press report of Dec. 13, states that work will be started early this year, and that it is expected all problems in connection with the entrance of this and the Hamilton-Galt-Guelph-Elmira line into Hamilton will be solved by the end of January. It is reported that connection will be made with the G.T.R., either across a bridge or fill at Carroll's Point, or back on the G.T.R. level at the west of the ravine, where a bridge would not be necessary.

The municipalities interested in the proposal to build a line from Hamilton to Galt, Elmira and Guelph, will vote on Jan. 1 on the bylaws to provide their several allotments of the total cost of \$6,530,659. Meetings have been held at various centers at which Sir Adam Beck spoke in favor of the bylaws. Considerable opposition to the bylaw developed in Kitchener. Upon the initiative of the Kitchener Light Commissioners, who operate the Kitchener and Waterloo Electric Ry. The objections were: (1) The serious shortage in Niagara power at present, and the likelihood of more serious shortage before the Chippawa development is completed. With the continuous increase in applications for power from all over the Niagara system, it has been estimated that the total load available at the new Chippawa plant will be required for domestic, commercial and manufacturing purposes, without the additional loads required for the proposed hydro radial railways. (2) The amount of \$1,053,080, which is required to be guaranteed by Kitchener is altogether too large in view of the fact that Premier Drury has gone on record as saying that no duplication of existing lines will be sanctioned by the Ontario Legislature. At present there is the G.T.R. line from Elmira to Galt, which the proposed hydro radial would parallel, and Kitchener's

er's estimate as above is based on building a new line. Should the present G.T.R. Elmira-Galt line be turned over to the Hydro Power Commission for electrification, the amount, which Kitchener should be asked for should be very considerably less. (3) The Kitchener Light Commissioners also objected to certain paragraphs in the agreement. The proposed extension of hydro radial railways includes operating their cars over the Kitchener and Waterloo St. Ry. tracks from the city limits to the northwesterly part of Waterloo. Paragraph C of the agreement gives the H.E.P.C.O. power to acquire the K. and W.S.R. Under clause E, the City of Kitchener is required to furnish free right of way for the H.E.P.C.O. railway and power lines. T. J. Hannigan, Secretary, Ontario Hydro Electric Radial Railway Association, met the Kitchener Light Commissioners, Dec. 20, and discussed with them points in the agreement to which they had taken objection. It is reported that an understanding was arrived at on the several matters, and that the H.E.P.C.O. will embody in a letter to the Kitchener Light Commissioners an interpretation of the sections of the agreement to which objection is taken, on acceptable lines.

The agreement between the Hydro Electric Power Commission of Ontario, the City of Toronto and a number of municipalities east of the city for the purchase of the Toronto Eastern Ry. from the Canadian National Ry. and its completion at a total estimated cost of \$8,360,794, had been approved by bylaws voted on by the ratepayers of the towns of Whitby, Oshawa and Bowmanville, and the townships of Scarborough, Pickering, West Whitby and East Whitby, prior to Nov. 30. Darlington Tp. ratepayers passed a similar bylaw Dec. 18 by 186 to 24 votes. Toronto ratepayers will vote Jan. 1 on a bylaw to raise \$4,328,665, as its quota of the cost of entrance and terminals and York Tp. ratepayers will vote on Jan. 17 on a bylaw to raise \$381,587 for Toronto's share of the work.

Proposals for Buying Ontario Electric Railways.

Dominion Power and Transmission Co.—A press report of Dec. 22 states with respect to negotiations which have been in progress for some time between the Hydro Electric Power Commission of Ontario and the Dominion Power and Transmission Co., that the price at which the company's common stock is proposed to be acquired is par. The common stock outstanding is reported to be \$7,714,500. There is also outstanding \$3,681,000 of preferred stock and \$8,000,000 of bonds. The company's electric railway properties are: Hamilton St. Ry.; Hamilton and Dundas Electric Ry.; Hamilton Radial Electric Ry.; Hamilton, Grimsby and Beamsville Electric Ry., and Brantford and Hamilton Ry.

Guelph Radial Ry.—In connection with the Hydro Electric Power Commission of Ontario's offer to take over the Guelph Radial Ry., free of all encumbrance, as at July 1, 1920, for \$150,000, Sir Adam Beck, spoke at a meeting of Guelph ratepayers, Dec. 4. He stated that the idea is to take over the rail-

way and incorporate it with the proposed Hamilton-Galt-Elmira and Guelph line, the bylaws for which are to be voted on on Jan. 1. Guelph City Council, at a meeting Dec. 8, decided to have the ratepayers vote on a bylaw to raise \$150,000 for the purpose of putting the G.R.R. with the H.E.P.C.O.'s railways.

London St. Ry.—The report of the Hydro Electric Power Commission of engineers as to the value of the London St. Ry.'s, was considered by the London City Council, Dec. 6. The estimated value of the property was stated as \$1,356,000, and it was estimated that the city could not pay what the property was worth, and operate it as cheaply as the company is able to do. The council decided not to ask the ratepayers to vote on a purchase bylaw on Jan. 1. A press report states that the company is willing to sell for \$1,208,000.

Port Arthur Civic Ry.-Fort William Electric Ry.—We are advised that at the request of the Port Arthur and Fort William City Councils, the Hydro Electric Power Commission of Ontario will make a valuation of these two electric railways. Some of the commission's engineers have visited the two cities and collected some of the information necessary, but, we are advised that further details will be required before a report can be completed.

Sarnia St. Ry.—The Sarnia City Council passed a resolution, Dec. 14, asking the Hydro Electric Power Commission of Ontario to make a report upon the Sarnia St. Ry. with a view to its acquisition by the city, and we are advised that the commission will have the investigation made. We are further advised that the company had not been approached up to Dec. 20, and no statement can be made as to whether it would sell.

Proposal to Change the Rule of the Road in British Columbia.

According to a report from Vancouver, legislation will be introduced by the government at British Columbia Legislature's forthcoming session to change the rule of the road from the left to the right hand. The report adds that the Vancouver Board of Trade has passed a resolution asking the government in making the change to provide that the cost attendant upon the change be borne by the people of British Columbia by taxation. George Kidd, General Manager, British Columbia Electric Ry., attended the meeting and explained that the company would not oppose the change, provided that the cost of making it was provided for by the legislature. The estimated cost of altering street cars, switches and overhead equipment, is about \$500,000. It was arranged that a delegation from the board of trade should interview the government upon the matter.

A Victoria report states that W. G. Murrin, Assistant General Manager, and T. Toward, Victoria Local Manager, B.C. E.R., met the Prime Minister and other members of the cabinet, Dec. 15, and discussed the matter. The report says it was estimated that the cost of making the necessary changes would be \$700,000 (instead of \$500,000 as stated at Vancouver), and that it would take a year to do the work. It was arranged for the B.C. Public Works Department's Chief Engineer and the company's engineer to meet and discuss details in order that a report on the whole matter may be prepared.

Our snow headquarters are at our central car barn, in Cote St., where special telephones are in operation, and dispatchers are at hand, and here the Superintendent takes up his position at the center of the web, and directs the movement of his forces. All orders are issued from this spot and all news is transmitted there, and I can tell you that there is lots of that. Divisional superintendents and inspectors report every hour. Sweeper and leveller crews also report every trip, giving their sweeper number, the place they are reporting from, the ground they have covered and the condition of their road, and this means some 90 calls an hour. All this information is tabulated in such a way that the assistant superintendent in charge at the desk during the snow storm can tell at a glance, the position of each sweeper or leveller. There is a lot of thinking to do and he must be a man having the whole system engraved in his mind, as the number of telephone messages per minute would not allow time to consult any map. In this way a close check can be kept on the whole system and help can be sent where it is needed and a sweeper transferred from its own line to another, where danger threatens.

Our snow season begins, as I said before, in November and continues right through till St. Patrick's Day. The snow in December is soft and comparatively easy to handle, as the cold is not severe, but in January and February, our snow storms live up to their reputation, and when the thermometer acts in conjunction and drops to 20 or 25 degrees below, then indeed we have our work to do. Storms in these two months often commence one day, continue all that day and night and the next day sometimes, and although the snow fall is scientifically given as 10 or 12 in., this means that the streets are covered with piles of snow 3 or 4 ft. deep.

In storms like these, something more is needed than equipment and plans, and that is men. If your men are of this kind that work only for pay, then the most complete equipment, the most carefully laid out plans, will not pull you through. What you need, and need badly, are men who are real men, men who work not only for their pay, but do work such as cannot be paid for, in mere money. Esprit de corps must permeate your whole staff from Superintendent down to switchman. Men are wanted whose ideals are so well put by Kipling when he says:

"No one shall work for money,
No one shall work for fame, but
Each for the joy of the working."

Men who answer the call, on the jump, who phone headquarters even before they are called, who pull out their sweepers at the beginning of a storm, and return it only when the storm is over, whether it be after 12, or 24, or 36 hours, and who are indignant when offered relief for a few hours of needful rest. With a staff that starts in with the storm and stays right with it, eating sometimes, sleeping at no time, but fighting at all times, you feel your feet on solid ground and are ready to do your best in the battle with nature's storm king. And after the storm, when the last sweeper has been ordered in and your inspectors are phoning in "cars on schedule time," you turn homeward for a much needed clean up, tired and worn out physically, but your mind at ease, and as you see the streets piled up with snow, but with the car track clean and shining in the sun, the cars filled with passengers riding safely and comfortably down to work, you are suddenly filled with a feeling of joy and pride—joy in the doing of a man's work, and pride in the organization of which you are the head.

The foregoing paper was read before the Montreal Publicity Association.

Sale of Sandwich, Windsor and Amherstburg Ry. to Hydro Electric Power Commission of Ontario.

The voting by ratepayers of Windsor, Ont., and 8 other and adjoining municipalities for bylaws providing for the raising of \$2,100,000 by debentures for the construction and operation of an electric railway under the Hydro Electric Power Commission of Ontario, details of which were given in Canadian Railway and Marine World for Dec., 1919, pg. 667, took place Dec. 6, and resulted in the bylaws being carried in all the municipalities except Anderdon Tl. Following are particulars of the votes:

	For	Against
Sandwich East Tl.	214	14
Sandwich West Tl.	123	45
Anderdon Tl.	56	133
Ford City Town	180	—
Walkerville Town	198	7
Sandwich Town	179	17
Oilville Town	8	—
Amherstburg Town	216	40
Windsor City	1,100	29
Total	2,254	285

The figures for Sandwich West Tl. are stated to be incomplete.

In connection with the defeat of the bylaw in Anderdon Tl., a resolution was passed by the Sandwich West Township Council, Dec. 10, guaranteeing that that township would assume its proportion of the \$143,536, which Anderdon Tl. was to have provided and other municipalities will probably do the same.

While the bylaws and the agreements to be signed by the municipalities under them provide for the construction of an

electric railway, no new line will be built, but the Sandwich, Windsor and Amherstburg Ry. lines will be acquired from the Detroit United Ry. for \$1,849,000. It was reported that the company's property would be taken over within sixty days, from the voting, and that very soon thereafter work would be started on certain betterments which are required, and for which there has been considerable agitation. The bylaws provide \$251,000 for this purpose.

The bylaws state that the amount estimated to be required for the maintenance of the railway, apart from operating expenses is \$134,000 a year. The operating revenue is estimated at \$491,000 and the operation and maintenance expenses are estimated at \$339,000.

The Sandwich, Windsor and Amherstburg Ry. also owns a light and power plant, which it is also proposed to be acquired by the Hydro Electric Power Commission of Ontario for \$190,000. The total price therefore for the railway and the light and power plant, is \$2,039,000, which will be paid in the Hydro Commission's 40 year 4½% bonds. The light and power plant is operated entirely in the City of Windsor, and will be handed over to the city's hydro electric commission for operation. A bylaw to raise the \$190,000 necessary to pay for this plant will be voted on by Windsor ratepayers on Jan. 1.

Electric Railway Employees Wages, Working Conditions, Etc.

British Columbia Electric Ry.—We have received a copy of the agreement made between the British Columbia Electric Ry., and its employees, under the terms of the award of the board of conciliation's award referred to in Canadian Railway and Marine World for Dec., 1919, pg. 671. The new wage schedule was made retroactive to Sept. 8, 1919, and is to continue in operation until changed; 30 days notice of any desired change to be given by either party. As the wages to be paid differ in some cases from those mentioned in our last issue, the schedule of conductors and motormen, as contained in the agreement, is given as follows:

City and Suburban Lines:	Per hour
First 6 months	50c
Second 6 months	50c
Third 6 months	50c
Thereafter	50c

Motormen and conductors in work train service receive 2c an hour in addition to the above rates.

Interurban Lines—District 1, District 4, Saanich Line, 16th St. Yard and Carroll St. Yard:

Passenger Conductors and Motormen:	Per hour
First 6 months	45c
Second 6 months	51c
Third 6 months	57c
Thereafter	58c

Freight Conductors and Motormen:	
First 6 months	47c
Second 6 months	53c
Third 6 months	57c
Thereafter	60c

Passenger Brakemen:	
First 6 months	45c
Second 6 months	50c
Third 6 months	52c
Thereafter	55c

Freight brakemen	53c
Trolleyman	52½c

Work done on Sundays and holidays to be paid time and a half. Extra men to be guaranteed 6 hours work a day.

Edmonton Radial Ry.—As a result of an application by the Street Railwaymen's Union of Edmonton, Alta., the City Commissioners were reported, Dec. 15, to have taken up with the Alberta Government the question of securing for the Edmonton Radial Ry. employees, full pay from the Workmen's Compensation Board for sickness, or injury, caused by accident over which they have no control.

The Montreal and Southern Counties Ry. has advanced its conductors and motormen's wages as follows:

	Suburban lines	Interurban lines
Conductors and motormen.	37c to 46c	38c to 48c
Conductors and motormen.	46c	48c

The new rates are an advance of from 6c to 9c an hour.

The Quebec Ry., Light and Power Co. increased its conductors and motormen's wages on its city division 3c an hour on Nov. 15 and 2c an hour more on Dec. 1, the rates per hour now being:

First year	31c
Second year	31c
Third to 6th year	36c
After 7 years	38c

Toronto Ry. and the Don Bridge—In connection with the building of a bridge on Queen St., Toronto, over the Don River, the Board of Railway Commissioners made an order in 1909, allocating the cost of the bridge among the several parties interested. The amount which the Toronto Ry. was ordered to pay was approximately \$110,000; the total cost of the bridge being \$748,035. The company appealed, and subsequently paid \$80,000 on account under protest. The case went to the Imperial Privy Council, which gave judgment Dec. 18, against the company with costs.

Canadian Electric Railway Association's Annual Meeting.

The Canadian Electric Railway Association's annual meeting was held in Montreal, Dec. 3 and 4, the President, A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Railway, in the chair.

The Honorary Secretary-Treasurer, Acton Burrows, reported on the association's work during the year, the report being presented under the different heads.

J. A. Cameron, in charge of Division of Wood Preservation, Forest Products Laboratories of Canada, Interior Department, in co-operation with McGill University, read a paper on the preservation of logs, and other timber used by

General Manager, Montreal Tramways Co.

Honorary Vice President, Acton Burrows, Managing Director, Canadian Railway and Marine World.

President, A. Gaboury, Superintendent, Montreal Tramways Co.

Vice President, G. Gordon Gale, Vice President and General Manager, Hull Electric Co.

Honorary Secretary-Treasurer (pro tem), A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Railway Co.

Executive Committee—The President, Vice President, and F. D. Burpee, Superintendent, Ottawa Electric Railway Co.; C. C. Curtis, Manager, Cape Breton Electric Co.; A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Railway Co.; Geo. Kidd, General Manager, British Columbia Electric Railway Co.; M. W. Kirkwood, General Manager, Grand River Railway Co.; A. W. McLimont, Vice President and General Manager, Winnipeg Electric Railway Co.; R. M. Reade, Superintendent, Quebec Railway, Light and Power Co.; Lieut.-Col. G. C. Royce, General Manager, Toronto Suburban Railway Co.; C. L. Wilson, Assistant Manager, Toronto & York Radial Railway Co.

Mainly About Electric Railway People.

O. E. Baldwin is reported to have been appointed Manager, Guelph, Ont., Radial Ry., at a salary of \$1,800 a year.

Sir Adam Beck, Chairman, Hydro Electric Power Commission of Ontario, was presented with an illuminated Christmas card by the London, Ont., Rotary Club, Dec. 8, on the eve of his departure for England, where Lady Beck is ill.

Albert Eastman, who was Vice President, Canadian Electric Railway Association, 1917-1918; President, 1918-1919, and who on Dec. 4 was elected Honorary Secretary-Treasurer, pro tem, was born in Bosanquet Tp., Ont., Aug. 21, 1870. He entered transportation service in 1889, and was to 1891, operator, Michigan Central Rd.; 1892 to 1900, freight and ticket clerk and operator, G.T.R., Detroit, Mich.; 1901, assistant agent, Michigan Central Rd.; 1892 to 1900, to Nov., 1902, Travelling Express and Passenger Agent, Detroit United Ry.; Dec., 1902, to May, 1903, General Express Agent, Utica and Mohawk Valley Ry.; May to Nov., 1903, Division Superintendent, Detroit United Ry.; Nov., 1903, to Nov., 1907, Superintendent of Employment, Public Service Corporation of New Jersey; Nov., 1907, to May, 1910, General Express and Passenger Agent, New York State Railways, Syracuse and Utica, N.Y.; May, 1910, he was appointed General Manager, and in 1914, also Vice President, Windsor, Essex and Lake Shore Rapid Ry., Kingsville, Ont.

Arthur Gaboury, who has been elected President, Canadian Electric Railway Association, was born at Montreal, April 6, 1875, and entered Montreal Street Ry. Co.'s service, June 4, 1894, since when he has been, to Oct., 1900, conductor and motorman; Oct. to Nov., 1900, Assistant Inspector; Nov. to Dec., 1900, night clerk,

Cote St. Barn; Dec., 1900, to Sept., 1903, day chief clerk, St. Denis; Sept., 1906, to May, 1906, Chief Agent, May, 1906, to 1907, Assistant Superintendent; and from 1907, Superintendent, which position he still occupies in Montreal Tramways Co.'s service. He was, early in 1918, appointed, by the French Government, an officer of the French Academy. He has been a member of the Canadian Electric Railway Association's executive committee for several years, and was its Vice President, 1918-1919.

G. Gordon Gale, M.E.I.C., who has been elected Vice President, Canadian Electric Railway Association, after having been a member of the executive committee for several years, was born at Quebec, Que., Oct. 9, 1882, and prior to 1907 was Assistant Engineer, Canadian

J. E. Hutcheson.
General Manager, Montreal Tramways Co. who was here elected Honorary President Canadian Electric Railway Association.

electric railways, which was illustrated by lantern slides.

The resignation of Acton Burrows, as Honorary Secretary-Treasurer, after serving for over 12 years, tendered by him in July, 1919, and at the executive committee's request, held in abeyance until the annual meeting, was discussed, and as Mr. Burrows stated that it was absolutely impossible for him to continue to occupy the position, owing to demands on his time for his business and his private interests, it was accepted with an expression of regret, and he was elected as the association's first honorary member.

Considerable time was spent in discussing a proposed re-organization of the association, so as to widen its activities, and extend its work, and the revision of the constitution and bylaws was referred to the executive committee, which reported at the second day's meeting. It is proposed to appoint a paid secretary-treasurer or manager, to devote his whole time to the association's work.

The following officers were elected for the current year:—

Honorary President, J. E. Hutcheson,

Acton Burrows.
Managing Director, Acton Burrows Ltd. proprietor, Canadian Railway and Marine World, who has resigned the Honorary Secretary-Treasurership of the Canadian Electric Railway Association, after having been unanimously re-elected for 12 consecutive years, and who has been elected an honorary member of the association and its Honorary Vice President.

Rubber Co.'s electrical plant; 1907 to Nov., 1908, Superintendent of Power, Hull Electric Co.; Nov., 1908 to 1909, acting General Superintendent, same company; 1909 to June, 1914, General Superintendent, same company; June, 1914 to Jan., 1917, General Manager, same company, and from Jan., 1917, Vice President and General Manager, same company.

J. E. Hutcheson, who has been elected Honorary President, Canadian Electric Railway Association, was born at Brockville, Ont., Sept. 10, 1858, and entered railway service in 1874, in the G.T.R. mechanical department, afterwards serving in that company's ticket, freight and telegraph departments. In 1884 he was appointed a dispatcher, C.P.R., at Ottawa, in 1886 Chief Dispatcher, and in 1888 Trainmaster, which position he held to 1891, when he took charge of the Ottawa Electric Ry. Co.'s operation of which he was Superintendent until July, 1912, when he was appointed General Manager, Montreal Tramways Co. He

has taken an active part in the Canadian Electric Railway Association's work since its inception, having served for several years as a member of the executive committee, and also having been Vice President, and for the year 1908-09, President. He was, for several years, a member of the 43rd. Regiment, retiring with the rank of Major, in 1910, on his return from England, where he acted as Adjutant in charge of the Canadian team at Bisley. He was subsequently appointed an honorary lieutenant colonel. He has been a member of the Militia Department's small arms committee for several years.

H. A. Lemmon has been appointed Secretary, Nova Scotia Tramways & Power Co., vice H. R. Mallison, resigned.

Alexander MacDonald, whose appoint-

Arthur Gaboury, Superintendent, Montreal Tramways Co., who has been elected President, Canadian Electric Railway Association.

ment as Traffic Superintendent, Winnipeg Electric Ry. was announced in our last issue, was born Apr. 7, 1872, and entered electric railway service June 5, 1897, since when he has been, to 1900, conductor and motorman; 1900 to 1903, Inspector; 1904 to July, 1912, Superintendent, Hochelaga Division, Montreal St. Ry.; July, 1912 to Nov., 1919, Superintendent, St. Denis Division, Montreal Tramways Co.

H. C. Nickle, General Superintendent, Kingston, Portsmouth & Cataraqui Electric Ry., who has been elected mayor of Kingston, Ont., by acclamation, was born there, May 26, 1874, and entered transportation service in Sept., 1893, and has been with the K.P.&C.E.R. Co. ever since the introduction of electric cars in Kingston.

F. W. Summer, who was a director of the Moncton, N.B., Tramways, Electricity and Gas Co., from its inception, died recently.

The Electrification of the Italian State Railways is, it is reported, to be carried out by an Italo-United States combine with a capital of 800,000,000 lire (at nominal rates of exchange \$150,000,000).

The Waterloo-Wellington Railway.

The Berlin and Bridgeport Electric Street Ry. Co., began operations between those two Ontario municipalities in 1902, and in 1912, with a view to extending the line northerly, an act was secured from the Ontario Legislature, changing the name to the Berlin and Northern Ry. Co. and authorizing the extension of the line to Fergus and Elora. In 1919, owing to the change of the name of the City of Berlin to Kitchener, the Ontario Legislature authorized the company to change its name to the Waterloo-Wellington Ry. Co. and extended the time within which the additional line of railway could be built for three years.

The company owns 2.75 miles of track serving Kitchener, Bloomingdale and Bridgeport, and operates over about a mile of the Kitchener and Waterloo Ry.

G. Gordon Gale, Vice President and General Manager, Hull Electric Co., who has been elected Vice President, Canadian Electric Railway Association.

tracks, owned by the City of Kitchener. The company also owns a park and casino, on the Grand River at Bridgeport, where there is also a race track, country club and other features attracting a large summer business. The company operates its line directly, and uses thereon 3 motor cars, double truck and 2 single truck. One of the latter is a one man car and it is found entirely satisfactory. The company also owns 3 steel dump cars for hauling gravel, and 5 additional smaller cars.

We are officially advised that the company has had some negotiations with the City of Kitchener, as to the purchase or taking over and operating the W.-W. line in conjunction with the city's line, but no arrangement has been reached further than the conclusion of an operating agreement for the use of power and the use of trackage in the city for another year.

We are further advised that the company has a project under way for extending its line to Guelph; the city authorities of which are reported as having expressed themselves as being strongly interested in the project. With 26,000 people at the Kitchener end, and about

20,000 people at the Guelph end, and three villages directly on the route, with several more nearby, and a fine, prosperous rural territory and population intervening, an electric railway giving a good service between Kitchener and Guelph, 15 miles, would, it is contended, pay well within a few years. W. H. Breithaupt, Kitchener, Ont., is President.

Toronto Ratepayers to Vote on Street Railway Questions.

Toronto ratepayers will vote on the following questions at the municipal elections Jan. 1: Are you in favor of:— (1) The operation of the Toronto Ry. System by a commission of three ratepayers, resident in the municipality, to

Albert Eastman, Vice President and General Manager, Windsor, Essex and Lake Shore Rapid Railway, who was President, Canadian Electric Railway Association, 1918-1919, and who has been elected its Honorary Secretary-Treasurer, pro tem.

be appointed by the city council and to act without salary? and (2) The city applying for legislation enabling it to borrow money without a further vote of the electors, to acquire the Toronto Ry. Co.'s property, which the city is entitled to take over under the agreement between the city and the company, and for the purposes of the transportation commission, and to make arrangements for the operation thereof?"

A third bylaw, which will also be voted on an Jan. 1, affirms the expediency of the city taking over certain real and personal property of the Toronto Ry. Co., pursuant to the statutes and to the agreement with the city.

The Ontario Court of Appeal, on Dec. 8, refused to grant the Toronto and York Radial Ry. leave to appeal against an order of the Ontario Railway and Municipal Board, authorizing Toronto City Council to cross the company's line on Yonge St., with its projected Mount Pleasant civic car line. It is reported that the case will probably go on to the Imperial Privy Council.

Electric Railway Projects, Construction, Betterments, Etc.

British Columbia Electric Ry.—We are informed that the company has been authorized to build a new line from the Fraser Ave. station to the Victoria station, a distance of about 10 miles. The line will be built on the right of way of the C.P.R. and will be operated by the C.P.R. The estimated cost of the line is \$1,000,000. (Dec., 1919, pg. 612).

Calgary Municipal Ry.—The board of trustees has authorized the city to build a new line from the city center to the airport, a distance of about 10 miles. The line will be built on the right of way of the C.P.R. and will be operated by the C.P.R. The estimated cost of the line is \$1,000,000. (Dec., 1919, pg. 612).

Chatham, Wallaceburg and Lake Erie Ry.—We are officially advised that although the company has bought rotaries and transformers to be used in connection with the installation of hydro electric power, the machinery has not been installed, and it is not expected to put it in operation before Jan. 15. It is intended to use two 250 rotary converters at Chatham, Ont., one 250 rotary converter at Wallace, and one of similar capacity at Cedar Springs. The line is still being operated by the company's own steam plant, and it is intended to use this as an auxiliary in case of failure of the hydro power.

Edmonton Radial Ry.—We are officially advised that the following new track is under construction in Edmonton, Alta.: To exhibition grounds, 3,000 ft.; to Calder suburb, 2,000 ft.

Grand River Ry.—We are officially advised in regard to the company's application to the Board of Railway Commissioners for approval of diversion of the line in Waterloo Tp. and the City of Kitchener, Ont., that the change in location has been brought about by the city advising the company, about a year ago, that on the expiration of the franchise on Oct. 8, 1919, the city intended exercising its rights by taking over the portion of the line on King St., between the city limits and Albert St., 4,700 ft., with a view to building a second track, and paving the street, for the purpose of extending the service on the Kitchener and Waterloo St. Ry. to the city limits. As the line in question serves the company's Kitchener freight terminal, and Waterloo, branching off between the city limits and Albert St., it became necessary for the company to seek a new location to carry on freight and express service properly, and it has been decided to do so on a private right of way. After preparing the plans and submitting them to the city for approval as to street crossings, the Hydro Electric Power Commission of Ontario appeared and opposed the application unless the G.T.R. agreed to grant the commission's proposed electric railway priority rights in the way of diamond crossing, signal plant and operation should the commission decide to cross this same land at some future date. This the G.T.R. refused to agree to, consequently its application for approval of plans was heard by the Board of Railway Commissioners at Hamilton, Oct. 29. The board's decision on the matter has not been announced. (Dec., 1919, pg. 670).

Nipissing Central Ry.—Residents of the part of Quebec lying round the

northern end of Lake Timiskaming, are reported to be desiring of securing some facilities with L'Assomption, Cobalt, Harbary and other Ontario towns. A suggestion has been made that the N.C.R., which has a Dominion charter, and authority to build lines in Quebec, might be extended from L'Assomption through the area in question, as far as the Des Quinze River, where a large water power could be developed. The N.C.R. is owned by the Ontario Government. (July, 1918, pg. 589).

Nova Scotia Tramways and Power Co.—We are officially advised that the company has in progress the building of a new line on Cogswell St., Halifax, N.S., about 3,000 ft.; double track, which will connect the existing track on Gottingen and Windsor St., the rebuilding of 1,800 ft. double track on the Spring Garden Road, and the rebuilding of 3,400 ft. double track on Agricola St. The company has in contemplation the rebuilding of other track as follows:—Cobourg Road, 2,600 ft. double track; Quinpool Road, 4,100 ft. double track; Windsor St., 1,500 ft. double track; Gottingen St., 4,000 ft. single track.

Ottawa Electric Ry.—A press report states that laying rails for the street rail on the new Chaudiere Bridge, Ottawa, is being gone on with, and that as soon as this work is completed the temporary bridge will be removed. The Ottawa City Council was asked by a citizens' deputation, Dec. 6, to favor the building of a loop on Creighton St., and decided to refer the matter to the company for consideration. (Dec., 1919, pg. 670).

Quebec Ry., Light and Power Co.—We are officially advised that the agreement between the company and the Quebec City Council, signed Nov. 25, under the provisions of the bylaw passed by the city council Nov. 15, contains the following provisions as to extensions of lines, etc., to be built in consideration of the increase of fares authorized to be charged: Extension on Dorchester St., about 0.5 mile; extension on Charlesbourg Rd., from Lamontagne St. to Commissioner St., 650 ft. Construction of subway under Canadian Northern Ry. tracks on Beauport Road instead of placing a railway diamond for level crossing, as previously provided, this extension is completed, leaving the subway only to be built. The company had undertaken previously to extend its line in Belvedere Ward, and by the new agreement the city has agreed to extend the time limit in connection with the building of this extension. The company is expected to commence the extension not later than July 1, and to complete it not later than Nov. 25.

The company has also agreed to pay the same amount as paid last year to proprietors and tenants in connection with the removal of snow thrown on their properties by its sweepers. (Dec., 1919, pg. 670).

Regina Municipal Ry.—A special committee of the Regina, Sask., City Council is reported to have recommended the council to authorize the building of a loop of the spur line now running to the Imperial Oil works plant, and to install an interlocking plant at the intersection of the Fourth Ave. line with the C.P.R. Bulvea line. (Nov., 1919, pg. 612).

Regina Municipal Ry.—Superintendent Houson is reported to have recommended

that the following works be carried out on the Regina, Sask., Municipal Ry., during this year: Building a second track on Fifth Ave., west of Angus St.; building another three track unit to the car barns, east of the existing units, and extend the building south to a line flush with the offices. If a second story is added to the office building, it would then be possible to carry the roof across to the new unit, providing a good sized covered area, the width of the existing units and the length of the present office building, which would also provide partial protection for cars not parked in the storage barns. The existing barns comprise a three-track unit, and a one-track unit in the repair shops.

The Sherbrooke Ry. and Power Co., during 1919, laid 1,800 ft. of additional track from Short St. to Drummond St., and 1,700 ft. of second track on Wellington St. The company is building about 3,000 ft. of new track on Alexander, Galt and Belvedere Sts. (Dec., 1914, pg. 670).

Toronto Civic Ry.—A second track is being built on Bloor St. West, between Quebec Ave. and Runnymede Road; 60 lb. rails being laid on gravel ballast. Other material is being secured and the work will be proceeded with as soon as weather permits. D. W. Harvey is Superintendent and Engineer. (Dec., 1919, pg. 671).

Winnipeg Electric Ry.—The Manitoba Public Utilities Commissioner was asked Dec. 10, to direct the removal of the Winnipeg Electric Ry. tracks to the center of Portage Ave., from the Winnipeg city limits to the intersection of the line of the westerly limit of Douglas St., and for the building of a double track subway. (Oct., 1919, pg. 553).

London and Port Stanley Railway Betterments, Etc.

The London, Ont., Railway Commission asked the city council recently to have the ratepayers vote on Jan. 1, on a bylaw authorizing the issue of \$218,000 of debentures for London and Port Stanley Ry. purposes. A city council committee recommended that the amount be reduced to \$200,000, and this amount was inserted in the bylaw which will be voted on Jan. 1.

We are officially advised that the work proposed to be done includes the following:—An extension of car barns at London to provide additional space for repairs and storage, \$7,000. Double tracking of line through St. Thomas, which in addition to tracks already laid, will give the railway 2.5 miles of double track through that city, \$35,000. A new slip dock at Port Stanley, \$8,500. An extension of Port Stanley station, \$19,000. Extension of other buildings there \$11,000. Installation of track scales in London, \$9,500. Shelters and platforms at various concession stops along the line, \$9,300. Overhead railway bridge in St. Thomas, \$5,700. Electric locomotive and 5 or 6 passenger cars, \$95,000.

These expenditures are said to be necessary on account of the business done on the railway being about two and a half times as great as was estimated when the citizens were asked to vote on the electrification of the line in 1913. The commission has spent on various betterments and on additional equipment

the surplus which have accrued from operation during the past four years.

The additional double track work in St. Thomas is necessary to take care of the heavy freight and passenger business into and through that city. The work at Port Stanley includes some additions to the station, the erection of a freight shed, and the provision of a closed terminal at the beach station, to properly control and handle the crowds that are carried to and from that resort during the summer. It is proposed to extend the other buildings at Port Stanley in order to accommodate the patrons of the various concessions there.

A press report states that the new station near Talbot St., St. Thomas, is nearing completion. It is of brick, with tile roof, and is thoroughly modern in all its appointments.

Appraisal of Winnipeg Electric Railway's Properties.

It was reported in Winnipeg, Dec. 2, that a copy of the appraisal of the Winnipeg Electric Ry.'s property and made at the instance of the Manitoba Public Utilities Commissioner in connection with the company's application for an order for the fixing of passenger fare permanently at 6c, was delivered to the city officials Mar. 30. The reports as to the figures contained in the document are to the effect that the present value of the company's holdings is estimated as \$12,934,293.85, and that it would cost \$15,724,501.16 to replace the plant. This valuation, it is pointed out, represents a part only of the company's property, and does not include rolling stock, land, gas property, the Winnipeg River Power property, and intangible assets. Press comments on the figures further set out that the J. G. White Co.'s valuation of 1915 put the valuation of the company's holdings at \$23,995,860, and that it would then have cost \$27,182,322 to replace them. The company's rolling stock, which is not included in present valuation, was valued at \$1,500,000 in the J. G. White Co.'s report, while the Public Utilities Commissioner, about a year ago, valued the company's gas plant at \$2,200,000 for rate making purposes.

At a meeting of the city council, Dec. 9, it was resolved that the City Solicitor, after using the services of such city officials as may be found suitable, and after consultation with the chairman of the transportation committee, appoint such expert assistance as he may require in connection with the valuation of street railway properties, the finance committee to provide sufficient funds for such purpose. The mayor informed the council that the idea was to show the actual cash put into the concern. There was a great discrepancy between the company's appraisal and the appraisal made by the Public Utilities Commissioner's experts, and the city wanted its experts to check over the different valuations.

The Toronto Board of Police Commissioners decided, Dec. 16, to make an allowance of 25c a day to all members of the Toronto police force who, during the period between the issues of the new police badges, which the Toronto Ry. refused to recognize, and the date of the issue of the present T.R.C. badges, paid their own street car fares. The amount involved is estimated at \$600.

Increases in Electric Railway Freight and Passenger Rates.

British Columbia Electric Ry.—The freight and passenger tariffs filed with the Board of Railway Commissioners as given fully in Canadian Railway and Marine World for Dec., 1919, are, we are officially advised, the same as were in force under provincial jurisdiction, on city lines in Vancouver, New Westminster and Victoria and the interurban lines.

The Board of Railway Commissioners considered the question of its jurisdiction over the B.C.E.R. at a sitting in Vancouver in Nov., 1919, reserving judgment, which had not been delivered up to Dec. 26.

Burnaby Municipality's Solicitor was in Victoria, Dec. 16, to discuss the matter with the B.C. Government. He is reported to have said:—"The point to be urged against the Board of Railway Commissioners' jurisdiction is that while the Dominion Parliament has the right to declare any railway system to be for the general advantage of Canada, and as such under its control, those railways must be specifically named, and parliament has no power to insert an omnibus clause bringing lines under control without specifying them."

The British Columbia Premier is reported to have said in connection with the matter on Dec. 20:—"I am not, of course, in a position to judge of the legal side of that question, but the Attorney General is taking it up with the Board of Railway Commissioners, and the province's side of the case will be thoroughly investigated. It is not possible to state just now what the final outcome will be, but the Attorney General will not neglect any phase of this question."

Grand River Ry.—The Board of Railway Commissioners passed order 29,145, Dec. 12, 1919, as follows:—Re Grand River Ry. application, for authority to file tariffs providing for a general advance in tolls for carriage of passengers for its lines, in the same manner and to the same extent as has been permitted by the board in the case of steam railways. It is ordered that the company be authorized to increase its standard maximum fare for the carriage of passengers to 2.875c a mile, such increased fare not to become effective until the company has complied with the requirements of the Railway Act, sec. 334.

London St. Ry.—London, Ont., ratepayers will vote Jan. 1 on a proposal to reduce the number of tickets sold for 25c by one. At present 7 tickets are available all day, and 9 limited tickets are sold for 25c.

Quebec Ry., Light and Power Co.—We are officially advised that the Quebec City Council passed a bylaw, Nov. 15, authorizing an increase in fares on the company's lines and a new contract was signed Nov. 25, the new rates becoming effective Nov. 20, remain in force for 5 years. The new tariff is as follows:—Cash fare, from 5 a.m. until midnight, 7c; cash fare after midnight, 10c; without privilege of transfer. Seventeen tickets to be sold for \$1, and 4 tickets for 25c. Six "limited employees" tickets, heretofore known as workmen's tickets, to be sold for 25c, good between 6 and 8 a.m., and 5 and 7 p.m., daily except Sundays; all employees in factories, offices, stores, etc., will be entitled to use

this style of ticket. School children 16 years and under, 10 tickets for 25c. Children, carried in arms with parents, and who do not occupy a seat, travel free; children under 7 years, 3c cash fare or 10 tickets for 25c. These rates replace those which had been in effect from June 22, 1918, as follows:—Cash fare, 5c; 21 tickets for \$1. Seven workmen's tickets for 25c, good between 6 and 8 a.m., and 5 and 7 p.m., daily except Sundays; school children's tickets, 10 for 25c, good for children attending school, 14 years of age and under. Children carried in arms with parents and who do not occupy a seat, travel free; children 7 years of age and under, 3c cash fare, or 10 tickets for 25c.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and subsidiary companies—

	Sept. 1919	Sept. 1918	1919	1918
Gross	\$681,916	\$375,176	\$1,991,206	\$1,533,783
Expenses	568,135	411,928	1,196,178	1,295,433
Net	113,781	163,248	795,028	238,350

The net for Sept., 1919 includes \$23,612, being 1c out of each 6c fare collected in Vancouver, and held in suspense under the terms of the Public Utilities Act, pending the commissioner's decision.

Calgary Municipal Ry.—Earnings, expenditure, etc., for Nov., 1919:

Fares	\$74,985
Advertising	1,256
Total revenue	\$77,231
Expenditures	\$64,968
Profit	\$11,268
Statement for the 11 months ended Nov. 30, 1919, is as follows:	
Revenue	\$786,559
Expenditures	713,182
Profit	\$24,377

Edmonton Radial Railway—

	Oct., 1919	Nov., 1919
Total revenue	\$ 69,294.52	\$ 65,733.92
Passengers carried	1,006,012	1,121,192

Montreal Tramways Co.—At a meeting of directors, Dec. 22, to consider the question of dividends on the common stock, which were deferred in 1918, it was decided to pay a quarterly dividend of 2½% at the rate of 10% per annum, for the year ended June 30, 1918, on the paid up capital stock of the company to shareholders on record Dec. 29, 1919. Financial circles takes this as an indication that the company will continue to pay regular dividends, and that a meeting of the directors will be held early in the new year to consider paying arrears.

Regina Municipal Railway—

Passenger receipts Nov., 1919	\$29,503.75
Number of passengers carried	610,444

Toronto Ry., Toronto & York Radial Ry., and allied companies—

	9 months to Sept. 30, 1919	9 months to Sept. 30, 1918
Gross	\$1,121,139	\$1,119,325
Expenses	726,221	655,009

Winnipeg Electric Ry., and allied companies—

	9 months to Sept. 30, 1919	9 months to Sept. 30, 1918
Gross	\$381,248	\$285,677
Expenses	220,470	224,618
Net	160,778	161,059

The surplus for October, after allowing for fixed charges, was \$44,661.57.

Electric Railway Notes.

The Hydro Electric Power Commission of Ontario has ordered 2 trams for electric illumination from Canadian Car and Foundry Co.

Quebec City, Superior Electric Ry. has secured a contribution from Canada and Cooper from Ottawa Car Manufacturing Co.

The British Columbia Electric Ry. office staff has its annual dinner at Vancouver, Dec. 6, George Kidd, General Manager, is the guest.

Three Rivers Traction Co., Three Rivers, Que., has ordered 2 one man, near standard, motor cars on order, from Ottawa Car Manufacturing Co.

A. L. Farquharson, Manager, Fort William Electric Ry., left Fort William, Ont., Dec. 7 to secure options on new and second hand cars to replace those destroyed in the recent fire.

The Ottawa Electric Ry. will, it is said, in future be the plaintiff in actions due to collisions between automobiles and street cars, where they are due to careless automobile driving.

The Brantford, Ont., City Council will consider the regulation of the speed at which Brantford and Hamilton Ry., and Lake Erie and Northern Ry. cars shall be operated within the city limits.

The Regina, Sask., Municipal Ry., management has under consideration the purchase of some motors from Winnipeg, which it is proposed to instal on the 6 old cars, which were bought in England, to speed them up.

The Niagara, St. Catharines & Toronto Ry.'s car barn at Niagara Falls, Ont., was destroyed by fire Dec. 10, together with 2 of the latest type of cars and a snow plough; the damage being estimated at \$40,000.

The Winnipeg City Council on Dec. 8 authorized the preparation of a bylaw creating a standing committee on transportation to deal with all questions of transportation, and to consist of 5 members.

The Regina, Sask., Municipal Ry., is considering the question of the operation of cars on Sundays to a later hour at night than at present. Under the present schedule, all cars are in the barns a little after 10 p.m.

The Calgary, Alta., Municipal Ry., is reported to be buying 4 cars, and to be considering the buying of 2 additional cars. Superintendent T. H. McCauley, who was in the east recently, received telegraphic instructions as to the matter Dec. 5.

The Moncton Tramways, Electricity and Gas Co.'s car barn and machine shop, at Moncton, N.B., was burned Dec. 25; considerable machinery, one car, and a sweeper being destroyed. The watchman died from injuries received during the fire.

The Regina, Sask., Street Railway Department has begun the issue of a twice a month pamphlet, giving information and items of interest in connection with the street railway. It is entitled the Regina Municipal Railway Headlights, and is issued free to the public.

The Toronto Suburban Ry.'s bylaw authorizing W. J. Radford, Assistant Manager, to prepare and issue passenger tariffs, and F. Butcher, Freight Superintendent, to prepare and issue freight tariffs, was approved by the Board of

Railway Commissioners by order 29,124, Dec. 6.

The Imperial Privy Council on Dec. 5, reserved judgment on the Toronto Ry.'s appeal against the City of Toronto regarding the removal of snow. A second appeal case, in which the same parties were involved, having to do with penalties for alleged inadequate service, was also heard.

County Judge Gunn, Ottawa, is Chairman of a board of conciliation which commenced its sittings in Toronto, Dec. 8, to interpret certain parts of the award of Sept. 23, 1919, respecting the Toronto Electric Co. and its employees. W. H. Moore is the company's representative, and F. Bancroft represents the men.

The Nova Scotia Tramways & Power Co.'s 24 cars ordered for its Halifax, N.S., electric railway as mentioned in our last issue, are of the standard Birney safety type, arranged for double end operation. They were ordered from American Car Co., St. Louis, Mo., for delivery during Dec., 1919.

The Montreal Tramways Co. is applying to the Quebec Legislature for an act determining its rights and obligations with regard to its contribution to the building and maintenance of sewers in Montreal and other municipalities to which its lines extend; to amend laws, relating thereto, and for other purposes.

The Hamilton, Ont., City Council's street railway committee is reported to have abandoned its idea of appealing to the Ontario Railway and Municipal Board for an order to compel the Hamilton St. Ry. to give an improved service pending the outcome of the negotiations between the Hydro Electric Power Commission of Ontario and the Dominion Power and Transmission Co., for the purchase of the latter's interests.

The Commissioner of Public Safety of St. John, N.B., is reported to have called the attention of the New Brunswick Power Co. to the frequent overloading of street cars in contravention of the law. The company is stated to have recently put on 6 extra cars on two routes, in order to lessen the overcrowding. During the rush hours and on rainy days the company's conductors could not keep people from getting on cars, even when they were already well filled.

The Winnipeg Electric Ry. put in effect on Dec. 7, a general rerouting of cars on a number of its lines, aiming, in so doing, as the more even distribution of car service, and permitting a greater number of extra cars in sections of the city, where traffic is heaviest during rush hours. A protest against this rerouting was made at a meeting of the city council, Dec. 8, when it was intimated that the council would determine whether or not the company is obliged to consult the city when making changes in routing.

The Winnipeg City Council and the Winnipeg Electric Ry. are reported as having arrived at an understanding in reference to taxation matters. The city claims approximately \$500,000 for unpaid taxes from and including 1916. The company alleged overcharges, particularly in connection with street paving work. Representatives of the city finance department met A. W. McLimont, Vice President and General Manager, at the end of November and subsequently with

the result that it was reported, Dec. 9, that an arrangement had been made.

The hearing of the New Brunswick Power Co.'s appeal in connection with the fixing of the original cost of the company's investment in St. John, N.B., for street railway purposes, has been concluded before the New Brunswick Court of Appeal and judgment reserved. The special commission appointed by the N.B. Legislature in 1918, after an investigation, fixed the value of the investment at \$2,800,000 on which a return of 7% was to be secured. In the appeal, the St. John City Council asked for a reduction to below \$2,000,000, while the company argued that it should be increased to about \$5,000,000.

The Sandwich, Windsor & Amherstburg Ry.'s Superintendent suspended 4 conductors and motormen, in connection with their alleged refusal to handle a broken live trolley wire in Nov., 1919. The matter was referred to the Ontario Railway and Municipal Board, which sent the following telegram to the company's General Manager: "Ontario Railway and Municipal Board, on report of inspector, finds fault in car house foremen not acting promptly when telephoned, and finds motormen and conductors in fault in not telephoning between 9 and 11.30 o'clock, and orders reinstatement forthwith of 4 suspended employees and payment to them of half pay for period of suspension."

Electric Railway Track Laid in 1919.

Following is a preliminary statement showing new electric railway track laid during 1919:—

	Miles	Miles
Brantford Municipal Ry.—		
Colborne St. to St. Paul Ave.	1.95	
T.H. & B. tracks to G.T.R. tracks	.40	2.35
Montreal Tramways Co.—		
Cote de Neiges Cemetery area to		
Queen Mary Road	0.54	
Monk Boulevard, Church to		
Allard	1.45	
Therville, Masson to Belanger	1.15	2.74
Ottawa Electric Ry.—		
Raymond St. to Powell Ave.	0.20	
Three other extensions	0.20	0.40
Quebec Ry., Light and Power Co.—		
Beaufort Road, C.N.R., to city		
limits, going west	1.15	
C.N.R. to 3rd Ave., along 10th		
St., going west	0.50	1.65
Sherbrooke Ry. and Power Co.—		
Short St. to Drummond St.		0.34
Total		7.48

The Nova Scotia Tramways and Power Co. is rebuilding about 4 miles of double track, which is being relaid with concrete filler in pavement.

The Sherbrooke Ry. and Power Co. laid 1,700 ft. of second track on its Wellington St. line.

The Wellington-Waterloo Ry., laid a turning Y in Bridgeport, Ont., about 320 ft. of track.

London and Lake Erie Ry. and Transportation Co.'s Liquidation—St. Thomas, Ont., ratepayers decided, Dec. 1, by a vote of 475 to 37 to authorize the issue of \$25,000 of debentures to buy the company's car barns, power house and land in the vicinity of the Michigan Central Rd., and the overhead wiring on Talbot St. Negotiations are reported to be in progress for the sale of the company's property on Horton St., London, the buildings on which were used as a freight station and the ticket office by the railway before its abandonment.

Marine Department

Canadian Government Merchant Marine, Ltd., Shipbuilding, Operation, Etc.

Orders for Steamships—The table on page 39 of this issue containing particulars on orders for steel cargo steamships for Canadian Government Merchant Marine Ltd., gives full particulars of 53 ships ordered by the Marine Department, and partial particulars of 3 others, 56 in all. We were officially advised Dec. 17, that the contracts for the 3 ships of which only partial particulars are given, viz.: 1 from Midland Shipbuilding Co. of approximately 3,950 d.w. tons, and 2 from Wallace Shipyards, Ltd., of approximately 8,350 d.w. tons each, had not then been signed. If not signed at the time of writing this (Dec. 26), they doubtless will be in the near future. Although no official information was obtainable up to Dec. 19, Canadian Railway and Marine World is aware that further orders have been decided on which will bring up the fleet to at least 60 ships. These additional orders include 2 'tween deck ocean going steel cargo steamships of approximately 3,950 d.w. tons each, to be built by Collingwood Shipbuilding Co., one at Collingwood, Ont., and the other at Kingston, Ont. It is said that the Nova Scotia Steel & Coal Co., New Glasgow, N.S., has another order for a steamship of approximately 2,800 d.w. tons, similar to the first two orders placed with it, and that the Port Arthur Shipbuilding Co. has an order for another steamship of approximately 4,300 d.w. tons, in addition to the orders placed with it previously.

Oil Fuel—Referring to the question of equipping the 4 steel cargo steamships, of approximately 8,350 d.w. tons each, which were ordered by the Marine Department from Canadian Vickers Ltd., on Sept. 30, to use fuel oil instead of coal, Canadian Railway and Marine World was advised Dec. 9, that the department had not come to any decision on the question in regard to any of the ships being built under its orders.

Launchings of Steamships—Since Canadian Railway and Marine World for December was issued we have been advised of the following launchings:

S.s. Canadian Importer; Marine Department contract 34; builder's yard no. 11; approximately 8,100 d.w. tons; J. Coughlan & Sons, Vancouver, B.C.; Dec. 6, 1919.

S.s. Canadian Beaver; Marine Department contract 31; builder's yard no. 15; approximately 3,750 d.w. tons; Collingwood Shipbuilding Co., Kingston, Ont.; Dec. 10.

S.s. Canadian Farmer; Marine Department contract 46; builder's yard no. 65; approximately 3,950 d.w. tons; Collingwood Shipbuilding Co., Collingwood, Ont.; Dec. 27, 1919.

S.s. Canadian Raider; Marine Department contract 7; builder's yard no. 102; approximately 5,100 d.w. tons; Wallace Shipyards Ltd., North Vancouver, B.C.; Dec. 11.

Delivery of Steamships—In addition to the steamships mentioned in Canadian Railway and Marine World previously, the following have been delivered to the Marine Department by the builders, and were transferred to Canadian Government Merchant Marine Ltd., for operation on the dates mentioned.

Nov. 18, 1919, s.s. Canadian Sower; Marine Department contract 20a; builder's yard no. 42; approximately 3,400 d.w. tons; Port Arthur Shipbuilding Co., Port Arthur, Ont. She was loaded with general cargo at Montreal for St. John's, Nfld.

Nov. 22, 1919, s.s. Canadian Navigator; Marine Department contract 23; builder's yard no. 73; approximately 4,300 d.w. tons; Canadian Vickers Ltd., Montreal. She was loaded with general cargo at Montreal for London, Eng.

Dec. 2, 1919, s.s. Canadian Settler; Marine Department contract 13; builder's yard no. 5; approximately 5,100 d.w. tons; Tidewater Shipbuilders Ltd., Three Rivers, Que. She was loaded with general cargo at Montreal for St. John's, Nfld.

Dec. 6, 1919, s.s. Canadian Spinner; Marine Department contract 27; builder's yard no. 71; approximately 8,350 d.w. tons; Canadian Vickers Ltd., Montreal. She was loaded with general cargo at Quebec for South America.

Dec. 20, 1919, s.s. Canadian Sealer; Marine Department contract 40; builder's yard no. 5; approximately 2,800 d.w. tons; Nova Scotia Steel & Coal Co., New Glasgow, N.S. She has since been reported to be icebound at Pictou, N.S.

Three steamships are now at Quebec ready to be delivered to Canadian Government Merchant Marine Ltd., viz.: Canadian Planter, approximately 8,100 d.w. tons, built by Canadian Vickers Ltd.; Canadian Rancher, approximately 5,100 d.w. tons, built by Tidewater Shipbuilders Ltd.; and Canadian Trapper, approximately 5,100 d.w. tons, built by Davie Shipbuilding & Repairing Co. In view of the unusual ice conditions in the St. Lawrence, they will not be put in service until next spring, and will be moored at Quebec for the winter.

Officers of Steamships—The following officers have been appointed by Canadian Government Merchant Marine Ltd. The first column contains the names of the ships, the second those of the captains and the third those of the chief engineers:

Canadian Importer	A. O. Cooper	
Canadian Planter	A. L. Starratt	J. Young
Canadian Rancher	W. Bradley	
Canadian Recruit	C. J. Murphy	W. Byers
Canadian Sower		L. Cunningham
Canadian Volunteer	E. C. Sears	J. Campbell
Canadian Voyageur	J. D. MacKenzie	
Canadian Warrior	C. R. Bissett	

Steamship Services—The Vancouver Board of Trade is reported to have received word that as soon as possible, Canadian Government Merchant Marine Ltd., will establish a steamship service between Montreal, Halifax and British Columbia ports, via the Panama Canal.

The Canadian Merchant Service Guild has sent a petition to the Minister of Marine, asking that a government passenger steamship service be established between Vancouver, Victoria and San Francisco. It is pointed out that there was at one time an indifferent service given between these points by vessels under the U.S. flag, but that this was withdrawn some time ago.

The s.s. J. A. McKee has been chartered to the Newfoundland Government, for a short time, to carry coal from Cape

Breton to Newfoundland, where there is a serious shortage. She is screw driven by engine of 204 n.h.p., and is 2,158 tons gross, 1,375 tons register.

The s.s. Canadian Recruit, 3,964 d.w. tons, built by Collingwood Shipbuilding Co., and delivered to Canadian Government Merchant Marine Ltd., June 7, 1919, left Montreal, Dec. 8, with a general cargo for Kingston, Jamaica, and Havana, Cuba. She was to call at Sydney, N.S., to fill her bunkers, and was to take a return cargo of sugar to St. John, N.B. She passed Crane Island Dec. 16, encountered serious ice trouble, lost her rudder, and went ashore on Vache Reef, near the mouth of the Saguenay, Dec. 20. The officers and crew were landed ashore, and the owners have notified the underwriters that the ship has been abandoned.

The s.s. Canadian Spinner, approximately 8,350 d.w. tons, built by Canadian Vickers Ltd., and delivered to Canadian Government Merchant Marine Ltd., Dec. 6, left Quebec Dec. 16, with a general cargo, via Halifax, for Rio de Janeiro, Santos, and Buenos Aires. She passed Red Island Dec. 18, and at the time of writing, Dec. 27, was stuck in the ice about 8 miles off Metane, with her rudder post being reported as broken. The Dominion Government ice breaking s.s. Lady Grey made two attempts to go to her rescue, leaving Quebec Dec. 24 and 25, but put back each time; the captain declaring it impossible to proceed owing to ice conditions.

S.s. Canadian Trapper—An action has been entered at Quebec by Tidewater Shipbuilders Ltd., Three Rivers, Que., against the Davie Shipbuilding and Repairing Co., Lauzon, Que., for \$180,600, claimed to be due for installation of machinery by plaintiffs in the s.s. Canadian Trapper's hull, built by defendants.

The s.s. Volunteer, approximately 4,530 d.w. tons, built by Wallace Shipyards Ltd., and delivered to Canadian Government Merchant Marine Ltd., June 19, 1919, left Montreal Dec. 6, with a general cargo for London, Eng., and arrived at Quebec, Dec. 9, having struck three times near Cap la Roche, causing leaks in the bilges. Owing to the lateness of the season she will be kept at Quebec until the spring.

Canadian Vickers Ltd., Montreal, delivered the s.s. Canadian Navigator; Marine Department contract 23; builder's yard no. 73; approximately 4,300 d.w. tons; to the Marine Department, Dec. 2, 1919. She was immediately transferred to Canadian Government Merchant Marine Ltd., and was loaded at Montreal with general cargo for London, Eng.

The company also delivered the s.s. Canadian Spinner; Marine Department contract 27; builder's yard no. 71; approximately 8,350 d.w. tons; to the Marine Department, Dec. 6, 1919. She was immediately transferred to Canadian Government Merchant Marine Ltd., and loaded at Quebec with general cargo for South America.

Collingwood Shipbuilding Co., which has contracts from the Marine Department for 2 steel cargo steamships, of approximately 3,950 d.w. tons each, launched one of them, Canadian Farmer,

Marine Department contract 34; loaded at Port Arthur, Ont., Dec. 27, 1919.

The third ship, Canadian Exporter, Marine Department contract 41, loaded at Port Arthur, Ont., Dec. 27, 1919, and is expected to be launched at Collingwood in February.

The fourth ship, built at its home port, Port Arthur, Dec. 28, is the Canadian Exporter, Marine Department contract 41, loaded at Port Arthur, Ont., Dec. 27, 1919, and is expected to be launched at Collingwood in February.

The fifth ship, built at its home port, Port Arthur, Dec. 28, is the Canadian Exporter, Marine Department contract 41, loaded at Port Arthur, Ont., Dec. 27, 1919, and is expected to be launched at Collingwood in February.

J. Coughlan and Sons, Vancouver, B.C., are the builders of the Canadian Exporter.

Railway and Marine World, contracts from the Marine Department for 1 steel cargo steamships of approximately 8,100 d.w. tons each. The first of these, Canadian Importer, Marine Department contract 34; builders yard no. 11; was launched Dec. 6, 1919, the christening ceremony being performed by Mrs. R. C. Cooper, wife of the Colonel of the 7th Battalion, who carried a bouquet showing the insignia of the battalion. The steamship, when launched, carried the Canadian ensign, the Canadian Government Merchant Marine flag, and the Prince of Wales' honor flag, on the bow.

The second steamship, Canadian Exporter, was expected to be launched about Dec. 30, 1919. Approximate launching dates for the other two are, Canadian Inventor, Jan. 30; Canadian Prosperity, Feb. 28.

Nova Scotia Steel and Coal Co., New Glasgow, N.S., delivered the s.s. Canadian Sealer; Marine Department contract 40; builder's yard no. 5; approximately 2,800 d.w. tons, to the Marine Department, Dec. 20, 1919.

The s.s. Canadian Miner, a sister ship to Canadian Sealer, is expected to be ready for launching by the end of January, but will probably be kept on the ways till the latter part of February, and should be delivered early in April if the river is free of ice.

Port Arthur Shipbuilding Co., Port Arthur, Ont., delivered the s.s. Canadian Sower, Marine Department contract 20a; builder's yard no. 42; approximately 3,100 d.w. tons; to the Marine Department, Nov. 18. She was immediately transferred to Canadian Government Merchant Marine Ltd., and was loaded at Montreal with general cargo for St. John's, Nfld. This was the fourth ship delivered to the Marine Department in 1919 by this company, the others being Canadian Trader, July 18; Canadian Sailor, Aug. 7, and Canadian Adventurer, Oct. 29; full particulars of which are given in the table on page 39.

The company is also building for the Marine Department, 2 steel cargo steamships of approximately 4,300 d.w. tons each, Canadian Runner and Canadian Carrier; the keels of which were laid Aug. 29, 1919. They will be launched early in the spring and should be ready to sail in June or July for Buffalo, N.Y., where they will be cut in two, so as to go through the locks to Montreal. After they are rejoined at Montreal their trial trips will be run and delivery made to the Marine Department.

Tidewater Shipbuilders Ltd., Three Rivers, Que., delivered the s.s. Canadian

Settler; Marine Department contract 13; builder's yard no. 31; approximately 3,100 d.w. tons; to the Marine Department, Dec. 2, 1919. She was immediately transferred to Canadian Government

Merchant Marine Ltd., and loaded at Montreal with general cargo for St. John's, Nfld.

The second ship, Canadian Rancher, Marine Department contract 14; builder's yard no. 6; left Three Rivers in the second week of December for Quebec to have some final work done and to be delivered to the Marine Department. The keels for the two other ships this company is building, Canadian Hunter and Canadian Forester, were laid Sept. 20 and Nov. 1, 1919, respectively.

Canada Steamship Lines Ltd. Dividends—At the monthly meeting of directors of Canada Steamship Lines Ltd., at Montreal, Dec. 2, it was announced that the common stock had been placed on a 7% dividend basis, effective Jan. 1. The dividend of 1% for the then current quarter, payable to shareholders of record, Dec. 15, was declared. An increase in the dividend was expected, but it was anticipated that it would be made 6%, with a bonus of 2%; the directors, however, decided that a straight increase in the dividend was the better plan, as being of a more permanent character. Some confusion took place on the Montreal Stock Exchange, on account of the company not having notified the exchange of the change, but the company explained that as it was merely a decision to place the stock on a 7% basis for 1920, it was not considered necessary to notify.

The Sinking of the Empress of Ireland—The appeal of the C.P.R. against the Supreme Court of Canada's judgment in connection with the collision between the Norwegian s.s. Storstad and the C.P.R.'s s.s. Empress of Ireland, in the St. Lawrence River, May 29, 1914, came before the Judicial Committee of the Imperial Privy Council, Dec. 5. The Supreme Court decided that in the distribution of the proceeds of the sale of the Storstad, preference would be given to the claims of the passengers, but the Privy Council has now decided that the C.P.R. shall share equally with the other claimants. The chief point dealt with was whether the disaster occurred in Canadian territorial waters or on the high seas.

The Marine Navigation Co. of Canada Ltd., which is operating several vessels between Canada and France, was incorporated at the end of 1916, and early in 1917 operated the steamships Niczaristan and North Cambria between Halifax and St. Nazaire. In addition to these steamships, several schooners, some with auxiliary power, were operated, chiefly in the lumber trade. The company is practically a subsidiary of the Marine Navigation Co., Ltd., of England, controlled by Sir William Garthwaite, Paris, France. Murray Kennedy, is President of the Canadian company, which is managed by McLean, Kennedy and Co., Montreal.

Hudson's Bay Co.'s Steamships—During 1919 the company's steamships, Athabasca River, Peace River and Port Simpson, and the motor boat Port Churchill, were not in operation, and we are advised that the s.s. Athabasca River, and the motor boat, Taltahn, are being dismantled, the former at Peace River Crossing, Alta., and the latter at Port Simpson, B.C. The company has registered the steamboat Liard River, which was built at Port Smith, Alta., in 1919. She is paddle wheel driven by engine of 3 n.h.p., and her dimensions are: length, 81.8 ft.; breadth, 16.8 ft.; depth, 3 ft.; tonnage, 113 gross, 77 registered.

Details of the Different Types of Steamships for Canadian Government Merchant Marine Ltd.

The following are comparative details of the seven different types of steamships being built for Canadian Government Merchant Marine Ltd.

By Hon. D. O. L'Esperance, Chairman Quebec Harbor Commission.

Ice—Another obstacle to navigation in the form of ice affecting the operation of the Gulf is caused in the spring from the middle of April to the middle of May by the rush of ice out of the Gulf, causing a block between the St. Paul Islands, northwest of Cape Breton Island, and Cape Ray, the southwest point of Newfoundland. This block, which sometimes lasts for two weeks and completely prevents the passage of ships, is known as the bridge and it is a matter of record that at one time 300 ships have been detained by this obstacle and many wrecks have occurred in consequence on the Newfoundland coast. Ice from the Gulf is generally met with in Cabot Strait early in January, and at this time it is thin, but increases gradually to as much as 5 ft. thick. Occasionally small bergs some 18 ft. high, are seen, although a large berg is seldom visible, and the ice has been known to float in this manner as late as the beginning of June. The prevalence of northwesterly and northerly winds drive the ice towards the strait and along the north coast of Cape Breton, while incoming vessels meet no ice except southward of St. Paul Island. Southwest gales occasionally take ice be-

tween Magdalen Island and Cape Breton Island. When this ice meets the main body flowing past Bird Rock, and closes the strait between St. Paul Island and the Newfoundland coast, northwesterly winds open the Newfoundland coast, and the strait clears quickly, so that in about 36 to 46 hours very little ice in visible quantities passes through for some period after navigation is open, particularly with north winds. Vessels not strongly built to encounter this ice are seriously impeded by encountering it, but it has been found that vessels specially strengthened for ice conditions have no difficulty in navigating.

This last condition appears to be the most serious obstacle in the operation of the St. Lawrence River during winter, but when it is considered that this condition at its worst, exists for but a short period of two weeks, at most, it is concluded that vessels encountering this obstacle can be diverted to Halifax, N.S., and St. John, N.B., and as the time that this occurs is not at a period when rail traffic is most seriously congested, the operation for the handling of traffic diverted to those ports could adequately be carried on by the present facilities afforded at those ports and lines serving same.

As an extra precaution and guard to navigation, information as to ice, wind, temperature, and weather conditions can be obtained by communication between vessels and any of the marine or signal stations in the Gulf and River St. Lawrence at Cape Ray, St. Paul Island, Magdalen Island, Anticosti, New Brunswick coast points, Gaspé coast and as far north as the Labrador coast. It is only necessary that the small additional expense of operating these stations during the winter and early spring be added to that of the summer season, and the short distances between those points of warning are an additional safeguard in that they afford sufficient time for ships

to seek shelters that are numerous, enabling them to be protected against any unusual conditions.

Investigations have shown that strandings in the Gulf and River St. Lawrence, and the approaches, including the Newfoundland coast, are not, owing to the danger of the route, but to the want of care and attention to navigation. There is a wide variation in the magnetic bearing between Belle Isle and Montreal, particularly between the first named point and Anticosti, and the frequent wrecks which occurred formerly on the eastern part of Anticosti, in foggy weather, were doubtless due to non allowance for change in variation, but such obstacles to a route should not be considered a hindrance when modern day care and navigation instruments are considered.

Snow Storms are at times severe, lasting from 24 to 48 hours. They constitute the most serious menace to navigation on the St. Lawrence River during their duration, owing to the impossibility of sight. From observation during one of these storms it was found that objects at a distance of 50 ft. were entirely obliterated. This condition can be adequately met, so as to entirely eliminate any chance of collision or groundings, by careful warning of vessels, as suggested in the meeting of the ice condition, and anchorage can be had in shelters. The most serious wrecks occurring during those snow storms have resulted from vessels anchoring in the stream, and drifting to shore, after having anchor chains cut by the floe ice. To meet this condition, two breakwaters, providing adequate shelters could be established along the river, behind which ships would be sheltered from the floe during the storms. Other recommendations have been suggested, such as guards carried by vessels for anchor chains. It is estimated that if it was found necessary to establish the breakwaters mentioned, a total investment of

\$1,000,000 would be adequate.

It would also be necessary to fit every ship coming up the river with an iron or wooden apron over the bow, and vessels so equipped become in themselves icebreakers of no mean ability. Such outfits are in use on all ships running to Russian ports, and adequately protect ships from harm.

During the past the keepers of some lighthouses have been withdrawn from service during the winter, and other river markings have been removed during the flow of ice. This practice can be discontinued and the markings made sufficiently permanent to place them above the danger resulting from the ice flow, and the expense of such works and their operation would be almost negligible when compared with the great economy effected by the handling of freight by water transportation.

It appears that in short there are no serious obstacles for the entire winter navigation of the St. Lawrence River. In all northern countries, when the average winter temperature is below the freezing point, the water becomes frozen, and attempts to continue navigation are made with great difficulty. As population increases, and demands for cheaper and more effective communication grow, the question will arise as to the feasibility of operating the waterways and harbors in Canada during the winter. This matter has been found to be of no very serious moment, except in one or two instances. Winter navigation has been maintained for many years between Prince Edward Island and the New Brunswick mainland and similar communication has been carried on with Newfoundland, but when the volume of trade grows there can be no question as to the needs of cheaper methods of transit as afforded by water. In Russia winter navigation has been found to prove feasible and many ports require icebreakers in summer to reach northern

Vessels Registered in Canada During October, 1919.

In compiling the following lists of vessels registered, steamboats and motor boats, operated by engines of less than 10 n.h.p., are eliminated, as also are sailing vessels of less than 100 tons register.

STEAM.

St. Lawrence River navigation has been maintained for many years on the Great Lakes, and at some points on Lake Ontario, retractable ferries are operated carrying 3 or 4 ft. of solid ice for a distance of 10 or 20 miles.

The whole cost of making the St. Lawrence River navigable in winter as far as Quebec, including the construction of two retractable bridges, the dredging of the channel to a maximum of 40 ft. and pro-

per equipment of lights and buoys, has been estimated at \$10,000,000, in round figures. The advantages to be derived by keeping the port of Quebec open the year round are so great that the cost of equipment to meet these conditions appears insignificant.

The foregoing paper was read before the American Association of Port Authorities at its annual meeting in Galveston, Texas, recently.

Repair of German Ships Interned in South America.

The Montreal Gazette's London, Eng., correspondent sent the following copyrighted cable dispatch, Dec. 4:—The award of the contract to repair enemy ships interned in South American waters to a German instead of a Canadian firm, has been explained in the House of Commons at the instance of Percy Hurd, M. P. Col. Leslie Wilson, Parliamentary Secretary to the Minister of Shipping, under took to defend the contract, but to anyone with inside knowledge of the negotiations, his statement appears very curious. He said: "The ships which could not be properly repaired on the spot, are being towed to German yards to be repaired, the expenses being met by Germany." There would not be a year's delay, as suggested would be occasioned, but on the contrary, the work should be expedited, as the majority of the ships were built in Germany, and German shipbuilders are in possession of the drawings, patterns, etc., of the damaged parts. Even if it had been possible for any British or colonial firm to have undertaken the repairs, it would have cost a large sum, which would have to be financed in cash by the British Government.

Col. Wilson appears to have been badly misinformed. Had the Canadian contract been accepted, the ships would have been accepted, the ships would have been ready six months ago, and their operation would have paid the whole cost of repairs by now. As it is, it will be another six months before they are ready. As for Germany bearing the expense of the repair, the Secretary admitted to your correspondent, provision had to be made for this under the treaty obligation. Meanwhile Canada has been deprived of the use of the ships.

Proposed Drydocks at Vancouver—In addition to the applications for subsidies for the construction of drydocks at Vancouver, made by J. Coughlan & Sons, Davidson & Cameron, and Wallace Shipyards, Ltd., details of which were given in Canadian Railway & Marine World for Nov., 1919, page 621, we are officially advised that the Raymond Concrete Pile Co. Ltd., Montreal, has applied for a subsidy in connection with its project to build a masonry graving dock of the first class at Burrard Inlet, Vancouver. The Drydock Subsidy Act provides that a drydock of the first class shall cost not more than \$5,500,000, and shall be of the following dimensions, clear length of bottom from caisson groove or hollow-quoins to head, 1150 ft.; clear width of entrance, 125 ft.; depth of water over sill at high water ordinary spring tides, 38 ft. The subsidy to be paid for such dock is at the rate of 4½% per annum of the cost of the work, payable half yearly for not exceeding 35 years from the completion of the work.

The s.s. Frontenac, which, as stated in Canadian Railway and Marine World for Nov., 1919, was bought from U.S. owners by the Davie Shipbuilding and Repairing Co., Lauzon, Que., has been thoroughly overhauled at the company's yard and has been placed on the Canadian register under the name of Vaudreuil, in the name of C. A. Barnard, Montreal. She is screw driven, by engine of 136 n.h.p., and her dimensions are: length, 278 ft.; breadth, 40 ft.; depth, 20.3 ft.; tonnage, 2,514 gross, 1,436 registered.

Wreck Commissioner's Enquiries and Judgments.

Stranding of s.s. Germanicus

Held at Montreal, Nov. 21, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. C. Lapierre and Commander C. J. Stuart, R.N.R., into the cause of the stranding of the s.s. Germanicus on the northwest reef of Biequette Island in the River St. Lawrence, Nov. 7, while bound to Montreal from Rotterdam. The s.s. Germanicus was formerly a German steamship and is being operated by Ropener & Co., on behalf of the British Ministry of Shipping.

The court found that the master's evidence showed a marked indifference as to the manner in which the vessel was navigated. At Cape Magdalen the vessel had apparently deviated from her course, and the evidence showed that either the courses by compass were faulty, or were badly steered, or other agencies were at work which were not explained. There were no unusual currents and, though strong winds were experienced, it was said that they did not tend to take the ship from her course. At the time of the stranding, the mate was in charge, it being alleged that the master was intoxicated, and that it was impossible to arouse him. The vessel struck while going at half speed and immediately the order full speed astern, was given, and at that time the master appeared on the bridge. Subsequent effort to release the vessel proved unavailing and further attempts will be made if possible, in the spring.

With regard to the pilot boat, the court expressed the opinion that there was nothing in the weather conditions to prevent her being, if not at the pilotage grounds, at least at her station, which is Father Point and not Bic. It may happen in rough weather that the pilot boat would be forced to take refuge at Bic Island, but the moment the weather moderated her place would be Father Point, and the court was assured that at the time of the stranding, the pilot boat was west of the reef on which the vessel stranded and in a position not justified by the weather existing.

The court found that the master, Capt. John Olive, was incapable of administering or exercising the vigilance and care for property with which he was entrusted, through having indulged freely in intoxicating liquors. It cancelled his certificate as master, but recommended that a mate's certificate be granted to him. On account of the extenuating circumstances, the court exercised leniency towards the mate, Thomas Pinkney, and did not deal with his certificate, but severely reprimanded him for not taking into account the state of the tides. The second officer was exonerated from all blame and his certificate returned to him. With regard to the pilot boat being away from her station, the court expressed the opinion that it is a matter which should

be investigated by the Marine Department, and recommended that that course be adopted at the earliest moment possible.

Stranding of s.s. Rio Negro.

Held at Quebec, Que., Dec. 3, 1919, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. C. Lapierre and Commander C. J. Stuart, R.N.R., into the stranding of the s.s. Rio Negro near Point des Monts, on the north shore of the Gulf of St. Lawrence, Nov. 17. The master's evidence, which was given in a very straightforward manner, indicated that the ship's courses and distances had been made good up to Martin River, and a safe distance was allowed off the land in order to reach Father Point. On leaving the bridge, he left written instructions in the night order book, as well as verbal instructions, that he should be called when Cape Chat was visible, or the distance run. When the distance had been run, the second officer did not carry out the instructions to call the master, and the ship proceeded on the course. He was succeeded by the first officer, who stated that the weather was clear, though his log book shows that a heavy snow storm had come on. Seeing what he considered to be the Matane light ahead of him, he immediately put the ship full speed astern and hard a port, and called the master. The first officer then ordered half speed ahead, and then full speed, with the intention of leaving the light, thought to be the Matane light, astern of him, and getting an offing. This speed was maintained for about four minutes after the master came on deck, and then full speed astern was ordered, when land became visible, the ship striking at that time.

The court was of opinion that the cause of the casualty was the disobeying of instructions by the second officer, as to calling the master, and he was declared in default for not carrying out implicitly the instructions he had received. The first officer erred in judgment, by being led astray as to the light he saw being the Matane light, and considered that he should have made sure of the nature of the light before acting on his assumption, or to have taken soundings and stopped the ship until his position was verified. He was, therefore, found in default for lack of judgment. The court considered that there was nothing in the master's conduct to give rise to criticism, but, on the contrary, the fact that he released the ship from her precarious position, with such slight damage under the circumstances, is much to his credit. The certificate of the second officer, David Davies, was suspended for three months, and the first officer, Alfred Hodder, had his master's certificate suspended for two months, dating from Dec. 3, 1919. The master and third officer were exonerated from all blame.

General Shipbuilding Matters Throughout Canada.

Steamships for French Government—In reference to the Ottawa press report, to the effect that the French Government was prepared to order 121 steel cargo steamships, to be built in Canada, at \$170 a ton, which was referred to in Canadian Railway and Marine World for December, we are informed by the head of the Technical Department of the Merchant Marine, French High Commissioner's office, New York, that nothing is known there of such an intention, but that M. Falcoz, a representative of the Messageries Maritimes, has been in the United States for the purpose of pricing the construction of several cargo steamships for themselves.

Virtually all of the vessels contracted for in the U.S. are completed, although a few remain to be finished. A question that is still pending between the U.S. and French Governments is said to be preventing a large number of contracts for tank steamships being given to U.S. shipyards.

Omar Blinn, Grosses Coques, N.B., launched a barquentine of 692 net tons for C. E. K. Warren, Halifax, N.S., early in December. She is equipped with gasoline engines for hoisting, and full electric light installation.

Canadian Vickers Ltd., Montreal—In addition to the 4 steel steamships which this company is building for Canadian

Dominion Shipbuilding Co., Toronto—Of the 8 steel steamships delivered during 1919, by this company, as mentioned in our last issue, the first was sold to the Marine Trading Co., New York; 4 have been sold to the Aalesund Steamship Co., of Norway, and the other 3 are being operated by Christoffer Hannevig Inc., New York.

The company launched the steamship **T. L. Church, Dec. 20**, the christening ceremony being performed by Mrs. L. H. Clarke, wife of the Lieut.-Governor of Ontario. The ship has been designed for ocean service and was built on yard account. Her dimensions are: length, 261 ft.; breadth, moulded, 43½ ft.; depth,

Steamship War Vixen, 3,500 d.w. tons, for British Government.

The s.s. War Vixen, and sister ship, War Magic, were both built by Canadian Allis-Chalmers Ltd., Bridgeburg, Ont., for the British Government, under orders from the Imperial Munitions Board, and went into service in Nov., 1918. Canadian Allis-Chalmers Ltd., are building two precisely similar ships for private account.

A New York press dispatch of Dec. 20 said:—An executive officer of French High Commission states that France has definitely decided not to build ships in United States or Canadian yards. It is stated that the decline in the exchange rates is responsible for the decision. Should the rate of exchange become much more favorable, it is possible that the French Government will change its attitude. Until recently it was anticipated that France would order about 150,000 tons of ships from American yards. An unverified report was current this week to the effect that a French syndicate had placed a contract in U.S. yards for the construction of 11 tank steamers; 9 of large dimensions and 2 of small register. Enquiry at the French High Commission revealed that the tankers had not been ordered by the government, and an executive stated that he knew nothing of private interests having placed this contract. In Canadian yards, the French Government has had a number of oil barges of about 1,500 d.w. tons register built, but these have been completed and are now on their way to French ports.

Government Merchant Marine, Ltd., for delivery during 1920, it has orders for 2 steel steamships, each of approximately 8,350 d.w. tons, for Norwegian interests.

Collingwood Shipbuilding Co., Collingwood, Ont.—The Northern Navigation Co., s.s. Hamonic will be docked by this company during the winter, for wheel repairs.

J. Coughlan & Sons, Vancouver, B.C.—The trial trip of the s.s. War Chariot, the last of the ships built by this firm for the British Government, under orders from the Imperial Munitions Board, made her trial trips in November, completed her cargo at Burrard Inlet and sailed for Great Britain at the end of November. This firm has built 10 steamships of 8,800 d.w. tons each, for the British Government, viz.: War Camp, War Charger, War Chariot, War Chief, War Noble, War Cavalry, War Convoy, War Column, War Company, and one other which was christened Alaska, and was on the stocks at the time the Imperial Munitions Board placed its original order, and was taken over by it on behalf of the British Government.

moulded, 23 ft.; deadweight carrying capacity, 3,350 tons. She is equipped with triple expansion engines of approximately 1,200 h.p.

Grant & Horne, St. John, N.B., launched the 4-masted schooner Cutty Sark, Dec. 8.

Halifax Shipyards Ltd., Halifax, N.S.—The s.s. Troja, which was built by the Dominion Shipbuilding Co., Toronto, and which stranded on the Old Proprietor Ledge, early in 1919, and became almost a total loss, has been practically rebuilt by Halifax Shipyards Ltd. After docking and examination, it was found that all the bottom plating to the bilge strake, floors, intercostals, and 85% of the double bottom, with 11 tank top plates in the fore hold and a large number of frames and hold supports, had to be renewed. The interior fittings were destroyed by fire, while the vessel was on the ledge, and considerable damage was done to the steel plating in connection with the officers' quarters. The engines and boilers had to be completely overhauled and all missing parts replaced. The contract was awarded the Halifax

company, after competition with several large U.S. yards. Aug. 29, 1919. The accompanying illustration shows the Troja undergoing repairs in Halifax drydock, and about after the repairs had been completed.

that, on account of his death, the yard will be closed.

Midland Shipbuilding Co., Ltd., Midland, Ont., is building a full canal sized steamship under its yard no. 9, of approximately 2,500 d.w. tons, for the

installation and all modern appliances. The boilers will be 11½ ft. diam. by 11 ft. long, for a working pressure of 180 lb., but the engines will probably be transferred from another vessel.

The *s.s. F. P. Jones*, which, as stated in our last issue, was purchased recently from the United States Shipping Board by the Great Lakes Transportation Co., has been thoroughly overhauled by the Midland Shipbuilding Co., and a complete derrick arrangement, with 8 deck winches, has been installed. All steam pipes have been placed on deck, as for a regular ocean type vessel, and the boilers have been equipped for burning fuel oil, instead of coal as heretofore. Arrangements have also been made so that enough oil for various voyages can be carried in no. 3 tank, and also for storage, so that she may run oil into a land storage tank, to enable the owners to operate mills on land for grinding sugar. The derrick posts have been put on in such a way that they can be easily removed, should the vessel be transferred from ocean to lake service. The vessel has been chartered for operation in southern waters, to carry sugar cane, and the accommodation for the crew has all been remodelled, and spare lifeboats added. The name of the vessel has been changed to *Glencaden*, and not *Glenca-*

Steamship E. D. Kingsley, 1,500 d.w. tons.

Built for Kamox Navigation Co., Vancouver, B.C., by Canadian Car & Foundry Co., Fort William, Ont. This ship was fully described in *Canadian Railway and Marine World* for Nov., 1919, pg. 617.

Foundation Co., Victoria, B.C.—The trial of the *s.s. Nouvelle Ecosse*, took place Dec. 3, and was considered satisfactory, a general average of 12.42 knots an hour on the Parry Bay course being obtained. This is the last of the 20 wooden steamships of approximately 3,000 d.w. tons built by this company for the French Government.

Wm. Lyall Shipbuilding Co., North Vancouver, B.C. This yard, at which a number of wooden steamship hulls were built for the British Government, under orders from the Imperial Munitions Board, and also for the French Government, and which was closed on the completion of its contracts, will, it is reported locally, be reopened for resumption of business in the near future. The plant was offered for sale recently.

W. N. MacDonald, Sydney, N.S., is building a concrete motor ship, *Permanencia*, which was launched at Sydney, N.S., Dec. She was built under Lloyd's special survey for classification at the highest rating. She is 128 ft. long over all, 27½ ft. beam, and with a depth of 12½ ft. There are two hatches, each 12 by 14 ft., with the deck house and bridge placed amidships, between the hatches. The vessel will have deadweight carrying capacity of from 450 to 500 tons, and sleeping accommodation for 10 passengers, in addition to the crew. She will be equipped with a Bolinder crude oil engine of 240 h.p., for a speed of from 9 to 10 knots an hour when loaded, supplied by the Swedish Steel and Importing Co. Ltd., Montreal. When completed she will be operated between Cape Breton, Prince Edward Island, and Newfoundland ports.

McKay and McLean, Economy, N.S., launched the tern schooner *Hiram D. McLean*, 150 tons register, at midnight, Dec. 6. She is fitted with all the latest improvements, including gasoline power for hoisting the sails and anchor, and is classed in *Bureau Veritas* for 12 years. She subsequently went to Walton to load plaster for New York. She was named after *Hiram D. McLean*, one of the partners, who died recently, and it is stated

Steamship Troja, undergoing repairs in Halifax Shipyards Ltd., drydock at Halifax, N.S.

Great Lakes Transportation Co. It is being built so that it can operate on either the lakes or the ocean, which ever it may be called upon to do. It will be equipped with complete electric lighting

dam, as stated in our last issue.

New Westminster Engineering & Construction Co., New Westminster, B.C.—It is reported that the shipbuilding yard at Poplar Island, New Westminster, B.C.,

operated recently by this company for building wooden steamship hulls, for the British Government, under orders from the Imperial Munitions Board, has been sold, and that it will be remodelled and equipped to build steel steamships under the management of Haley and Christian.

The Port Arthur Shipbuilding Co., Port Arthur, Ont., in addition to building the steel cargo steamships for the Marine Department, which are referred to under "Canadian Government Merchant Marine Ltd.," on another page, completed early in 1919, four trawlers for the Naval Service Department, which were commenced late in the autumn of 1918. The company, during 1919, repaired over 30 ships, over 20 of which had to be docked. Although in 1918 the company turned out six 3,400 d.w. ton steel cargo steamships and 6 trawlers, and a tug, 13 ships in all, as against 8 in 1919, a lot of the

to build a number of wooden sailing vessels, provided some government assistance was given. The proposal was made by J. O. Cameron, President of the company, that it would build 2 such vessels, and that H. C. Hansen would build 2, and he is reported to have stated that plans were in course of preparation, and that it was expected orders would be received to proceed within a few weeks. D. O. Cameron, of the same company, is reported to have stated that the matter was merely a proposal laid before the minister, with the object of trying to get some government assistance for the revival of wooden shipbuilding, and that it would be impossible to build vessels without such assistance.

Wallace Shipyards Ltd., North Vancouver, B.C., laid the keel recently for a steel steamship for the Union Steamship Co. of British Columbia, and it was

Projected Harbor Improvements at Vancouver, B.C.

In connection with the recommendations placed before the Vancouver Harbor Commission, for a number of improvements in the harbor, as outlined in our last issue, we are officially advised that the Vancouver Harbor Commissioners have submitted to the Marine Department, a proposal to purchase the necessary site and to build thereon a modern pier 1,200 ft. long, with double deck sheds and the latest loading and unloading devices. Among other matters submitted for approval, are, the operation of a car ferry service between Vancouver and North Vancouver, and a proposal for terminal railway construction.

A Montreal press dispatch of Dec. 11, stated that the Vancouver Harbor Commissioners and the Dominion Government had approved of the general scheme of harbor development for Vancouver as prepared by A. D. Swan, M. Inst. C.E., Montreal, and that the commissioners, after an extended tour of harbors in eastern Canada, and in the United States, had authorized Mr. Swan to prepare plans and specifications, so that tenders may be asked as early as possible, for the first unit, which will consist of deep water accommodation, by the provision of 4 modern steamship berths with 2-story reinforced concrete sheds, equipped with mechanical devices for handling cargo, the estimated cost of the work being about \$5,000,000.

The Marine Department at Ottawa, advised Canadian Railway and Marine World, Dec. 18, that up to that date none of the harbor commissioners' proposals, as outlined above, had been approved.

A Novelty in Ship Repair—The British Government has completed, at its Chatham dockyards, the joining together of the bow of the destroyer Zulu and the stern of the destroyer Nubian, thus making a new vessel out of the wrecks of two. Both vessels were damaged by mines, during the war. The new vessel has been named Zubian.

The Convoy Steamship Co. Ltd., has been incorporated at Halifax, N.S., to own and operate the s.s. War Convoy, one of the steel steamships of 8,800 d.w. tons, built by J. Coughlan & Sons, Vancouver, B.C., for the British Government, under orders from the Imperial Munitions Board. The name of the vessel has been changed to Willdomino.

The Canadian National Rys. Train Ferry Steamship Scotia running between Mulgrave and Point Tupper, N.S., ran aground Dec. 5 at 5 a.m. while transferring the night express passenger train for Sydney across the Strait of Canso. The ferry was released on the following day without damage and the service was resumed.

Tide Tables for Eastern Coast, including the St. Lawrence River and Gulf, Bay of Fundy, Northumberland and Cabot Straits, have been prepared by the Tidal and Current Survey, Naval Service Department, under the superintendence of W. Bell Dawson.

The St. Lawrence Navigation Season of 1919 was officially closed Dec. 10, so far as ocean shipping was concerned, with the departure of the Elder Dempster and Co.'s s.s. Bassa. The Canadian Government Merchant Marine Ltd., s.s. Canadian Planter, just completed by Canadian Vickers Ltd., left for Quebec, to take on cargo, Dec. 12.

Steamship Troja, after having been repaired by Halifax Shipyards Ltd.

1918 work was done under war rush conditions and entailed a lot of overtime work. During 1919 the plant was steadily busy and the increased amount of repair work done over 1918 was large, so that the number of employes throughout 1919 was within about 200 of the number employed in 1918.

Prince Rupert Dry Dock and Engineering Co., Prince Rupert, B.C.—The Grand Trunk Pacific Coast Steamship Co.'s steamships, Prince Rupert, Prince George, Prince Albert and Prince John, will, each in turn, be overhauled at this yard, during the winter. The s.s. Prince Rupert was withdrawn from service, for that purpose, towards the end of December.

Victoria, B.C.—When the Minister of Finance was in British Columbia recently, a plan was outlined by the Cameron Lumber Co., by which it would undertake

announced that the builders hoped to launch the ship by the end of January. All the material, including the engines, is on the ground, and no delays are anticipated. The steamship will be 173 ft. long, and approximately 800 d.w. tons.

Vancouver Steamship Co. Ltd., has been incorporated under the British Columbia Companies Act with \$2,000,000 authorized capital and office at Vancouver, B.C., to own and operate steam and sailing ships, and to carry on a general navigation and transportation business.

The British Government is reported to have allotted the German steamship Kronprinz Friedrich Wilhelm, one of the vessels taken over from the enemy, to Canadian Pacific Ocean Services Ltd., to replace the s.s. Melita, which has been requisitioned to return troops from Great Britain to India.

Canadian Notices to Mariners.

Ontario—Light to be established on—Thurs. extremity of Pointe aux Pins, about 2½ miles east of Rimouski harbor. One white acetylene light shown from a steel lantern on a pole. The light is unwatched.

Ontario—St. Marys River, Pointe aux Pins, main light, an outer and of low sand point, the 4th order dioptric apparatus will be replaced by a 4th order dioptric apparatus. The light will be fixed white as at present.

Ontario—Lake Superior, Port Arthur Harbor.—During the past season the slip at the Thunder Bay elevator wharf, 1,200 ft. long by 150 ft. wide, was dredged by the Public Works Department to 21 ft. below low water of the harbor gauge.

United States—St. Marys River, Vidal Shoals—Gas buoy established, on north side of channel; occulting red light every 10 seconds; thus: light 5 seconds, eclipse 5 seconds; steel cylindrical; red; depth, 25 ft.

British Columbia—Vancouver Island, West Coast, Quatsino Sound—J. H. Bingham of the tugboat Canpack reports the existence of a rock, with 1 ft. of water on it, in the channel south of Limestone Island, between Single Island and Foul Islands, where the charts shows 20 fathoms.

British Columbia—Chatham Sound, Malacca Passage—Light established, on southwest side of Genn Island; occulting white acetylene light, automatically occulted at short intervals; elevation, 30 ft.; visibility, 7 miles from all points of approach; steel cylindrical tank, surmounted by pyramidal steel frame supporting lantern; color, white; the light is unwatched.

British Columbia—Chatham Sound, Entrance to Prince Rupert Harbor—Light established on northwest side of East Kinahan Island; occulting white acetylene light, automatically occulted at short intervals; elevation, 30 ft.; visibility, 7 miles from all points of approach; white steel cylindrical tank surmounted by a pyramidal steel frame supporting lantern; the light is unwatched.

Ontario—Lake St. Clair, Thames River—During the summer of 1919, the Public Works Department dredged a channel 2,500 ft. long by 25 ft. wide with a least depth of 5 ft. from about 1½ miles above the mouth of the Thames River through the marsh, on a bearing of 134° 30' (S. 43° E. mag.) to Jeannettes Creek station.

Ontario—Lake Superior, Port Arthur Harbor, Dredging—Additional dredging

has been performed by the Public Works Department in the approach to the Richardson and Saskatchewan Co-operative elevators and in the Richardson slip, as follows; the middle ground immediately in front of the elevators has been dredged to 25 ft. deep to within 200 ft. from the front face of the wharves; on the south side of the entrance basin a strip 120 ft. wide and 800 ft. long was dredged to 25 ft. deep from the 25 ft. contour shoreward; on the north side of the entrance basin a strip 120 ft. wide and 850 ft. long was dredged to 25 ft. deep from the 25 ft. contour shoreward; the Richardson slip was completed to a length of 1,300 ft. and a width of 150 ft. to 25 ft. deep for the outer 600 ft. and 22 ft. deep for the inside 700 ft.

United States—St. Marys River, Squaw Island—Pipe Island Twins, light established on northerly end of East Twin Island in the lower St. Marys River; flashing white light, showing one flash of 0.5 second duration every 2 seconds; elevation, 26 ft.; black pyramidal steel skeleton tower on concrete foundation pier; gas buoy 5B, will be discontinued; on southerly edge of Squaw Island in the lower St. Marys River; flashing red light, showing one flash of 0.5 second duration every 2 seconds; elevation, 26 ft.; red pyramidal steel skeleton tower on concrete foundation pier; gas buoy, 4, will be discontinued.

United States—St. Marys River, Hay Lake Cut—North entrance light no. 27 re-established on former position, on west side of north entrance to Little Rapids cut; occulting white light every 5 seconds thus; light, 2.5 seconds; eclipse, 2.5 seconds; elevation, 85 ft.; black pyramidal steel skeleton tower on concrete pier; temporary fixed red light will be discontinued.

Ontario—Georgian Bay, Parry Sound approach, Jones Island back range light, change in illuminant—The fixed white oil light has been replaced by an unwatched fixed white acetylene gas light.

Ontario—Lake Superior, Whitefish Bay, Corbeil Point, non-existence of shoal—During a recent examination of the vicinity of Corbeil Point, by the Hydrographic Survey, Naval Service Department, it was found that the shoal reported about 2.16 miles 287° 30' (N. 69° 30' W. mag.) from Corbeil Point lighthouse does not exist, a least depth of 14 fathoms having been found on this spot.

Nova Scotia—West Coast, Yarmouth harbor corner beacon temporarily dis-

continued—Position, ¼ mile southwestward of the long wharf, Yarmouth; during dredging operations in Yarmouth harbor the corner beacon will be discontinued.

Prince Edward Island—South Coast, Bedouque Bay, Dunk River, Hurds Point pier, dredging—A channel 2,130 ft. long and 60 ft. wide with a least depth of 9 ft. has been dredged by the Public Works Department from deep water to Hurds Point pier, about 2½ miles south of Summerside, on the Dunk River; from a point 600 ft. north of the pier head the dredged channel gradually widens to 130 ft. in front of the pier, where there is a turning basin 130 ft. square.

Quebec—Gulf of St. Lawrence, Mouth of Rock River, Shelter Bay—Change in color of private range lights; on or about Dec. 1, 1919; on the islet south of the island about 1½ miles long at the mouth of Rock River; the range lights will be changed from fixed red to fixed white.

Nova Scotia—South Coast, Ship Harbor—Uncharted shoal; 2½ cables 113° 30' (S. 45° E. mag.) from Wolf Point light; depth, 13 ft.; pinnacle of rock 10 ft. across, dropping immediately to 36 ft. of water to the eastward and 27 ft. of water to the westward.

Nova Scotia—South Coast, Sheet Harbor—Uncharted shoal; 1½ cables southward of Monahan Island (marked L. northeast of Malagash Island); depth, 11 ft.; large boulder, about 9 ft. square, dropping immediately off to 30 ft. water.

Nova Scotia—South Coast, Mary-Joseph harbor—Uncharted shoals; 11-13 miles 91° (S. 67° 30' E. mag.) from Thrumcap lighthouse; depth, 17 ft.; boulders over rock, 10 yds. across, with a depth of 5 fathoms; 3 cables 271° (N. 67° 30' W. mag.) from Lang shoals; depth, 9 ft.; large stones covered with kelp over solid rock, 50 yds. across with a depth of 3½ fathoms; 1½ miles 68° 30' (E. mag.) from Gull Ledge; depth, 5 fathoms; pinnacle of rock, 8 fathoms of water 30 ft. off.

British Columbia—Vancouver Island—The car ferry slip on the south side of the Canadian Western Fuel Co.'s wharf in Nanaimo harbor has been dredged by the Public Works Department to a least depth of 17 ft. and a width of 60 ft. from the shore end of the slip to deep water.

British Columbia—Grenville Channel, Camp Point—Light established on point of land directly opposite Yolk Point, southern entrance to Grenville Channel; white acetylene light, automatically occulted at short intervals; elevation, 22 ft.; visibility, 10 miles from all points of approach; structure, concrete base, surmounted by a staff carrying a wooden structure, concrete base, surmounted by a staff carrying a wooden slatwork ball, with lantern on top; color, white; the light is unwatched.

Job Shipyard Corporation, controlled by Job Bros. and Co., St. John's, Nfld., has opened a yard at Machias, Me., to build sailing and auxiliary powered vessels between 100 and 2,000 tons.

The Canada Atlantic Transit Co.'s directors for the current year, as elected at the recent annual meeting, are as follows: H. G. Kelley, President; W. D. Robb, Vice President; Frank Scott, Secretary and Treasurer; W. H. Biggar, K.C., and J. E. Dalrymple. They are all G.T.R. officials.

The Proposal to Close the Straits of Belle Isle.

Wireless Telegraphy Requirements for British Ships.

F. W. Hyndman, Charlottetown, P.E.I., has written the local press as follows:— I am satisfied that no sane man having a person knowledge of the conditions existing in the Gulf of St. Lawrence and Straits of Belle Isle would for one moment give favorable support to the proposal to close the Straits of Belle Isle, and thereby to cause a great change in climatic conditions in the Maritime Provinces.

Some years ago, when I was an assistant in the hydrographic survey of the Gulf of St. Lawrence and Newfoundland, working under the British Hydrographic Department, I spent two summers in the Straits of Belle Isle surveying those straits and the adjacent coasts of Labrador and Newfoundland. During those two seasons our particular attention was given to recording the currents of the straits and the action of this Arctic current.

We found that the flow of water from the River St. Lawrence, the Miramichi, and other rivers emptying into the gulf caused a continuous flow of the Straits of Belle Isle to be out to the Atlantic, and there was no current coming in. The consequence was that there was no flow of ice from the Arctic currents inwards through the straits, and in those two summers we only saw two small icebergs enter the straits, and they were driven by a heavy easterly gale which lasted three or four days. The fact is that the Arctic current which comes down along the Labrador coast, and east coast of Newfoundland is so wide, deep, and swift that it pays no attention to the Straits of Belle Isle; besides the constant out-flow of water from the gulf to the Atlantic prevents it having any effect.

To close the Straits of Belle Isle, would, in my opinion, have a disastrous effect upon the climate and inhabitants of the gulf coasts and Prince Edward Island. The ice of the northern part of the gulf is now carried out with the outgoing current of the straits, which, if closed, would remain in the gulf until late in the summer, and have an exceedingly bad influence upon the farming portions of those coasts. The Gulf stream which passes eastbound some 120 miles south of Nova Scotia and Newfoundland would not be affected in the slightest degree by the closing of the Straits of Belle Isle.

I sincerely trust that before the Canadian Government take any steps, such as have been recommended, it will consult the British Hydrographic Office in London, where I am satisfied my contentions will be fully upheld.

Tugs for Fisheries Protection Service—The Naval Service Department, Ottawa, will receive tenders to Jan. 23, for the construction of 3 first class, single screw tugs, of approximately the following leading dimensions, viz.: length between perpendiculars, 75 ft.; breadth, moulded, 17½ ft.; depth, moulded, 9 ft.; mean draft, loaded, 7½ ft.; deadweight on that draft, approximately 30 tons; speed on measured mile, 10 knots; complement, officers and men, 6; to be delivered at Port Stanley or Kingsville, Ont., for use on Lake Erie. Contractors must submit with their tenders, an outline of the general arrangement plan and midship section, and detail specifications of hull and machinery.

An act to make further provision with respect to wireless telegraphy on ships (chap. 38), was passed by the British Parliament, Aug. 18, as follows:—

1.—(1) Every seagoing British ship registered in the United Kingdom being a passenger steamer or a ship of 1,600 tons gross tonnage or upwards shall be provided with a wireless telegraph installation, and shall maintain a wireless telegraph service which shall be at least sufficient to comply with the rules made for the purpose under this act, and shall be provided with one or more certified operators and watchers, at least, in accordance with these rules: Provided that the Board of Trade may exempt from the obligations imposed by this act any ships or classes of ships if they are of opinion that, having regard to the nature of the voyages on which the ships are engaged, or other circumstances of the case, the provision of a wireless telegraph apparatus is unnecessary or unreasonable.

(2) The Board of Trade, in consultation with one operator would have been given the Postmaster-General, shall make rules prescribing the nature of the wireless telegraph installation to be provided, of the services to be maintained, and the number, grade, and qualifications of operators and watchers to be carried: Provided that no ship shall be required to carry more than one operator unless

required under the provisions of the Merchant Shipping (Convention) Act, 1914.

(3) If this section is not complied with in the case of any ship, the master or owner of the ship shall be liable in respect of each offence to a fine not exceeding £500, and any such offence may be prosecuted summarily, but, if the offence is prosecuted summarily, the fine shall not exceed £100.

(4) A surveyor of ships or a wireless telegraph inspector may inspect any ship for the purpose of seeing that she is properly provided with a wireless telegraph installation and certified operators and watchers in conformity with this act, and for the purpose of that inspection shall have all the powers of a Board of Trade inspector under the Merchant Shipping Acts, 1894 to 1916. If the said surveyor or inspector finds that the ship is not so provided, he shall give to the master or owner notice in writing pointing out the deficiency, and also pointing out what in his opinion is requisite to remedy the same. Every notice so given shall be communicated in the manner directed by the Board of Trade to the chief officer of customs of any port at which the ship may seek to obtain a clearance or transire, and the ship shall be detained until a certificate under the hand of any such surveyor or inspector is produced to the effect that the ship is pro-

ports provided with wireless telegraph installation, and certified operators and was not in conformity with this act.

(1) The obligations imposed by this act shall not come into operation, while the obligations with respect to wireless telegraph, on ships required by the Defence of the Realm Regulations remain in force, but shall be in addition to, and not in substitution for, the obligations as to wireless telegraph imposed by the Wireless Telegraphy Act, 1904, or any order in council, or regulations made thereunder, or by the Merchant Shipping (Conventions) Act, 1914.

2. The foregoing provisions of this act shall, as from a date three months after the coming into operation of the obligations imposed by this act on British ships registered in the United Kingdom, ap-

ply to ships other than British ships registered in the United Kingdom, while they are within any port in the United Kingdom in like manner as they apply to British ships so registered.

(1) This act may be cited as the Merchant Shipping (Wireless Telegraphy) Act, 1919, and the Merchant Shipping Acts, 1894 to 1916, and this act may be cited together as the Merchant Shipping Acts, 1894 to 1919.

(2) This act shall be construed as one with the Merchant Shipping Act, 1894, and "passenger steamer" shall mean a steamer which carries more than 12 passengers, and "wireless telegraphy inspector" means an officer appointed under sec. 20 of the Merchant Shipping (Convention) Act, 1914, for the purpose therein mentioned.

registered tonnage, on every scow; movements shall be paid both in and out of each and any port.

MOVAGES—(1) In the port of Vancouver (1) in Burrard Inlet, between first and second narrows, \$10 a move; (2) in Burrard Inlet from any place below second narrows to any place above second narrows or vice versa; \$15 a move; (3) from False Creek to any place in Burrard Inlet above second narrows, or vice versa, \$30 a move.

(b) In the port of Ladysmith \$15 a move.

(c) In all other ports not already specified, \$10 a move.

The charges for the services of a pilot shall be \$10 while compasses are being adjusted, \$15 for trial trips, and \$20 for trial trips if compasses are being adjusted at the same time.

While a pilot is on board, a special rate of \$30 a day or fraction of a day, shall be payable, in addition to any other pilotage dues, on any vessel proceeding to ports north of Comox to the Alaska boundary, or to ports on the west coast of Vancouver Island or Queen Charlotte Islands.

For determining the pilotage dues payable under the preceding sections, it shall be understood that they are to be calculated on the draft, or on the net registered tonnage, of the vessel, or on both, as provided; any portion of a foot not exceeding 6 ins. shall be paid for as half a foot and any portion of a foot exceeding 6 ins. shall be paid for as 1 ft.

Appointment of Superintendent—The Dominion Civil Service Commission, in August, 1919, invited applications as follows:—A Superintendent for the British Columbia Pilotage Authority, with headquarters at Victoria, B.C., Marine Department, at an initial salary of \$3,060 a year. Candidates must hold a master mariner's certificate, and must have been actually in charge of a seagoing or coasting passenger ship for at least one year. They must be thoroughly familiar with the work of the masters, seamen, and pilotage branch, and must have administrative ability. Preference will be given to residents of British Columbia.

We are officially advised that Commander B. L. Johnston, D.S.O., has been appointed to the position. He was at one time captain of the Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince Rupert, and was a pilot at Vancouver, for a number of years, except from Aug. 14 to June, 1919, when he was on war service.

C. W. Morse, President, United States Steamship Co., suggests a federal ship loan act to provide capital to enable the U. S. merchant marine to maintain the advantage given it by the war and to keep the U. S. flag on the seas as a powerful competitor for a fair share of the world's trade.

Re-organization of British Columbia Pilotage Authorities.

The pilotage districts and pilotage commissions of Vancouver, Nanaimo and Victoria-Esquamalt, have been abolished and the Pilotage District of British Columbia have been established in charge of Commander B. L. Johnston, D.S.O., as Superintendent, British Columbia Pilotage Authority. The Pilotage District of New Westminster has not been changed, and is still in charge of a commission.

Order in Council—The following order no. 1,876, was passed at Ottawa Sept. 10, 1919:—The Deputy Governor General in council, on the recommendation of the acting Minister of Marine, and under the provisions of the Canada Shipping Act, chap. 113, Revised Statutes of Canada, 1906, sec. 416, is pleased to order as follows:

The orders in council of Feb. 6, 1904; April 15, 1879, and Feb. 20, 1880; fixing the limits of the pilotage districts of Vancouver, Nanaimo, and Victoria-Esquamalt, are hereby cancelled.

A pilotage district, to be called to Pilotage District of British Columbia, is hereby established, with limits from the International Boundary, between Canada and the United States on the south, to the International Boundary between Alaska and Canada on the north, excepting thereout and therefrom the waters of the Pilotage District of New Westminster, as established by order in council of Feb. 6, 1904.

The Deputy Governor General in council, under the provisions of sec. 430 of the said act, is hereby further pleased to order that the payment of pilotage dues in the said Pilotage District of British Columbia shall be compulsory.

The Deputy Governor General in council, under the provisions of sec. 432 of the said act, as amended by the Statutes of 1919, chap. 41, hereby appoints the Minister of Marine, the pilotage authority for the said Pilotage District of British Columbia.

The above provisions shall become and be effective on and after Jan. 1, 1920.

Notice to Mariners—The Marine Department issued the following notice, Dec. 2, 1919:—Pilotage stations at Vancouver and Nanaimo will be discontinued as from midnight, Dec. 31, 1919. A pilot may join a ship before it reaches British Columbia waters, on request, and by the ship paying in addition to the regular pilotage dues, the pilot's transportation and living expenses.

PILOTAGE DUES shall be the same for vessels propelled by sails, steam or in tow, other than scows.

To or from Quarantine, Royal Roads or Brothie Ledge, into Victoria, or vice versa—50c a ft. draft, and $\frac{1}{2}$ c a ton net registered tonnage to a maximum of 3,000 tons net registered tonnage. Esquamalt and the inner harbor of Victoria shall be deemed to be part of the port of Victoria.

To or from Quarantine, Royal Roads or Brothie Ledge, into any ports or ports (other than Victoria and ports on the Fraser River, including New Westminster) as far as Union Bay or Comox, or vice versa—\$2 a ft. draft, and 1c a ton net registered tonnage.

On entering or leaving any port in the Pilotage District of British Columbia shall be \$2 a ft. draft, and 1c a ton net registered tonnage, but vessels calling at more than one port on the same voyage shall pay only \$1 a ft. draft and 1c a ton net registered tonnage on entering the second or subsequent ports, provided such port is not Victoria. Chemainus and Boat Harbor shall be deemed to be part of the port of Ladysmith.

In case of ships registered elsewhere than in Canada, engaged exclusively in the coastal trade between any port or ports in British Columbia and any Pacific port in the U.S., including Alaska, the following pilotage charges shall be paid:—

Victoria:— $\frac{1}{2}$ c a ton net registered tonnage, if over 1,000 tons, to a maximum of 2,000 tons net registered tonnage; movages free, if pilots are not used.

In all other ports— $\frac{1}{2}$ c a ton net registered tonnage, if not exceeding 1,000 tons net registered tonnage; $\frac{1}{2}$ c a ton net registered tonnage, if over 1,000 tons net registered tonnage; $\frac{1}{2}$ c a ton net

Grain Shipped From Port Arthur and Fort William, Ont.

The following table shows the bushels of each kind of grain shipped from Fort William and Port Arthur, Ont., in Canadian and U.S. ships to Canadian and U.S. ports, from Sept. 1 to Dec. 12, 1919:

	Canadian ships	U.S. ships	Total
Wheat	2,000,000-00	410,000-00	2,410,000-00
Oats	700,000-00	1,300,000-00	2,000,000-00
Barley	2,000,000-00	300,000-00	2,300,000-00
Rye	200,000-00	30,000-00	230,000-00
Mixed	1,000,000-00	1,000,000-00	2,000,000-00
Strawberries	2,000,000-00	10,000-00	2,010,000-00

	Canadian ports	U.S. ports	Total	Same period 1918
Wheat	2,000,000-00	410,000-00	2,410,000-00	2,410,000-00
Oats	700,000-00	1,300,000-00	2,000,000-00	2,000,000-00
Barley	2,000,000-00	300,000-00	2,300,000-00	2,300,000-00
Rye	200,000-00	30,000-00	230,000-00	230,000-00
Mixed	1,000,000-00	1,000,000-00	2,000,000-00	2,000,000-00
Strawberries	2,000,000-00	10,000-00	2,010,000-00	2,010,000-00

Canadian Merchant Shipping Losses During the War.

The following particulars have been compiled from a return "Merchant Shipping Losses," prepared by the British Admiralty, and presented to the British House of Commons recently. They show the names and tonnages of Canadian registered merchant ships which were destroyed or captured by the enemy during the war, together with the approximate places of capture, the means of destruction, when destroyed, and the number of lives lost. Where the name of the ship is followed by the letter "(s)," it was a sailing ship:

1914

Dec. 2.—Drummuir (s), 1,800 gross tons, owned by Ship Drummuir Co., Victoria, B.C., captured and sunk by bombs by the s.s. Leipzig, near Cape Horn.

1915

May 26.—S.s. Morwenna, 1,414 gross tons, owned by Ardeola Steamship Co., Liverpool, Eng., and chartered to Dominion Coal Co., Sydney, N.S., captured and sunk by torpedo by a submarine near Fastnet; one life lost.

July 1.—L. C. Tower (s), 518 gross tons, captured by submarine and set on fire near Fastnet.

Aug. 13.—Royal Edward, 11,117 gross tons, owned by Cunard Steamship Co., and owned formerly by Canadian Northern Steamships Ltd., torpedoed and sunk without warning by submarine near Kandelusia; 132 lives lost.

Aug. 4.—S.s. Midland Queen, 1,993 gross tons, owned by Midland Navigation Co., Midland, Ont., captured and sunk by submarine gun fire near Fastnet.

Sept. 28.—S.s. H. C. Henry, 4,219 gross tons, owned by Steamer H. C. Henry, Vancouver, B.C., captured and sunk by submarine gun fire near Cape Matapan, Mediterranean Sea.

1916

Feb. 27.—S.s. Empress of Fort William, 2,181 gross tons, owned by Canada Steamship Lines, sunk by mine near Dover.

Mar. 27.—S.s. Empress of Midland, 2,224 gross tons, owned by Canada Steamship Lines, sunk by mine near Kentish Knock.

May 13.—S.s. Eretria, 63,464 gross tons, owned by Steamship Eretria Co. Ltd. (Battle Line), St. John, N.B., sunk by mine near Ile d'Yeu.

Dec. 2.—S.s. Palatine, 3,268 gross tons, captured by submarine and sunk by bombs near Ushant.

Dec. 6.—Duchess of Cornwall (s), 152 gross tons, owned by R. Moulton Ltd., St. John's, Nfld., captured by s.s. Mowe, and crew made prisoners; fate of vessel unknown.

Dec. 24.—Harry W. Adams (s), 127 gross tons, owned by H. W. Adams, Lunenburg, N.S., captured and sunk by submarine gun fire near Cape Villana.

Dec. 30.—Jean (s), 215 gross tons, owned by T. DesBrisay, Bathurst, N.B., captured and converted into a raiding vessel by s.s. Mowe, near St. Paul Rocks; fate of vessel unknown.

1917

Jan. 19.—Lillian H. (s), 467 gross tons, owned by Lillian H. Ship Co., Fox River, N.S., captured by submarine and sunk by bombs near Old Head of Kinsale.

Jan. 28.—Perce (s), 364 gross tons, owned by Robin Jones & Whitman Ltd., Halifax, N.S., captured by s.s. Seadler and sunk by gun fire near St. Paul Rocks.

Jan. 31.—S.s. Dundee, 2,278 gross tons, owned by Canada Steamship Lines, sunk by submarine torpedo, without warning, near St. Ives Head; one life lost.

Feb. 16.—Mayola (s), 146 gross tons, owned by T. DesBrisay, Bathurst, N.B., captured by submarine and sunk by bomb near Cape St. Vincent.

Feb. 26.—British Yeoman, 1,953 gross tons, owned by Ship British Yeoman Ltd., Victoria, B.C., captured by s.s. Seadler near St. Paul Rocks.

Mar. 10.—James Burton Cook (s), 133 gross tons, captured by submarine and sunk by gun fire near Malaga.

Mar. 11.—Kwasind, formerly Turret Belle, 2,211 gross tons, owned by the Arctic Steamship Co., Quebec, Que. sunk by mine near Southwold.

Apr. 13.—S.s. Stratheona, 1,881 gross tons, owned by Canada Steamship Lines Ltd., captured by submarine and sunk by bomb near Ronaldshay, nine lives lost and master, chief and third engineers made prisoners.

Apr. 16.—Victoria (s), 165 gross tons, captured by submarine and sunk by bombs near Beachy Head.

Apr. 19.—Thomas (s), 132 gross tons, captured by submarine and sunk by bombs near Cape St. Vincent.

Apr. 22.—S.s. Neepawah, 1,799 gross tons, owned by Canada Steamship Lines, captured by submarine and sunk by bombs near Bishop Rock.

Apr. 25.—Invermay (s), 1,471 gross tons, captured by submarine and sunk by bombs near Eagle Island.

May 1.—S.s. C. A. Jaques, 2,105 gross tons, owned by Canada Steamship Lines, sunk by submarine torpedo, without warning, near Boulogne; three lives lost.

May 14.—Carmoney (s), 1,299 gross tons, captured by submarine and sunk by bombs near Fastnet.

May 16.—Dorothy Duff (s), 186 gross tons, captured by submarine and sunk by bomb near Cape Culena.

May 24.—McClure (s), 220 gross tons, captured by submarine and sunk by bombs near Cape Carbonara.

June 10.—S.s. Scottish Hero, 2,205 gross tons, owned by Hero Steamship Co., Halifax, N.S., sunk by submarine gun fire, one life lost.

July 21.—Willena Gertrude (s), 317 gross tons, captured by submarine and sunk by bombs near Azores.

Sept. 29.—Percy B. (s), 330 gross tons, sunk by submarine gun fire near Cape Villana.

Nov. 5.—Hilda R. (s), 100 gross tons, captured by submarine and sunk by bombs near Cape St. Mary.

Dec. 11.—S.s. D. A. Gordon, 2,301 gross tons, owned by Canada Steamship Lines, sunk by submarine torpedo, without warning, near Cape de la Huertas, one life lost.

1918

Jan. 10.—W. C. McKay (s), 145 gross tons, attacked by submarine off the Azores; fate unknown; 6 lives lost.

Mar. 15.—S.s. Armonia, 5,226 gross tons, owned by Canada Steamship Lines, sunk by torpedo, without warning, near Porquerolles Island, 7 lives lost.

May 16.—S.s. Tagona, 2,004 gross tons, owned by Canada Steamship Lines, sunk by torpedo, without warning, near Trevoze Head, 8 lives lost.

May 24.—Ruth Hickman (s), 417 gross tons, captured by submarine and sunk by bombs near Azores.

Aug. 2.—Motor ship Dornfontein, 766

gross tons, captured by submarine and burnt near Brier Island, N.S.

Aug. 5.—S.s. Freshfield, 3,445 gross tons, owned by R. L. Smith, Montreal, sunk by torpedo, without warning, near Cape Colonne, Italy, 3 lives lost.

Aug. 5.—Luz Blanca, 4,868 gross tons, owned by Imperial Oil Ltd., sunk by torpedo, without warning, near Halifax, N.S., 2 lives lost.

Sept. 16.—S.s. Acadian, 2,305 gross tons, owned by Canada Steamship Lines Ltd., sunk by torpedo without warning near Trevoze Head, 25 lives lost.

Oct. 4.—Industrial (s), captured by submarine and sunk by bombs near Nantucket Island, N.Y.

The above particulars show a total of 43 vessels, of 74,323 gross tons, and 199 lives lost. The list does not include a number of Canadian vessels, and vessels engaged almost solely in the Canadian trade, the majority of which were on the British register, and which were destroyed by the enemy.

In addition to the foregoing, the following fishing boats were captured by the enemy during a sporadic raid on the Canadian Atlantic coast in Aug., 1918. All were sailing boats, except the Triumph, which was captured and converted into a raider. The following were captured and destroyed by bombs:—C. M. Walters, 107 gross tons; E. B. Walters, 98 tons; Elsie Porter, 136 tons; Gloaming, 100 tons; Lucille M. Schnare, 121 tons; Nelson A., 72 tons; Pasadena, 91 tons; Potentate, 136 tons; Uda A. Saunders, 125 tons; Verna D. Adams, 132 tons. The following were captured but not sunk:—Clayton W. Walters, 80 tons; Marion Adams, 99 tons. The s.s. Triumph, 239 gross tons, was, as mentioned, captured and converted into a raider.

These figures show a total of 13 boats and 1,536 gross tons; no lives were lost.

United States Shipbuilding and Shipping Notes.

Chairman Payne estimates that marine and shipyard strikes during 1919 cost the U. S. Shipping Board \$37,000,000.

The U. S. Shipping Board's chairman is reported to have stated Dec. 12, that its construction division had delivered 5,818,500 d.w. tons of ships up to Dec. 1 and that this would be increased to 6,000,000 tons by Dec. 31, 1919.

The U. S. National Marine League states that the U. S. merchant marine has expanded from 4 ships in deep seas commerce before the war, to a fleet of 9,733,000 tons in ocean service. The league also states that in addition U. S. Great Lakes shipping measures 2,000,000 tons, giving a total of 11,733,000 tons against Great Britain's 18,000,000 tons.

The U. S. Shipping Board has announced that, in order to coordinate its labor policy and bring about a more consistent method of dealing with labor problems, all questions of labor policy affecting the construction, repair, operation, loading and unloading of ships and marine equipment, will hereafter be handled, subject to the board's direction, through the Division of Industrial Relations of the Shipping Board at Washington, D.C. Darragh de Lancey, heretofore Director of Marine and Dock Industrial Relations Division, has been appointed Director of Division of Industrial Relations.

Winter Moorings of Canadian Steamships.

Following is a list of Canadian steamships and the ports at which they have been berthed for the winter, of which the Canadian Railway and Marine World has been advised.

Algoma Central Steamships Line.
Sault Ste. Marie, Ont.—Steamships
Albion, Georgian, Ont.; J. Edgar Tay-
lor, Port McNicoll, Ont.; Home Smith,
Vancouver, Montreal, Ont.; W. O. Franz,
Collingwood, Ont.

Canada Atlantic Transit Co., Montreal.
—Steamships Arthur Orr, Buffalo, N.Y.;
Keweenaw, Chicago, Ill.

Canada Steamship Lines Ltd.—Freight
s.s. Toiler, Montreal; T. P. Phelan,
Saguin and Brookdale, Kingston, Ont.;
Pearl, Wyoming, Ontario, Nipigon,
City of Hamilton, City of Ottawa, Belle-
ville, and Home Rule, Toronto; Bick-
erdike, Hamilton, Ont.; J. H. G. Hagarty,
E. B. Quier, W. D. Matthews, Midland
King and Martin, Goderich, Ont.;
Maple Grove, Port Dalhousie, Ont.; B. L.
Pennington, Rickarton, J. R. Binning,
and Isabel Reed, Port Colborne, Ont.;
W. Grant Morden, Midland Prince and
Collingwood, Port McNicoll, Ont.; Stada-
cona, Port Huron, Mich.; Emperor, Had-
dington and Cadillac, Fort William, Ont.;
Sarnian and Sir Trevor Dawson, Buf-
falo, N.Y.

Passenger Steamships—Longueuil.
Louis Philippe, Montreal, Murray Bay,
Pierrepont, Quebec, Rapids King, Rapids
River, Rapids Queen, Rochester, Saguenay,
Syracuse, Ste. Irene, Tadoussac,
Three Rivers, Sorel, Que.; America,
Brookville, Ramona, St. Lawrence, Va-
runa, Kingston, Ont.; Cayuga, Chippewa,
Corona, Kingston, Macassa, Modjeska,
Toronto, White Star, Toronto, Ont.

Canadian Pacific Car and Passenger
Transfer Co., Prescott, Ont.—S.s. Charles
Lyon, Prescott, Ont.

**Canadian Pacific Ry., British Colum-
bia Lake and River Service.**—Steamships,
Kokanee and Ymir, Nelson, B.C.; Bon-
nington, Kootenay, and tug Columbia,
Nakusp, B.C.; s.s. Okanagan, and tugs
Castlegar and York, Okanagan Landing,
B.C.

**Canadian Pacific Ry., Great Lakes Ser-
vice.**—Steamships, Alberta, Assiniboia,
Athabasca, Kewatin and Manitoba, Port
McNicoll, Ont.

Canadian Towing and Wrecking Co.,
Port Arthur, Ont.—S.s. Vinmount, Col-
lingwood, Ont.; steam tugs, A. B. Col-
mee, A. F. Bowman and James Whalen,
Sarnia, Ont.; derrick barge Empire, and
barge Coteau, Port Arthur, Ont.

Crystal Stream Steamship Co., St. John,
N.B.—Steamships D. J. Purdy and Ma-
jestic, Indiantown, N.B., for general
repairs.

Davidson and Smith Elevator Co., Port
Arthur, Ont.—S.s. Robert L. Fryer, Port
Arthur, Ont.

Donnelly Salvage and Wrecking Co.,
Kingston, Ont.—Steamships Cornwall,
Frontenac, Harriet D., and William John-
ston, Kingston, Ont.

**George Hall Coal Co. of Canada—Mont-
real.**—Steamships, Fred Mercier, John
Rugee, Senator Derbyshire; barges, A.D.
Katie and Zapotec; steam tug, Margaret
A. Hackett, Montreal; steam tug, J. H.
Hackett, Quebec; steamships, Compton,
James W. Follette, John B. Ketchum,
Robert R. Rhodes, and Rockferry; barges,
Cuba, F. D. Ewen, Gladys; steam tug,
Florence, Ogdensburg, N.Y.

Gulf of St. Lawrence Shipping and

Trading Co., Quebec, Que.—S.s. Guide,
Louise Basin, Quebec; s.s. Labrador,
Murray Bay, Que.; s.s. Lady Evelyn,
Pictou, N.S.

Hudson's Bay Co., Winnipeg.—S.s. Fort
York, Port Nelson, Man.; s.s. Inenew
and motor ship Fort Churchill, Moose
Factory, Man.; motor ship Nannuk, Lake
Harbor; s.s. Mackenzie River, Fort
Smith, Alta.; motor ship Fort McMurray,
near McMurray, Alta.; s.s. Athabasca
River, Peace River Crossing, Alta.; s.s.
Peace River, Fort Vermilion, Alta.; s.s.
Port Simpson and motor ship Taltahn,
Port Simpson, B.C.; motor ship Fort Mc-
Pherson, Herschel Island.

Huntsville, Lake of Bays and Lake
Simcoe Navigation Co., Huntsville, Ont.
—Steamships, Algonquin, Phoenix and
Ramona, Huntsville, Ont.; Iroquois, Min-
ota, Mohawk Belle, Portage, Ont.

Imperial Oil Ltd., Toronto.—Steam-
ships, Icolotte, Icoma and Imperial and
barge 41, Sarnia, Ont.

Lake Erie Navigation Co., Walkerville,
Ont.—S.s. Marquette and Bessemer No.
1, Conneaut Harbor, Ohio.

**Marquette and Bessemer Dock and Na-
vigation Co., Walkerville, Ont.**—S.s. Mar-
quette and Bessemer No. 2, Conneaut
Harbor, Ohio.

Newcastle Steamboat Co., Newcastle,
N.B.—S.s. Max Aitken, Chatham, N.B.

Niagara, St. Catharines and Toronto
Navigation Co., St. Catharines, Ont.—
Steamships Dalhousie City, and Garden
City, Port Dalhousie, Ont.

**North Bay and French River Naviga-
tion Co., North Bay, Ont.**—S.s. Northern
Belle, North Bay, Ont.

Northern Navigation Co., Sarnia, Ont.
—Steamships, Huronic, Noronic, Thou-
sand Islander and Waubic, Sarnia, Ont.;
Hamonic, Collingwood, Ont., for wheel
repairs.

Ontario Car Ferry Co., Montreal—S.s.
Ontario No. 2, Cobourg, Ont. The car
ferry steamship Ontario No. 1 operates
throughout the winter.

Ottawa Transportation Co., Ottawa,
Ont.—Steamships, Dolphin, Florence,
Hall, Harris, Ottawa, Scotsman and Sir
Hector, Hull, Que.

**Pembroke Transportation Co., Pem-
broke, Ont.**—S.s. Oiseau, Pembroke, Ont.
Prescott and Ogdensburg Ferry Co.,
Prescott, Ont.—Steamships, Ferdinand
and Miss Vandenberg, Prescott, Ont.

J. F. Sowards, Kingston, Ont.—Steam-
ships, H. N. Jex, Jeska and Shanly, King-
ston, Ont.

Sparrow Lake Steamer Line, Sparrow
Lake, Ont.—S.s. Glympse, Port Stanton,
Ont.

**Toronto, Hamilton and Buffalo Na-
vigation Co., Hamilton, Ont.**—S.s. Mait-
land No. 1, Ashtabula, Ohio.

Webster Steamship Co., Montreal.
—Steamships, Colin W., Eric W. and Rich-
ard W., Montreal; Howard W., Marian
W., and Stuart W., Quebec, Que.

U. S. Vessels Passed Through the
Welland Canal—During 1919, 234 steam-
ships built at U.S. shipyards on the
Great Lakes, as well as 46 steam tugs,
passed through the Welland Canal on
their way to the sea. Of these, 10 took
on cargo at Montreal for the United
Kingdom, 10 took cargo for Mediterran-
ean ports, and the balance took coast-
wise cargoes. In their passage from the
Great Lakes to Montreal, 70,000 tons of
coal were taken down.

Steamship Inspectors for Quebec and Vancouver.

The Civil Service Commission at Ot-
tawa gave notice early in December
that applications would be received for
the appointments of two steamship in-
spectors, one for the port of Vancouver
and the other for the port of Quebec,
to act in the dual capacity of inspector
of boilers and machinery and of hulls
and equipment, at an initial salary of
\$2,700 a year, which will be increased
on recommendation for efficient service
at the rate of \$180 a year until a max-
imum of \$3,240 has been reached. Can-
didates must have education equivalent to
graduation in engineering from a tech-
nical school of recognized standing; at
least 12 years of experience in the de-
sign, construction, maintenance or op-
eration of ships, marine engines and boil-
ers; thorough knowledge of the theory
and the practice of marine engineering
and ship construction; ability to make
clear and concise reports on inspections
and to make working drawings, specifi-
cations, and estimates for proposed work;
tact and good judgment.

The successful candidate will be re-
quired to perform the following duties:
To inspect the boilers and machinery and
hulls and equipment of steamships dur-
ing construction, and, as required by law,
to determine whether they are sufficient
for the service intended and in good con-
dition; to examine plans of ships and
their equipment, marine machinery and
boilers, submitted for the purpose of
determining by calculations of the
strength of the various parts whether
they can receive approval; to advise
builders, owners, and others concerned
in the matter of construction of ships
and their machinery and the repairs re-
quired to keep the same in efficient con-
dition; when satisfied as regards the suf-
ficiency of ships, their boilers and ma-
chinery, and the law, as regards certi-
ficated officers, etc., has been complied
with, to issue a statutory certificate of
inspection, to examine candidates for
marine engineer certificates; to act as a
member of a board of steamship inspec-
tion occasionally as required; to investi-
gate and report on accidents and break-
downs happening to ships, their boilers
and machinery; to supervise and report
on repairs to government ships, their
boilers and machinery, and to perform
other related work as required. Can-
didates should be not more than 40 years
of age.

An examination will be held in con-
nection with the filling of this position,
and candidates will be notified later of
the date and place of examination. Pre-
ference will be given to residents of the
provinces of British Columbia and Que-
bec respectively.

The Gulf of St. Lawrence Shipping and
Trading Co.'s steamship services, some
details of which were given in our last
issue, will probably be extended consid-
erably during this year. It is hoped to
operate 7 or 8 steamships, 2 of which
will be in service between Montreal,
Prince Edward Island and St. John's,
Nfld.; 2, or possibly 3, on the north shore
of the Gulf of St. Lawrence; one on the
south shore between Montreal and Pas-
pebiac; one between Pictou, N.S., and the
Magdalen Islands, and probably 2 be-
tween Pictou, N.S., Prince Edward Island
and Cape Breton ports.

Atlantic and Pacific Ocean Marine.

The Leyland Line s.s. Mercian, which sailed from Boston, Mass., Dec. 5, for Manchester, Eng., put into St. John's, Nfld., Dec. 12, with a fire in one of her holds.

The Red Line s.s. Lancaster arrived at Halifax, N.S., Dec. 18, from Antwerp, Belgium, with fire in her no. 1 hold, among chemicals. The crew had been fighting the fire for four days.

The British s.s. Manxman, which left Portland, Me., Nov. 30, is reported to have foundered in mid ocean, with a loss of 43 of her crew, the balance of 16, being picked up by the British s.s. British Isles, and taken to New York.

Canadian Pacific Ocean Services' s.s. Empress of Asia was docked at Wallace Shipyards, North Vancouver, B.C., recently, for boiler repairs and other work. The s.s. Empress of Japan has had her boilers overhauled at the same yard.

The Cunard Line s.s. Carmania, which collided with another steamship, Dec. 14, when approaching Halifax, N.S., underwent temporary repairs by Halifax Shipyards Ltd. It is said that she will be thoroughly examined and overhauled in Great Britain.

Canadian Pacific Ocean Services' s.s. Empress of Russia, was docked at the B.C. Marine Railway Co.'s yards, Vancouver, B.C., recently, for the fitting up of coolie accommodation for the transportation of coolie labor back to China, and also underwent extensive repairs.

Elder Dempster and Co.'s s.s. Bassa, which stranded on a shoal in the St. Lawrence River, near Montreal, Nov. 28, through the failure of the steering gear, was released Dec. 7, and taken to Canadian Vickers' dry dock for examination and repair. She sailed again from Montreal, Dec. 10.

The Union Steamship Co. of New Zealand, which operates a steamship service between Canada and Australasia, is reported to be adding another passenger steamship to its fleet for the Canadian service. During the war some of the company's vessels were lost and the cargo steamships Waihemo, Waikawa and Wairuna, of approximately 9,000 tons each, were bought to take their places.

The Greek s.s. Platea, which ran ashore on Sabie Island, early in November, and which was believed to be a total loss, will probably be salvaged. The ocean going tug Cruiser was working on the vessel early in December, and succeeded in moving her about 100 ft. nearer to deep water. It is anticipated that provided the weather abates somewhat she may be towed into deep water and repaired sufficiently to enable her to be docked for complete examination.

Furness Withy and Co.'s s.s. Messina, which sailed from St. John, N.B., Dec. 5, for Antwerp, Belgium, was reported by wireless, Dec. 12, to have been abandoned in a sinking condition about 430 miles from Newfoundland. She was a first class cargo steamship, of about 6,000 d.w. tons, and it is presumed that she encountered heavy weather, which was prevalent in the neighborhood during December. It is reported that the crew were saved by another steamship which had been standing by.

The Canadian Transatlantic Co.'s s.s. Bilbster, which was scheduled to sail from St. John, N.B., under Canada Steamship Lines' schedule, as general

agents for the owners, Dec. 6, was requisitioned by the British Ministry of Shipping, to carry lumber to the United Kingdom. It is said that a protest was made, on the ground that so much lumber is being shipped that the docks are already badly congested. The ship was to have been utilized in shipping Canadian live stock to France, it being barred from England.

The wooden s.s. Colmar, which was built by Three Rivers Shipyards, Ltd., Three Rivers, Que., for the French Government, and which sailed from Quebec, Nov. 26, for Europe, sprang a leak about 60 miles from Halifax, N.S., Dec. 1, and after experiencing heavy weather, was abandoned by the crew, Dec. 12, and eventually sank. The crew took to the boats and set out for Halifax, in two sections, the first lot arriving there after considerable hardship, the second being rescued by the s.s. Mississippi and landed at St. John, N.B.

Maritime Provinces and Newfoundland.

The Red Cross Line's s.s. Rosalind has been practically rebuilt at New York, subsequent to running aground in Sept., 1919, while en route from Halifax to New York. In addition to the rearrangement of her interior, she has been changed to a fuel oil burner.

The three-masted schooner Barbara Macdonald, which was built by J. A. Macdonald and Co., Charlottetown, P.E.I., in October, being wrecked and became a total loss, off Cape Vine, Nfld., Dec. 16, the master, T. Whittle, being washed overboard and drowned.

The Reid Newfoundland Co.'s s.s. Ethie, running between Curling, Nfld., and Labrador, went ashore during a storm, Dec. 10. The passengers and crew, numbering 92 persons, were taken ashore by a line which was landed from the vessel by a dory.

A press dispatch from Sydney, N.S., states that preliminary work has been commenced there in connection with the proposed government harbor terminal work. Soundings are said to have been taken, but it is stated that no work of a definite nature will be undertaken until the spring.

The Valley Steamship Co.'s s.s. Granville III., which was built recently at Meteghan River, N.S., underwent her trial trips Dec. 8, where she developed 12 knots an hour over a measured mile. Her dimensions are: length, overall, 100 ft.; beam, 22.6 ft.; depth of hold, 9 ft. She is to be operated on the St. John River.

The construction of a canal through the Chignecto Isthmus, between Nova Scotia and New Brunswick, is again being agitated. For several years a short cut to the ocean at this point has been under consideration, either by means of a canal or a ship railway. An attempt to carry out the latter plan was made some years ago, but ended in failure.

The United States Shipping Board's steamships Lake Elmsdale and Lake Gatewood, were driven ashore on the Cape Breton, N.S., coast, during a snow storm, Dec. 10, the former at Cape Blue, and the latter at Port Hood Island. The Lake Elmsdale was bound for Halifax to load cargo for Santiago, Cuba. Both ships were built recently at Cleveland, Ohio.

The s.s. David C., which was built by Burns and Kelleher, Bayside, N.S., early

in 1919, has been chartered by Job Bros., of Newfoundland, and has had her name changed to Edmund Donald. She loaded cargo recently at Sydney, N.S., for Wabano, Nfld. She is in charge of Capt. A. E. Seaman, formerly of the s.s. Stella Maris, with L. S. Freeman as chief engineer.

The steam tug Alert, owned by W. N. McDonald, Sydney, N.S., was reported to be ashore near Canso, N.S., early in December, after having collided with the U.S. Shipping Board's s.s. Lake Elmsdale, in connection with the salving of which she had been working for some time. The Alert's stern was badly battered and temporary alterations were carried out on this spot.

The s.s. E. D. Kingsley, owned by the Kingsley Navigation Co., Vancouver, B.C., and built recently at Fort William, Ont., by Canadian Car and Foundry Co., ran ashore at Whitehead Harbor, Dec. 11, whilst en route from Montreal to Halifax, N.S., in ballast. She was refloated the following day, and proceeded under her own steam. She is on her way to British Columbia via Panama Canal.

The s.s. Dream, which was purchased by Capt. C. Taylor, St. John, N.B., recently, has been remodelled and a new boiler installed, with the intention of operating her on the St. John River in the suburban passenger trade next summer. She was built at Newark, N.J., in 1881, and is screw driven by engine of 12 n.h.p. Her dimensions are: length, 63.9 ft.; breadth, 14.1 ft.; depth, 5 ft.; tonnage, 45 gross, 30 registered.

A deputation from St. John, N.B., interviewed members of the Dominion Government, Dec. 7, and urged the desirability of at once proceeding with a comprehensive scheme of harbor improvements at the port. The work which the deputation dealt with, is apart from the developments and improvements now under way in Courtenay Bay. It is stated that the dock accommodation at St. John is utterly inadequate, and that ships going to the port are inordinately delayed.

The Dominion Government s.s. Arranmore ran ashore at Cape Whipple, Labrador, Dec. 3. The Dominion Government's s.s. Montcalm, which was sent to her assistance, reported by wireless that she was unable to get within 2 miles of her on account of the heavy sea. She had been abandoned by the crew and was reported to be pounding heavily. The Arranmore was carrying winter supplies for lighthouses and wireless telegraph stations along the shores of the Strait of Belle Isle.

The Louisburg Drydock & Shipbuilding Co. Ltd., the incorporation of which was announced in a recent issue, has applied to the Dominion Public Works Department for a subsidy for a second class drydock at the mouth of Garrets Brook, in Louisburg harbor, N.S., between the Dominion Coal Co.'s shipping piers and the old town. The dock is estimated to cost \$3,060,000. The dimensions proposed are: length, 650 ft.; width, 85 ft.; depth of water over sill at high water, ordinary spring tides, 30 ft.

Enemy Vessels Handed to the Allies.—It was announced in the British House of Commons, Dec. 11, that up to Dec. 7, there had been delivered to the allied powers, 355 enemy ships with a gross tonnage of 1,788,913 tons, of which 203 ships of 1,200,000 tons were in British hands.

Ontario and the Great Lakes.

The Welland canal was officially closed for the winter Dec. 14.

It having been decided that Bear Point, Lake Erie, is in Canadian waters, and not U.S. waters, a lightship has been placed there by the Dominion Government.

Canada Steamship Lines' s.s. *Chimora*, which sank at her moorings at Toronto, about the end of October, was raised Dec. 6 by the J. E. Russell Wrecking Co., on behalf of the underwriters.

Canada Steamship Lines' s.s. *Sir Trevor Lawrence* left the head of the lakes Dec. 7, with 622,000 bush of oats for Buffalo, N.Y. This, it is stated, is the largest cargo of oats ever shipped to Buffalo.

The Public Works Department is reported to have awarded a contract to N. B. Horton, Owen Sound, Ont., for the construction of a concrete dock there, on the east side of the C.P.R. property at the foot of 11th Street East.

Owing to the regulations requiring all persons entering the United States from Ontario to be vaccinated, it is reported that the ferry service between Sault Ste. Marie, Ont., and Sault Ste. Marie, Mich., has been suspended for the winter, and that no attempt will be made to keep the water route clear of ice.

The U.S. Lake survey reports the stages of the Great Lakes in feet above mean sea level for November as follows: Superior, 602.51; Michigan and Huron, 580.43; Erie, 572.24; Ontario, 346.11. Compared with the average November stages for the last 10 years, Superior was 0.01 ft. above; Michigan and Huron, 0.17 ft. above; Erie, 0.43 ft. above; Ontario, 0.56 ft. above.

The Midland Transportation Co. has registered the s.s. *Luckport*, which was formerly the s.s. *Magnolia*, owned by Canada Steamship Lines, Ltd., and which was wrecked some time ago. She was originally built at Midland, Ont., in 1898 and is screw driven by engine of 57 n.h.p. Her dimensions are length, 126 ft.; breadth, 21.6 ft.; depth, 12 ft.; tonnage, 231 gross, 134 registered.

The Great Lakes Transportation Co.'s s.s. *Glenlyon* arrived at Port Arthur, Dec. 17, with general cargo, from the east. She had a rough passage, and was well encrusted with ice, the temperature during the entire trip from Sault Ste. Marie, which took five days, having varied from 35 below zero to zero. This is said to be the latest arrival at Port Arthur from the east, in any year.

The Niagara Ferry & Transportation Co. is reported to have bought the ferry steamship, *Newton*, in New York, where it has been used in harbor work, for operation between Port Erie, Ont., and Buffalo, N.Y. Her dimensions are: length, 152 ft.; beam, 52 ft. She is of the side wheel driven type, with rudder at each end and two pilot houses. The hull is of steel, with upper decks and cabins.

The Ontario and Quebec Navigation Co., one of the constituent companies of Canada Steamship Lines Ltd., was given judgment with costs and interest, at a sitting of the Supreme Court, at Belleville, recently, on a claim for \$65,000, against J. E. Rathbun, M. J. McFall, F. Brennan, D. B. Christie, M. Palmatier, A. Leslie, M. Leslie, H. Dempsey, and the estate of the late J. F. Chapman. The amount was claimed on shares issued to them in connection with the absorption of the Quinte Navigation Co.

The U.S. steam tug *Bison*, which was built at Cleveland, Ohio, and passed through the Welland Canal and the St. Lawrence, sailed from Quebec, early in December for Halifax, N.S., in company with four other tugs, was reported at Halifax, Dec. 11, to have been lost in the Gulf of St. Lawrence, with her crew. She, however, arrived safely at Port Hastings, N.S., Dec. 12, having been out of touch with the remainder of the fleet and the shore, as she was not equipped with wireless telegraph.

British Columbia and Pacific Coast.

The Quadra Steamship Co.'s s.s. *Quadra*, had her engines and boilers overhauled by Yarrows Ltd., Victoria, recently.

The Union Steamship Co.'s steamships *Chemainus* and *Chilliwack* underwent extensive overhaul by the B.C. Marine Railway Co., Vancouver, recently.

The C.P.R. s.s. *Princess Alice* was docked recently at Yarrows Ltd. yards, Victoria, for cleaning and painting, and general overhaul, including the drawing of the tail shaft.

The Coastwise Steamship & Barge Co., Vancouver, B.C., has bought the barge *Granco*, from U.S. owners, and has transferred it to the Canadian register under the name of *Barracouta*.

The Canadian Fish & Cold Storage Co., Prince Rupert, B.C., has bought the s.s. *Louisiana* from U.S. owners, and has transferred it to the Canadian register with the name of *Chief Legaic*.

The Grand Trunk Pacific Coast Steamship Co. was reported recently to be negotiating for the purchase of the s.s. *Roosevelt*, owned in Seattle, Wash. After an inspection it was found that extensive alterations would be necessary, and it is improbable that the ship will be acquired.

Canadian National Rys. car ferry steamship *Canora* was thoroughly overhauled by Yarrows, Ltd., Victoria, B.C., recently, and resumed her trips between Port Mann and Patricia Bay, early in December. It is reported that she is to be used for the transfer of cars to and from the Ogden Point piers, Victoria.

The Grand Trunk Pacific Coast Steamship Co.'s s.s. *Prince Rupert* was laid up at Prince Rupert, Dec. 28, for her annual overhaul, and the steamship service on the route between Seattle, Vancouver, Prince Rupert and Anxox, was reduced to a weekly one, with the s.s. *Prince George*. The company's Queen Charlotte Islands and Stewart service is being performed by the s.s. *Prince Albert*, the s.s. *Prince John* having been taken off the route until further notice.

Passenger Fares on Atlantic Steamships—War time rates for passengers crossing the Atlantic remain in force, and are likely to do so for some time. The passenger business across the ocean is comparatively heavy, and the prospects for next year are rather for an increase than a decrease in the number of passages, both east and west. First class fares vary, according to the type of vessel, from \$202.50 to \$150; second class fares from \$110 to \$92.50; cabin fares on single class vessels from \$100 to \$90; third class fares from \$67.50 to \$61.25. In addition to these rates there is a war tax of \$5 on those above \$65; \$3 on those between \$40 and \$65, and \$1 on those from \$10 to \$40.

Mainly About Marine People.

Lionel H. Clarke, grain merchant, Toronto, who has been Chairman, Toronto Harbor Commission, since its inception, tendered his resignation early in December, on being appointed Lieutenant-Governor of Ontario. The other commissioners passed a resolution placing on record their high appreciation of his invaluable service as chairman during the past seven years, and requested him to withdraw his resignation, and to continue to act as chairman, which he consented to do.

John Watson Corbett, whose appointment as Purchasing Agent, Canadian Government Merchant Marine, Ltd., Montreal, was announced in our last issue, was born there, Oct. 4, 1887, and entered transportation service in July, 1905, since when he has been, to Mar. 1908, in Superintendent's office, Canadian Northern Ry., Montreal; Apr., 1908 to Nov., 1909, in Purchasing Department, same road, Quebec, Que.; Feb., 1917 to Dec., 1918, in Purchasing Department, Imperial Munitions Board, Toronto; Jan. 1 to Oct. 31, 1919, in Purchasing Department, Canadian National Rys., Winnipeg.

John P. Doherty, whose appointment as Port Agent, Canadian Government Merchant Marine, Ltd., St. John, N.B., was announced in our last issue, was born at Portland, Me., Apr. 8, 1889, and entered transportation service in May, 1904, since when he has been, to Feb., 1915, chief clerk, Allan Line Steamship Co., at Quebec in the summers, and at St. John, N.B., in the winters; Feb., 1915 to May, 1918, chief clerk, Canadian Pacific Ocean Services Ltd., same places; Sept., 1918 to Nov., 1919, Travelling Freight Agent, C.P.R., St. John, N.B.

J. W. Norcross, President, Canada Steamship Lines, Montreal, and Mrs. Norcross, announce the engagement of their eldest daughter, Jessie Eileen, to D. H. Mapes, Jr., of New York, son of D. H. Mapes, Engineer of Buildings, C.P.R., Montreal, the marriage to take place in January.

Hon. C. C. Ballantyne, Minister of Marine and of Naval Service, entertained Admiral Viscount Jellicoe, and a large number of other guests, at dinner at the Country Club, near Ottawa, Dec. 4. Mrs. Ballantyne gave a dinner in Montreal for Lady Jellicoe, Dec. 9.

J. F. Paige, who was appointed Operating Manager, Halifax Shipyards, Ltd., recently, took over his new duties there early in December. He was formerly General Manager, Port Arthur Shipbuilding Co., Port Arthur, Ont.

St. Lawrence River Pilotage—A petition has been addressed to the Minister of Marine urging the abolition of compulsory payment of pilotage dues, and against the continued discrimination against ships from Ontario, which are not included in the exemptions extended by the Canada Shipping Act, sec. 477. This matter has been brought before the government several times during past years, by the Dominion Marine Association, but nothing has been done to relieve the vessels trading to St. Lawrence ports from Ontario. The Shipping Federation of Canada, which has always opposed any change in the restrictions against Ontario shipping, is now stated to favor the proposal, and it is reasonable to expect that the desired amendments will be made shortly.

Regulations for Bunkering Ships on Atlantic and Pacific Coasts.

The Canadian Trade Commission's Fuel Section and License Department at Ottawa issued the following circulars to steamship owners recently over the signature of M. J. Cullen:—

Nov. 29, 1919. In order to facilitate the issuance of licenses for the bunkering of your boats, we would prefer, when possible, to receive your application by mail, furnishing the information required on the enclosed forms, which should be transmitted in duplicate. In addition to the information asked for on the blanks we also require to know the nature of the cargo being carried by the vessel under consideration, together with the country of origin of the same. When time will not permit of application being made by mail, telegraphic applications should contain all the information requested on the bunkering form, together with the nature of the cargo and the country of its origin.

I may inform you that it is the commission's policy to grant bunkers to boats of foreign registry sufficient only to carry them to their destinations, while Canadian owned boats may be bunkered for the round trip.

We are desirous that as much bunkering as possible should be undertaken at Sydney, N.S., on account of its proximity to the mines, and would appreciate your co-operation in having as many of your craft as possible diverted to that point for this purpose.

In order to expedite the coaling of vessels on the Eastern Maritime coast, A. L. Woods has been appointed by this commission to issue licenses for bunkering of vessels at Sydney, North Sydney, and Louisburg. Mr. Wood's headquarters are at Sydney and any request for licenses covering coaling of vessels at points under his jurisdiction should be directed to him.

Dec. 6, 1919. In further reference to our circular letter of Nov. 29, I beg to advise you of the policy now decided upon by this commission for the bunkering of vessels which becomes effective Dec. 8, at 1 a.m. Bunkers may be given boats for the following movements:

1. Vessels sailing from foreign destinations to United States ports may receive bunkers at Canadian ports, to take them to U.S. destination and return, or they may be bunkered at Canadian ports to take them to their U.S. destination and thence back direct to their foreign port.

2. Boats sailing from the U.S. to foreign destinations may be given bunkers at Canadian ports sufficient only to take them to their destination.

3. Boats sailing from Canadian ports may be bunkered with sufficient coal only to take them to destination.

4. Bunkering of boats will be governed by the available coal supply, and preference given in the following order, (a) Canadian owned boats; (b) boats flying British flag; (c) boats flying U.S. flag; (d) boats flying allied flag; (e) boats flying neutral flags; (f) boats flying other flags.

In order to preclude delay in coaling at Halifax and St. John, we are pleased to advise you of the appointments of the following officers who are authorized to grant licenses at these ports: Lieut. Alfred J. May, Customs House, Halifax,

N.S.; Lieut. C. J. Mulcahey, Naval Dock Yards, St. John, N.B. When requiring permits to coal at these ports, please direct your requests to the above mentioned officers.

Canadian Railway and Marine World is officially advised that in addition to the officers appointed to issue bunkering licenses on the Atlantic coast, W. G. Gaunce has been authorized to grant licenses covering the bunkering of ships on the Pacific coast.

In reference to the foregoing we are advised that it was necessary to control the export of coal, under an agreement reached between the Canadian Fuel Controller and the U.S. Fuel Administration, whereby the latter arranged to let Canada have a supply of emergency coal for the urgent needs of Ontario and Quebec, provided the use of coal at the Canadian Atlantic and Pacific seaports was curtailed in certain ways. The control of exports was enforced formerly by the War Trade Board, and after its discontinuance the control was transferred by order in council to the Canadian Trade Commission. It is hoped that all restrictions on the bunkering of vessels will be removed early in 1920.

Roger Miller & Sons Ltd. Toronto Harbor Contract.

S. W. Jacobs, M.P. for Montreal, asked several question in the House of Commons recently, which were answered by the Minister of Public Works, the questions and replies being as follows:

Q. Has an order in council been passed giving Roger Miller & Sons, Ltd., additional work on a cost plus basis over and above that originally provided? A. Yes.

Q. What was the amount provided originally to be done by Roger Miller & Sons, Ltd., on a cost plus basis, and what were the terms under which this work was to be done? A. Approximately \$848,000, on basis of cost plus 7½%.

Q. What was the amount of the work under such order in council, and what were its terms? A. Approximately \$2,478,250, on same basis of cost, plus 7½%.

Q. Has an appropriation yet been made covering the additional work authorized by such order in council? A. No.

Canadian Western Steamships Ltd., has been incorporated under the British Columbia Companies Act with \$2,000,000 authorized capital and office at Vancouver, B.C., to own and operate steam and sailing ships, and to carry on a general navigation and transportation business.

The Ross Navigation Co. Ltd., Pas, Man., has made application to the Interior Department for a lease of lots 25 and 29, at Sturgeon River Landing, Man., for the erection of docks, wharves, warehouses, etc. These lots have a frontage on the Sturgeon River, of 100 ft. each, with a depth of 25 and 60 ft., respectively, and were surveyed in 1917, at the mouth of the Sturgeon River, on Namen Lake, to meet requirements in connection with navigation at that point, which is the head of navigation from Pas to the northern part of Manitoba. The rental to the company will be at \$10 a year for 5 years.

Customs Requirements re Coastwise Entries and Clearances.

Canadian Railway and Marine World for Oct., 1919 contained a reference to the desires of British Columbia steamship owners for some relief from alleged unnecessarily onerous customs requirements in connection with the operation of steamships in the coasting trade. Under the present rules, it is necessary for all steamships engaged in the coasting trade to make entry and clearance at each port of call; whether carrying dutiable cargo or not, and regardless of the number of calls they may make at the same port on the same day or trip. An example of this is shown in the case of the C.P.R. s.s. Princess Patricia, a passenger steamship running the short distance between Vancouver and Nanaimo, making two round trips daily, and having to make two entries and two clearances at each port, even when not carrying any bonded or dutiable cargo. The whole question was taken up by C. H. Nicholson, Manager, Grand Trunk Pacific Coast Steamship Co., Vancouver, some months ago, and in a communication to the Dominion Marine Association, he asked that association's aid in the attempt to obtain some relief. The association has expressed itself as approving of the movement, believing the requirements are enforced for purely statistical purposes and throw a heavier burden on ship owners than is justified by the benefits received.

Information regarding the practice adopted by other countries in this regard has been collected by Frank Waterhouse and Co. of Canada Ltd., Vancouver, and from this it is gathered that in the United Kingdom there is a system of transires, which permits vessels to arrive and depart at the various ports, when not going to a foreign port and not carrying bonded cargo, without reporting at the customs house. A record is kept and reports are made from time to time as required by the Customs Department, and it is said that a similar practice obtains in the various British dominions, with the exception of Canada. In Norway, Sweden, Japan and several other countries, coastwise traders are not required to enter and clear each trip. In the United States special arrangements are made for coastwise traders, the whole area being divided into five districts, and so long as a coastwise vessel is trading within one of these customs districts, it is not required to enter or clear unless carrying bonded or dutiable cargo. When, however, it is trading between a port in one district, and a port in another district, it is necessary to enter and clear.

It is desired that the Dominion Government adopt a system of transires for the British Columbia coasting trade, to obviate the difficulty complained of.

Australian Shipbuilding Costs—It has been officially stated that H.M.A.S. Brisbane, which was built at Cockatoo Island dockyard, Sydney, during the war, cost £776,000, against £385,000 for H.M.A.S. Sydney, and £405,000 for H.M.A.S. Melbourne, which were built in Great Britain just prior to the war. All are practically sister ships, there being very little difference in tonnage, armaments and rating. Most of the material for the Brisbane was imported, and difficult to obtain; the mechanics employed were inexperienced, and the cost of building was therefore necessarily high.

Marine Casualties During 1918.

The report of L. A. Demery, Dominion Workmen's Compensation Board for the calendar year 1918, which was not printed and distributed until Dec. 1, 1919, states that during the year 31 formal investigations and one departmental investigation were held.

During 1918 there were 226 casualties reported to the Marine Department, the tonnage of the ships being 312,928, and the stated damage \$1,818,895, while 492 lives were lost.

Of the casualties 180 were to coasting and sea going ships, the tonnage being 289,438, the stated damage \$1,718,795, and 492 lives were lost; 46 of the casualties were to inland ships, the tonnage being 2,490, and the stated damage \$105,100.

In 129 cases of casualties to coasting and sea going ships, and 24 cases of casualties to inland ships, the amount of damage is not stated; 70 of the casualties to coasting and sea going ships, made up of 27 steam and 43 sailing ships, resulted in total losses, and of this number 60 were Canadian, 2 British and 8 foreign ships.

Seven of the casualties to inland ships resulted in total losses; all were Canadian vessels.

The casualties were as follows:

Coasting and Sea Going Vessels.	
Coasting ships	30
Sea going ships	28
Marine accidents	3
Miscellaneous accidents: fire, loss of sails, etc.	20
Vessels sunk by submarines	20
Inland Vessels.	
Coasting ships	17
Sea going ships	1
Miscellaneous accidents	8
Submerged	17

Nova Scotia Workmen's Compensation Act Made Applicable to Seamen.

An amendment of sec. 8 of the Nova Scotia Workmen's Compensation Act comes into force Jan. 1, and provides as follows:—Owners and employers of vessels registered in Nova Scotia, or operated by an employer residing or having a place of business in Nova Scotia, shall be liable to any member of the crew who is injured by an accident arising out of and in the course of his employment.

The amount payable to an injured workman shall be an amount equal to the compensation that would be payable under the Workmen's Compensation Act if the industry were within the scope of part 1 of the act.

The employer may escape such personal liability by having the operations of the vessel brought under part 1 of that act. To do so an application to the

Workmen's Compensation Board, and the payment of an assessment based upon the amount of the payroll, are necessary.

The amendment applies only to vessels operating between places in Nova Scotia and places in New Brunswick, or Prince Edward Island, or Newfoundland, or to vessels making fishing trips or voyages from ports or places in Nova Scotia.

Courtenay Bay Development, St. John, N.B.

The St. John Dry Dock and Shipbuilding Co. made very satisfactory progress during 1919 on its two contracts for harbor works and dry dock respectively. The work consisted principally of rock excavation for the drydock and it is expected that this work will be finished by the middle of February. The excavation is being done by the ordinary methods of drilling and blasting and removal by steam shovels. The rock is loaded into 6 yd. dump cars and hauled by locomotives to the breakwater, where it is dumped over a trestle.

The 2,500 ft. breakwater extension is nearly completed, with the exception of laying the cornerstone. A cofferdam is being built to unwater an area sufficiently large to excavate about 140,000 yd. of rock in the immediate entrance channel to the breakwater. This cofferdam will enclose an area of about 650 x 400 ft. The channel inside the cofferdam will be 250 ft. wide and about 500 ft. long. The excavation grade for this channel will be 32 ft. below low water which, with the 28 ft. tide, will make the extreme depth of 60 ft. at highest water.

The whole work is of very considerable magnitude and will undoubtedly prove of very great interest to engineers generally. In consideration of the extreme lead of water and the length of the cofferdam, it is probably one of the largest ever undertaken.

Among the Express Companies.

The Canadian National Ex. Co. has opened an office at Birch River, Man., and has closed its office at Ragged Rapids, Ont.

The Dominion Ex. Co. has been relieved by the Board of Railway Commissioners, from providing a cartage service at Courtright, Ont.

The Canadian National Ex. Co. has opened an office at Entrance, Alta., and has closed its offices at Perthuis, Que., Burwash, Ont., and Ardill, Sask.

New regulations respecting the packing express shipments, went into effect during the early days of December. Under these regulations, shipments over 25

lbs. in weight must be forwarded in wooden containers or cartons bearing the box makers' certificate as to the strength and size required by the express company.

The Canadian Ex. Co. was fined \$202 at Ottawa, Dec. 17, for transporting a quantity of intoxicating liquor from Montreal to Ottawa in contravention of an order in council, passed Feb. 24. On the application by counsel for the defence, a stated case was granted for the Court of Appeal. A quantity of wine was shipped from Montreal to the Ottawa Country Club, which is also in Quebec, and in the course of transit, it crossed the boundary between Quebec and Ontario.

Telegraph, Telephone and Cable Matters.

The American Railroad Association's Telegraph and Telephone Division held its annual meetings at Chicago, Dec. 3 to 5, 1919.

G. D. Perry, General Manager, Great North Western Telegraph Co. and Mrs. Perry, returned to Toronto early in December, from a trip to the Pacific coast.

The Great North Western Telegraph Co. has opened offices at Kabina, Mattice and Ragged Rapids, and has closed its offices at Barsing, Glenorchy and Watcomb, all in Ontario.

The Marconi Wireless Telegraph Co. of Canada Ltd., has bought the office building occupied by the Montreal Stock Exchange, where it is opening a school for training wireless operators. The price paid was \$17 a sq. ft.

The Marconi Wireless Telegraph Co. of Canada, will, it is reported, build a large wireless telegraph station near Vancouver, B.C., at an approximate cost of \$2,000,000, to handle commercial business between Canada and the Orient, and a similar station will, of course, be built on the other side of the Pacific, most likely in Japan.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries unless otherwise stated:

American Association of Port Authorities. M. P. Fennell, Jr., 57 Common St., Montreal.
Belleville Railway Men's Educational Club. Meets each Tuesday, 7.30 p.m. F. A. Pinkston, Belleville, Ont.

Canadian Car Service Bureau—W. J. Collins, Manager, 401 St. Nicholas Building, Montreal.
Canadian Electric Railway Association—Acton Burrows, 29 Bond Street, Toronto.

Canadian Freight Association (Eastern lines)—G. C. Ransom, 909 Shaftesbury Building, Montreal.

Canadian Freight Association (Western lines)—W. E. Campbell, 805 Boyd Block, Winnipeg.

Graphic Production Control.

By E. T. Spidy, Assoc. Mem. Am. Soc. Mech. Engrs.; Production Engineer, Angus Shops, C.P.R., Montreal.

In the management of any industrial plant, the author has become convinced, through plain experience, that apart from the personality of the management directing affairs, and the regular accounting system, there is a great necessity everywhere for the placing of facts in such a manner that the condition of affairs today can be quickly seen in their true relation to the policy of the management. We are all more or less accustomed to seeing statistics shown graphically. Their value to show what has happened is unquestioned. We are able to see at a glance for instance how our expenditure on a certain class of output compares with last year, and if we plot on the same sheet the amount of our output we are able to see how the cost has varied with the output. Such a diagram is a familiar one and needs no explanation (sample shown in fig. 1). Endless combinations are made like this, but they all tell you what is done. I wish to emphasize this point because upon it hinges the purpose of this paper.

I ask those who are departmental heads, do you not on receiving statements, whether in figures or by diagram, often feel that you have been "let down," so to speak. Let us suppose you have received a statement showing departmental expenses, or a statement of output in which an item shows lower than your expectations or the average. You see a condition that if you had known it was happening, you could have done something, but you didn't, and all you can do now is to investigate and make such changes as your judgment dictates.

After you have received an explanation, called your man down or perhaps replaced him, what guarantee have you that you will not look at an even worse condition next month? The only guarantee you have is your confidence in the man in charge. This confidence I do not for an instant depreciate, because it is your main stay with the most perfect of systems, but consider, in this age of specializing, would you not be better off and would not the individual departmental heads or foreman be better off if you were to supply him with such information on expenses or where he stands on this output, or other details that are "up to the day of looking at it," so that he can control the situation to give you what you want. The natural question becomes, can it be done? It can if you organize to do it. To organize to do it, means that you must assist that executive or foreman by training specialists to perform functions that are at present part of that foreman's duties, to do them better than the foreman can, by reason that these specialists concentrate on one particular object only.

Specializing needs no introduction, on our machines and operations we know a specialist can produce more than an all round man on work adaptable to specializing. We no more think of having the same boilermaker that puts a patch on a boiler, roll in tubes, than we would

ask a tuber to put on a patch even if they do get the same rate. Therefore, I say, for the reason that specializing cuts costs, so it applies in management questions.

Without further discourse on the principles involved, I propose to give a few concrete examples of how graphical production methods permit a specialist to perform functions that assist the executive by supplying information that is "up to the day of looking at it," that show "What is causing delays," or "What will cause delays." The diagrams I have made are for obvious reasons of size and data made so as to show the principle. Colors are used on actual forms in order to create striking contrast.

Locomotive or Passenger Car Repair Schedule—Example 1 is a shop repairing locomotives. The methods apply equally to a passenger car repair shop. Our object is to assist all foremen to plan their work so that delays to output are min-

Fig. 1. What HAS happened.

imized. Analyzing the situation, we find we have about 30 departments, all of which receive some part of each locomotive or car to repair, and on all of which rests the responsibility of having it ready at a certain time, when the process of erecting demands it. Based on the road report, and a preliminary inspection our specialist, the scheduleman, in conjunction with the general foreman of the shop, determines that it will require so many days to complete. This period is determined by adding together the time required on all the various detail jobs known. From past experience we have on this work developed a series of schedules from 9 to 30 days each, one of which is applied to each locomotive or car as the case may be, as the work demands. The locomotive repair schedules are practically all based on one 18 day schedule, in that on all locomotives the operations for the first 5 days are practically the same, and for the last 7 days also, they are the same; the space in between being taken up by the department having the excessive or special work to do.

We now come to our first chart which we call a master schedule (fig. 2). The master schedule forms have detailed

down the left side all the controlling detail operations or parts listed in the sequence in which they are required completed. At the top of the vertical columns we enter the locomotive or car number as each is taken in the shop, and then by the application of the particular schedule, on which each locomotive or car is to follow, we enter opposite the operation or part the date it is required completed or delivered. When this is done we take our second form called a date schedule (fig. 3), which is identical with the master schedule, except that instead of locomotives or car numbers at the top of the vertical column, we have all the days of the month, and we insert in the column for the date as entered on the master schedule the locomotive or car numbers opposite the operation.

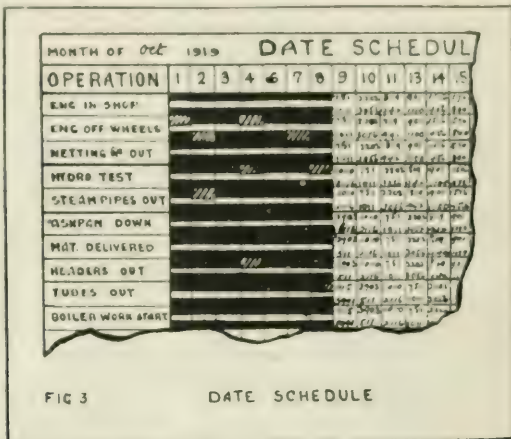

This is done as soon as the locomotive or car is taken in the shop. By a four color code we record on both charts every day exactly what has happened, whether "on time," "shop late," "material delivery late," or "drawings late," in black, green, red or yellow, respectively. This is done as follows: Each day, at a certain time, the scheduleman make a check of all shops, after which they mark up the master and date schedules. Following this they make out from the date schedule for each departmental foreman, a list of operations due completed tomorrow, and include on it, especially marked, all items that are late. This daily order of work sheet is delivered to each foreman the night before the day it covers, so that they can plan their work to cover every item. Incidental to this a list of all late items in all shops is prepared for the general foreman and superintendent's use in order that they may use their influence to prevent further delays.

Summarizing this example, we provide each departmental foreman with a list of work which must be done tomorrow; we provide a list of late operations and material so that delays may be investigated and something can be done early in the progress. We have before us a graphic record of each locomotive or car's progress, showing each delay, as it occurs, and we have a graphic record of each day's progress, from which weak points can be seen at a glance. The result of this performance is that we get a co-operative effort, because each department, being familiar with the process, realizes that the management knows what is going on and can measure each man's effort. It makes it unnecessary for foremen to leave their shops to trace material, this being part of scheduleman's duties. Changes that occur when extra work is found necessary, causing a set back to the original date of delivery are automatically taken care of by the production department. The net result is a shorter number of days in the shop per unit, time between jobs reduced and lower costs.

Locomotive or Passenger Car Repair Costs—Example 2 may be considered a

In each locomotive cost column, a red cross line is drawn. At a point opposite the estimated cost of the job. An estimate is made for each locomotive based on its age and in the case of steam locomotives, on its condition as reported by inspectors, and which includes extra depreciation in the case of extra or unusual repairs. Now, when an executive looks at the chart, he

Cost of Manufactured Material—Example 1 illustrates the efficiency and cost of detail manufactured material. Our desire is to know the efficiency and cost of each order up to date, during its progress through the shops. The method described is used by manufacturing com-

notes particularly those that have gone past the red mark and by consultation with the locomotive master schedule (similar to chart 2) he sees what has happened, when it happened and the progress of that particular locomotive. He is then in a position to act if his judgment indicates the cost is abnormal. It will be noted that short thin black lines extend from each locomotive cost line, at more or less irregular intervals, with a number close at hand. These lines are to indicate the amount added each day,

cerns which have found that the way to control costs is in the shop while the job is in progress. It is applicable, in a form adapted to railway back shop manufacturing, and is a real way to keep these costs right. It consists of a job cost sheet, and is kept and entered up in the shop office. These sheets are kept in loose leaf book form, and the duties of the cost clerk are to enter in the proper column, from the daily time cards, the costs incurred the previous day. Thus by noon the cost of each order, up to the

and the number represents the date. We can thus see whether the labor expended has been irregular, or whether it is a steady growth. This is a clear indication of good or bad organization in the shops. Very great use can be made of this chart. It shows poor distribution of labor in detail and enables conditions that bring about high costs to be thoroughly ana-

previous evening, should be entered. On each sheet is detailed the standard method of doing the job and the standard time allowed for each operation. This information is obtained from the production department, which develops the correct method, in conjunction with the shop engineer and foreman of the department, who, at the same time, recommend such

special jigs and tools as may be deemed necessary. When the order is a special one, that is, unusual, or rare enough not to warrant making standards for further use, a summary estimate is made up for each operation by the production department, in order that a daily check may be kept on the job. The duty of the cost clerk is to call the attention of the foreman, or party concerned, when the cost exceeds the allowance up to the point in the progress the order has reached. We thus have a means of keeping our foreman posted up to date on the cost of each job, at all points of its progress, not when it is done and too late for him to do something.

Major Account Expenditure—Example 4 is a form that we use to show us graphically our unit and summary expenditures on major accounts. It was developed by the late H. L. Gantt and used effectively to record progress of airplane and munition manufacture, also many other items in his work for the U.S. Government during the war. We want to know how our daily expenditure on each account compares with the allowance for the day, also how our total expenditure to date compares with the total allowance to date on each account. The chart, fig. 5, contains one vertical column for each day of the month, over which the date is inserted. On the left hand side the name of each account is inserted. We then calculate the allowance for each working day of the month and enter it for reference on the right hand side of the chart. Now in making up the chart it must be understood that the distance horizontally between each date column represents 100%, or the allowance figure for the day, on the right, and as your actual expense figures are received, you make a line across that space equal to the amount actually expended. If less than the allowance, this line will not cover the space, if more than the allowance, an extra line over the one covering the space shows how much. Directly under this line, representing the daily expenditure, is a thicker line, that represents summary cost to date. This line is merely extended daily, by the same amount as entered under the daily cost column, except that it, being no respecter of dates, it shows by its total length, whether the account is over or under expended to date, the comparative point being always the line of the date up to which the chart is entered.

While this sounds somewhat complex, it really is extremely simple in operation and we have a complete record on each account of how much, when, and on what account we have over or under expended. The chart is soon readable by anyone and shows immediately how close instructions are being attended to. As may be seen, the idea is one of vast possibilities outside of costs, where unit and summary data are required.

Building New Equipment—Example 5 covers the manufacturing of new equipment, such as locomotives, passenger cars or freight equipment of any description. Here a new element demands first consideration, and that is raw material, the source of which we do not control. It goes without saying that the shops can make no progress without material and drawings. Therefore, we require practically all the items that are not stores stock to be included on our schedule for erection. Material that is regular stores stock requires to be checked at definitely determined periods, before it is required for erection, but by

reason of the number of items it is usually followed on a special chart. It is essential, however, that all castings and all purchased material be listed on our erecting schedule. Our object is to complete so much equipment at a certain date. On the master schedule chart, we list all these parts on the left hand side, and head all our vertical columns, which cover a period of three months, with the date. We insert the completion date at the point, the first unit is required completed, and, working back from that date for each item, we then insert the date each item is required completely machined, ready for erection. Then, from each of these dates, we compute the necessary time for machining each item, which gives us the date raw material must be

resent whether item is "on time," "shop late," "material late" or "drawings late." Black represents "on time" in every case, and green, red and yellow, respectively, represent late on the other items. This color scheme is standard on all charts and a clear indication at all times is available of the general condition of the order. A permanent record is incidentally available, showing reasons for delays, which places the responsibility where it belongs. It also shows much good matter for consideration when future orders are being placed. Its chief value to the shop is that it shows what is due to be done each day, and shows at a glance how the material is coming along, and how dates are being maintained so that the shops can be organized

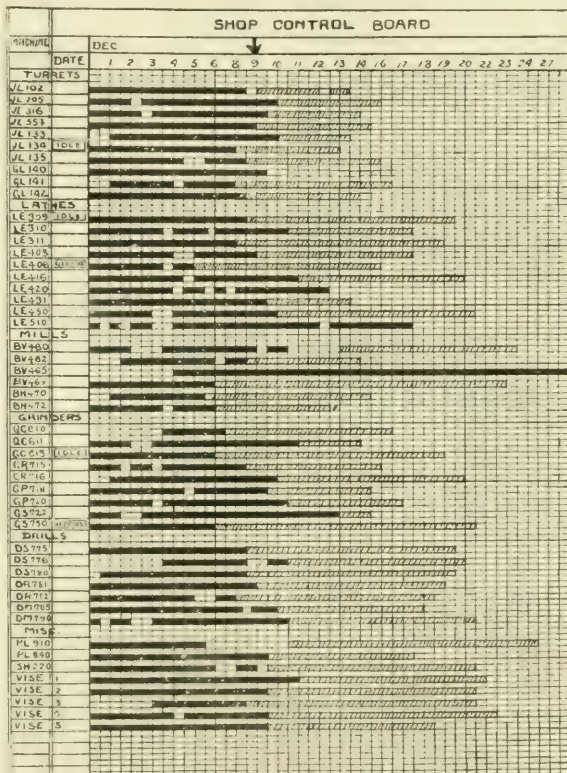

Fig. 7.

available. After this we take into account the necessary time to deliver patterns, and to obtain material from brass, steel or grey iron foundry or other source from which material is obtained, and thus we arrive at the date drawings must be completed. All these dates are marked plainly on the chart and the parties concerned are given a copy of the schedule. The whole form represents what must be done in order that the final completion date be made. It does not matter if material arrives before that date, but a certain time before each item becomes due, our schedule tracers commence to trace the party concerned, in order to prevent avoidable delays. Each day, as it passes, one date column is filled in with the proper color, to rep-

resent whether item is "on time," "shop late," "material late" or "drawings late." Black represents "on time" in every case, and green, red and yellow, respectively, represent late on the other items. This color scheme is standard on all charts and a clear indication at all times is available of the general condition of the order. A permanent record is incidentally available, showing reasons for delays, which places the responsibility where it belongs. It also shows much good matter for consideration when future orders are being placed. Its chief value to the shop is that it shows what is due to be done each day, and shows at a glance how the material is coming along, and how dates are being maintained so that the shops can be organized

Detail Operation Schedule—Example 6 is a method used by the author to plan the work for every productive man and machine in a department. The object is to provide the shop foremen with information as to the "next job" for every man. Fig. 7 is a photograph of a shop control board, which consists of a board containing a separate slot for every man or machine, the identification being down the

Canada's National Economic Problems.

By E. W. Beatty, K.C., President Canadian Pacific Railway.

Our national economic problem is not only to produce much, but to produce cheaply, and not only to produce much and cheaply, but to be so quick and elastic in our marketing arrangements as to be able to sell our goods always in the most profitable of the world's various and constantly changing markets. The right of every Canadian to look forward to prosperity, that is, to plenty of work, and wholesome work, for a return that will maintain a decent standard of living and provide something for the rainy day, is thus related closely to the condition of the railways of this country. For our railways are the means of quick and regular deliveries to market. They are to Canada what an efficient conveyor system may be to a factory which has otherwise no advantage over its older competitor, saving it time and expense in moving material into the receiving rooms, or from one machine to another, or out again to the ultimate consumer. In short, the ability of our railways to handle any possible peak load of traffic, of any character, in any direction, at any time, and cheaply, is something vital to every worker with hand or brain, from the most obscure of farm districts to the largest of our industrial centers.

For example: the apple crop in a well known Nova Scotian valley exceeded the estimate of the authorities by almost 75%. Instead of something over 1,000,000 barrels there were 2,000,000. Frost following close on the harvest reduced the time during which the apples could be moved in ordinary cars. Furthermore, the market for these apples, instead of lying largely in the United Kingdom, as in other years, developed with practically no warning in the United States and in Central and Western Canada. In other words, prices overseas had gone down; American bids were high. The difference between a large profit or a small profit to Canada on the year's work of these Annapolis Valley apple-growers became almost entirely a matter of railway service. In place of a normal crop to be hauled a few miles to the seaboard in ordinary cars, an unprecedentedly large crop had to be hauled in special refrigerator cars to distant cities in the United States and Canada. Details are not necessary. The crop, I may say, is still in process of being moved, but the peak load, which has passed, could never have been handled had the Canadian transportation machine not been the superior organization it is. The apple-growers in this case were served by a small railway company which had never before known a similar crisis. Almost 2,000,000 barrels had to be moved, 225 barrels a car. Through the Railway Association of Canada, that is, the old Canadian Railway War Board, the larger associates of this small railway, the Grand Trunk, Canadian National, and Canadian Pacific, scoured the Dominion to get together a supply of refrigerator cars, already scarce owing to the detention of Canadian refrigerators in the United States, to meet this extraordinary demand. These cars were gathered even from the very ends of the transcontinental lines. They were rushed to the Canadian National at Montreal and by the Canadian National forwarded to the small local carrier to which I have re-

ferred. Instead of recording in the government blue books for 1919 an export of so many dollars' worth of apples, Canada will be able to show an export much higher, due very largely to the efficiency of the railroads.

This is the kind of service the Canadian railways have been giving and are still able to give Canada. There was no breakdown during the war, though every other country had to make radical readjustments. No failure, when the signing of the armistice in Nov., 1918, brought about great changes in the character and direction of traffic. Between Nov., 1918, and Oct., 1919, they handled 271,500 returning soldiers through the ports of St. John, Halifax, and Portland, a movement involving 827 special trains, traversing over 2,427,162 train miles. I may add that a greater degree of comfort was assured each soldier on his homeward journey through Canada than was even attempted by either the United States or Great Britain. The return of commercial confidence after the first uncertainties of peace, and the change in freight traffic back to the lines of development which had been interrupted four and a half years before by the outbreak of war, was met without difficulty. Threatened labor troubles in Mar., 1919, were successfully dealt with by joint action through the Canadian Railway War Board. The settlement involved, it is true, serious but unavoidable outlays by the railways. It was effected about three months ago, but with no corresponding increase in railway rates. A strike of bituminous coal miners in the U.S. had no more serious reflection in Canada than a minor and temporary reduction in passenger train service. Canada, through the foresight of most of her railways in providing large stocks of fuel in advance, was able to avoid the serious freight embargoes which elsewhere were the result of the strike.

So much for the manner in which the transportation machinery of the country is carrying out its obligations to the Canadian producer. Other aspects of the transportation problem are less satisfactory. There are many people who look upon Canadian railways as custodians of magic fortunes which cannot be exhausted. That bookkeeping should be as simple and inexorable in its tale of losses and vanished profits to a railway as it may be to a corner grocer, is to these people unthinkable. It apparently does not occur to them that to no public is it more important than to the Canadian public that the good reputation of its railway securities in the world of thrift and investment should be carefully guarded. To those, however, who understand these things clearly and who view the matter from the standpoint of broad public interest, it is at once apparent that the Canadian public pays a very low rate for the quality of service rendered and that a time is rapidly approaching when, if Canadian railway securities are not to be made less desirable to investors than almost any other kind of industrial security, railway rates will either have to go up, or railway operating costs go down. Such persons recognize that it is not because the situation of the railways is an easy one that certain companies have been able to show net earnings—very low net earnings compared to the

actual cash invested in the industry—but because in the past the shareholders of such companies have been, as they are today, courageous persons willing to supply the means for constructive enterprises in which no one but themselves had faith, and because, too, their officers have been skilled, resourceful and loyal business men, assisted by staffs filled with the spirit of pride and devotion to their work. This, indeed, is the thing which has made it possible for Canada's railways to function successfully during the war, without making anything like the demands that foreign roads, less efficient in serving their community, yet earning the safe rates and paying the same wages, have made upon their public exchequers. I do not believe that this strain upon the railways and this tendency to weaken the general reputation of Canadian railway securities should continue. The servant after all is worthy of his hire and railway capital is not less worthy a servant than other forms of capital whose earnings have not been so consistently depressed.

The net earnings, during the war years, of those companies which showed net earnings, would have been much lower had the Canadian railways been making expenditures for maintenance which circumstances would have justified, but which conditions prevented during that period. These arrears have now to be made up. During 1919 the C.P.R. laid 70,000 tons of steel rail. In place of, say, 2,000,000 ties, worth 44c in 1914, the C.P.R. laid 4,434,000 ties at 85c a tie. The sensational advance in the rate of railway wages is well known. Further advance may be necessary within the very near future, as indicated by discussions in the United States. The price of coal for locomotives was \$3.09 in 1913. Now it is \$4.77. The cost of hauling an average train (freight or passenger) one mile rose from \$1.604 in 1913 to \$2.494 in 1918. It is higher today. The operating expenses of one mile of line in 1915 were \$4.152; in 1918, \$7.046, and today they are even greater. On the other hand, railway rates, taking all classes of revenue together, have advanced scarcely 25%. I venture to say no other industry in the Dominion can show such moderation.

The Flin Flon Mine and Projected Railway—A press report of Dec. 29 stated that Hayden and Stone, of Boston, had withdrawn from negotiations for the purchase of the Flin Flon mining property near Pas, Man., on the ground of the refusal of the present owners to grant an extension of the firm's option on the property for another year. The report added that negotiations had been opened for the sale of the property to the Anaconda Mine Co., Butte, Montana. The construction of a railway to serve the mining area in which the Flin Flon property is situated is under consideration, and the Manitoba Premier has intimated that if the Canadian National Rys. does not undertake it the Manitoba Government will.

The Dominion Atlantic Ry., in conjunction with the Nova Scotia Department of Agriculture is offering prizes for the best acre of potato ground in the Annapolis valley served by its line.

Shown on honor lists to Dec. 31, 1919: Killed, 948; wounded, 2,046; total, 2,994.

C.P.R. War and Employment Figures.

The following figures, revised to Dec. 31, 1919, show the C.P.R. employees' war record, and the employment by the company of soldiers discharged from the army:

Total reported as joining army	10,875
Dead	1,042
Wounded	2,045
Re-employed in the service	6,463
Other soldiers given employment	8,137
Total soldiers given employment	14,600

Canadian Collieries (Dunsmuir) Reorganization.

The plan for the reorganization of Canadian Collieries (Dunsmuir), which has been under consideration of a bondholders' committee, appointed in 1915, provides for the cancellation of the following securities:—First mortgage gold bonds and all arrears of interest, \$2,054,000, second mortgage debenture stock; 3 year notes, \$50,000; preferred stock, \$3,500,000 (out of \$5,000,000), and common stock, \$9,900,000 (out of \$10,000,000); and for the creation of the following new stocks: \$1,027,000 of 5% non cumulative A income debenture stock; \$1,027,000 of 5% non cumulative B debenture stock; \$3,400,000 of new preferred stock, and \$1,027,000 of new common stock. Holders of existing bonds will receive for every \$100 of bonds now

held, \$50 of A debentures, \$50 of B debentures, \$100 of preferred stock and \$50 of common stock, and so on in proportion for amounts of less than \$100. The holders of the \$50,000 three year notes will receive \$250,000 of preferred stock, of which a balance of \$1,096,000 will remain unissued after the bondholders' claims have been satisfied. A new debenture stockholders' committee is to be appointed to issue prior lien securities to an amount not exceeding \$1,500,000 at 10%, and other powers. Subject to approval half of the net earnings are to be applied to redeeming A debentures by annual drawings, and the remainder to paying interest on A and B debentures, while any balance is to be utilized for the redemption of A debentures until paid off, and then to the payment of dividends on the capital stock.

The Transportation Club of Toronto has elected the following officers: President, A. M. Adams, Local Freight Agent, G.T.R.; Vice President, W. A. McIlroy, chief clerk, District Passenger Agent's office, C.P.R.; Treasurer, M. Macdonald, Assistant Superintendent of Weighing, G.T.R.; Secretary, W. A. Gray; committee chairmen, membership, C. E. Hornung, District Passenger Agent, G.T.R., entertainment, E. R. Thorpe, City Freight Agent, G.T.R.; publicity, T. Marshall, Traffic Manager, Board of Trade; sick, J. J. Rose, Robert Reford Co.; reception, W. Fulton, Assistant District Passenger Agent, C.P.R.

Grain Inspected at Western Points.

The following figures, compiled by the Dominion Bureau of Statistics, show the number of cars of grain inspected at Winnipeg and other points on the Western Division, for Dec., 1919, and for 4 months ended Dec. 31, 1919 and 1918 respectively:—

C.N.R.	4,178	26,771	27,384
C.P.R.	7,909	44,799	48,191
G.T.P.R.	2,455	12,511	11,044
G.N.R. (Duluth)	42	455	677
Total	14,584	84,536	87,296

Railway Hotels—The Dominion Atlantic Ry. is reported to have taken over the Aberdeen Hotel, Kentville, N.S., and to be preparing it for the summer tourist traffic.

Rails for Roumania—The Dominion Iron and Steel Co. has received an order for 7,500 tons of steel rails, of a special section, to weigh 30 kilos per meter, and to be delivered to the Roumanian Commission at Sydney, N.S., for shipment, about February.

French Railway Rates Advanced—In order to meet an anticipated deficit of 2,400,000,000 francs in the operation of French railways, the government asked parliamentary authority for an increase of rates, which was approved by the Chamber of Deputies, Dec. 31.

The Cornwall Terminal Co., to which reference was made in Canadian Railway and Marine World, Aug., 1919, pg. 440, has been granted supplementary letters patent under the Dominion Companies Act, increasing its authorized capital stock from \$100,000 to \$200,000.

R.F. Richardson, formerly Local Freight Agent, C.P.R., Edmonton, Alta., who has been appointed General Agent, C.P.R., Alaska and Yukon Territory, at Juneau, Alaska, in writing Canadian Railway and Marine World to change his address, says that he does not wish to miss a copy of the paper.

The Canadian Fur Auction Sales Co., which is in formation in Montreal, has among its promoters, Lord Shaughnessy, Chairman of the Board C.P.R.; Sir Herbert Holt, a C.P.R. director, and Lorne C. Webster, President Quebec Ry., Light and Power Co., Webster Steamship Co., etc.

Victoria and Sidney Ry. Liquidation—The Saanich, B.C., Tp. Council is reported to be negotiating with the Victoria and Sidney Ry. liquidator for the purchase of the abandoned right of way from Saanichton northerly to the junction with the Canadian Northern Pacific Ry. It has taken steps to protect the road crossings, the cost of repairs to the same to be recovered from the parties liable, and to protect the township's rights as to taxes, etc., pending the sale of the property.

Detroit River Bridge—A press report of Jan. 13 states that preliminary surveys for the projected bridge across the Detroit River between Windsor, Ont., and Detroit, Mich., have been started and that C. E. Fowler, who is associated with G. Lindenthal, New York, who is designing the bridge, is in charge of the work. He is reported to have stated that the logical site for the Canadian end of the bridge is at the Huron line in Sandwich, where it would serve not only the center of the border population, but also the railway system and the electric railways.

Orders by Board of Railway Commissioners for Canada.

29,202. Dec. 27.—Extending to Feb. 27, 1920, time within which G.P.R. shall install distant signals where its line crosses Canadian National Rys. at Bonarlaw, Ont.

29,203. Dec. 28.—Approving C.P.R. clearances at Vancouver Ice and Cold Storage Co.'s warehouse, Vancouver, B.C.

29,204. Dec. 28.—Relieving C.P.R. from providing further protection at Aberdeen Ave., Windsor, Ont.

29,205. Dec. 27.—Approving Fredericton and Grand Lake Coal and Ry. Co.'s bylaw, authorizing Passenger Traffic Manager and Assistant Freight Traffic Manager to issue passenger and freight tickets respectively.

29,206. Dec. 29.—Extending to June 1, 1920, time within which G.T.R. shall build farm crossing for A. McGuiness, Lot 31, north range of Con. 1, south of Slash Road, Tyendinaga N.P. (Ont.)

29,207. Dec. 31.—Suspending order 20,859, Nov. 21, 1913, as amended by orders 28,537 and 28,269, Sept. 12, 1914 and Apr. 29, 1915, negatively, re installation of cattle gates at Whyte St., Edmonton, Alta., by C.P.R.

29,208. Dec. 31.—Authorizing Canadian Northern Western Ry. to cross, close and divert north and south road allowance between Secs. 30 and 19, Tp. 20, Range 12, west 4th meridian, Alta.

29,209. Dec. 31.—Authorizing Canadian National Rys. to remove diamond at crossing at Spruce Ave., Edmonton, Alta., and lay straight rail; to be operated for 6 months from date.

29,210. Dec. 31.—Dismissing application of Wawota Village, Sask., for order requiring better train service on C.P.R. Reston-Wolesey Branch with connections at Wolesey with westbound train.

29,211. Dec. 31.—Approving New Brunswick Government's order in council, passed Dec. 9, 1919, authorizing New Brunswick Coal and Ry. Co.'s Passenger Traffic Manager and Assistant Freight Traffic Manager to issue passenger and freight tickets respectively.

29,212. Dec. 31.—Authorizing Canadian National Rys. to cross and divert north and south road allowance in n.w. ¼ Sec. 9, Tp. 24, Range 27, north of Alta.

29,213. Dec. 23.—Authorizing Canadian National Rys. to rebuild bridge over Rideau Canal, at moves 40 ft. from Beaudry N.P., Quebec, Tp. 20.

29,214. Dec. 27.—Authorizing C.P.R. to build grade at grade across Highway No. 2, Rosemount, Ont.

29,215. Jan. 8.—Amending order 25,108, Dec. 6, 1919, re crossing of certain highways in Manitoba by Canadian National Rys.

29,216. Jan. 5.—Dismissing Appleton Progressive Association's application for order directing C.P.R. to erect shelter and platform at Appleton, Ont.

29,217. Dec. 31.—Approving Canadian Northern Western Ry. location, mile 117.94 to 121.11, St. Paul de Metis, Alta., including location of station and closing and diversion of portion of Centre Ave., also authorizing crossing of several highways.

29,218. Jan. 2, 1920. Dismissing application of Wm. Taylor, Richmond, Que., for order authorizing opening of highway crossing over G.T.R. main line crossing provided under order of 27-589, Aug. 27, 1919.

29,219. Jan. 2.—Authorizing G.T.R. to remove electric alarm at Jeffries highway crossing near Richmond station.

29,220. Dec. 27, 1919.—Reconsidering order of 27-630, Aug. 8, 1919, which disallowed C.P.R. tariff C.R.C. 3,369 in so far as it provided for carriage allowance of 14¢ per 100 lb. to Canada Sugar Refining Co. Montreal.

29,221. Dec. 2.—Authorizing Canadian Northern Western Ry. Co. to make highway crossing over Canadian National Rys. in s.e. ¼ Sec. 4, Tp. 29, Range 12, west 4th meridian, Alta.

29,222. Jan. 2, 1920.—Authorizing Canadian National Rys. to make crossing over tracks of road allowance between Secs. 31 and 32, Tp. 48, Range 19, near Edam, Sask.

29,223. Jan. 2.—Authorizing Canadian National Rys. to build highway crossing in s.e. ¼ Sec. 9, Tp. 26, Range 17, west 3rd meridian, Sask.

29.221. Jan. 2.—Relieving Canadian National Ry. from erecting fences, gates and cattle guards along its line between Toronto and Ruel, and a number of points on its Muskoka, Sudbury and Ruel Subdivisions, Ont.

29.222. Jan. 3.—Authorizing C.P.R. to build spur for Canadian Ry. Co., Elcan, Alta.

29.223. Jan. 3.—Rescinding order 29.095, Jan. 8, 1915, re Canadian Northern Ry. siding for Sterling Coal Co., at mile 312.16, Calgary Subdivision and authorizing removal of spur.

29.224. Jan. 2.—Dismissing Grand Trunk Pacific Ry. application for authority to remove its station agent at Entwistle, Alta., with leave to renew application six months from date.

29.225. Jan. 2.—Relieving Canadian National Ry. from providing further protection at crossing 9 poles west of mile 4, Winnipeg Subdivision, Man.

29.226. Jan. 2.—Relieving Canadian National Ry. from providing further protection at crossing 6 poles west of mile 50, Riding Mountain Subdivision, B. Birnie, Man.

29.227. Dec. 30, 1919.—Approving agreement, Dec. 15, between Bell Telephone Co. and Otonabee Tp., Ont.

29.228. Jan. 5, 1920.—Extending to May 5, time within which C.P.R. may build extension to spur for Saskatchewan University.

29.229. Dec. 31, 1919.—Extending to May 1, 1920, time within which C.P.R. may build a permanent culvert with opening 20 ft. wide, at mile 37.56, near Golden, B.C., as required by order 28.544, July 4.

29.230. Jan. 2.—Dismissing application of Associated Boards of Trade and Saskatchewan Grain Growers' Association for reduction in rates to stations on C.P.R. Weyburn-Lethbridge line and for the building of uncompleted portion of the line.

29.231. Jan. 9.—Ordering Canadian Freight Association to reinstate by Jan. 15, 1920, rates and conditions of service for traffic on freight for export to trans-Pacific destinations.

29.232. Jan. 5.—Relieving Canadian National Ry. from providing further protection at crossing at Letellier, Man.

29.233. Jan. 3.—Authorizing C.P.R. to build spur for Exchange Oregon Products Co., and Eureka Planter Co., Woodstock, Ont.

29.234. Jan. 7.—Authorizing Canadian National Ry. to take certain extra lands for right of way and retaining walls for Athabasca Subdivision, Moose Jaw, Sask.

29.235. Jan. 9.—Extending to Feb. 15, 1920, time within which C.P.R. may build spur for Vancouver Ice and Cold Storage Co., Vancouver, B.C., as authorized by order 28.507, Sept. 20, 1919.

29.236. Jan. 10.—Authorizing G.T.R. to rebuild bridge carrying public highway over its track at mile 147 near Huntsville, Ont.

29.237. Jan. 10.—Dismissing complaint of Broadview Ratepayers' Association, Burnaby, B.C., against rates charged by the British Columbia Electric Ry.

29.238. Jan. 12.—Authorizing C.P.R. to build spur for Goodyear Tire & Rubber Co. of Canada, Regina, Sask.

29.239. Jan. 13.—Authorizing Hillcrest Lumber Co. to cross under Esquimalt & Nanaimo Ry. at mile 4.5, Lake Cowichan Subdivision, Vancouver, Island, B.C.

29.240. Jan. 12.—Authorizing G.T.R. to use bridge on Lot 21, Range 8, Markham Tp., Ont.

29.241. Jan. 12.—Recommending to Governor in council for sanction, Alkoma Eastern Ry. General Train and Interlocking Rules.

29.242. To 29.250. Jan. 13.—Authorizing Canadian National Ry. to build across highway at 9 points on its Munson to Wayne second track, Alta.

29.251. To 29.253. Jan. 12.—Authorizing G.T.R. to use bridges 5, Lot 19, Range 8, Markham Tp., Ont.; between Lots 30 and 31, Con. B, Scarborough Tp., Ont., and on line of Bethune St., Peterborough, Ont.

29.254. Jan. 14.—Authorizing Canadian National Ry. to cross road on its Acadia Valley Branch, between Secs. 29 and 20, T. 26, Range 28, west 3rd meridian, Sask.

29.255. Jan. 12.—Amending order 28.496, July 5, 1919, re loss of portion of C.P.R. Langdon North Branch, Alta.

29.256. Jan. 13.—Authorizing G.T.R. to rebuild bridge carrying public highway over its tracks between Lot 19, Con. 8, and Lot 19, Con. 9, Esquimaux, B.C., near Port Kootenay, Ont.

29.257. Jan. 9.—Authorizing City of Regina, Sask., to build foot passenger subway under C.P.R. on Hamilton St.

29.258. Jan. 13.—Authorizing C.P.R. to build spur for C. B. Burns Co., Regina, Sask.

29.259. Jan. 13.—Authorizing Canadian Northern Saskatchewan Ry. to build across 8 highways on its Lampman-Peebles Branch, mile 8 to 22.39.

29.260. Jan. 18.—Authorizing C.P.R. to build spur for C. B. Croesing Co., Trenton, Ont.

29.261. Jan. 13.—Authorizing Toronto, Hamilton & Buffalo Ry. to build spur for Norton Co. of Canada, and C. S. Anderson, Hamilton, Ont.

29.262. Jan. 13.—Authorizing Canadian National Ry. to build across and divert road between Sec. 36, T. 28, Range 20, and Sec. 31, T. 28, Range 19, west 4th meridian, Alta.

29.263. Jan. 10.—Approving Fredericton and

Grand Lake Coal & Ry. Co.'s standard tariff of maximum mileage freight rates C.R.C. 84.

29.264. Jan. 10.—Approving New Brunswick Coal & Ry. Co.'s standard tariff of maximum mileage freight rates C.R.C. 51.

29.265. Jan. 8.—Authorizing C.P.R. to take certain lands of H. Bousquet for extending siding and station grounds at St. Basile, Que.

29.266. Jan. 2.—Approving location and details of Canadian National Ry. station building at Alfred Center, Que.

29.267. Jan. 15.—Approving agreement, Dec. 30, 1919, between Bell Telephone Co. and Barrie-Angus Telephone Co., Simcoe County, Ont.

29.268. To 29.270. Authorizing Canadian National Ry. to build across highway at 3 points on its Munson to Wayne second track, Alta.

29.271. Jan. 14.—Authorizing G.T.R. to build spur for Beachville White Lime Co., Oxford North Tp., Ont.

29.272. Jan. 10.—Ordering G.T.R. to make such changes in boarding as double deck stock cars as will give 3 or 4 in of air space at top.

29.273. Jan. 16.—Relieving Michigan Central Rd. from maintaining day and night watchmen crossing of Middle Road, near Ruscomb station, Ont.

29.274. Jan. 16.—Authorizing G.T.R. to build bridge carrying highway over its tracks between Lots 14 and 15, Broken Front Concession, East Whitley Tp., near Colons, Ont.

29.275. Jan. 16.—Rescinding order 29.011, Nov. 10, 1919, approving location of Canadian Northern Pacific Ry. Kamloops-Vernon-Kelowna-Lumby Branch, mile 66 to 82.22 east from Kamloops, B.C.

29.276. Jan. 16.—Authorizing Canadian Northern Ontario Ry. to rebuild bridge at Orient Bay, mile 44, from Jellicoe, Ont.

29.277. Jan. 16.—Authorizing Canadian National Ry. to carry traffic, temporarily, over its MacRorie Western Branch from Glidden mile 105.0 to Eaton, mile 115.0, Sask.; speed of trains limited to 19 miles an hour.

29.278. Jan. 16.—Relieving Michigan Central Rd. from providing further protection at crossing of Middle Road, near Comber, Ont.

29.279. Jan. 16.—Approving detail plan of C. P.R. subway at mile 28.3, MacTier Subdivision, Ont.

29.280. Jan. 16.—Ordering on application of Canadian Manufacturers' Association, on behalf of Canadian General Electric Co., Canadian Westinghouse Co., et al., that rating of twice first class for electric light bulbs shown in Express Classification for Canada 4, be reduced to 1½ times first class; change to be effective by Feb. 1.

29.281. Jan. 16.—Rescinding order 26.363, July 24, 1917, re agreement between Bell Telephone Co. and Heath Head & Grey Telephone Co., Grey County, Ont.

29.282. Jan. 19.—Authorizing Canadian Northern Pacific Ry. to open for freight traffic its line from junction with Patricia Bay Line, mile 180 to 265 from Victoria, B.C.; speed of trains limited to 10 miles an hour.

General order 281. Jan. 12.—Authorizing railways on application of Railway Association of Canada, to issue free or reduced rate transportation to private securities of Dominion Government Ministers and of the opposition leader.

The following letter, written to E. W. Beatty, President, C.P.R., by the Prince of Wales, from Government House, Ottawa, just prior to his departure from Canada, is only now available for publication:—Dear Mr. Beatty:—I am sending today a signed and framed photograph of myself, which I hope you will accept as a very small acknowledgment of your kindness and care during my tour in Canada. I cannot look back upon my journey across the Dominion and back without the warmest admiration for the wonderful efficiency with which it was organized. I greatly appreciated the comfort and smooth working of the train, the thoroughness of all your arrangements, and, above all, the unvarying forthright and courtesy of the C.P.R. staff which travelled with me. For all this I am very grateful to you yourself and to the whole organization under you. Neither I, nor the members of my staff, will ever forget the very pleasant journey which we made under the auspices of the C.P.R. Believe me, yours sincerely, Edward P.

Towards the close of his Canadian tour, the Prince said:—"I have just left

the magnificent train which has transported me across the Dominion, and in which I have lived in such comfort for the last two and a half months, and I should like to take this opportunity of thanking the Canadian Government for all the admirable arrangements that have been made for the tour. I am also very grateful to all the Canadian railways for the care which they have taken of me and for the consideration they have shown in making my 9,000 mile journey so easy for me. Railways seem to be the subject of quite a lot of excitement at present. I am not going to talk about that, but I do know that I could never have got across to Vancouver and back without the Canadian railways. Far more important still, there would have been no Dominion of Canada today but for them. I know of no country in whose history railways have played so important—in fact, decisive—a part."

D. B. Hanna on the Canadian National Railways System, Etc.

During the early part of January, D. B. Hanna, President Canadian National Railway, came to report on his tour of inspection of the Dominion of Ontario and the Province of Quebec, and the St. Lawrence Valley, at the St. Lawrence Valley of Commerce and Industry.

There is no doubt I know of that there are many people in that great country who are probably a little prejudiced against the Canadian National Railway. Canada has an area of 3,900,000 square miles, a population of 10,000,000, and a population of 10,000,000 in 1920. In the United States there is an area of 3,600,000 square miles, and a population of 11,000,000, according to figures I received from the U.S. Consul in Toronto yesterday; so that that great country has an equivalent of 38 persons to every square mile of territory. The large country has a population to Great Britain and Ireland of 45,400,000, with an area of 120,580 square miles, which is equivalent to a density of 377 persons to every square mile. It will be seen, therefore, that Canada has a long way to go in order to measure up to the U.S., and a much longer road to go to measure up to Great Britain and Ireland. But as regards forests, fisheries, mines, coal and other minerals, Canada is very much in excess of the U.S. In population Canada has only about 7½% that of the U.S., but in railway mileage we are about 12% of theirs. On this basis it might be argued that we have more railway mileage in operation than is absolutely necessary at present, and Canada has probably overdone herself in that regard. It must be remembered, however, that very little new mileage was added during the war, to Canada's total, and much of the intensive construction which was done prior to the war has not added a very great deal to the Dominion's wealth in industries, food production or population. A new era has now developed, and if the same courage and loyalty that permeated Canada in its imperishable war activities is directed to the pursuits of peace, we will make a far greater development than we have done in the past.

"It is not true to say that Canada has more railway mileage than is necessary. That may be true in isolated cases, but it only represents a small percentage of the total mileage constructed, where duplication has been permitted. But think of the country to the north, in both Ontario and Quebec; do not overlook the fact that there are provinces west of Ontario where there are millions of acres of land which has not yet been brought under cultivation. We know that land cannot be profitably cultivated where the haul is 50 miles from the railway, yet, due to the insistent demand for more production during the war, many farmers rose to the heart-breaking task of hauling their products to the railway, in some cases over 50 miles away. That condition cannot always continue, and therefore I say let no one imagine that railway building is over in Canada. On the contrary, I am convinced that in the years to come we are going to have as much additional mileage built as is now in operation. There will, of course, be greater judgment displayed in the building of future lines, construction of not be permitted, and

inasmuch as there are only to be two companies competing for the new territory, a more policy will obtain, and the country will be the gainer by it.

"My reason for saying these things is, that Canada is on the world's map as never before; immigration will begin again in a larger volume; and more than ever Great Britain and her allies will depend on Canada for foodstuffs. Thus, trade commissions, boards of trade, chambers of commerce, and other activities regarding industrial operations are beginning to grow, and new enterprises are being established throughout the Dominion. In the years to come we are going to be less dependent on U.S. industries to supply us with goods and manufactured articles, which we will manufacture ourselves. There is too much raw material going out of this country to be manufactured elsewhere and we must find means to correct that condition. With a better understanding between capital and labor, with that spirit governing our joint activities; we cannot but feel that Canada—Canada, the promised land—in the years to come, has a profitable development before her and her people. To me the development of this Canada of ours is a never ending, interesting story, because of what I have seen, particularly in western Canada, during the past 35 years.

"I wish to speak to you about the Canadian National Rys., as I find the Canadian people are not yet fully seized with the importance of these railways to the country, and they have failed to grasp their individual responsibility to assist in the success of the Canadian National Rys. Speaking in regard to my own experience, and particularly in regard to the west, I am always very diffident about using the personal pronoun 'I,' and yet sometimes one cannot get away from it. Strange as it may appear to you, I am a very humble person, but, I am a Scotchman, and that is one of the characteristics of the race. When I hear laudatory things said about myself, I am always reminded of an incident that occurred in my early railway career, in the old land. As a young lad, selling passenger tickets at a place called Barrhead, where my mother was born, in Scotland, I was carrying on my work in the usual way when an old lady came to the ticket window to purchase a ticket to Glasgow. She looked at me very intently for a moment or so, and said, 'They tell me, laddie, you are a son of Janet Blair's.' I said, 'Yes, I am.' She went on 'I kent your monther when she was young, and she was a fine, handsome, strapping woman—you are no a bit like her.' So, I carry through life that humble spirit, because, knowing the visible truth that, 'pride goeth before a fall,' probably it is just as well not to tumble into it any more than you can help.

"The Canadian National Rys. System is composed of the Intercolonial Ry., the Prince Edward Island Ry., the National Transcontinental Ry., and the Canadian Northern Ry.; having a total of close to 14,000 miles of lines, and operating in every province of the Dominion. As to the Intercolonial—what need I say? It is there. It was originally built as a military road. It has been performing a service and I do not think the people of this country exactly understand.

Stranger as it may seem to a great many people, the Intercolonial Ry. is a very valuable property, and there is a time coming, and not in the distant future, either, when both ends can be made to meet; that is to say, the earnings will pay the expenses; and we will hope a little later to see it make a little bit of profit. It has got an organization which is just as good as any organization anywhere in Canada or elsewhere, for that matter. You know all about the National Transcontinental Ry. It was a subject for political discussion for many years; but it has been built, and, strange to say, it is there, too. There is a development going on which is perfectly amazing; lumber mills are being built in every direction; settlers are going in; industries are being developed; and a through freight and passenger service has been inaugurated that in time to come will be of some advantage to the whole system.

"Do not let us forget that the Intercolonial and the National Transcontinental railways are two assets that can be made in the years to come, much more valuable than they are today, from the standpoint of dollars and cents. Had I time I could tell you what service those railways rendered during the war, and you would be amazed. Prince Edward Island was a contribution to Confederation, and let me tell you that 98% of the arable land of that little province is under cultivation, at one time or other during the year. It is an amazing little island; full of business, although handicapped by being away from the main land.

"The Canadian Northern Ry., is, after all, the mainstay of the system for the time being. In the Canadian Northern you have a property which I know all about. I am exhibit 'a' of that property. I turned the first wheel in 1896; and I have seen a little property grow from 100 miles, a single locomotive and 50 cars, to what it was in 1918, when it was turned over to the government. What has it done in all that time? There has been a great deal of loose talk about the Canadian Northern being so much junk, and being pitchforked into the government's hands to be got rid of, and that the government has had to pay for the privilege of taking it over. The Canadian Northern began, as I said before, in a small way. Railway men who are here will appreciate this joke because it requires a railway man to understand it. Table 1, which I prize with a great deal of satisfaction, says, 'No. 4 will not leave until No. 3 has arrived.' In those days we had pretty dry times; we were a long way from being flush with money, but I could not help working in a little humor, and of taking advantage sometimes of our richer brother, the C.P.R. In 1895-6 the safety coupler was not what it is today; we used the old link and pin, and I can remember our conductor, old Dad Ritstien, who is still with us, and is one of the type of conductor who has gone by the board. Dad used to wander into the C.P.R. yard, where we got our freight, and occasionally he would pick up a link and pin, so that he could always keep ahead of his requirements in a fairly life-sized barrel that he kept in the baggage car. In fact, it was a physical example of the widow's cruise of oil, because the more

he took out, the more there always seemed to be in that barrel. And the singular thing of all was, to my recollection, I never bought one link or pin. The C.P.R. cannot make a claim on us now, I think it is outlawed, and so I am free to tell the story.

"In those days we had to be very economical. I practically lived on the railway; I was not only general superintendent, but master mechanic, roadmaster, and traffic manager. I looked after whatever lands there were to sell, and did any other thing that nobody else would do. I took a great deal of pride in doing that work, because I was seeing, as so few people had been able to see, how that country would grow. I looked upon it as such a romantic thing, and enjoyed every minute of it, very much to the neglect of my own family. In the spring of 1897 we were bowling along with what they used to call the 'Muskeg Limited,' with 12 or 14 freight cars, and 2 passenger cars in the rear, taking up into the Dauphin country a number of people from Huron and other Ontario counties to locate there, and they are doing well. A stray heifer ran across the track, and the locomotive caught it by the legs and threw it over to one side, but it was not killed. The train was stopped and I went forward with the conductor to see what was the trouble. We found the heifer lying there, the brakeman happened to be a butcher, and on the train was another butcher belonging to the construction department. I got them together and said, 'Let us kill this animal, dress it, and take it to the construction camp.' The passengers got out and stood around while the two butchers tackled the job, and in 16 minutes they had it hanging up in a box car, in quarters. In the meantime the owner turned up, and he was the most wrathful man I ever met in my life, his language was such that I could not repeat it. I told him we would settle his claim and in that way calmed him. We took the carcass along and I sold it to the construction department, and paid the man's claim in full, establishing a principle, probably the first time in railroading, by paying the claim in full without disputing it, and I had \$4 to the good. And so, all during those years, from 1896 to 1902, when I moved from the west to the east, I saw that country grow, particularly the territory tributary to the Canadian Northern Ry.

"When the government took over our property there were between 9,000 and 10,000 miles of railway; we had placed on the map of Canada over 600 towns or villages; we had made it possible to find homes for hundreds of thousands of new settlers. We saw the revenue of that railway grow from \$67,000 during the first full year of operation in 1897, to \$44,500,000, we handled millions of tons of freight in that time; and we performed a service, and I say it from the knowledge that I have, second to none; not even the C.P.R. in the sphere in which we were located. I am a great believer in the C.P.R.; I consider that company is a credit to Canada, we are all proud of it, because it is the biggest thing in Canada, and under the British crown, its organization is all that could be desired, and it has done a service to this Dominion, particularly in the west, that was only duplicated by the Canadian Northern.

"Much of the mileage the Canadian Northern had built was practically completed about the time war came on.

When the war came, immigration ceased, we were taking people out by the tens of thousands, and others were not going to take their places, therefore, that mileage has still to be properly developed, and the day will come when the Canadian Northern Ry. will come into its own. There is no institution in Canada, no government in Canada, that has spent as much money as the old Mackenzie and Mann organization, in getting to know something about that western country. We can tell you all about it. We know, just as well as any government can tell, just how far north you can go and raise grain, and we have proved it; but we are a long way from being finished. That western country is a long way from being developed, notwithstanding the mileage that has been developed. There are lines to the north that are still to be brought into real operation, and when that is done, and that must be done, we are going to have in Canada such operation through that western country that will have its effect in every industry in Ontario and Quebec, and right down to the sea.

"Why do I tell you these things? It is because I want you to understand exactly what you have got. There is not one of you here who is identified with any business interest who has not got personal responsibility in the success of this national railway of ours. I do not mean by that to say we have to ignore the C.P.R. There is plenty of business in this country for both railways, but I want everyone here to know as I have told the people at London, St. Thomas and Toronto, that, just in proportion as the people here and elsewhere realize the responsibility that the ownership of 1,300 odd miles of railway casts upon them, will they lend their support, and be doing something in their own and industrial interests. I want you to feel that in what you are doing you are not doing anything to assist me, but to assist the organization.

"The Canadian National Rys. are very strong in the west. Let me just go back a moment to speak of the Canadian Northern Ry. The layman knows the value of railway property, if he sees two lines of railway running in parallel order; on the one line there is a locomotive of the same standard as on the other line; one hauling 10 cars and making a fuss over it; another hauling 25 cars and doing it with, 'All right, I thank you, we are doing very well.' That is the condition of the Canadian Northern lines in the west, with a grade going through the mountains, with the exception of some 28 miles, of five-tenths of 1%. Let me illustrate what that means. In 1915 the Senators and members of parliament were taken on a trip to the Pacific coast. I have always said, and repeat it, that if they talked less in Ottawa, and did a little more travelling, so as to know something more of the country, we would think a great deal more of them. I think the ignorance of some members of parliament is colossal, in regard to the Dominion as a whole. On that trip we hauled 15 cars, consisting of sleeping cars, dining cars, and a lounge car where they could have enjoyment, speeches, and reminiscences by the old time members of parliament. Fifteen cars were hauled by a single locomotive through the mountains to Vancouver. Consider what that means. How many of you have been to the coast? How many have travelled over the Canadian Northern Ry? (One). You should get

the Victoria Cross for that. Those who have been to the coast have seen how the C.P.R., with 6 or 7 cars, struggled to get up the grades across the Fraser River; whereas we can take 15 cars with a single locomotive. That means that the Canadian Northern Railway comes into its own, as it is going to come into it, as sure as I am standing here. It is but a question of time. We have a line of railway that will do 150% more business than our good friends across the Fraser River and do it at less cost. If we have any faith in our country at all, it is only a question of time when this property of yours can be made a valuable asset to Canada.

"We are strong in the west; we are strong in the east; but we are weak in the centre of the system. That is where the Grand Trunk will fit in to a nicety. I am not going to discuss the why and wherefore of that; it is not my province. I consider the government acted with great wisdom when it made up its mind that no more money was to be advanced to carry on operations with respect to the Grand Trunk and Grand Trunk Pacific, but that it had better take over the property. That is what it has done. It was the logical thing to do; and it is going to mean everything to the Canadian National Rys. system. The Grand Trunk is linked up with all industries of any importance in Ontario, and Quebec, with a continuous roll of traffic both east and west, and when the national system gets the benefit of the long haul you can see where we will be. We are not going to lose much sleep over our friends the C.P.R., that will be their business. Our business is to see that the Canadian National Rys. are considered first. In that you must play your part.

"Here we have a complete system. It means in figures to you that Canada will have an investment of about \$1,000,300,000. What does it get for that? Let me read some figures; 22,375 miles of railway, doing business in every province of the Dominion, and 1,881 miles in the United States; gross earnings, assuming consolidation with the Canadian National Rys., of about \$200,000,000 with 90,000 employees; 3,020 locomotives; 3,200 passenger cars; 120,000 freight cars; and this year would have handled 60,000,000 tons of freight, and 22,500,000 passengers. Now, I submit that is a pretty big property for any man to handle. Yet, after all, it is very simple. There is no earthly reason why the same management cannot be given to this property as the C.P.R. gives to its road. The only way the Canadian National Rys. can be given that management is that there must be no interference. I do not mean from that that the government should not be fully advised; I recognize as any man does the supremacy of the government, it must be advised of everything that is being done with its property; it must know the why and wherefore of certain things, as it has to advance moneys from time to time for capital expenditures. I submit with all deference to my friend Mr. Morphy here, that the fact he is a member of parliament does not give him any sort of privilege to come to me, or to say to any of my directors that this, that, or the other thing ought to be done, or that somebody ought to be appointed to take the place of somebody else, because that person does not fill the bill. I tell you, as far as I am concerned, and so far as the other directors

are worse off than nothing at the end of the month. I am not going to say a word about the rates of wages for which he was responsible. I am a believer in the doctrine that the laborer is worthy of his hire, I am a believer in paying good wages, because I think by doing that we get better service and a better class of employees. However, if we do pay good wages, if we have to pay excess amounts for our coal, and other materials which enter into the operation of a railway, but do not get enough revenue to meet those bills, what is the answer? 'Lift the freight rates.' The other day the wheat board raised the price of wheat 50c a bushel over night. There is not one industry represented here, but, if it finds the cost of operation is so much greater than it was before, will increase the price to the consumer, and I do not blame them, as it is the proper thing to do. What about the railway companies? The fact is that the revenue per ton mile is actually less today than it was in 1907, while wages have gone up in that time, 142%. Now, I submit to you, there is a question for us all to face. Would you rather pay the deficit in taxes, or would you rather make the man who gets the use of the railway pay the bill? It is a simple question, and the answer is very simple, too. There is no country in the world, as far as I know, that has lower freight rates, not even excepting the U.S., than you have here in Canada.

"There is one more thing in the operation of railways, the question of labor. I have never seen, and do not know of, any other industry where all it is organization. I know that on the Intercolonial, the National Transcontinental, the Canadian Northern, and on the Grand Trunk, there are men equal to the best. Their ability is not in question; their loyalty is beyond any doubt; and if governed by a proper board of management it cannot be anything else but a success. It all depends on good, and others, to see to it that the organization is not interfered with, and that the board will be permitted to carry on what they conceive to be proper and in the interest of the Dominion as a whole, not in the interest of any individual part of it.

"In addition to the railways, the Canadian National Rys. are in the steamship business. At present we are operating 23 steamships, doing business to the West Indies, South America, Cuba; across to London, Glasgow and Liverpool. We contemplate another service to the Mediterranean, and have just commenced a service from the Pacific coast to Australia. A year from now we will have over 60 ships, and we will have the largest, by long odds, floating fleet flying the Canadian flag. There will be over 300,000 tons floating, a year from now, in the transport of freight. The principal thing we are concerned about is this, the trade of Canada must be developed, there must be new avenues for its output, and our business is to come in contact with chambers of commerce, boards of trade and manufacturing associations, so that we may know along what channels they are developing their business, and the points they desire to reach. We are not in the benevolent business, by any means. We are not doing something for nothing, that would be strictly against my nationality. We do expect that for every dollar we spend, we will at least get, not only a dollar back, but enough to pay fixed charges for the ships that are operating in the business. In addition to the freight ships we will have passenger ships. We must be properly equipped, and as a national system we must be in a position to not only carry on our business in every province of the Dominion, but we must be able to see to it that on the Pacific coast and north Atlantic we can carry the products of our allies, or of our enemies if need be. We must have a complete system and the only way we can complete it is by having ships going in every direction, carrying freight, and in time to come, passenger ships.

"I have not been talking about what it costs to do these things, so I will tell you something about that. 'The laborer is worthy of his hire.' I have often quoted that in my own family, because sometimes I think some get more than they ought without working very much for it. Due to conditions over which we had no control, the Canadian National Rys. system began operations under a cloud, as it were, because we were only in operation for some two months when a gentleman named McAdoo loomed on

the horizon. I am not going to say a word about the rates of wages for which he was responsible. I am a believer in the doctrine that the laborer is worthy of his hire, I am a believer in paying good wages, because I think by doing that we get better service and a better class of employees. However, if we do pay good wages, if we have to pay excess amounts for our coal, and other materials which enter into the operation of a railway, but do not get enough revenue to meet those bills, what is the answer? 'Lift the freight rates.' The other day the wheat board raised the price of wheat 50c a bushel over night. There is not one industry represented here, but, if it finds the cost of operation is so much greater than it was before, will increase the price to the consumer, and I do not blame them, as it is the proper thing to do. What about the railway companies? The fact is that the revenue per ton mile is actually less today than it was in 1907, while wages have gone up in that time, 142%. Now, I submit to you, there is a question for us all to face. Would you rather pay the deficit in taxes, or would you rather make the man who gets the use of the railway pay the bill? It is a simple question, and the answer is very simple, too. There is no country in the world, as far as I know, that has lower freight rates, not even excepting the U.S., than you have here in Canada.

"Sometimes great truths can be brought home to people by homely illustrations. Here is a cigar; say it cost 10c; yet Canadian railways are compelled to haul a ton of freight 12½ miles to earn enough to buy such a cigar. Your chairman, Mr. McDonald, may make a complaint to his railway agent that he is not getting freight in as promptly, or that freight is not going out as promptly, as he would like, and the agent, as a good agent, being enquiries to find out what is the trouble, and he writes a reply on the typewriter, puts it in an envelope and places a postage stamp on the letter, which costs 2c. The Grand Trunk has to haul a ton of freight almost 3 miles to earn the 2c which it cost to put that stamp on the envelope. It is such illustrations that bring home to us exactly what is being done in this country by the railways; yet every time the question of an increase in rates arises, chambers of commerce, boards of trade, and institutions of one kind or another are on their toes, and I do not blame them. The facts must be placed before them, and the fact is that this year the Canadian National Rys. have a payroll of \$21,000,000 greater than it was last year, due to the increase in wages paid to our employees. I am not questioning that, I am glad to see it, I like to see proper wages paid and have stood for that all my life and am too old now to change. I say to you, as I have said to other boards of trade, there must be equilibrium between expenses and receipts, and so the question is bound to come up at a later period. We may not be so jovial as we are tonight when that time comes. Let me say further that the total increases of wages paid by all the railway companies in Canada amounted to \$77,000,000 last year, nearly \$10 per head of the whole population of Canada. Other costs have gone up in proportion. To me, there is nothing so heartrending as to find, month after month, after the work of our organization in regard to the hauling of freight, that when the bills are paid we

are worse off than nothing at the end of the month. I am not going to say a word about the rates of wages for which he was responsible. I am a believer in the doctrine that the laborer is worthy of his hire, I am a believer in paying good wages, because I think by doing that we get better service and a better class of employees. However, if we do pay good wages, if we have to pay excess amounts for our coal, and other materials which enter into the operation of a railway, but do not get enough revenue to meet those bills, what is the answer? 'Lift the freight rates.' The other day the wheat board raised the price of wheat 50c a bushel over night. There is not one industry represented here, but, if it finds the cost of operation is so much greater than it was before, will increase the price to the consumer, and I do not blame them, as it is the proper thing to do. What about the railway companies? The fact is that the revenue per ton mile is actually less today than it was in 1907, while wages have gone up in that time, 142%. Now, I submit to you, there is a question for us all to face. Would you rather pay the deficit in taxes, or would you rather make the man who gets the use of the railway pay the bill? It is a simple question, and the answer is very simple, too. There is no country in the world, as far as I know, that has lower freight rates, not even excepting the U.S., than you have here in Canada.

"There are many other features about the Canadian National Rys. that I would like to tell you about, but there is not time, this is a social night and we are going to have some more music. I want to say this about Canada as a whole, it is a great subject to me, I have been away in Sydney, Nova Scotia, and in Sidney on the British Columbia coast, I have been identified with railways in this country since 1892; I have seen so much change, and so many developments, that I feel extremely confident that this country is a real promised land, it is a country of great potentialities, and it is up to us, particularly of the younger generation coming along, to see to it that we develop it along proper lines; not only along material lines, but along spiritual lines. If we keep that ideal before us, we may be very sure that wherever we may go outside of Canada, we will be able to hear things spoken well of us.

"The management of the Canadian National Rys. is a very serious thing. There will be some changes when the Grand Trunk comes under the control of the national lines. I do not know what the government's views are in that regard; I do not think it has any views about it; I do not mean that in a humorous way. I mean it probably has other things to attend to; but it is going to have the biggest thing in Canada very shortly, to think about—bigger than the government itself. I do not know what the government proposes to do, whether the Canadian National Rys. will be operated by a board of directors, or by a board of management, or by a commission, or who is going to be in control. Personally, it will be my pleasure to render assistance to any one who may succeed me. I have no expectation that I shall be the head of that organization, I do not expect it. Whoever it is, I shall be glad to render him every assistance possible, because I have unlimited faith in this country of ours. I know that Canada can be developed. I am optimist always, I do not think there is room in this country for a pessimist, if there is, he ought to be railroaded out of the Dominion. Believing what I do of Canada, having seen what it has already done; just as sure as I stand here, the railways are just as important as the nation itself, and the development of one will mean the development of the other; and what you are doing here in your own city, what others are doing elsewhere, is contributing towards the time when that great railway property, the Canadian National Rys., will be considered one of Canada's most valuable assets."

Railway Lands Patented—Letters patent were issued during Dec., 1919, for Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:

	Acreage
Alberta and Great Waterways Ry.	8,04
Canadian Northern Ry.	962,00
Canadian Pacific Ry. roadbed and station grounds	52,46
Total	1,012,50

Mainly About Railway People Throughout Canada.

W. J. Babe, for several years a Michigan Central Rd. conductor at St. Thomas, Ont., has been appointed Deputy President of the International Brotherhood of Railway Trainmen, and will undertake the work supervised formerly by the Vice President, Jas. Murdock, who was appointed recently to the Dominion Board of Commerce. Until his present appointment, Mr. Babe was general chairman, of the Brotherhood's grievance committee.

W. R. Baker, C.V.O., formerly Assistant to President, and Secretary, C.P.R. Co, returned to Canada early in January, via New York, after an extended visit to Europe. He has been re-elected President, Royal Montreal Golf Club.

E. W. Beatty, K.C., President C.P.R., left Montreal by special train, Jan. 13, for a trip of inspection over the company's western lines. He arrived at Port Arthur, Jan. 18, where he was met by D. C. Coleman, Vice President, Western Lines, who accompanied him to the Pacific coast. Mr. Beatty was expected back in Montreal during the first week in February.

F. Brinkman, Yardmaster, Pere Marquette Rd., St. Thomas, Ont., was elected Mayor of that city, Jan. 1.

Acton Burrows, Proprietor and Editor, Canadian Railway and Marine World, who has been Chairman of the Canadian Press Association's Trade and Class Section for the past four years, has been unanimously elected President of the newly organized Canadian National Newspapers and Periodicals Association.

Sir Gee. Bury, ex-Vice President, C.P.R., now President, Whalen Pulp & Paper Co., Vancouver, was reported in an Ottawa press dispatch of Jan. 5, to have been appointed by the Dominion Government as Canadian representative to advise the British members of the Reparation Commission as to Canada's claims for damages suffered during the war. This report had not been officially confirmed up to the time of going to press.

Hon. J. A. Calder is acting Minister of Railways and Canals, at Ottawa, during Hon. J. D. Reid's absence in Florida.

E. Chandler, Foreman, Bridge and Building Department, G.T.R., Stratford, has retired after 42 years service with the company. On Dec. 31, he was entertained by a number of his associates and presented with a set of chairs.

Mrs. Cochrane, widow of Hon. Frank Cochrane, some time Minister of Railways and Canals, has gone to California, to spend several weeks.

W. J. Cowan, formerly of the Cowan Construction Co., which carried out several contracts on the Canadian Northern Ry. Western Lines, and who died at Cannington, Ont., during the elections for the Dominion Parliament in December, when he was one of the conservative candidates; left an estate valued at \$191,908.09. **R. J. Mackenzie**, a former director of the Canadian Northern Ry., and a son of Sir William Mackenzie, formerly President of that company, and **A. J. Reid**, of the C.N.R. legal staff, are the executors.

Baron Cunliffe, Governor of the Bank of England, who died suddenly in London, Jan. 5, was a director of the North Eastern Railway Co. of England.

Chas. P. Disney, whose appointment

as acting Engineer of Bridges, Eastern Lines, Canadian Northern Ry., Toronto, was announced in our last issue, was born at Montreal, June 11, 1877, and from 1902 to 1905 was bridge draftsman, Dominion Bridge Co., Montreal; 1905 to 1906, steel checker, Locomotive & Machine Co., (afterwards Montreal Locomotive Works), Montreal; 1906 to 1907, taking a course at Institute of Technology, Boston, Mass.; 1907 to 1914, designing and estimating, Bridge Engineer's office, National Transcontinental Ry., Ottawa; Oct., 1914 to Sept., 1915, in bridge department, Intercolonial Ry., Moncton, N.B.; 1915 to 1919, on military service, being for 18 months a sapper with the Canadian Engineers, and then 3 years consecutively, Lieutenant and Captain in the Royal Engineers, his service in France being continuous for four years.

J. L. Englehart, Chairman, Timiskaming and Ontario Ry. Commission, left Toronto Jan. 7, for Santa Barbara, Cal., intending to remain there until May. His resignation has not been accepted by the Ontario Government, but it is said that he will not withdraw it, as he is determined to retire, on account of the state of his health.

Geo. H. Ham, of the C.P.R. headquarters staff, left Montreal, Jan. 13, for the Southern States, expecting to be away about three months.

D. B. Hanna, President, Canadian National Rys., left Toronto Jan. 17, with Mrs. Hanna, and their two daughters, for Miami, Florida, expecting to remain there about three weeks.

Anton Lund Hertzberg, whose retirement from C.P.R. service was announced in our last issue, died at Toronto, Jan. 31, after a short illness. He was born at Horton, Norway, April 30, 1855, and came to Canada early in 1880, since when he was, to 1883, in G.T.R. service. In 1883 he was appointed Chief Engineer, Credit Valley Ry., and Toronto, Grey and Bruce Ry., and when they were taken over by the C.P.R., he remained with that company, as Resident Engineer at Toronto, and was for two years Engineer, Maintenance of Way Department, Montreal, after which he was appointed Engineer, Ontario Division, later Ontario District, at Toronto. He retired from active service Jan. 1, after 37 years of continuous service with the company. The funeral, which took place at Toronto, Feb. 2, was attended by a number of his former colleagues.

Gerald Hiam, District Freight Agent, C.P.R., Cleveland, Ohio, was married at Fort William, Ont., recently, to Miss D. C. Young, daughter of Lt.-Col. S. C. Young.

Miss Dorothy C. Jones, elder daughter of F. W. Jones, of Victoria, B.C., who for many years occupied prominent positions in the C.P.R. service at Winnipeg, was married Jan. 3, to Lt.-Commander D. S. Lambert, R.N., son of the late Major General Lambert, C.B., of Hampshire, Eng.

Zebulon Aiton Lash, K.C., Senior Counsel, Canadian National Rys., died at Toronto, Jan. 24 after an illness lasting several weeks, and culminating in a stroke of paralysis, Jan. 11. He was born at St. John's, Nfld., Sept. 29, 1846, and educated there, at Dundas Ont., and Toronto University and was called to the Ontario bar in 1868, and made a

Q.C., in 1879. He was appointed Deputy Minister of Justice for Canada in 1872, under Hon. Alex. Mackenzie's ministry, resigning in 1876, and has since been a partner in the legal firm of Blake, Lash, Anglin and Cassels, Toronto. He was for many years a director of the Canadian Northern Ry. Co., and its General Counsel, and at the time of the taking over of the railway by Canadian National Rys., he was a director, and Vice President and General Counsel. He was also President, Great North Western Telegraph Co., a director of the Sao Paulo Tramway, Light and Power Co., Mexico Tramway Co., Rio de Janeiro Tramway, Light and Power Co., and a number of other companies, and also of the Canadian Bank of Commerce and National Trust Co., as well as occupying positions on the boards of Toronto University and several other public institutions. He was buried at Forest Lawn Mausoleum, Toronto.

James McGregor, Superintending Engineer, Halifax Ocean Terminals, Canadian National Rys., is visiting in Scotland and expects to spend some time there.

R. Marpole, General Executive Assistant, C.P.R., Vancouver, B.C., and Mrs. Marpole, left there, Jan. 12, to spend some time in Southern California.

Flight Lieut. J. A. Middleton, whose death as a wounded prisoner in Germany, in June, 1917, was reported only recently, was born at Toronto in 1888, and educated in Natal, South Africa, and Edinburgh, Scotland. In 1906 he joined the C.P.R. engineering staff, and was engaged on bridge work in British Columbia at the outbreak of war. He enlisted in Lord Strathcona's Horse, and went to France with that regiment, transferring later to the 7th Cameron Highlanders. Having joined the air service, he served as a pilot with the Royal Flying Corps in 1916 and on March 24 of that year, during a heavy enemy attack, his machine was forced down within German lines. A younger brother, Lieut. A. S. Middleton, who died of wounds after the battle of Loos, in France, was formerly on the Canadian Northern Ry. engineering staff.

R. P. Ormsby, Secretary, Canadian National Rys., expects to leave Toronto early in February, to spend about two months in England.

F. O. Parent, agent, G.T.R., Pembroke, Ont., died suddenly at Rockland, Ont., Jan. 12. One brother, F. A. Parent, is agent, G.T.R., Casselman, Ont.

F. H. Phippen K.C., is expected to return to Toronto, from England, about the middle of February.

J. A. Pratt, station agent, Canadian National Rys., Riviere du Loup, Que., died there suddenly, Jan. 23, aged 64. He was in Intercolonial Ry. service for several years.

Hon. J. D. Reid, Minister of Railways and Canals, and Mrs. Reid, left Ottawa Jan. 23, for St. Augustine, Florida, to be absent about a month.

F. Rioux, formerly Assistant to President, Reid Newfoundland Co., St. John's, Nfld., and who went overseas in 1916 as a second lieutenant in the British Army Service Corps, was released from military service recently and has been visiting friends at St. John's, subsequently returning to Montreal, where he will live in future.

Lieut. Col. Blair Ripley, C.B., D.S.O., was born in 1862, at St. John's, Nfld. He was educated at the University of Toronto and the Royal Military College, Kingston. He served in the 1st Canadian Trench Battalion, 1900-1901, and in the 1st Canadian Trench Battalion, 1902-1903. He was promoted to Major in 1904, and to Lieutenant-Colonel in 1906. He was appointed Engineer in charge of Grade Separation, C.P.R., North Toronto, in 1916. He was appointed Lieutenant-Colonel of the Canadian Railway Troops 1st Battalion, raised for general railway and bridge construction work at the front. He was given the D.S.O. for services in the field and at the close of the war was made a Commander of the Order of the British Empire.

J. K. L. Ross, director, C.P.R., and who recently retired from the Dominion Steel Corporation's board of directors, has been elected a director of the Consolidated Mining and Smelting Co. of Canada, succeeding the late W. D. Matthews, who was also a C.P.R. director and father of Mrs. Ross.

Hon. N. W. Rowell is acting Minister of Public Works at Ottawa.

W. A. Sibbett, who was engaged by the Colombian Government recently to survey the harbor at Barranquilla for extensive water front improvements, was born at Bracebridge, Ont., Nov. 4, 1890, and educated at Barrie, Ont., and Toronto University graduating with honors in civil engineering in 1911. He qualified as an Ontario land surveyor in 1912, and after spending some time on municipal work was engaged as a surveyor on the C.P.R. at North Bay, Ont. In 1915 he surveyed harbors in British Columbia for the Dominion Government. He enlisted for active service in 1915 and went overseas as lieutenant in the 122nd Muskoka Battalion, just prior to which he qualified as a Dominion land surveyor.

Mrs. Somers, wife of G. O. Somers died at St. Paul, Minn., Jan. 12, and was buried at Toronto. Mr. Somers, entered railway service at Toronto in 1879 as telegraph operator, Northern Ry., and was subsequently assistant agent, relieving agent, station agent, and clerk to Superintendent of that road; from 1880 to 1882 he was in private business in Chicago, Ill.; 1883 to 1885 successively, clerk in General Freight Department; acting General Baggage Agent, and chief clerk, General Passenger and Ticket Department, C.P.R., Winnipeg; 1886, chief clerk, General Passenger and

General Freight Agent, Central Ry. of Canada, St. Paul, Minn., 1887, to 1890, to 1891, to 1892, to 1893, to 1894, to 1895, to 1896, to 1897, to 1898, to 1899, to 1900, to 1901, to 1902, to 1903, to 1904, to 1905, to 1906, to 1907, to 1908, to 1909, to 1910, to 1911, to 1912, to 1913, to 1914, to 1915, to 1916, to 1917, to 1918, to 1919, to 1920, to 1921, to 1922, to 1923, to 1924, to 1925, to 1926, to 1927, to 1928, to 1929, to 1930, to 1931, to 1932, to 1933, to 1934, to 1935, to 1936, to 1937, to 1938, to 1939, to 1940, to 1941, to 1942, to 1943, to 1944, to 1945, to 1946, to 1947, to 1948, to 1949, to 1950, to 1951, to 1952, to 1953, to 1954, to 1955, to 1956, to 1957, to 1958, to 1959, to 1960, to 1961, to 1962, to 1963, to 1964, to 1965, to 1966, to 1967, to 1968, to 1969, to 1970, to 1971, to 1972, to 1973, to 1974, to 1975, to 1976, to 1977, to 1978, to 1979, to 1980, to 1981, to 1982, to 1983, to 1984, to 1985, to 1986, to 1987, to 1988, to 1989, to 1990, to 1991, to 1992, to 1993, to 1994, to 1995, to 1996, to 1997, to 1998, to 1999, to 2000, to 2001, to 2002, to 2003, to 2004, to 2005, to 2006, to 2007, to 2008, to 2009, to 2010, to 2011, to 2012, to 2013, to 2014, to 2015, to 2016, to 2017, to 2018, to 2019, to 2020, to 2021, to 2022, to 2023, to 2024, to 2025, to 2026, to 2027, to 2028, to 2029, to 2030, to 2031, to 2032, to 2033, to 2034, to 2035, to 2036, to 2037, to 2038, to 2039, to 2040, to 2041, to 2042, to 2043, to 2044, to 2045, to 2046, to 2047, to 2048, to 2049, to 2050, to 2051, to 2052, to 2053, to 2054, to 2055, to 2056, to 2057, to 2058, to 2059, to 2060, to 2061, to 2062, to 2063, to 2064, to 2065, to 2066, to 2067, to 2068, to 2069, to 2070, to 2071, to 2072, to 2073, to 2074, to 2075, to 2076, to 2077, to 2078, to 2079, to 2080, to 2081, to 2082, to 2083, to 2084, to 2085, to 2086, to 2087, to 2088, to 2089, to 2090, to 2091, to 2092, to 2093, to 2094, to 2095, to 2096, to 2097, to 2098, to 2099, to 2100, to 2101, to 2102, to 2103, to 2104, to 2105, to 2106, to 2107, to 2108, to 2109, to 2110, to 2111, to 2112, to 2113, to 2114, to 2115, to 2116, to 2117, to 2118, to 2119, to 2120, to 2121, to 2122, to 2123, to 2124, to 2125, to 2126, to 2127, to 2128, to 2129, to 2130, to 2131, to 2132, to 2133, to 2134, to 2135, to 2136, to 2137, to 2138, to 2139, to 2140, to 2141, to 2142, to 2143, to 2144, to 2145, to 2146, to 2147, to 2148, to 2149, to 2150, to 2151, to 2152, to 2153, to 2154, to 2155, to 2156, to 2157, to 2158, to 2159, to 2160, to 2161, to 2162, to 2163, to 2164, to 2165, to 2166, to 2167, to 2168, to 2169, to 2170, to 2171, to 2172, to 2173, to 2174, to 2175, to 2176, to 2177, to 2178, to 2179, to 2180, to 2181, to 2182, to 2183, to 2184, to 2185, to 2186, to 2187, to 2188, to 2189, to 2190, to 2191, to 2192, to 2193, to 2194, to 2195, to 2196, to 2197, to 2198, to 2199, to 2200, to 2201, to 2202, to 2203, to 2204, to 2205, to 2206, to 2207, to 2208, to 2209, to 2210, to 2211, to 2212, to 2213, to 2214, to 2215, to 2216, to 2217, to 2218, to 2219, to 2220, to 2221, to 2222, to 2223, to 2224, to 2225, to 2226, to 2227, to 2228, to 2229, to 2230, to 2231, to 2232, to 2233, to 2234, to 2235, to 2236, to 2237, to 2238, to 2239, to 2240, to 2241, to 2242, to 2243, to 2244, to 2245, to 2246, to 2247, to 2248, to 2249, to 2250, to 2251, to 2252, to 2253, to 2254, to 2255, to 2256, to 2257, to 2258, to 2259, to 2260, to 2261, to 2262, to 2263, to 2264, to 2265, to 2266, to 2267, to 2268, to 2269, to 2270, to 2271, to 2272, to 2273, to 2274, to 2275, to 2276, to 2277, to 2278, to 2279, to 2280, to 2281, to 2282, to 2283, to 2284, to 2285, to 2286, to 2287, to 2288, to 2289, to 2290, to 2291, to 2292, to 2293, to 2294, to 2295, to 2296, to 2297, to 2298, to 2299, to 2300, to 2301, to 2302, to 2303, to 2304, to 2305, to 2306, to 2307, to 2308, to 2309, to 2310, to 2311, to 2312, to 2313, to 2314, to 2315, to 2316, to 2317, to 2318, to 2319, to 2320, to 2321, to 2322, to 2323, to 2324, to 2325, to 2326, to 2327, to 2328, to 2329, to 2330, to 2331, to 2332, to 2333, to 2334, to 2335, to 2336, to 2337, to 2338, to 2339, to 2340, to 2341, to 2342, to 2343, to 2344, to 2345, to 2346, to 2347, to 2348, to 2349, to 2350, to 2351, to 2352, to 2353, to 2354, to 2355, to 2356, to 2357, to 2358, to 2359, to 2360, to 2361, to 2362, to 2363, to 2364, to 2365, to 2366, to 2367, to 2368, to 2369, to 2370, to 2371, to 2372, to 2373, to 2374, to 2375, to 2376, to 2377, to 2378, to 2379, to 2380, to 2381, to 2382, to 2383, to 2384, to 2385, to 2386, to 2387, to 2388, to 2389, to 2390, to 2391, to 2392, to 2393, to 2394, to 2395, to 2396, to 2397, to 2398, to 2399, to 2400, to 2401, to 2402, to 2403, to 2404, to 2405, to 2406, to 2407, to 2408, to 2409, to 2410, to 2411, to 2412, to 2413, to 2414, to 2415, to 2416, to 2417, to 2418, to 2419, to 2420, to 2421, to 2422, to 2423, to 2424, to 2425, to 2426, to 2427, to 2428, to 2429, to 2430, to 2431, to 2432, to 2433, to 2434, to 2435, to 2436, to 2437, to 2438, to 2439, to 2440, to 2441, to 2442, to 2443, to 2444, to 2445, to 2446, to 2447, to 2448, to 2449, to 2450, to 2451, to 2452, to 2453, to 2454, to 2455, to 2456, to 2457, to 2458, to 2459, to 2460, to 2461, to 2462, to 2463, to 2464, to 2465, to 2466, to 2467, to 2468, to 2469, to 2470, to 2471, to 2472, to 2473, to 2474, to 2475, to 2476, to 2477, to 2478, to 2479, to 2480, to 2481, to 2482, to 2483, to 2484, to 2485, to 2486, to 2487, to 2488, to 2489, to 2490, to 2491, to 2492, to 2493, to 2494, to 2495, to 2496, to 2497, to 2498, to 2499, to 2500, to 2501, to 2502, to 2503, to 2504, to 2505, to 2506, to 2507, to 2508, to 2509, to 2510, to 2511, to 2512, to 2513, to 2514, to 2515, to 2516, to 2517, to 2518, to 2519, to 2520, to 2521, to 2522, to 2523, to 2524, to 2525, to 2526, to 2527, to 2528, to 2529, to 2530, to 2531, to 2532, to 2533, to 2534, to 2535, to 2536, to 2537, to 2538, to 2539, to 2540, to 2541, to 2542, to 2543, to 2544, to 2545, to 2546, to 2547, to 2548, to 2549, to 2550, to 2551, to 2552, to 2553, to 2554, to 2555, to 2556, to 2557, to 2558, to 2559, to 2560, to 2561, to 2562, to 2563, to 2564, to 2565, to 2566, to 2567, to 2568, to 2569, to 2570, to 2571, to 2572, to 2573, to 2574, to 2575, to 2576, to 2577, to 2578, to 2579, to 2580, to 2581, to 2582, to 2583, to 2584, to 2585, to 2586, to 2587, to 2588, to 2589, to 2590, to 2591, to 2592, to 2593, to 2594, to 2595, to 2596, to 2597, to 2598, to 2599, to 2600, to 2601, to 2602, to 2603, to 2604, to 2605, to 2606, to 2607, to 2608, to 2609, to 2610, to 2611, to 2612, to 2613, to 2614, to 2615, to 2616, to 2617, to 2618, to 2619, to 2620, to 2621, to 2622, to 2623, to 2624, to 2625, to 2626, to 2627, to 2628, to 2629, to 2630, to 2631, to 2632, to 2633, to 2634, to 2635, to 2636, to 2637, to 2638, to 2639, to 2640, to 2641, to 2642, to 2643, to 2644, to 2645, to 2646, to 2647, to 2648, to 2649, to 2650, to 2651, to 2652, to 2653, to 2654, to 2655, to 2656, to 2657, to 2658, to 2659, to 2660, to 2661, to 2662, to 2663, to 2664, to 2665, to 2666, to 2667, to 2668, to 2669, to 2670, to 2671, to 2672, to 2673, to 2674, to 2675, to 2676, to 2677, to 2678, to 2679, to 2680, to 2681, to 2682, to 2683, to 2684, to 2685, to 2686, to 2687, to 2688, to 2689, to 2690, to 2691, to 2692, to 2693, to 2694, to 2695, to 2696, to 2697, to 2698, to 2699, to 2700, to 2701, to 2702, to 2703, to 2704, to 2705, to 2706, to 2707, to 2708, to 2709, to 2710, to 2711, to 2712, to 2713, to 2714, to 2715, to 2716, to 2717, to 2718, to 2719, to 2720, to 2721, to 2722, to 2723, to 2724, to 2725, to 2726, to 2727, to 2728, to 2729, to 2730, to 2731, to 2732, to 2733, to 2734, to 2735, to 2736, to 2737, to 2738, to 2739, to 2740, to 2741, to 2742, to 2743, to 2744, to 2745, to 2746, to 2747, to 2748, to 2749, to 2750, to 2751, to 2752, to 2753, to 2754, to 2755, to 2756, to 2757, to 2758, to 2759, to 2760, to 2761, to 2762, to 2763, to 2764, to 2765, to 2766, to 2767, to 2768, to 2769, to 2770, to 2771, to 2772, to 2773, to 2774, to 2775, to 2776, to 2777, to 2778, to 2779, to 2780, to 2781, to 2782, to 2783, to 2784, to 2785, to 2786, to 2787, to 2788, to 2789, to 2790, to 2791, to 2792, to 2793, to 2794, to 2795, to 2796, to 2797, to 2798, to 2799, to 2800, to 2801, to 2802, to 2803, to 2804, to 2805, to 2806, to 2807, to 2808, to 2809, to 2810, to 2811, to 2812, to 2813, to 2814, to 2815, to 2816, to 2817, to 2818, to 2819, to 2820, to 2821, to 2822, to 2823, to 2824, to 2825, to 2826, to 2827, to 2828, to 2829, to 2830, to 2831, to 2832, to 2833, to 2834, to 2835, to 2836, to 2837, to 2838, to 2839, to 2840, to 2841, to 2842, to 2843, to 2844, to 2845, to 2846, to 2847, to 2848, to 2849, to 2850, to 2851, to 2852, to 2853, to 2854, to 2855, to 2856, to 2857, to 2858, to 2859, to 2860, to 2861, to 2862, to 2863, to 2864, to 2865, to 2866, to 2867, to 2868, to 2869, to 2870, to 2871, to 2872, to 2873, to 2874, to 2875, to 2876, to 2877, to 2878, to 2879, to 2880, to 2881, to 2882, to 2883, to 2884, to 2885, to 2886, to 2887, to 2888, to 2889, to 2890, to 2891, to 2892, to 2893, to 2894, to 2895, to 2896, to 2897, to 2898, to 2899, to 2900, to 2901, to 2902, to 2903, to 2904, to 2905, to 2906, to 2907, to 2908, to 2909, to 2910, to 2911, to 2912, to 2913, to 2914, to 2915, to 2916, to 2917, to 2918, to 2919, to 2920, to 2921, to 2922, to 2923, to 2924, to 2925, to 2926, to 2927, to 2928, to 2929, to 2930, to 2931, to 2932, to 2933, to 2934, to 2935, to 2936, to 2937, to 2938, to 2939, to 2940, to 2941, to 2942, to 2943, to 2944, to 2945, to 2946, to 2947, to 2948, to 2949, to 2950, to 2951, to 2952, to 2953, to 2954, to 2955, to 2956, to 2957, to 2958, to 2959, to 2960, to 2961, to 2962, to 2963, to 2964, to 2965, to 2966, to 2967, to 2968, to 2969, to 2970, to 2971, to 2972, to 2973, to 2974, to 2975, to 2976, to 2977, to 2978, to 2979, to 2980, to 2981, to 2982, to 2983, to 2984, to 2985, to 2986, to 2987, to 2988, to 2989, to 2990, to 2991, to 2992, to 2993, to 2994, to 2995, to 2996, to 2997, to 2998, to 2999, to 3000, to 3001, to 3002, to 3003, to 3004, to 3005, to 3006, to 3007, to 3008, to 3009, to 3010, to 3011, to 3012, to 3013, to 3014, to 3015, to 3016, to 3017, to 3018, to 3019, to 3020, to 3021, to 3022, to 3023, to 3024, to 3025, to 3026, to 3027, to 3028, to 3029, to 3030, to 3031, to 3032, to 3033, to 3034, to 3035, to 3036, to 3037, to 3038, to 3039, to 3040, to 3041, to 3042, to 3043, to 3044, to 3045, to 3046, to 3047, to 3048, to 3049, to 3050, to 3051, to 3052, to 3053, to 3054, to 3055, to 3056, to 3057, to 3058, to 3059, to 3060, to 3061, to 3062, to 3063, to 3064, to 3065, to 3066, to 3067, to 3068, to 3069, to 3070, to 3071, to 3072, to 3073, to 3074, to 3075, to 3076, to 3077, to 3078, to 3079, to 3080, to 3081, to 3082, to 3083, to 3084, to 3085, to 3086, to 3087, to 3088, to 3089, to 3090, to 3091, to 3092, to 3093, to 3094, to 3095, to 3096, to 3097, to 3098, to 3099, to 3100, to 3101, to 3102, to 3103, to 3104, to 3105, to 3106, to 3107, to 3108, to 3109, to 3110, to 3111, to 3112, to 3113, to 3114, to 3115, to 3116, to 3117, to 3118, to 3119, to 3120, to 3121, to 3122, to 3123, to 3124, to 3125, to 3126, to 3127, to 3128, to 3129, to 3130, to 3131, to 3132, to 3133, to 3134, to 3135, to 3136, to 3137, to 3138, to 3139, to 3140, to 3141, to 3142, to 3143, to 3144, to 3145, to 3146, to 3147, to 3148, to 3149, to 3150, to 3151, to 3152, to 3153, to 3154, to 3155, to 3156, to 3157, to 3158, to 3159, to 3160, to 3161, to 3162, to 3163, to 3164, to 3165, to 3166, to 3167, to 3168, to 3169, to 3170, to 3171, to 3172, to 3173, to 3174, to 3175, to 3176, to 3177, to 3178, to 3179, to 3180, to 3181, to 3182, to 3183, to 3184, to 3185, to 3186, to 3187, to 3188, to 3189, to 3190, to 3191, to 3192, to 3193, to 3194, to 3195, to 3196, to 3197, to 3198, to 3199, to 3200, to 3201, to 3202, to 3203, to 3204, to 3205, to 3206, to 3207, to 3208, to 3209, to 3210, to 3211, to 3212, to 3213, to 3214, to 3215, to 3216, to 3217, to 3218, to 3219, to 3220, to 3221, to 3222, to 3223, to 3224, to 3225, to 3226, to 3227, to 3228, to 3229, to 3230, to 3231, to 3232, to 3233, to 3234, to 3235, to 3236, to 3237, to 3238, to 3239, to 3240, to 3241, to 3242, to 3243, to 3244, to 3245, to 3246, to 3247, to 3248, to 3249, to 3250, to 3251, to 3252, to 3253, to 3254, to 3255, to 3256, to 3257, to 3258, to 3259, to 3260, to 3261, to 3262, to 3263, to 3264, to 3265, to 3266, to 3267, to 3268, to 3269, to 3270, to 3271, to 3272, to 3273, to 3274, to 3275, to 3276, to 3277, to 3278, to 3279, to 3280, to 3281, to 3282, to 3283, to 3284, to 3285, to 3286, to 3287, to 3288, to 3289, to 3290, to 3291, to 3292, to 3293, to 3294, to 3295, to 3296, to 3297, to 3298, to 3299, to 3300, to 3301, to 3302, to 3303, to 3304, to 3305, to 3306, to 3307, to 3308, to 3309, to 3310, to 3311, to Railway Rolling Stock Orders and Deliveries.

Canadian National Rys. have received 3 sleeping cars from Canadian Car and Foundry Co.

Canadian National Rolling Stock Ltd., has ordered 80 cabooses from Canadian Car and Foundry Co.

Canada Creosoting Co. has ordered 50 tram cars, and 54 sets of running gear; from Canadian Car and Foundry Co.

The G.T.R., to Jan. 10, received 44 steel fram box cars, 80,000 lb. capacity, from Canadian Car and Foundry Co.

Algoma Steel Corporation has ordered 2 standard gauge car trucks, 80,000 lb. capacity, from Canadian Car and Foundry Co.

Bedford Construction Co., St. John, N.B., has bought one 20 yd. steel dump car from Canadian Car and Foundry Co.

The Grand Trunk Pacific Ry. is having a further 1,500 cars repaired by Canadian Car and Foundry Co. at Fort William, Ont.

The G.T.R. has received 44 box cars and 2 stock cars, and 233 repaired box cars and 138 repaired hopper cars from Canadian Car and Foundry Co.

The Canadian National Rys., has invited tenders to be sent in by Feb. 10, for the following rolling stock,—2,000 box cars, 40 tons capacity; 500 refrigerator cars, 30 tons capacity; 500 general service cars (coal), 50 tons capacity; 350 ballast cars, 50 tons capacity; 20 baggage cars, 73½ ft. long; 18 sleeping cars, 12 dining cars, 30 Pacific type locomotives, and 20 switching locomotives.

Canadian National Rys. have received 6 six wheel switching locomotives from Canadian Locomotive Co., completing an order for 25, placed Jan. 28, 1919, with Canadian Locomotive Co., and illustrated in our last issue. Following are the chief details:

Weight in working car.....	150,000 lb.
Wheel base, engine.....	12 ft.
Wheel base, engine and tender.....	41 ft. 1½ in.
Heating surface, fire box.....	132 sq. ft.
Heating surface, tubes and arch tubes.....	1,449.7 sq. ft.
Heating surface, total.....	1,581.7 sq. ft.
Driving wheel, diam.....	51 in.
Driving wheel, centers.....	cast iron
Driving journals, diam and length.....	8½ x 11½ in.
Cylinders, diam and stroke.....	21 x 26 in.
Boiler, type.....	Straight top
Boiler pressure.....	180 lb.
Tubes, no. and diam.....	157—2 in.
Tubes, length.....	24—5½ in.
Airbrakes.....	Westinghouse E.T. 6
Packings.....	Metallic
Fire brick.....	Security
Valve motion.....	Walschaert
Cab.....	Steel, wood line
Headlight.....	10 Pyle National type K, and 15 Schneider Electric Taylor and Arnold casing
Weight of tender, loaded.....	36,000 lb.
Water capacity.....	3,800 imp. gals.
Coal capacity.....	6 tons
Truck type.....	4 wheel arch bar type
Wheel, diam.....	33 in.
Wheel, type.....	10 Davis C and 15 cast iron chilled
Journal, diam. and length.....	4½ x 8 in.
Break beam.....	Simplex

The Jamaica Government Ry. has ordered 7 twelve wheel (4-8-0) locomotives from Canadian Locomotive Co. They are duplicates of an order placed in Oct., 1919, except that the present ones are to be equipped with superheaters. Following are the chief details:

Weight in working order on drivers.....	110,000 lb.
Weight in working order total.....	140,000 lb.
Wheel base engine, rigid.....	12 ft. 9 in.
Wheel base, total.....	23 ft.
Wheel base, engine and tender.....	50 ft. 2 in.
Heating surface, fire box and arch tubes.....	148 sq. ft.
Heating surface, tubes.....	1,355 sq. ft.
Heating surface, total.....	1,503 sq. ft.

Driving wheel, diam.....	46 in.
Driving wheel centers.....	Cast iron
Driving journals, diam. and length.....	8½ in. x 10 in.
Cylinders, diam. and stroke.....	19 x 25 in.
Boiler, type.....	Straight top
Boiler, working pressure.....	130 lb.
Tubes, no. and diam.....	139—2 in.
Tubes, length.....	21—5½ in.
Air brakes.....	Westinghouse E.T.
Packings.....	Metallic
Superheater.....	Locomotive Superheater Co. type A
Valve motion.....	Walschaert
Fire brick.....	Electric
Weight of tender, loaded.....	94,100 lb.
Tank capacity.....	3,500 imp. gal.
Tank type.....	U shape
Coal capacity.....	4,500 lb.
Truck type.....	4 wheel arch bar type
Wheel, diam.....	33 in.
Wheel, type.....	C.I. center with steel tires
Journal, diam. and length.....	4½ x 8 in.
Break beam.....	Simplex high speed

Belgian Rolling Stock Orders.

The Belgian State Railways have ordered 75 consolidation (2-8-0) locomotives from American Locomotive Co., Schenectady, N.Y. The Belgian railway standard train connections, front and rear, will be included in the equipment, but the general design will be the American Locomotive Co.'s. Following are the chief details:

Gauge.....	4 ft. 8½ in.
Cylinders, diam. and stroke.....	24 x 25 in.
Driving wheel, diam.....	59.84 ft.
Boiler, outside diam.....	68 in.
Boiler pressure.....	200 lb.
Firebox, length and width.....	96 x 60½ in.
Tubes, no. and diam.....	160—2 in.
Heating surface, superheater.....	564 sq. ft.
Heating surface, tubes.....	1,292 sq. ft.
Heating surface, arch tubes.....	25 sq. ft.
Heating surface, arch tubes.....	25 sq. ft.
Heating surface, firebox.....	150 sq. ft.
Heating surface, total.....	2,031 sq. ft.
Heating surface, superheating.....	510 sq. ft.
Grate area.....	40 sq. ft.
Wheel base, engine.....	19 ft. 8 in.
Wheel base, engine and tender.....	54 ft.
Weight, leading truck.....	22,000 lb.
Weight, driving truck.....	16,000 lb.
Weight, total engine.....	186,000 lb.
Weight, tender.....	117,000 lb.
Maximum tractive effort based on 65% boiler pressure.....	35,000 lb.
Factor of adhesion.....	4.7
Limiting weight, per axle.....	42,900 lb.
Tender type.....	6 wheel
Capacity, water.....	6,340 U.S. gal.
Capacity, coal.....	7 metric tons
Superheater.....	Locomotive Superheater Co. fire box tube, type and cross header
Airbrakes.....	Westinghouse, French automatic
Sanders.....	Lambert
Couplers.....	Belgian standard screw link with 2 spring buffers
Brake.....	Belgian standard

London, Eng., press dispatch, Jan. 22.—The Belgian Minister of Railways is here negotiating for the purchase of 50 locomotives and 3,000 cars from Canadian manufacturers through the Canadian Government. The contracts will be signed as soon as the Canadian Finance Minister consents to an advance of credit. Belgium only had about \$11,000,000 of the \$25,000,000 granted last year. This credit, with others in Europe, expired at the end of December. The total unused amount will be advanced when good propositions are put forward. Belgium hopes to obtain a credit for needed rolling stock amounting to about \$10,000,000.

Ottawa press dispatch, Jan. 27.—It is said here that large United States firms are interested in the fact that the Belgian Government is in the market for 50 locomotives, 18,000 freight cars and a number of passenger cars. Whether they will get any of the business depends on the Belgian Government, which now has the Canadian offer before it to accept Belgian Government 5½%, five year treasury bonds in payment for the

locomotives and cars. Sir Henry Drayton's proposal that the companies themselves should extend five-eighths of the credit and the Dominion Government the balance has been accepted by the companies. A 50-50 basis was originally suggested by the companies.

The Chief Railway Commissioner on Applications for Rehearings.

Hon. F. B. Carvell, Chief Commissioner, Board of Railway Commissioners, at a sitting of the commission in Montreal, Jan. 20, at which the Canadian Freight Association, on behalf of the C.P.R., the G.T.R., and the Canadian National Rys., asked for a rehearing of the joint freight tariffs order of Aug., 1919, is reported to have said: "What interests me in this matter is that nothing this board ever does seem to be accepted as final. Whenever a judgment is made and the railways do not like it, back they come trying to get the case reheard. In this particular matter the board issued an order in August last. Why was it not obeyed? Why this request that the case should be reopened. I have not been long on the board, but since I have been there have been two occasions on which cases have been asked to be retried. If the applicants can show that the board's order took any person by surprise, or is not sound in law why all right, but if it is simply because you don't like the order that you ask to have the case reheard then I do not feel like hearing it again. I find no fault with you for coming back if you think you have a real case, but I find it creeping up all the time that when an order is not pleasing to the railways, they come back to endeavor to have it changed. They seem to want to treat this board as if it was nothing more than a rubber stamp. Every order this board has made has only been made after we have given it the most careful consideration. In fact I have been rather surprised at the amount of work in connection with each case and I have reached the opinion that in what we are doing we are giving you our best well considered judgment. I'll admit that decisions are not reached as quickly as it is thought they should be, but I contend that every case is thoroughly considered in all its phases before an order is made. That being so, you must have very good grounds before you can ask for a rehearing."

New Brunswick Workmen's Compensation Act—The board appointed by the N.B. Government to carry out the Workmen's Compensation Act of 1918, issued on Dec. 29, 1919, a notice containing the rate of assessment to be made upon the pay roll of every concern in the province for the purpose of the act. The amount of the pay roll is to be ascertained under conditions prescribed in the act, and the rate of assessment is set out in a schedule attached to the notice. The operation of steam and electric railways, railway car shops, steel and wooden shipbuilding yards; wrecking and salvaging, towing, express companies' operations, bridge building and a variety of other occupations affecting transportation interests come under the act.

W. F. Barry, Commercial Agent, Canadian National Rys., San Francisco, Cal., in renewing his subscription to Canadian Railway and Marine World, writes: "It is a pleasure to continue receipt of your very newsy and useful paper."

Riordon Sales Co., the Ha Ha Bay Sulphite Co., and the Canadian Export Paper Co. of Montreal; Grace & Co., the Meishosha Co., and Jardine, Matheson & Co., of New York; and Caldwell & Co., on behalf of Federal Export Corporation, International Trading Corporation, Mitsubishi Goshi Kaisha, Frazar & Co., Mitsui & Co., A. D. de Shubirin & Co., American Trading Co., Pacific Commercial Co., Anderson Meyer & Co., China, Japan and South American Trading Co., A. G. Kidston & Co., Suzuki & Co., and Iwai & Co., of New York, against withdrawal of export rates to Seattle and Tacoma, Washington, by tariff C.R.C. 43, of Canadian Freight Association, published to become effective Jan. 15. Upon hearing the complaints at Ottawa, Jan. 7, the complainants and the Canadian Freight Association being represented and what was alleged, it is ordered that the Canadian Freight Association be required, not later than Jan. 15, 1920, to reinstate the rates to Seattle and Tacoma in its tariff on freight for export to trans-Pacific destinations.

British Columbia Electric Ry. Fares.

29,237, Jan. 10. Re complaint of Broadview Ratepayers' Association, Burnaby, B.C., against fares charged by British Columbia Electric Ry. in Broadview District; upon hearing the complaint at Vancouver, Nov. 21, 1919, the complainants and the railway company being represented at the hearing, and what was alleged, it is ordered that the complaint be dismissed.

Assistant Chief Commissioner McLean gave the following judgment, Dec. 28, 1919: At the board's sittings in Vancouver, Nov. 22, 1919, complaint was made of the rates, particularly those affecting Horne Payne and Crown Ave. stations. As expressed by Mr. Collier, one of the parties applicant: "This has been argued before by the solicitor for the municipality, but the ratepayers' association instructed me to come and make a formal protest before this board as to what we consider an exorbitant increase that was granted the company on this line last June. Previous to that we had a 50c rate ticket in existence. I will mention Horne Payne and Crown Ave. stations. At Horne Payne the rate was 5c a ride, Crown Ave. 6c, buying a book costing \$3. The new rate to Horne Payne is 7c, an increase of 2c, the new rate to Crown Ave. is 9c, an increase of 50%, which we consider is exorbitant. The company in its statement listed the old rate on the basis of a 10 ride ticket, which in the case of Crown Ave. would read 7½ to 57c for a 10 ride ticket. So far as we were concerned, using that station, the 10 ride ticket was practically nonexistent, so that to us the old rate was 6c and the new rate is 9c."

The stopping points particularly referred to are located on the British Columbia Electric Ry.'s Burnaby Lake line, which in terms of its charter, is the Vancouver, Fraser Valley and Southern. The application of the B.C. Electric Ry. for increases in passenger rates on that line was dealt with by the board in its judgment of Nov. 14, 1918. In the increases for which sanction was asked were certain commutation rates. The rates herein involved fall in this class. The following detail sets out the former rate and the rate for which sanction was asked.

Between and	Miles	Vancouver 10 ride adult		New Westminster 10 ride adult	
		Old rate	New rate	Old rate	New rate
Horne Payne	1.3	\$0.50	\$0.70	9.8	\$1.35
Crown Ave.	5.5	0.50	0.90	9.2	1.25

The figures as to earnings and expenses were carefully analyzed at the time, and the conclusion was unescapable that the various increases involved were justified; and, accordingly, a sanction which covered the rates herein complained of was given. At the hearing in Vancouver, additional information as to this condition of the line was submitted by the railway. Intimation was given at the hearing by the Chief Commissioner that on the showing made it was improbable that the line could carry on on lower rates. While it cannot be said that there was much, if anything, new in the way of evidence as showing that a lower rate basis was justifiable at present on the line in question, the urgent submissions as to the effect of the rate increases has caused the matter to stand for further consideration. Further consideration, however, in view of the fact that no change for the better in the condition of the line in question has been shown as compared with the date when the original judgment was given simply emphasizes the fact that the increases allowed are still justifiable.

The Chief Commissioner and Commissioner Rutherford concurred.

Fredericton and Grand Lake Coal and Ry.'s Freight Tariff.

29,263, Jan. 10. Re application of the C.P.R., as lessee exercising franchises of Fredericton & Grand Lake Coal & Ry. Co., under sec. 330, of the Railway Act, 1919, for approval of its Standard Mileage Tariff, C.R.C. 34; upon the report and recommendation of the board's Chief Traffic Officer, it is ordered that the said tariff of maximum mileage freight rates to apply between stations on the Fredericton & Grand Lake Coal & Ry. Co.'s line, be approved; the tariff, with a reference to this order, to be published in at least two consecutive issues of the Canada Gazette.

New Brunswick Coal and Ry. Co.'s Freight Tariff.

29,264, Jan. 10. Re application of C. P.R., as lessee exercising franchises of New Brunswick Coal & Railway Co., under sec. 330 of the Railway Act, 1919, for approval of its Standard Mileage Freight Tariff, C.R.C. 51; upon the report and recommendation of the board's Chief Traffic Officer, it is ordered that the said tariff of maximum mileage freight rates, to apply between stations on the New Brunswick Coal & Ry. Co.'s railway, be approved; and that the tariff, with a reference to this order, be published in at least two consecutive weeks of the Canada Gazette.

Express Rates on Incandescent Lamps.

29,280, Jan. 16. Re applications of Canadian Manufacturers' Association on behalf of Canadian General Electric Co., Canadian Westinghouse Co., Solex Co., Northern Electric Co., Dominion Lamp Co., and Toronto Board of Trade for a reduction from double first class to first class rates on incandescent electric lamps carried by express; upon hearing the application at Toronto, Oct. 31, 1919, the applicants, the Express Traffic Association of Canada, and the Dalyle Electric Co., being represented at the hearing, and what was alleged; and upon the re-

commendation of the board's Chief Traffic Officer, it is ordered that the rating of two times first class for electric light bulbs, shown in Express Classification for Canada no. 4, be reduced to one and one-half times first class; the change to be made effective not later than Feb. 1, 1920.

Claim for Loss of Grain.

29,288, Jan. 22. Re complaint of United Grain Growers Ltd., of Winnipeg, that Canadian National Ry. have refused compensation for loss occasioned by delivery to Thunder Bay elevator instead of Paterson's elevator, as directed, car C.N.R. 44,458, grain, ex Deepdale, Man, Dec. 5, 1918, consigned to complainants in care of terminal elevator of Canadian Northern Ry. Co., Port Arthur; upon hearing the complaint at Winnipeg, Nov. 15, 1919, the complainants and the railway company being represented and what was alleged; and upon its appearing that what is involved is a loss and damage claim, in which the board is without jurisdiction; it is ordered that the complaint be dismissed.

Toronto Suburban Ry.'s Freight Tariff.

29,293, Jan. 23. Re application of Toronto Suburban Ry., under sec. 330 of the Railway Act, 1919, for approval of its Standard Freight Tariff C.R.C. 1; upon its appearing that the company's wage schedule is substantially that of the Canadian National Ry. System, of which the said railway forms a part; and in virtue of which the Canadian National Ry. were permitted, by order in council, 1863, to increase their rates, the tariffs submitted for approval being identical with that of the Canadian National Ry. System for similar distances; it is ordered that Standard Freight Mileage Tariff C.R.C. 1 be approved; the tariff, together with a reference to this order, to be published in at least two consecutive issues of the Canada Gazette.

Charge for Lining Cars for Flaxseed.

29,309, Jan. 26. Re application of W. E. Campbell, Secretary, Canadian Freight Association, Winnipeg, on behalf of the railways operating in Western Canada, for an order authorizing them to increase their charge from \$3 to \$4 a car for lining cars used for carriage of flaxseed in bulk; upon hearing the application at Winnipeg, Nov. 15, 1919, the applicant, the North West Grain Dealers' Association, the Canadian National, Canadian Pacific and Grand Trunk Pacific Railways, and certain shippers interested being represented, and what was alleged; and upon the consent of the representatives of the said shippers and of the Northwest Grain Dealers' Association, it is ordered that the said railway companies be authorized to increase their charge for lining cars used for the carriage of flaxseed in bulk from \$3 to \$4 a car, subject to conditions set out in order 23,894, June 2, 1915. Order 25,956, Mar. 28, 1917, made herein is rescinded.

Express Charges on Apples—Virden to Cromer.

On Dec. 13, 1919, the board received the following letter from the United Grain Growers, Ltd., Eastern Division, Winnipeg: "On Nov. 4 we made a shipment of 251 boxes of apples, weight 12,550 lb., Virden to Cromer, via Canadian National Express, which exacted express charges on basis of 55c per 100 lb., which is full tariff rate. We are

Transportation Appointments Throughout Canada.

Only noncommutative theories (and hence, in particular, nonlocal ones) can be consistent. This is the main result of the paper. It is shown that the only consistent noncommutative theories are those which are invariant under the noncommutative gauge group. The noncommutative gauge group is shown to be the direct product of the noncommutative gauge group and the noncommutative gauge group.

Canadian National Ry. F. J. H. L. H. R. formerly Paymaster, Eastern Lines, Canadian Northern Ry., has re-entered the service and has been appointed Supervisor in charge of Local Treasurers and Paymasters, Canadian Northern Railway System. Office, Toronto.

W. A. KIRKPATRICK has been appointed acting Assisting Superintendent, Division 2, Central District, vice D. W. Steeper, assigned to other duties. Office Sioux Lookout, Ont.

G. H. PERLEY, heretofore transitman, New Glasgow, N.S., has been appointed Resident Engineer there, vice R. Montgomerie, resigned on his removal to Scotland.

The positions of Supervisors of Work Equipment, with jurisdiction north, and south, of the St. Lawrence River held by W. S. Secord, Toronto and T. Carroll, Moncton, N.B., respectively, as announced in our last issue, are new ones. Their duties are to look after the maintenance of work equipment, provide the necessary outfit and operators for its successful operation, and arrange for its distribution, after consultation with the proper officials.

Canadian Pacific Ocean Services Ltd.—**H. B. BEAUMONT** has been appointed General Agent, Passenger Department, Montreal District, vice **W. Webber**, promoted. Office, Montreal.

P. D. SUTHERLAND has been appointed General Passenger Agent for the Orient. Office, Hong Kong, China.

W. WEBBER, heretofore General Agent, Passenger Department, Montreal District, has been appointed General Agent, Passenger Department in charge of the handling of passenger traffic at Atlantic ports. Office, Montreal.

Canadian Pacific Ry.—S. A. BROWN, heretofore Assistant Yardmaster, has been appointed Yardmaster, Port Arthur, Ont., vice J. D. Callahan, transferred.

J. D. CALLAHAN, heretofore Yardmaster, Port Arthur, Ont., has been appointed Yardmaster, Medicine Hat, Alta.

R. F. RICHARDSON, heretofore Local Freight Agent, Edmonton, Alta., has been appointed General Agent, Alaska and Yukon Territory. Office, Juneau, Alaska.

D. STEVENSON, who returned recently from active military service overseas, has been appointed Assistant Yardmaster, Port Arthur, Ont., vice S. A. Brown, promoted.

Grand Trunk Ry.—G. H. BROWN has been appointed Commercial Agent, Grand Trunk Ry. lines in Canada, vice J. Waugh, transferred. Office, Minneapolis, Minn.

FRANK FOSTER has been appointed Assistant to Superintendent, Motive Power, Ontario Lines, Allandale, Ont., vice John Vass, assigned to other duties.

again for a challenge. In other cases where such allegations, or even if false, are a result of the apparatus, have been advanced as a reason for additional time, the board has not found justified in granting additional time. It was not found justified in granting that an extension should be made is the present instance.

C. J. HAIGH has been appointed Commercial Agent, G.T.R. lines in Canada. Office, Philadelphia, Pa.

S. G. WAGSTAFF has been appointed Commercial Agent, G.T.R. lines in Canada. Office, Toledo, Ohio.

C. S. WAINWRIGHT has been appointed Commercial Agent, G.T.R. lines in Canada. Office, Los Angeles, Cal.

JAMES WAUGH, heretofore Commercial Agent, Minneapolis, Minn., has been appointed Commercial Agent, G.T.R. lines in Canada. Office, San Francisco, Cal.

Grand Trunk Western Lines Rd.—W. M. GUY, heretofore Travelling Freight Agent, London, Ont., has been appointed Division Freight Agent there, vice R. W. Youngs.

Walford Forwarding Corporation—H. A. YOUNG, formerly Traffic Manager, Canadian Lake Line, has been appointed agent Walford Forwarding Corporation, New York. Office, 53 Yonge St., Toronto.

Telegraph Address Registration—Jas. Richardson & Sons, Ltd., et al. complained to the Board of Railway Commissioners recently against the fee of \$2.50 proposed to be charged by the C. P. R. Co.'s Telegraph and the Great Northern Western Telegraph Co., for recording a registered address as set forth in a circular letter of Nov. 20, 1919, issued by those telegraph companies. The Chief Railway Commissioner gave the following ruling, Dec. 24, 1919: The board has considered the substance of the application. I am of the opinion that the charge is not a rate under the control of this board, because it is a charge made by the telegraph companies for a service to be performed by the cable companies, over which we have no jurisdiction. In other words, the telegraph company is acting to some extent as an agent for the cable company by devising a means by which one or two words may answer the purpose of half a dozen words which would be charged for individually by the cable company. Therefore, I do not see that we have any jurisdiction to interfere.

Rules or Wires Erected Along or Across Railways—The Board of Railway Commissioners issued the following circular, Jan. 5: Referring to circular 107, June 19, 1918, to the effect that under the provisions of the old act and the amendment of 1911, sec. 7, c. 22, general order 231, May 6, 1918, and the rules thereby adopted and confirmed, applied only to construction across a railway. Sec. 372 of the Railway Act, 1919, is not so limited and applies to construction along as well as across a railway. Where, therefore, the construction, whether along or across the railway, is by consent and in accordance with the Standard Conditions and Specifications set out in the schedule to general order 231 and approved by that order, no further leave of the board is necessary.

Canadian National Railways Construction, Betterments, Etc.

St. John, N.B., Terminals—A. P. Barnhill, one of the C.N.R. directors, in addressing the Commercial Club at St. John, N.B., Jan. 10, is reported to have said the city's interest would be well cared for by the board, and that the port would be given fair treatment. At the next meeting of the board the first appropriations under the present management will be submitted, and St. John will have no cause for complaint when the appropriations are made public, so far as matters within the directors' authority are concerned. The important point for the citizens of St. John is to impress on the Dominion Government is that additional terminal facilities should be provided by the government in fulfillment of its several promises to the city. The directors may decide on certain terminal improvements but money must come from the government, and any recommendations by the directors will be subject to revision by the government. The board has under consideration plans, the preparation of which is well advanced, for a new station, and a large appropriation will be recommended for additional yard accommodation.

one of the C.N.R. lines, to give a through connection to Quebec. The L. and B. R. has been acquired by the Dominion Government recently.

Grenville Cut Off—The Board of Railway Commissioners has authorized the opening for traffic of the Grenville cut off on the Lachute Division, Que., from Lot 359, Range 1, Block O, Chatham Tp., near mile 60 from Joliette.

Carillon-Grenville Canal Bridge—The Board of Railway Commissioners has authorized the company to rebuild its bridge across the Carillon-Grenville canal in Grenville Tp., Que.

North Crosby Bridge—The Board of Railway Commissioners has authorized the company to rebuild its bridge across the Rideau Canal, in North Crosby Tp., Ont., mile 40.10 from Brockville.

Capreol Y.M.C.A. Building—The company is erecting a Y.M.C.A. building at Capreol, Ont., at the south end of the yard facing the main line from Parry Sound, the rear elevation overlooking Bloor St. The building has concrete foundation walls, the main exterior walls being of brick finished with stucco, the

alcove is the main staircase, also an entrance from the street. The main or first floor has large open spaces which can be used for meetings and lectures. A simple treatment of stucco beams, with a plain cove cornice mould, and plaster columns, is used throughout the main floor, which is finished with oak; the partitions and trim on this floor are of Georgia pine, stained and varnished. On the second floor there are 18 bedrooms; a sick bay, large lavatory and bathroom and linen closets. There is access to 4 balconies from the corridors and some of the rooms. The balconies are for fire protection and sleeping porches. On the third floor there are 18 single bedrooms and one double bedroom, a large lavatory and linen closets. There is access to the balcony roofs on this floor, also for fire protection, and outside sleeping porches. At the ends of the second and third floors, doors are provided, so that an exit can be obtained to future iron fire escapes. The floors are of wood joists, the main floor being finished in oak, and the second and third floors in birch. The partitions are of wood studs, the whole of the walls and partitions on the main or first and second and third floors being covered with lath and plaster. The trim on the main floor is of Georgia pine, stained and varnished, and on the second and third floors of pine painted. In the basement provision is made for 2 bowling alleys which will be put in later. A boiler room and fuel room are provided in the basement at the rear. Provision is also made for the installation of a public and a private lavatory. One room at the rear can be used for help and if necessary two more rooms can be erected at this end of the basement, between piers, as living quarters for any further help. The building was designed by G. C. Briggs, Supervisor of Buildings.

Fort William Interlocking Plant—A press report states that a contract has been let for the installation of 2 half interlocking plants at Fort William, Ont.

Western Lines Construction, Etc.—We are officially advised that grading and other construction work was done on 16 branch lines in Manitoba, Saskatchewan and Alberta during 1919. Grading on some of these lines had been done in previous years, while on others the grading contracts were only been let in 1919. During 1919 there were 253.95 miles of new grading completed on these lines, and 158.46 miles of track laid. On 7 of the lines, partly on grading completed previously and partly on new grading. In addition 7.15 miles of second track were laid near Munson, Alta. The following table shows the miles of grading and track laying done during 1919:

	Grading, Miles	Track laid
Amaranth extension, Man.....	11.68	
St. Rose du Lac extension, Man.....	9.31	
Alask southeastw. Sask.....	1.40	
Eston southeastw. Sask.....	25.16

Canadian National Railways Y.M.C.A. Building at Capreol, Ont.

Canada Eastern Ry.—A recent press report states that work has been started on the section of the Intercolonial Ry., known formerly as the Canada Eastern Ry., between McGivney Jct. and Fredericton, N.B., to give the National Transcontinental Ry. direct connection into St. John, over the St. John and Quebec Ry. S. B. Wass, District Engineer, Moncton, is reported to have said in Moncton, recently, that work had been started on a big rock cut near Durham, that this was the beginning of the work of the revision of the line between McGivney Jct. and Fredericton, and that this section of the line is to be brought up to the standard necessary for heavy trains. The report also states that the work will include the construction of a new bridge across the St. John River at Fredericton.

Quebec Station—A press report, Jan. 14, states that plans have been submitted to the Railways Department for the building of a station in Quebec on the site occupied formerly by the Canadian Northern Ry., and the Quebec and Lake St. John Ry. station.

Lotbiniere and Megantic Ry.—A press report states that tenders will be called for shortly by the Canadian National Rys. for building an extension of the line from Fortierville to a junction with

roof is sloped and covered with cedar shingles. An entablature of galvanized iron returns all round the building, the dormer windows of the third floor being just above the cornice of the entablature. In the center of the front elevation there is a portico of 4 piers, 2 stories high and supporting two verandahs. The main entrance doors open off the lower of these and give access to the main hall or rotunda through a vestibule. Just at the left of the entrance from the vestibule is the office and manager's room. The office is provided with sliding sash and counter. Immediately to the right of the entrance is the library, which is also provided with a counter and sliding sash. In the center of the hall and opposite the entrance there is a spacious alcove with a fireplace. To the right, columns divide off the billiard room; a games room being screened off at the back of the billiard room. An open writing room is provided at the back of the main hall between the alcove and the games room. To the left, between two columns, access is obtained to the dining room or cafeteria. If found necessary this room can be partitioned off from the main hall. Entrance through swing doors is provided, between the dining hall and the kitchen at the back of it. At the back of the main hall, between the kitchen and

Reported Merging of Railways and Canals Department and Public Works Department—An Ottawa press report states that there is a probability that the Public Works Department, and the Railways and Canals Department will be merged under one minister. The Department of Public Works, is at present without a minister.

Canadian Pacific Railway Construction, Betterments, Etc.

Appropriations for 1920—We are officially advised that the appropriations for eastern and western lines for this year provide for tie and rail renewals; bridge work, including turntables; ballasting, ditching, tile drains, etc.; tie plates and rail anchors; station and building work; siding and yard tracks; terminal and other improvements; additional coaling plant facilities at Fort William; new station terminal improvements at Moose Jaw; water supply, pipe lines, tanks, etc.; automatic signals and interlockers; fencing, repairs and renewals, British Columbia coast and river steamships, miscellaneous, telegraph work, renewals and improvements.

The cut off from Molson, Man., to Winnipeg, 83.1 miles, will have a second track build. The ballasting, ditching, tile drainage, tie plates, rail anchors and rail renewals will be largely improvements to present track. The siding and yard track work will cover extensions to present tracks at various points. The fencing will include the usual amount of repair work, as well as further tree planting, for snow protection, which was started last year.

Renewals and repairs of bridges, etc., will include, in addition to ordinary maintenance, a number of new turntables at various places, and the putting in of heavier spans at various points on the main line, as well as a large amount of culvert replacements and renewals.

Water supply work will include the renewal of several tanks in steel, as well as the installation of some new tanks and standpipes, at points where they are required owing to exigencies of traffic.

Terminal and other improvements will include the extension of various buildings at Angus ships, Montreal, as well as other important terminals throughout the system; the station and building express buildings, as well as the extension of some of the present stations and express buildings at various points.

The automatic signal will include yard and station protection at several points on both eastern and western lines, and the rebuilding of Hamilton Jct., interlocker.

The telegraph work cover the replacement of some wires on important lines with copper, as well as dispatching and telegraph system between Montreal and Smiths Falls.

The British Columbia coast, lake and river steamship work will include the usual maintenance and repairs, a new station and office building at Victoria, 2 new tugs and a new barge for the B.C. lake and river service.

Western Lines Work—D. C. Coleman, Vice President, Western Lines, returned to Winnipeg, Jan. 15, from Montreal, where he spent some days discussing the appropriations for this year's betterments and construction work. He is reported to have made a statement at Fort William, Ont., Jan. 14, as to the works to be undertaken as follows: "This year's programme of betterments, improvements and extension is the most considerable undertaken since 1913. Given a normal grain yield, we look for the heaviest volume of freight traffic we have been called on to move, and we propose to make such provision for it that the public will continue to receive the best quality of service. The work

of double tracking those portions of the line where traffic is especially dense will be resumed. It is proposed this year to double track the Molson cut off, from Molson to Winnipeg, and to provide for the handling of all through freight and passenger traffic by that route. The increasing volume of livestock traffic will be recognized by the construction of 29 additional stockyards. The housing of employees at isolated points will continue to engage earnest attention and this year 21 additional houses for section foremen and a large number of additional bunk houses for temporary section laborers will be provided. The building of branch lines to promote settlement and to serve farming districts now without transportation facilities will proceed rapidly, but a definite announcement as to what may be completed this year is deferred until the prospects as to labor supply can be gauged a little more accurately.

"At Fort William work will be started on another unit of the coal handling plant on Island 1, which even now is considered the nest on the Great Lakes. The new unit, which will take the best part of two years to build, will practically double the storage capacity which can be served by the plant."

At Winnipeg, block asphalt platforms will be laid to serve the station tracks. A new plant will be put in to provide for the more rapid cleaning and disinfecting of passenger cars, the freight car shop at Weston will be extended, and provision has been made for many improvements in the other facilities there.

At Regina the locomotive house will be extended. A new coaling plant will be erected. A further extension to the station will be erected to provide for the constantly increasing express and mail traffic, and a rearrangement of the main building will be made to provide more waiting room and ticket office accommodation. At Regina Beach, additional trackage will be provided to accommodate excursion traffic.

At Weyburn, at new building will be erected for the Dominion Express Co., and the locomotive house will be extended.

At Saskatoon, the freight shed facilities will be improved, an electric staff system will be installed on the joint section to Harwood, and at Sutherland the car shop will be completed and the locomotive house facilities improved.

At Moose Jaw, the new station and office building will be proceeded with. The platforms will be reached through a subway from the station, and the layout will be of the most modern type. A central steam heating plant will also be built and the engine house extended.

At Yorkton, the track facilities will be greatly increased and a new freight shed of much increased capacity will be built. Extensions will also be made to the locomotive houses at Wynyard, Sask., and Hardisty, Alta.

At Medicine Hat the station facilities will be improved, the locomotive house facilities increased, and an increase in freight yard tracks is on contemplation.

At Calgary a handsome new building for the Dominion Express Co. will be built east of the present Y.M.C.A. building, the capacity of Alyth freight terminal will be greatly increased by additional tracks and the ice houses' facilities will be extended.

At Edmonton there will be a rearrangement of tracks at the station with

a view to increased capacity, and a substantial extension will be made to the freight shed.

At Lethbridge, and at Macleod, there will be considerable expenditure for improvement of present facilities.

At Cranbrook, the locomotive house, machine shops, and the ice house will be replaced by new structures.

At Revelstoke, the locomotive house facilities will be materially improved.

To handle the constantly increasing fruit traffic on Okanagan Lake, an additional tug and an additional car barge will be provided and a new tug will also be placed on the Arrow lakes.

At Vancouver, work on the new ocean pier will be pressed vigorously, and there will be other improvements undertaken to provide for the handling of the growing traffic of that great port.

At Victoria, in connection with the coast steamship service, it is intended to add to the appearance of the inner harbor by erecting a fine office and terminal building.

In addition to the works already enumerated, stations will be built at Lydiatt, Harrowby, and Schweitzer, in Manitoba; at Willows, Corrinne, Insinger, Dafee, and Rutland, in Saskatchewan, and at Metiskow.

West St. John, N.B.—The new baggage shed at West St. John, N.B., described in Canadian Railway and Marine World previously, was reported to be sufficiently completed for use early in January, about a month ahead of the contract date. The painting of the structure and the installation of the heating plant were said to be the only works uncompleted. Grant and Horne were the contractors.

Rapid progress is reported to have been made with the construction of the passenger camp from the baggage shed to the pier. Permission for the construction of this camp was granted recently by the St. John City Council.

The company is reported to have given a contract to the Fegles Construction Co., Port Arthur, Ont., for the installation of the equipment in the conveyors, connecting berth 15 with the company's elevators at West St. John, at an approximate cost of \$50,000. The conveyors are being built by Grant and Horne, St. John, N.B.

Chateau Frontenac, Quebec—D. H. Mapes, Engineer of Buildings, C.P.R., addressed the Montreal Rotary Club, Jan. 13, on "Problems which face a building engineer," in the course of which he gave details of the projected extension of the Chateau Frontenac. These extensions he said will alter the front of the hotel, the new wing, which will increase the hotel's capacity by 250 rooms, running up St. Louis St. The roof of the addition will provide a lookout for guests.

Aylmer Station—A press report states that an improved station will be erected at Aylmer, Que., during this year; that a new site has been surveyed and that certain preliminary work has been done.

London Division—A. Williams, Superintendent, London Division, is reported to have stated that an expenditure of \$245,000 had been approved for betterments on the division; that the work to be done will include a new station at Ayr, at an estimated cost of \$23,000; a new station at Puslinch, at an esti-

White Pass and Yukon Ry.—The accounts for the year ended June 30, 1919, which were issued recently, show a credit balance of \$67,847, instead of a debit balance of \$48,427, as at June 30, 1918. This is reported to be due to adjustments made in the company's finances under a scheme of arrangement.

Index to Canadian Railway and Marine World for 1919.

At the end of this issue is a very complete index to the contents of the volume for 1919 which as in former years, will doubtless be fully appreciated by the large number of subscribers who bind Canadian Railway and Marine World for reference purposes.

Even a casual glance over the pages of closely printed matter will show the tremendous range of subjects covered and the thorough manner in which this paper represents the entire transportation interests of the whole Dominion, steam railway, electric railway, marine shipbuilding, express and telegraph interests, as well as railway and canal and harbor contracting work.

Caraquet and Gulf Shore Ry. Pro- posed Sale.

Gloucester, N.B., County Council is reported to have passed a resolution asking the Dominion Government to take over the line from the company and make it a Canadian National Ry. branch, or to allow the New Brunswick Act summarized in Canadian Railway and Marine World, January, on pg. 12, to come into immediate effect. The Dominion Government has power to veto acts passed by a provincial legislature within a certain limited time. The Caraquet and Gulf Shore Ry. Co. has petitioned the Dominion Government to veto the N.B. act referred to; another press report states that a proposition may be made under which Gloucester County would issue bonds for the difference of about \$50,000 between the price at which the company is willing to sell, and that which the Dominion Government is willing to give for the line.

A letter signed C. W. White, in the St. John, N.B., Globe, of Jan. 21, referring to the Caraquet and Gulf Shore Ry. says: "This road is under option to a number of New York gentlemen, who will close the transaction during February. R. D. Isaacs, of St. John, who was in Bathurst recently, went over the road with an engineer. It is fully understood that Mr. Isaacs is the purchaser for the New York parties."

C.P.R. Employees Entertained at Montreal.

On New Year's Eve, the President, Vice President and other C.P.R. officers, entertained about 6,000 of its Montreal employees at an at home at the Windsor St. station. The feature of the evening was the conveyance by picture of the season's greetings of the company's chiefs to the employees, each greeting being preceded by a portrait of the officer sending it.

The principal messages were as follows:

E. W. Beatty, K.C., President: "I wish every officer and employee a very happy new year. In doing so let me suggest that the greatest happiness can be achieved by duties faithfully performed, and that the first duty of a railway officer or employee is an appreciation of the grave responsibilities of his position and the paramount necessity of good service to the public. The high standard of the company's service can be maintained only by unremitting diligence, by courtesy, by friendly co-operation and by

unfailing pride in the company's great traditions. I trust that you will all enjoy a maximum of health and happiness during the coming year."

Lord Shaughnessy, Chairman of the company: "Peace, contentment, happiness in home and occupational life, with all other blessings, be yours in the new year."

I. G. Ogden, Vice President, Finance Department: "May I have as good wishes from you all as I send to all of you for the new year."

E. W. Beatty Urges Thrift.

E. W. Beatty contributed the following to the New York Sun recently: "With every new year we usually resolve to turn over a new leaf. If there is to be any general resolution made by the North American continent for the year, it might well be in the direction of thrift, for the first after-the-war years are causing natural concern to those who remember the financial panics which have always closed similar periods of careless spending. The extravagance noted by every recent visitor from Europe to this continent synchronizes with conditions of actual starvation affecting millions of people in Europe itself, who fought for freedom only to die for lack of food. This extravagance has been made possible, at least in part, by the heavy purchases made under stress of war by European nations on this continent. It represents the expenditure of unexpected profits, which are being dissipated, instead of placed in reserve for a rainy day. In this orgy of extravagance, Canada is just as great a sinner as the United States. In the last few weeks Canadians have been penalized to some extent for their uncurbed purchase of United States made luxuries by an adverse exchange. What the penalty to be paid by the U.S. will be, remains to be seen."

Electrification of Steam Railways.

D. B. Hanna, President, Canadian National Rys., was reported in a London, Ont., press dispatch to have said in a speech there early in January, that within a short time all Canadian railway terminals will be electrified. We are officially advised that Mr. Hanna made no reference to the matter in his speech, but subsequently in conversation with some London business men, he did say that a time would perhaps come when railway companies would be forced to face such a situation. He did not say that the C.N.R. or any other Canadian railway had any present intention of electrifying its railway.

A Toronto daily paper, which has published several apparently fake stories recently about railway matters, stated early in January that the C.P.R. had decided to electrify its whole system, main line and branches. Grant Hall, Vice President, gave a categorical denial to this at once. We are advised that while the C.P.R. management is always looking into the future and has obtained data in connection with the possibility of electrifying various portions of its lines, nothing whatever has been done towards carrying out any portion of the work, nor is there any likelihood of anything being done in the immediate future.

Saxon State Railways Deficits — A Berlin, Germany, cablegram says that the state owned railways of Saxony, show a deficit of 300,000,000 marks.

Electric Railway Department

Electric Railway Employees' Wages, Working Conditions, Etc.

London St. Ry. Employees' Co. are engaged in the struggle for the ratepayers of London, Ont., Jan. 1, the question of what the company would do with the proposed increase in fares. The president, arrived in London from Cleveland, Ohio, and after seeing the situation, it was announced Jan. 5, that the company would continue to pay the increased wages granted, in the hope that the ratepayers would authorize an increase in rates, and would endeavor to recoup itself by reducing the service given. On Jan. 12, announcement was made that the company would be a combination of service, it being stated that two cars would be taken off the Ottawa line and one each off the Oxford, Normal and Richmond routes on Jan. 16. The service will be maintained as at present on Saturdays and Sundays; 45 cars will be operated during rush hours; "trippers" will be run whenever traffic warrants, but the new schedule cuts down the service during the hours when traffic is light. The London City Council had the matter of the reduced car service before it Jan. 19, when it was referred to a committee for consideration.

Niagara, St. Catharines & Toronto Ry. Wages—A Board of Conciliation has been appointed to investigate the question of wages and working conditions of the Niagara, St. Catharines and Toronto Ry.'s employees, G. D. Kelly, Ottawa, representing the company; J. A. McAninch, representing the men, and County Judge Snider, Hamilton, Ont., being Chairman.

Ottawa Electric Ry.—F. D. Burpee, Superintendent, issued the following bulletin, Jan. 7: "Beginning Jan. 16, the following rules will apply to spare conductors and motormen. A spare conductor or motorman is one who is not booked on a regular, relief or swing run. Spare men must report at the barns or relief points at the following hours, week days, 5.50 a.m., 10 a.m., and 5.25 p.m. Sundays, 8 a.m., 11.40 a.m., and 4 p.m. After reporting they must remain as long as the relief inspector or night barn clerk wishes. They must be properly clothed in uniform and ready to work. Spare men must report also, at times other than the above, when specially ordered to do so by an inspector, night clerk, or other proper authority. If a spare man is not employed after reporting, he will be credited with the full time he is held, which time in any case will not be less than one hour. The Inspector of Reliefs (Mr. Carson) will have charge of all booking. Spare men are entitled to lay off one day in each week of seven days if they wish to do so, but this layoff day must be arranged for with the Inspector of Reliefs. Spare men will not be allowed to lay off on Saturdays, Sundays or public holidays. A spare man who does not report at the regular times mentioned above, or whenever specially ordered, will be charged with a miss for each time he fails to do so. No miss will be charged against any man when he is off duty, by arrangement with the Inspector of Reliefs, or is on leave of absence, or has reported sick. Each spare man who

has no misses charged against him, or who is not away on account of sickness, or who is not on leave of absence (except the weekly day off), will be guaranteed \$37.50 for each pay period of one-half month as a minimum wage. If the time that has been credited to him for working and reporting does not reach that amount, the difference will be paid to him on the regular pay days. Not more than 5 spare conductors and 5 spare motormen must be allowed away on leave at the same time. No leave will be granted for more than 30 days, and only then if the demands of the service permit it. In future when spare men are employed they will be considered as on probation for 6 months. At the end of this probationary period, if their conduct has been satisfactory to the Chief Inspector, they will be taken

requisition upon the council for funds to carry out its duties. The powers asked by the council provide that it may without submitting the same to the electors, pass bylaws for the issue of debentures to cover the purchase of the Toronto Ry.'s property, and for the construction of any new lines or extensions of existing lines, for rolling stock, buildings and other equipment.

Automobile Drivers' Responsibility for Collisions With Street Cars.

The Ottawa Electric Ry. will be the plaintiff in accidents due to collisions with automobiles and other vehicles where such accidents are due to careless and reckless driving of automobiles and other vehicles. F. D. Burpee, Superintendent, O.E.R., in referring to the matter recently, said: "These accidents are becoming too frequent, and so many of them result in damage to the company's cars that we are obliged to take action. Careless driving upon the part of chauffeurs is becoming very serious. There is a class of chauffeur who recklessly rush in from side streets on to the main streets, without regard to results. Many of them have an idea that if a street car is on their left hand they therefore have the right of way. This is a mistake. Streets cars, under the city bylaws, have right of way over all other traffic at all times, but apart from this fact motormen on the cars are in many cases powerless to prevent collisions. The street cars are held to the tracks. Motormen can only go ahead or back up. They cannot turn out. Their instructions from the management to exercise care at all times and to do everything possible to avoid accidents, are strict and frequently repeated. On the other hand, practically every opportunity of avoiding collision is open to the chauffeur. He can approach main streets with caution, and he can guide his automobile in any direction and at any degree of speed. The public generally is vitally interested in this growing recklessness on the part of chauffeurs. Pedestrians, as well as passengers in street cars, are in constant danger. Much can be done to minimize the danger, and to decrease the number of accidents, if the owners of automobiles will warn their drivers, and punish them when accidents occur."

J. B. Bulley, Superintendent, Cape Breton Electric Co.'s Sydney Division, was presented with a set of pipes by motormen and conductors of his division recently.

Assessments of Electric Railways—The Grand River Ry. appealed recently against its assessment in Kitchener and Preston, Ont. The Kitchener court of revision dismissed the appeal against the assessment on the company's battery building, and the company has appealed to the county judge.

Louise Bridge, Calgary—The Calgary, Alta., City Council has under consideration plans for the erection of a new bridge across the Bow River, on the site of the present Louise bridge; the new structure to be of full street width, to accommodate a double track electric railway and the ordinary sidewalk.

Canadian Electric Railway Association.

Honorary President, Lieut.-Col. J. E. Hutchinson, General Manager, Montreal Tramways Co.

Honorary Vice President, Acton Burrows, Proprietor and Editor, Canadian Railway and Marine World.

President, A. Gaboury, Superintendent, Montreal Tramways Co.

Vice President, G. Gordon Gale, Vice President and General Manager, Hull Electric Ry. Co.

Honorary Secretary-Treasurer, pro tem. A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Railway Co.

Executive Committee. The President, Vice President, and F. D. Burpee, Superintendent, Ottawa Electric Railway Co.; C. C. Curtis, Manager, Cape Breton Electric Co.; A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Railway Co.; Geo. Kidd, General Manager, British Columbia Electric Railway Co.; M. W. Kirkwood, General Manager, Grand River Railway Co. and Lake Erie & Northern Railway Co.; A. W. McLimont, Vice President and General Manager, Winnipeg Electric Railway Co.; R. M. Reade, Superintendent, Quebec Railway Light & Power Co.; Lt.-Col. G. C. Royce, General Manager, Toronto Suburban Railway Co.; C. L. Wilson, Assistant Manager, Toronto & York Radial Railway Co.

Official Organ—Canadian Railway and Marine World, Toronto.

on as permanent employees. If not satisfactory, they will be relieved from duty."

Preparing for Taking Over Toronto Railway by the City.

Following the carrying of bylaws providing for the city acquiring the Toronto Ry. on the expiration of its franchise in 1921 for the establishment of a transportation commission, and for the operation of the railway by a commission of three persons, without salary to be appointed by the city council, the city council is applying to the Ontario Legislature for the power to establish the Toronto Transportation Commission, consisting of three members, each of whom shall be a resident and a ratepayer, and appointed by the city council for three years, without salary, for the operation and control of all car lines, controlled or owned by the city. The commission's power to include the fixing of fares, so that the income shall be sufficient to make the transportation facilities self-sustaining, and to make

Ottawa Electric Railway Proposes Service at Cost.

F. D. Burpee, Superintendent, Ottawa Electric Ry., wrote the mayor of Ottawa, Jan. 21, asking that the city board of control at first opportunity take up the consideration of a service at cost arrangement as a solution of the electric railway problems. He pointed out that with the certainty that the city will not renew the franchise on its expiry in 1923, the company could not be expected to spend money in providing extensions of the service. In connection with this matter, Mr. Burpee issued the following statement Jan. 2:—

"Operating a street railway today, particularly on a 5c fare, is no bed of roses, and most companies are eager enough to have municipalities buy them out. The costs of operation increase directly with the volume of business done, and the price of every item that makes up the costs of operation has nearly doubled since before the war, but the revenue is definitely controlled by the rate of fare. Service at cost contracts are not obstructive to municipal ownership. In fact the most of those in force provide that the city can take over the railway at any time on giving a year's notice. This clause makes such a contract a stepping stone towards municipal ownership. Ottawa Electric Railway shareholders are not averse to municipal ownership, and if the city desires to purchase in 1923, will do everything possible to facilitate the transfer of the property.

"The normal increase of business which halted during the war, has resumed, and we feel sure that this increase of business will continue. Next year it will be still more difficult to handle, and increasingly so from year to year till the end of the franchise. We are making daily use of our entire plant, and we cannot help but realize that from now on the general efficiency of our plant will be affected, but the demand for constant use will steadily increase. We admit that we cannot adequately serve the Ottawa public today, but we are doing our level best and placing every available car where it will serve the greatest number of people. The mayor stated yesterday that there seemed no good reason why the company should not make the necessary extensions and additions to its assets, as there was apparently little risk that there would be a fall in prices between now and 1923, when the city, under its agreement, is bound to pay for everything the railway has at that time. We have no cash reserves to make such purchases. Our reserves are already invested in cars, power house machinery, barns, etc. As a very large amount would be required to make any material improvement in the system, the shareholders certainly do not intend to try and raise that large amount on a franchise of three years, even if it were possible to do so, which is extremely doubtful. The mayor also stated that any valuation taken today must necessarily be higher than anything we have ever known and that no one can tell how it will compare with future values. Is it not also positive that future values may be considerably higher than they are today, and this may be the case in 1923? Certainly there are no indications of falling prices. Many of the best economists in the world are of the opinion that the present standard of values is a permanent one, and that we

cannot expect ever to return to the old state of things that existed before the war.

"To put a service at cost contract into effect requires a valuation of the property to decide what return shall be made to the owners of it. It makes no difference whether the company is capitalized at one million or ten million, the value is based on what the company actually owns, not on stock certificates. Such a valuation is exactly the same as that called for by our franchise at its expiration in 1923. Why not take such a valuation now, and if prices are expected to change, provide that any time the city decides to take over the property, another valuation should be made? The mayor infers that a service at cost contract will tend to extravagant operation. One of the fundamental principles of such contracts is that all expenditures are absolutely fixed by an independent commission appointed by the public. If the company spends more money on operation than the commission has allowed the excess must be paid out of a guarantee fund which the company is called upon to maintain at all times out of the pockets of the shareholders. Some of these contracts add an extra spur to economical operation by permitting the company and its employees to share to some extent in any surplus that may accrue over and above the costs of operation.

"The promoters of this company were the pioneer electric railway men of Canada, and they naturally have more than a financial interest in the electric railway here. We have our critics, as all public utility concerns have, but it is generally admitted that in the past the city has been well served by its street railway. We are anxious to preserve that good opinion. To relieve a situation that it is clear to us will become a very difficult one in the near future, we have suggested service at cost as an immediate remedy, and have asked the city government to look carefully into it. It is being successfully operated today in a number of cities on this continent to the evident satisfaction of the riding public. We are ready to make a definite proposition after a discussion with the city's representatives, but at present suggest that the general idea of the plan be looked into, and that the fullest publicity be given to the whole question."

Toronto Railway's Snow Removal Appeal.

The Judicial Committee of the Imperial Privy Council has dismissed the Toronto Railway Co.'s appeal against the city's claim for removing snow from the streets, where it had been deposited by the company, after removal from its tracks. The specific claim was for \$14,000 for clearing snow in 1914. A London dispatch giving a summary of the judgment, states that the correspondence between the company and the city, particularly in 1914-15, showed acute difference between the parties on the subject of snow removal. The company claimed that it had the right to deposit the snow in the same places as used by the city. Local courts decided that the company's claim was untenable, and stated the company's duty in the mat-

ter. Later proceedings before the Ontario Railway and Municipal Board had the same result and the board's orders on the subject were not complied with. The judgment states that the board was practically helpless to enforce its order in this regard, as by the statutes there is nothing expressed or implied, which would give it power to penalize the company for a breach of contract. The judgment considered it the company's duty not to deposit snow on a street without having first obtained permission of the city engineers and there appeared to be no doubt that the company did so, thereby committing a breach of its statutory duty. Therefore the city is quite within its rights in seeing to the streets being cleared, and the expense so incurred, so far as applicable of the removal of improper deposits by the company, is one which the company is under obligation to pay.

The Hydro Electric Power Commission of Ontario's Electric Railway Projects.

Toronto Eastern Ry.—The City of Toronto and all the other municipalities concerned in the project for the purchase of the Toronto Eastern Ry. from the Canadian National Railways, and its completion with terminals in Toronto at a cost of \$8,360,794 have passed bylaws approving the agreement, and authorizing the issue of debentures for their several proportions of the cost. The City of Toronto vote on Jan. 1, carried the bylaw by 22,351 to 4,333, and York Township, voting Jan. 17, carried it by 252 votes to 10. Following is a list of the municipalities and the amounts of debentures authorized:

Township of York	\$ 381,587
Township of Scarborough	802,686
Township of Pickering	482,050
Township of Whitby	280,304
Township of East Whitley	239,943
Township of Darlington	429,680
Town of Whitley	277,906
Town of Oshawa	711,894
Town of Bowmanville	216,030
City of Toronto	4,328,665
	\$8,360,794

Hamilton-Galt-Elmira-Guelph Line.—Ten of the 17 municipalities interested in the project for the construction of an electric railway from Hamilton to Galt, Elmira and Guelph, voted at the municipal elections early in January on bylaws to raise their several proportions of the total of \$6,530,659, which the line and its terminals in Hamilton are estimated to cost. Eight of the municipalities gave majorities for the bylaws, and in only one case, West Flamboro, was it defeated. Following is a list of the municipalities, the amount of debentures authorized to be issued, and the number of votes for and against where the voting has already taken place:—

	For	Against
Arcastrer Tp.	\$ 174,080	425 39
Flamboro West Tp.	82,734	131 225
Beverly Tp.	241,464	328 183
Dumfries North Tp.	157,817	80 65
Dundas Town.	168,942	319 82
Waterloo Town.	379,487	439 38
Hamilton City.	607,171	5377 1742
Galt City.	1,318,031	1,029 73
Kitchener City.	1,053,080	1,174 407
Guelph City.	855,239	1,099 248
Waterloo Tp.	557,973	385 211
Woodrich Tp.	233,687	284 27
Fusliher Tp.	88,543
Guelph Tp.	92,479
Elmira Village.	91,484	271 2
Fredericton Town.	281,915	317 153
Hespeler Town.	146,261
Total	\$6,530,659	

Under the existing legislation the Montreal Tramway's Co. has to pay one-half of the cost of sewers built on the highways along the company's right of way. The company contends that it does not benefit in any way from the building of such sewers, the only benefit accruing to the owners of properties alongside the right of way, and that, therefore it should be relieved of the charge. A bill has been introduced in the Quebec Legislature to add a new section, 25b to the act, 1 George V, as amended by the act, 2, George V, as follows: "Notwithstanding any law to the contrary, the strips of land belonging to the company and constituting its right of way, when in the centre or bordering on a street, road or highway in a municipality, shall not be considered as property fronting on such street, road or highway, nor required, as such, to contribute to the cost of construction, maintenance or repairs of roads, sidewalks, waterworks, or public drains of such municipality."

Electric Railway Projects, Construction, Betterments, Etc.

British Columbia Electric Ry.—Point Grey municipal council on Jan. 13, granted the company permission to lay tracks on Grenville St. W. G. Murrin, Assistant General Manager, Vancouver, was present and explained that the company has no particular desire to build the line, but it is under an obligation to the C.P.R. to make an expenditure of \$50,000. (Jan., pg. 34).

Calgary Municipal Ry.—Tenders have been received for the supply of ties and bolts for repairs to the tracks during this year.

After lengthened consideration, the Calgary, Alta., City Council has adopted a route for the extension of the Tuxedo Park line. It favors the extension of the present Center St. line from the present terminus at Twentieth Ave. to beyond Thirty-Second Ave. In order to carry out this plan the Canadian Estates Co. is being asked to permit the removal of the present line on First St., northeast to Center Ave., and for the taking up of the present line from Twenty-Fourth Ave. northeast, this track to be relaid on the Edmonton trail to Twenty-Seventh Ave., northeast.

In connection with a recent accident on the Fourteenth St. West hill, A. G. Graves, City Commissioner, and T. H. McCauley, Superintendent, have made a number of recommendations for the re-routing of cars, the construction of new loops, improvements to the car brakes, etc., with the view of making the operation safe. A press report states that the estimated cost of the improvements is \$14,000. (Dec., 1919, pg. 670).

The Hamilton, Grimsby and Beamsville Electric Ry.'s barns at Beamsville, Ont., together with 3 passenger cars, were destroyed by fire, Dec. 28. The amount of the damage is variously estimated at from \$40,000 to \$75,000.

Kingston, Portsmouth and Cataraqui Electric Ry.—We are officially advised that the company will make necessary repairs to its track, but is not contemplating any new construction.

London and Port Stanley Ry.—London, Ont., ratepayers on Jan. 1, by a vote of 2,930 to 2,188 defeated a bylaw for carrying out various betterments on the line, and the purchase of an electric locomotive and 6 passenger cars as detailed in Canadian Railway and Marine World for January, pg. 34. The commission asked for \$218,000, but the city council cut it down to \$200,000, which was the figure voted on. P. Pocock, Vice Chairman of the London Railway Commission, is reported to have stated, Jan. 5, that the defeat of the bylaw was probably caused by the large number of money bylaws voted upon, and the total amount asked for frightened the people that the money asked for the L. & P.S.R. is absolutely needed if the commission is to take care of the traffic and that the commission will, most probably, ask the council to have the bylaw submitted again at an early date. At this year's inaugural meeting of the London Railway Commission the question of the purchase of an electric locomotive and 6 cars was laid over for future consideration. It is said to be probable that the money for this rolling stock, and betterments for which the \$200,000 is required will be obtained by means of short term loans.

The new station building at Port

Stanley, Ont., which has already been described in Canadian Railway and Marine World, was opened Jan. 19.

An agreement with the London Gas Co. for the building of a spur line to the gas works has been approved, and it was decided to make application to the gas company for permission to extend the spur to the old Hunt's mill property and the hydro electric substation. (Jan., pg. 34).

The Moncton Tramways Electricity and Gas Co.'s car barns at Moncton, N.B., were destroyed by fire Dec. 26, the estimated amount of the damage being about \$50,000. The property destroyed included the car barn, and the machine shop, together with one car and a sweeper. A watchman lost his life as a result of injuries received during the fire. The property was only partially covered by insurance, the amount awarded to the company by the adjusters being reported to be \$8,540.

The Montreal and Southern Counties Ry. Co. is asking the Dominion Parliament to extend the time within which it may build its authorized lines of railway, and for other powers. The company was incorporated by the Dominion Parliament in 1897 to build a railway to be operated by electricity or any other mechanical power except steam, from the northern limit of Chambly County, Que., through Chambly, Vercheres, Rouville, St. Hyacinthe, Laprairie, St. Johns, Iberville, Missisquoi, Brone, Shefford, Stanstead and Sherbrooke Counties to the City of Sherbrooke, Que. In 1898 it was given power to build lines also in the Beauharnois, Chateaugay, Huntingdon and Napierville Counties. Extensions of time for construction were subsequently granted, the last being one of five years, granted in 1915. The company passed under G.T.R. ownership, and its railway consists of a line built from Montreal crossing the G.T.R. Victoria Jubilee Bridge to St. Lambert and Longueuil, and a converted Central Vermont Ry. branch having a total mileage of 52.20 miles. (Dec., 1919, pg. 670).

The Montreal Tramways Co. is, we are officially advised, building a new line on Stoville St., from Mason St., to Belanger St., 1.15 miles. At present it is not contemplating doing any new construction, but the usual work of renewal of tracks will be gone on with during the coming construction season. The company contemplates the immediate construction of a new substation at Cote St., with 10,000 k.w. capacity. (Dec., 1919, pg. 670).

The Oshawa Ry. has been authorized by the Board of Railway Commissioners to lay a second track across Wilkinson and Barrie Aves., and to make changes in the location of an existing spur line in Oshawa, Ont. (Aug., 1919, pg. 449).

Port Arthur Civic Ry.—A press report states that the Port Arthur, Ont., Civic Ry. contemplates the purchase of wires, etc., for the renewal of the overhead work on 4.5 mile of single track during this year.

Quebec County—A Quebec press report states that plans have been prepared for building an electric railway to link up a number of parishes and summer resorts in Quebec County, and that the project was laid before representatives of municipalities interested at a meeting held recently at Loretteville. The suggestion is to start from the

Sillery terminus of the Quebec County Ry., a subsidiary of the Quebec Ry., Light and Power Co., run through the Sillery, Cap Rouge, La Suede, Les Sauls, Loretteville, Ancienne, Lorette, Charlesbourg and Beauport municipalities and connect with the Q.R.L. and P. Co.'s line in Limolieu Ward, Quebec City. The estimated cost is \$500,000, and the promoters are said to be ready to begin building in April.

Quebec Ry., Light and Power Co.—Some complaints having been made as to the condition of extension work on the Beauport Road, W. J. Lynch, General Manager, was reported to have said, Jan. 13, that the extension was completed and that cars were running as far as the Canadian Northern Ry. crossing by Nov. 13, two days ahead of the date stipulated on the agreement with the city. Beyond the C.N.R. tracks grading has been finished and track laid, but owing to the state of the ground, the erection of the poles for the overhead work has been suspended. It is the company's intention to complete the work with as little delay as possible. (Jan., pg. 34).

Toronto Civic Ry.—We are officially advised that there were no extensions of or additions to the track, rolling stock or buildings during 1919. The only projected extension on which there is any definite instruction at present is the double tracking of the present temporary single track line on Bloor St. West, between Quebec Ave., and Runnymede Road, 0.491 mile.

Tenders will be received to Feb. 17, for the construction and equipment of the St. Clair Ave.—Mount Pleasant Road extension. The specifications show that this work involves the widening of St. Clair Ave., east of Yonge St.; the laying of a permanent pavement, with a double track railway, along the middle of the street; the grading of Mount Pleasant Road, the installation of a temporary ballast line; the construction of bridges and trestles, and the provision of 13 cars for the operation of the line. The track will be laid with 7 in. girder rails, 122 lb. to the yard; the St. Clair Ave. track to be classed as permanent, and the Mount Pleasant Road track to be classed as temporary. (Jan., pg. 34).

Toronto Ry.—The Board of Railway Commissioners has ordered the company to pay the C.P.R. \$10,093.98, being 10% of the estimated cost of the subway at Avenue Road, and interest at 5% on half the cost of the work during construction, and on the total cost from completion, amounting to \$13,807.01, altogether \$23,900.99. (Dec., 1919, pg. 671).

The Waterloo-Wellington Ry. Co. will apply to the Ontario Legislature to amend the letters patent incorporating the company under the name of the Berlin and Bridgeport Electric St. Ry. by authorizing it to build an electric railway from Bridgeport, through the Waterloo and Guelph townships to the City of Guelph.

A press report referring to the above, prior to the official notice of the application to the legislature being published, stated that W. H. Breithaupt, Kitchener, President of the company, said that after such a line had been built the company might be induced to sell out to the Hydro Electric Power Commission of Ontario at a fair price. (Jan., pg. 33).

Mainly About Electric Railway People.

Thos. Ahearn, President, Ottawa Electric Ry., is spending some time at the University of California.

O. L. Baldwin, General Manager, Amherstburg Radial Ry., has been appointed Manager, Guelph Radial Ry. at a great salary of \$1,500. He had the reputation of being a London, Eng., man, but is reported to have married a sister of the Mayor.

Sir Adam Beck, Chairman, Hydro Electric Power Commission of Ontario, was sent to England, towards the end of Dec., 1919, where he was attacked by pneumonia, is reported to be convalescing there and hoping to be able to sail for Canada about the middle of February. He has been reappointed by the London, Ont., City Council to the London Railway Commission, which manages the London and Port Stanley Ry. for two years. He has also been re-elected Chairman L.E.R. Commission.

H. Brooker, dispatcher, Niagara, St. Catharines and Toronto Ry., St. Catharines, Ont., has resigned, and is reported to have entered Hydro Electric Power Commission of Ontario's service, in connection with the operation of the Sandwich, Windsor and Amherstburg Ry., which is being taken over by the commission.

E. P. Coleman, General Manager, Dominion Power and Transmission Co., addressed the Hamilton, Ont., scientific society, Jan. 16, on public utilities, dealing particularly with those supplying electric light and power, and operating electric railways. In the course of his address he gave an account of the origin and development of the Dominion Power and Transmission Co., and the electric railway companies owned and operated by it.

N. S. Cumming, heretofore chief clerk, Dominion Power and Transmission Co.'s railway department, Hamilton, Ont., has been appointed Superintendent Niagara, St. Catharines and Toronto Ry., St. Catharines, Ont., vice W. R. Robertson, resigned to enter the Hydro Electric Power Commission of Ontario's service.

Alderman T. J. Hannigan, Secretary, Ontario Hydro Electric Railway Association, resigned from the Guelph, Ont., City Council, Jan. 12, as a protest against the council having elected Alderman H. Westoby as mayor. Mr. Hannigan alleged that Mr. Westoby is opposed to the hydro projects, though the latter expressed himself subsequently as in favor of at least some of them.

A. F. McGill, Assistant Superintendent, Niagara, St. Catharines and Toronto Ry., St. Catharines, Ont., has resigned, and is reported to have entered Hydro Electric Power Commission of Ontario's service, in connection with the operation of the Sandwich, Windsor and Amherstburg Ry., which is being taken over by the commission.

J. Moir, Traffic Superintendent, Edmonton, Sask., Radial Ry., was suspended from duty by the mayor, Jan. 7. On the following day the mayor issued a memorandum giving reasons for the step he had taken, and making a number of charges against Mr. Moir. The committee in charge of public utilities held a meeting Jan. 9, at which the mayor withdrew all the charges made and withdrew the suspension of Mr. Moir, who was thereupon reinstated in office. Mr.

Moir then resigned his position, his resignation to take place in 30 days. On Jan. 10 the city commissioners granted him two months pay on his retirement.

A. N. Pay, Master Mechanic, Niagara, St. Catharines and Toronto Ry., St. Thomas, Ont., has resigned, and is reported to have entered Hydro Electric Power Commission of Ontario's service in connection with the operation of the Sandwich, Windsor and Amherstburg Ry., which is being taken over by the commission.

P. Pocock has been reappointed by London, Ont., City Council as a member of the London Railway Commission which manages the London and Port Stanley Ry. for a further term of two years. He has also been re-elected Vice Chairman of the commission.

W. R. Robertson, Superintendent, Niagara, St. Catharines and Toronto Ry., has resigned to enter the Hydro Electric Power Commission of Ontario's service. He is on its railway department's staff and is in charge of operation.

Herbert Grant Tulley, who has been appointed President, International Ry. Co., Buffalo, N.Y., was born at St. John's Common, Sussex, Eng., Aug. 1, 1872, and for some years was in the British army in India. On leaving the British army, he went to the United States, entered the Metropolitan Life Insurance Co.'s service, and served in various capacities from 1899 to 1905. From 1905 to 1911 he was investigator, adjutant, assistant claims agent, and officer in the Transportation Department, Chicago, City Railways, Chicago, Ill.; 1911 to Jan. 14, 1920, Assistant Superintendent of Transportation, Superintendent of Transportation, and Vice President, Philadelphia Rapid Transit Co., Philadelphia, Pa. The International Ry. operates 435 miles of track, including city services in Buffalo, Niagara Falls and Lockport, N.Y., and connecting interurban lines, and the Niagara Falls Park and River Ry. in Canada.

Senator J. M. Wilson, one of the Montreal Tramways Co.'s directors, has given \$100,000, towards the restoration of Laval University, Montreal, which was seriously damaged by fire recently.

C. J. Yorath, City Commissioner, Saskatoon, Sask., who has charge of Saskatoon Municipal Ry., was reported recently to have been appointed Comptroller-General for Manitoba. The Premier of Manitoba advised Canadian Railway and Marine World, Jan. 25, that Mr. Yorath had not received any appointment from his government.

Transcona-Winnipeg Omnibus Line—The Transcona, Man., Town Council, on Jan. 13, instructed its clerk to get in touch with Winnipeg city officials to obtain permission to establish a terminus in Elmwood for an omnibus line from Transcona; to secure estimates of the cost of motor busses and to report to a future meeting. The route of the projected line follows the Nairn Road from Transcona to the Elmwood end of the Louise bridge, Winnipeg, near the end of the Winnipeg Electric Ry. on Talbot Ave., 4.5 miles. Details of the service and the fares will be fixed at a future meeting. Several attempts to establish an electric car line between Transcona and Winnipeg have failed.

Proposals for Buying Ontario Electric Railways.

Guelph Radial Ry.—Guelph, Ont., ratemakers, by a vote of 1,056 to 287, passed a bylaw on Jan. 1 to raise \$150,000 by debentures for improving the Guelph Radial Ry. and buying additional rolling stock. It is to be operated as part of the electric railway system to be built and operated by the Hydro Electric Power Commission of Ontario.

Mayor Westoby, in his inaugural address to the city council on Jan. 19 is reported to have urged its members to co-operate in every way with the Hydro Electric Power Commission of Ontario to the end that Guelph may secure an early date the hydro radial railways promised. He is also reported to have said that the Radial Ry. will be taken over by the commission, under the terms of the bylaw, in July, when improvements in the service will be made.

Sandwich, Windsor and Amherstburg Ry.—We were officially advised, Jan. 15, that it was expected that the Hydro Electric Power Commission of Ontario will assume control of this railway, the purchase of which was authorized by bylaws, passed by the nine municipalities interested, on Dec. 6, 1919, about the middle of March. Until the transfer is made the railway will be managed by the same staff as heretofore. One of the conditions of the transfer is that any of these officials shall resign on request from the commission.

Sarnia St. Ry.—A member of the Hydro Electric Power Commission of Ontario's engineering staff visited Sarnia, Ont., recently and it was reported Jan. 16, that complete survey of the Sarnia St. Ry. and its possibilities would be commenced by the commission's engineers during February. It is expected that as the result of the survey a proposition will be made to acquire the line by the city, and to extend it.

Toronto Suburban Ry.—On Oct. 16, 1919, the Toronto Board of Control requested the Works Commissioner to confer with the government authorities to ascertain what arrangements could be made for co-operation in the operation of the "City and Suburban Street Ry." and to form a scheme of operation for the benefit of the citizens. On Jan. 2, the Works Commissioner reported that he had received the following letter from A. J. Mitchell, Vice President, Canadian National Rys., dated Oct. 30, 1919:—

"The sale of the street railway lines within the City of Toronto, owned by the Canadian National Rys., was discussed at the last meeting of our board, when it was decided that the company would consider the sale of such lines at a fair price to be agreed on with the city, or subject to arbitration, providing that the city would agree to taking over the Woodbridge extension, or providing running rights to this company on an equitable basis over the lines taken over. The whole question of the operation of electric lines is under consideration at the present time and should the Hydro Electric Power Commission of Ontario proceed with an extensive programme of hydro radials this company might make an arrangement with the commission with respect to its lines outside the City of Toronto. I presume such an arrangement would not affect, but would rather advance, what the City of Toronto has in mind with respect to radials within

the city limits. I will be glad to discuss this matter further with you at any time."

In submitting this letter to the board of control, the Works Commissioner said: "Having regard for the provisions of the agreement between the city and the Hydro Electric Power Commission of Ontario, requiring the assent of the commission to acquisition by the corporation of any such lines, will your board please adopt a policy and instruct me further?"

On Jan. 14 the board of control decided to consult the Hydro Electric Power Commission of Ontario on the matter.

Reported Negotiations for Sale of Quebec, Montmorency and Charlevoix Ry.

Under an act of 1918 the Dominion Government was authorized to acquire from the Quebec Ry., Light and Power Co., the portion of its lines known formerly as the Quebec, Montmorency and Charlevoix Ry., extending from Quebec to St. Joachim, 25.1 miles, and there connecting with the Quebec and Saguenay Ry. Although this latter line has been taken over by the government under the same act, the Quebec, Montmorency and Charlevoix Ry. has not, but the Quebec and Saguenay trains are operated over it to Quebec under traffic agreement.

A press report states that negotiations are in progress between an English syndicate, acting in close conjunction with the Delaware and Hudson Co., for the purchase of the line from Quebec to St. Joachim; the price mentioned being \$2,000,000. The D. and H. Co., through its own lines in Canada—the Quebec, Montreal and Southern Ry. and the Napierville Junction Ry.—is reported to have secured running rights which will carry it up to the Quebec Bridge. Arrangements for running rights over this bridge into Quebec can, it is stated, be secured, and as a result, the Q., M. and S.R. could be linked up and with running rights over the Quebec and Saguenay Ry., which could probably be secured from the Dominion Government, the D. and H. Co. would have a through route to Murray Bay and other tourist points on the lower St. Lawrence River.

British Columbia Electric Railway Passenger and Lighting Rates.

The British Columbia Public Utilities Commissioner gave his decision recently on the Burnaby District's complaint that the British Columbia Electric Ry. was discriminating against the municipality in its electric light rates. The company in July, 1918, faced an increase in wages and suffered a strike. Before reopening the cars the company asked for an increase of passenger fares in the City of Vancouver and in the Point Grey, South Vancouver and Burnaby municipalities. The increase was granted by all the municipalities except Burnaby, and in return for this concession the company agreed to a reduction in rates for lighting charged in the three municipalities named. The single city line, the Hastings East line, in Burnaby operate on the old fares. The Burnaby Lake line is an interurban one under the Board of Railway Commission's jurisdiction. Apart altogether from negotiations for increased fares on city lines, the company applied for, and received, author-

ity to increase them on the Burnaby Lake line from the Board of Railway Commissioners, but Burnaby municipality appealed against this decision.

The commissioner, after reviewing the whole matter, says he can see nothing in the case which implies discrimination by the company. It appears that Burnaby municipality is seeking relief from a situation which has arisen out of its council's considered action. It is probable that under the existing rates, brought about in the way described, users of electric light are sufferers in comparison with users in other municipalities who pay standardized rates, but on the other hand users of the Hastings St. car line are gainers. If this discrimination exists, it is discrimination against electric light users, but the Burnaby people are responsible therefor through their elected council. As the commissioner's jurisdiction as to fares on the Hastings St. line is to say the least of it, questioned by the 1919 amendment to the Dominion Railway Act, he considered himself only competent to deal with electric light rates, and these could not be dealt with until after a proper segregation of the company's electric light and power systems from its railways. The application was therefore adjourned until the question of jurisdiction has been definitely settled. As the company wishes to standardize both railway rates, on the Hastings St. line, and light rates, he suggested that the parties get together and come to an agreement on such a basis.

Increases in Electric Railway Freight and Passenger Rates.

Grand River Ry.—The Board of Railway Commissioners has authorized the company's standard passenger tariff 16, C.R.C. 14, fixing a fare of 2.875c a mile on all its company's lines and which went into effect Jan. 20.

London St. Ry.—London, Ont., ratepayers on Jan. 1, voted 4,080 to 3,604 against authorizing the company to increase its fares.

Ottawa Electric Ry.—In connection with the company's appeal against the Board of Railway Commissioners' refusal to grant an increase of fares on the Britannia line, which was argued before the Supreme Court of Canada, Nov. 17 and 18, 1919, the court on Dec. 22, 1919, decided that it requires further argument on the following questions:—1. Has the Board of Railway Commissioners authority to reduce the company's charge for passenger services within the City of Ottawa, below the fare of 5c now charged for any such services? 2. If the first question is answered in the negative, has the board power to require the company to provide a service partly within and partly beyond the limits of the City of Ottawa for a charge not exceeding 5c? 3. In passing upon the questions raised upon this appeal is the court in any respect governed by the Railway Act, 1919, Sec. 325? The argument will probably be heard in February. Nepean Tp. is the respondent.

Winnipeg Electric Ry.—A Winnipeg press dispatch of Jan. 28 says that the 6c street car fare there, will continue for some months. Justice Curran having stated that, even if the city should be successful in an action to obtain an injunction restraining the company from collecting such a fare, the injunction

would not become operative for many months.

Montreal and Southern Counties Ry. to Build Bridge at Granby.

Judgment was given Dec. 31, in the Quebec Court of King's Bench, upon the Montreal and Southern Counties Ry.'s appeal against a Quebec Superior Court judgment in an action brought against the company by the City of Granby. The action arose out of the interpretation of the company's franchise contract with the city; one of the clauses of which provided for the construction of a general traffic bridge over the Yamaska River by the company, and authorizing the city, if the company failed to build the bridge, to build it at the company's expense. The company had not built the bridge, because it did not want to lay its lines along the road crossing the river, but the city called for its erection. The Superior Court held that the company should build its bridge, and the Court of King's Bench, with one dissentient, has upheld that decision.

The appeal raised not only a question of the legal interpretation of the contract between the parties, but also asked whether the issue was not one for the Board of Railway Commissioners and not the civil courts to decide. Judgment, as arrived at by a majority of the court—Justice Carroll dissenting—was that under the conditions of the contract this was a question properly before the courts and that the company was wrong in its contentions. As a result, the majority judgment orders the company to build a steel bridge over the Yamaska River at Irwin St., over which vehicles and pedestrians may safely pass. If it fails to do so, the City of Granby is authorized to build the bridge at the company's expense.

Hydro Electric Power Commission of Ontario's Railway Construction—In connection with the railway work which forms part of the power development being carried out by the Hydro Electric Power Commission of Ontario in the Niagara Peninsula, we are officially advised that the Canadian Bridge Co.'s tender has been accepted for the supply and erection of 3 double track deck plate girders to be designed for Cooper's E-70 loading. Each span will be 75 ft. long, designed in accordance with Michigan Central Rd. specifications, with concrete floor for ballasted deck. The bridge will be erected at the crossing of the Niagara power development canal about 1,000 ft. east of the crossing by the M.C.R. main line of the Welland River at Montrose, Ont.

Application for Increased Fares in New York—The Receivers for the New York Ry., the Interborough Subway and Elevated Lines, in Manhattan, and the Brooklyn Rapid Transit Co., have applied to the city for permission to charge an 8c fare until June 30. It was stated that unless an increased fare is granted the companies may be compelled to suspend all traffic.

Charles Kennedy and Lewis Kennedy, father and son, were each fined \$20 at the St. John, N.B., police court, recently, for assaulting a New Brunswick Power Co.'s conductor, while in charge of a car, Dec. 26. The accused persisted in taking a dog into the car with them in contravention of the rules.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry.

The British Columbia Electric Ry. Co. held its annual meeting at Vancouver, B.C., on Jan. 15, 1920. The following officers were elected: President, J. H. McLeod; Vice-President, J. H. McLeod; Secretary, J. H. McLeod; Treasurer, J. H. McLeod.

—Cape Breton Electric Co.—

The Cape Breton Electric Co. held its annual meeting at Sydney, N.S., on Jan. 15, 1920. The following officers were elected: President, J. H. McLeod; Vice-President, J. H. McLeod; Secretary, J. H. McLeod; Treasurer, J. H. McLeod.

Edmonton Radial Ry.

The Edmonton Radial Ry. Co. held its annual meeting at Edmonton, Alta., on Jan. 15, 1920. The following officers were elected: President, J. H. McLeod; Vice-President, J. H. McLeod; Secretary, J. H. McLeod; Treasurer, J. H. McLeod.

The surplus for the month of November, 1919, was \$53,285.94.

Electric Railway Notes.

Moncton Tramways, Electricity and Gas Co., Moncton, N.B., is reported to have ordered 2 new cars, and a new sweeper, to replace the car and sweeper destroyed when the car barn was burned Dec. 26.

Calgary, Alta., City Council is receiving applications for the position of Traffic Manager of the Calgary Municipal Ry., a new position which the city commissioners recommended should be created.

The Moose Jaw, Sask., Electric Ry., is reported to have put in operation on Jan. 12, a regular 6 minute car service on the belt line in place of the irregular service in operation for some time previously.

The Toronto Civic Works Department called for tenders during January for 2 single truck cars for the Toronto Civic Ry.'s Bloor St. route. It is expected that the order will be placed about the end of February.

Calgary, Alta., City Council is reported to have ratified an agreement with the Dominion Government for carrying letter carriers on the Calgary Municipal Ry. at \$40 each per year instead of \$35 as heretofore.

The Cape Breton Electric Co. has issued an illustrated calendar for 1920. The top half of the sheet for each month contains a colored cartoon of a humorous character illustrating a phase of the safety first movement.

Winnipeg Electric Ry. employees decided, Jan. 8, by a vote of 550 to 300, to withdraw from the International Street Railway Men's Union and to form an independent union. The company employs about 1,100 men.

By order of the Montreal Tramways Commission, the public were given the privilege of using the Montreal Tramways Co.'s cars at the ordinary day rates from midnight to 5 a.m. on Christmas and New Year's mornings. The regular night fare between these hours is 15c cash.

The Toronto Board of Control, on Jan. 21, made an order for the return of reports made in 1918 in connection with the proposed building of a civic car factory in Toronto, so that it may again consider the question of the building of cars by the city for the operation of the civic railway.

The Toronto Police Commissioners are paying the Toronto Ry. \$100 a year each for badges to be used by plainclothes men and detectives, when riding on the company's cars. It was announced early in

January that 160 of these were in use, but that the number will probably be considerably curtailed.

The Detroit United Railway adopted the queue system recently at Detroit, Mich., for handling crowds during the rush hours. Both the front and rear doors of the car are utilized, and two lines of intending passengers are formed, one for each door. Extra conductors are placed at each end to facilitate collection of fares.

The case of the City of Winnipeg Electric Ry., respecting the validity of the order, made by the Public Utilities Commissioner for Manitoba, increasing car fares, was set down for hearing at the sittings of the Manitoba Court of King's Bench, which opened Jan. 26. The city questions the validity of the Public Utilities Act.

The Toronto Board of Control, after considering the Imperial Privy Council's judgment on the Toronto Railway's appeal against the penalty of \$1,000 a day for noncompliance with an order of the Ontario Railway and Municipal Board to provide additional cars, decided that an application be made to the board forthwith for the enforcement of the original order.

The Quebec Ry., Light and Power Co. is reported to have announced, Dec. 24, that all tickets purchased at the rates in force prior to the recent increase in rates, would be accepted for transportation on the cars at face value. It was originally stated that these tickets would only be accepted on the cars for one month after the new rates went into force on Nov. 20, 1919.

The Toronto Board of Control, on Jan. 21, voted \$200,000 for the purchase of motor cars for operation on the civic railway, chiefly, to relieve congestion on Danforth and St. Clair lines. The Works Commissioner was instructed to buy cars making the best possible arrangement, preference to be given to Canadian car building companies, but not to close any deal without further instructions from the board.

The Fort William Municipal Ry. has bought 14 cars from the Cleveland St. Ry., Cleveland, Ohio, to replace those destroyed by fire in Dec., 1919. They are somewhat shorter than those being operated at present in Fort William. Two arrived at Fort William towards the end of January, and were immediately overhauled and put in service. The price paid for the cars delivered at Fort William is approximately \$4,800 each.

At the British Columbia Electric Ry., Vancouver Island employees' annual dinner at Victoria, recently, A. T. Goward, Local Manager presiding, it was stated that the company's employees in the Island Division, who enlisted for overseas service, 11 were killed and 14 wounded in action. Of the company's employees in the whole province, 564 enlisted, and of these 40 were killed in action, 41 wounded, and 81 died. Of the remainder, 318 had returned.

Edmonton, Alta., Radial Ry. employees are reported to have requested the city commissioners to discontinue the opera-

tion of one-man cars, and to put two men in charge of all cars. The men contend that it is too much to expect one man to punch transfers, collect transfers, give change, sell tickets, attend to fare box and run a car on schedule time, that it is taking altogether too great a risk, is unreasonable, and that the service would be greatly improved by its alteration. It is stated that during certain periods of the a second man is placed on the one man cars to enable the work to be done.

The Board of Railway Commissioners, sitting at Kitchener, Ont., Jan. 12, had

under consideration the Grand Trunk Ry.'s appeal for an order to direct the Kitchener Light Commission, operating the Kitchener and Waterloo St. Ry. to pay 50% of the cost of the watchmen at the King St. crossing at Kitchener. It is stated that the Kitchener commission at present only pays 2c a day towards the watchmen's wages, which amounts to \$9.75, and the G.T.R. claims that a fourth man will have to be employed. Commissioner Goodeve, who heard the application, recommended the parties to come to an agreement and report.

The Canadian Electric Railway Association Expresses its Appreciation of Its Honorary Secretary-Treasurer.

On the eve of leaving Toronto for a short New Year's holiday, Acton Burrows, who resigned the Honorary Secretary-Treasurership of the Canadian Electric Railway Association recently, after having been unanimously re-elected for 12 years, and who has been elected an honorary member of the association and its Honorary Vice President, was entertained at luncheon at the Albany Club, Toronto, by a number of officials of electric railways which are members of the association, the arrangements having been made by a committee, consisting of A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Ry.; Lt.-Col. G. C. Royce, General Manager, Toronto Suburban Ry.; and C. L. Wilson, Assistant Manager, Toronto & York Radial Ry.

After the King's health had been drunk, the association's President A. Gaboury, Superintendent, Montreal Tramways Co., who occupied the chair, said: "I need not explain the purpose of this luncheon, unfortunately we all know it too well, but I certainly cannot let the occasion go by without saying a few words of the great loss the association has sustained in the resignation of its Honorary Secretary-Treasurer, Acton Burrows, who has acted for so many years in that capacity, who has rendered such valuable services to the association, who has, as a matter of fact, sacrificed a great part of his time and energy, possibly to the detriment of his own personal affairs, for the purpose of helping along the Canadian Electric Railway Association, and making it a success. It is safe to say that it is the unanimous opinion of every member, from coast to coast, that much of its success has been due to the energy, experience and courage displayed at all time by our good friend Acton Burrows.

"Mr. Burrows, we have had the pleasure of knowing you for a great many years, and in those years you have made us feel that we could call upon you for all the help and assistance that lay in your power. You have always replied to any request for information, cheerfully and conscientiously, and I can assure you that we have appreciated and do still appreciate the courtesy and kindness you have always shown, both in your capacity of Honorary Secretary-Treasurer of the association, and as a personal friend. As a mark of our esteem we herewith tender you a small token of the very deep affection and love that all the members of the association feel for you. Do not accept the tokens at their price value, they are not intended as such, but accept them as a

reminder of deep attachment and friendship that will last forever."

The presentation consisted of a large Sheffield plate tray, silver on copper, with mounts, silver milled and hand engraved, and a Sheffield plate coaster, both of the period from 1800 to 1820, and several pieces of cut glass. The tray bore an engraved inscription "Presented to Acton Burrows by Canadian Electric Railway Association, Dec., 1919." Mr. Burrows expressed briefly his deep appreciation of the presentation, and of the too flattering manner in which Mr. Gaboury had spoken of his services, and assured the donors that although he felt compelled, owing to his business and personal affairs requiring his whole attention, to resign the honorary secretary-treasurership, he would always be at the association's disposal, and he hoped to continue to meet the members on many future occasions and to be in frequent correspondence with them from the Canadian Railway and Marine World's office.

The following, among those present, also spoke, A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Ry., and Honorary Secretary-Treasurer pro tem of the association; E. P. Coleman, General Manager, Dominion Power & Transmission Co.; E. W. Oliver, General Superintendent, Niagara, St. Catharines & Toronto Ry.; C. L. Wilson, Assistant Manager, Toronto & York Radial Ry.; F. D. Burpee, Superintendent, Ottawa Electric Ry.; W. J. Radford, Assistant Manager, Toronto Suburban Ry.; Jas. Anderson, Vice President, Sandwich, Windsor & Amherstburg Ry.; J. F. Deadey, Superintendent, Mimico Division, Toronto & York Radial Ry.

A. Eastman, acting Honorary Secretary-Treasurer, pro tem, read a number of telegrams and letters, received from officials of companies which are members of the association, from which the following are extracts:

E. P. Coleman, General Manager, Dominion Power & Transmission Co., Hamilton, Ont.: "We greatly regret to note that our Honorary Secretary-Treasurer, Acton Burrows, has felt constrained to tender his resignation to the association. We consider this a very serious matter, as there is no doubt that the success of the association in the past has been mainly due to the efficient and unselfish ministrations of our honored and Honorary Secretary-Treasurer and his wise direction of its affairs."

C. C. Curtis, Manager, Cape Breton Electric Co., Sydney, N.S.: "Please convey to Acton Burrows, the grand young

man of the C.E.R.A., my regret at being unable to be with you today, also my best wishes for a happy and most successful New Year."

E. J. Dickson, Vice President, International Ry., Buffalo, N.Y.: "Regret impossible to attend luncheon. Kindly convey our very best wishes to Mr. Burrows for all manner of success in the future."

G. Gordon Gale, Vice President, Hull Electric Co.: "I regret that I shall not be able to be in Toronto for the luncheon. I should very much like to join with you all in the presentation which will take place at that time."

Lt.-Col. J. E. Hutcheon, General Manager, Montreal Tramways Co., Montreal: "I am pleased to note that a presentation is to be made to Mr. Burrows. I would like very much to be present, but I fear that my attention will be required here during the entire week, on matters of very great importance to the company. If it is at all possible to get away, I assure you I will be present. Mr. Burrows has been of very great value to the association, in the many years he has occupied office, and we cannot do too much on his retirement to show our appreciation."

C. B. King, Manager, London Street Ry., London, Ont.: "We are very sorry that Mr. Burrows finds it necessary to discontinue serving as Honorary Secretary-Treasurer. Personally I feel the association may be quite unable to secure a substitute."

M. W. Kirkwood, General Manager, Grand River Ry. and Lake Erie & Northern Ry., Galt, Ont.: "It would really be a pleasure to attend the luncheon, but owing to press of business, it is not possible for me to do so."

A. W. McLimont, Vice President and General Manager, Winnipeg Electric Ry., Winnipeg, Man.: "Unfortunately it will be impossible for any of this company's officials to be represented at the luncheon to be tendered Acton Burrows. I personally regret very much not being able to attend, as there is nothing that the members of the C.E.R.A. can do that would be more than Mr. Burrows' untiring efforts for the association's interests have entitled him to."

C. U. Peeling, Manager, Cornwall Street Ry., Light & Power Co., Cornwall, Ont.: "While our company cannot be represented at the luncheon we heartily concur in the association's action, and regret that we have been unable to show our appreciation of Acton Burrows' services at an earlier date."

W. B. Powell, General Manager, Montreal & Southern Counties Ry., Montreal, Que.: "I regret very much that owing

being being very much favored at present, and it is probable to send a representative.

T. M. Rease, Superintendent, Quebec Ry. & Power Co., Quebec, Que.: "My best thoughts and wishes go out to all of you at this time, and I regret exceedingly my inability to be present, even to wish you of good being the best part of our winter season. We have the James Arthur Burrows, since after 14 years' absence from a winter home in particular, a situation in which he is active and always in action, the man who has done the most for the association, and Dec. 20, 1919, was called out as evidence of his sterling character and worth, showing the great outdoors, and I may say affection, we all have for him. Here's to his very good health and happiness, and I hope that as Honorary Vice President of the Association he will give us the benefit of his mature experience in things 'electro-politico.' I feel we can count on his hearty co-operation, not only now in the re-organization, but in the years to come."

H. E. Weyman, Manager, Levis County Ry., Levis, Que.: "Sorry cannot attend. Please accept my esteemed appreciation."

W. S. Hart, Secretary - Treasurer, Three Rivers Traction Co., Montreal, wrote Mr. Burrows personally: "I regret to note from circular issued by Mr. Eastman that you have resigned as Honorary Secretary-Treasurer of the Canadian Electric Railway Association. I am hardly surprised at that action as certainly it must have been a great sacrifice to you to give up so much time as you have to the affairs of the association. The high standing of our association is such that I feel we should testify our gratitude for the work that you have done. I have not been a very important factor in the association, but all of my relations to it have been of a most satisfactory nature."

Calgary Municipal Railway Operating Results.

City Comptroller Wood in a report upon the operations of Calgary, Alta., public utilities for the 11 months ended Nov. 30, 1919, is reported to have said: "In the street railway department, there was a deficit at the beginning of the year which totalled \$7,118.24. Increased traffic, especially during the autumn and early winter, however, quickly brought a surplus to this department, and at the end of November, the total actual revenue of the lines was \$736,559.05, as against total expenditures of \$713,182.64 leaving a surplus of \$23,376.41. The milder weather of December, it is expected, will cut down the revenue somewhat as compared to November, but the figures indicate that the lines will finish the year with a surplus of approximately \$25,000. The unfortunate accident of Dec. 20, will have no effect on the profits of the line, for the reason that such accidents are paid for out of a special reserve fund created by taking 2% of the gross profits each year and setting them aside for this purpose. At the beginning of 1919, there was \$18,667 and the 2% of the gross this year will add another \$15,000 about. However, a number of other minor accident cases had to be paid for out of the money on hand at the beginning of the year so that the recent accident will just about clean out the reserve fund."

A press report of Jan. 6, stated that the result of the year's operation would be about as follows:—

Operating expenses \$1,100,000
Maintenance 1,000,000
Interest 100,000
Depreciation 100,000
Total 2,300,000

The cost of operation is not given, but it is stated that the surplus is expected to be from \$25,000 to \$30,000.

In connection with these figures, T. H. McCauley, Superintendent, is reported to have given the following additional information:—"The total hours of operation for the year ended Dec. 31, were 304,396. On this basis, with 2 men on a car at 60c an hour, or \$1.20 an hour, the cost would have been \$365,515.20. With one man on a car, at 65c an hour, the cost was \$197,987.40, a saving of \$167,527.80. To this must be added saving in double time for holidays of \$8,223.60; saving on uniforms of \$5,550; winter trousers, \$1,612.50; saving on caps, \$487; a total saving of \$185,613.10.

Suits Against Montreal Tramways Co.

The Quebec Superior Court, sitting at Montreal, Jan. 14, awarded \$465.50 damages and costs in favor of George Gautier, against the Montreal Tramways Co. In Nov., 1917, the plaintiff was a passenger on one of the company's cars and after he had got off and was waiting for it to move on, the conductor, it was alleged, deliberately kicked him in the eye, causing a severe wound. There evidently had been some wrangling between the plaintiff and the conductor before the former got on the car, and the conductor admitted that in endeavoring to close the door of the car he touched the plaintiff, but without intending in anyway to cause him injury.

The Quebec Superior Court, sitting at Montreal, Jan. 12, gave a verdict in favor of the Montreal Tramways Co. in an action brought against it by Mrs. McConnell, who claimed \$2,000 damages for the death of her husband, caused by W. T. Mattice, an Italian. The evidence showed that McConnell was a passenger on one of the company's cars, May 17, 1917, on which the conductor had an altercation with an Italian. The Italian was ejected, but ran after the car, boarded it, and drew a knife. The conductor retreated to the interior of the car and closed the door. The Italian being in a rage turned on the passengers on the platform, inflicting such injuries on McConnell that he died June 8, 1917. The plaintiff alleged that the conductor did nothing to protect the lives and safety of the passengers on the platform. The court held that the death of the passenger was due to the criminal act of the Italian, and that the plaintiff had failed to prove the essential allegation of her claim, viz., the responsibility of the Montreal Tramways Co.

The Nova Scotia Tramways and Power Co.'s 24 safety cars, which are being built by the American Car Co. for the Halifax tramways service, as mentioned in a previous issue, are of the following general dimensions,—length over bumpers, 28 ft., ½ in.; length over dashers, 26 ft. 9½ in.; length of body, 17 ft. 9½ in.; width overall, 8 ft.; width over side plates, 7 ft. 8 in.; width inside, 7 ft. 2 in.; height from rail to roof, 9 ft. 10½ in.; height from rail to floor, 2 ft. 4 15-16 in.; wheel base, 8 ft. The cars have seating capacity of 32 persons each, and arrangement is made for fitting a

hinged seat against each vestibule, which is folded up when the door adjacent thereto is in use. The weight of each car is approximately 7½ tons, and owing to the installation of special safety devices, it is claimed that they can be operated on shorter headway. The safety devices applied to the cars are interlocked with a controller and brake handle, and it is necessary for the motorman to hold the control handle down to keep the car in motion, the releasing of the handle through any cause automatically cutting off the power, applying the brakes and releasing the pneumatically operated doors. Approximately 75% of the weight of the car body and passenger load is supported on swing links, suspended by the ends of quarter elliptic springs on the four corners of the truck.

Winnipeg Car Routing.—The Winnipeg Electric Ry. some time ago arranged a rerouting on a number of its car lines; Elmwood residents protested against the rerouting insofar as it had effected a reduction on the three lines serving the Elmwood and East Kildonan districts. The Public Utilities Commissioner heard the case Dec. 23, 1919, and gave his decision Jan. 15, stating that the effort to make a through route over the whole district, including Sutherland Ave., and Talbot Ave. West, will never be satisfactory, and he therefore disapproved of it. He approved the looping of the Elmwood line at Donald and Ethel Sts. The consideration of the route to be taken by the Morse place cars, whether the old route will be restored, or a new one arranged was held over for further consideration.

MARINE DEPARTMENT.

Facilities for Aiding Early and Late Navigation on St. Lawrence River.

Early in January the Quebec Board of Trade wrote the Minister of Marine urging that facilities be provided to assist early and late navigation on the St. Lawrence River. Mr. Ballantyne replied in part as follows:—"The casualty that befell the s.s. Canadian Recruit is very much to be regretted indeed. The very severe ice conditions that resulted in the loss of this ship came about at a much earlier period than was anticipated here with regard to the experience of previous years. So far as the s.s. Canadian Spinner is concerned, while the situation is extremely serious, it is hoped it may be possible to rescue her from the other end.

"I have realized for some time that the facilities available for assisting vessels to navigate the St. Lawrence River after severe weather sets in are quite inadequate. For reasons that I am sure will commend themselves generally, the Marine Department consented to the transfer to the Russian Government of the ships that would be really effective in combatting the ice conditions in the St. Lawrence. My present intention is to take such steps as may be necessary to provide equipment that will be reasonably adequate to assist any ships that may find it necessary to navigate the St. Lawrence after the ice conditions become severe. The representations submitted as to the extent to which facilities should be provided will be borne in mind by me in the course of the further consideration that the question will receive."

Marine Department

Canadian Government Merchant Marine, Ltd., Shipbuilding, Operation, Etc.

Orders for Cargo Steamships—Canadian Railway and Marine World for January gave particulars of orders placed by the Marine Department for 56 steel cargo steamships for operation by Canadian Government Merchant Marine Ltd., and also referred to further orders which were being negotiated for on Jan. 12, we were officially advised that the following additional orders had been decided on:

Collingwood Shipbuilding Co., two ships, approximately 3,890 d.w. tons each, one will be built at Collingwood, Ont., and one at Kingston, Ont.

Nova Scotia Steel and Coal Co., New Glasgow, N.S., one ship, approximately 2,800 d.w. tons.

Total value, 15 ships	\$54,234,635
Average cost per ton	\$199.63

Summary 2.	
No. of contracts agreed upon since signing of armistice, Nov. 11, 1918.....	15
Total d.w. tonnage.....	88,280
Total value, 15 ships.....	\$15,287,625
Average cost per ton.....	\$173.17

Summary 3.	
Total no. of contracts agreed upon to Jan. 12	60
Total d.w. tonnage.....	359,945
Total value, 60 ships.....	\$69,522,260
Average cost per ton.....	\$193.14

Summary 4.	
No. of ships completed to Jan. 12.....	23
Total d.w. tonnage.....	121,375

Summary 5.	
No. of ships turned over to Canadian Government Merchant Marine Ltd., to Jan. 12, and in service.....	19
Total d.w. tonnage.....	99,885

12; approximately 8,100 d.w. tons; J. Coughlan & Sons, Vancouver, B.C.; Dec. 27, 1919.

S.s. Canadian Inventor; Marine Department contract 36; builders' yard no. 13; approximately 8,390 d.w. tons; J. Coughlan and Sons, Vancouver, B.C., Jan. 24, 1920.

Deliveries of Steamships—In addition to the steamships mentioned in Canadian Railway and Marine World previously, the following were delivered to the Marine Department by the builders on the dates mentioned.

Dec. 20, 1919; s.s. Canadian Sealer; Marine Department contract 40; builders' yard no. 5; approximately 2,800 d.w.

Steel cargo steamship, Canadian Navigator; approximately 4,300 d.w. tons; built for Canadian Government Merchant Marine Ltd., by Canadian Vickers Ltd., Montreal.

Davie Shipbuilding and Repairing Co., Lauzon, Que., one ship, approximately 8,390 d.w. tons.

Fuller particulars of these ships are given in the table on pg. 90 of this issue.

In connection with the shipbuilders' deputation which waited on the Dominion Government on Jan. 7, it is said that the orders for steel cargo steamships will be increased from the 60 already placed to 70, and negotiations are under way in this connection.

J. J. Coughlan, of J. Coughlan and Sons, Vancouver, on returning there recently from Ottawa, where he spent some time, is reported to have said that he had arranged for orders for two ships of approximately 8,100 d.w. tons each. The Port Arthur Shipbuilding Co. was reported on Jan. 10 to have received an order for one ship of approximately 3,940 d.w. tons, in connection with which we were officially advised Jan. 26, that negotiations were proceeding, but that details had not been agreed on.

Statistics re Orders, Deliveries, Etc.—The following information has been furnished by the Marine Department as of Jan. 12:—

Summary 1.	
No. of contracts agreed upon before date of armistice, Nov. 11, 1918.....	45
Total d.w. tonnage.....	271,665

Passenger Ships to Be Ordered—As fully reported on pg. 96 of this issue, the Minister of Marine in speaking at the Dominion Marine Association's dinner in Montreal, Jan. 9, stated that the government has under consideration the building of combined passenger and freight ocean steamships of about 15,000 gross tons, and a speed of 18 knots, to be operated by Canadian Government Merchant Marine and that they will be built in Canada. The Marine Department's Naval Constructor, C. Duguid, is now in Great Britain on official business and while there will probably look into the most up to date practice for this class of ships.

Keels Laid—Since our last issue we have been advised of the laying of the following keel:—

S.s. Canadian Victor; Marine Department contract 50; builders' yard no. 77; approximately 3,350 d.w. tons; Canadian Vickers Ltd., Dec. 10, 1919.

Launchings of Steamships—Since Canadian Railway and Marine World for January was issued, we have been advised of the following launchings:

S.s. Canadian Exporter; Marine Department contract 35; builder's yard no.

tons; Nova Scotia Steel & Coal Co., New Glasgow, N.S.

Dec. 27, 1919; s.s. Canadian Rancher; Marine Department contract 14; builders' yard no. 6; approximately 5,100 d.w. tons; Tidewater Shipbuilders Ltd., Three Rivers, Que.; delivered to Marine Department, Dec. 27, 1919.

Dec. 27, 1919; s.s. Canadian Planter; Marine Department contract 28; builders' yard no. 72; approximately 8,100 d.w. tons; Canadian Vickers Ltd., Montreal.

Jan. 17, 1920; s.s. Canadian Raider; Marine Department contract 7; builders' yard no. 102; approximately 5,100 d.w. tons; Wallace Shipyards Ltd., North Vancouver, B.C. She was transferred to Canadian Government Merchant Marine Ltd., and is taking a cargo of lumber to Australia.

As stated above, 23 of the 60 ships ordered had been completed up to Jan. 12, and of these 19 had been transferred to Canadian Government Merchant Marine Ltd., for operation.

Officers of Steamships—The following officers have been appointed by Canadian Government Merchant Marine Ltd. The first column contains the names of the ships, the second those of the cap-

...and the Marine House of the United Kingdom.

Deadweights of Steamships—Canadian Government Merchant Marine. With the St. Lawrence, the Dominion Government has been able to secure the use of the St. Lawrence River for the purpose of shipping goods to the United Kingdom. The final determined weights at the present time are as follows: The Dominion Government Merchant Marine Ltd.

Steamship Services—Canadian Railway and Marine World for January mentioned that the Vancouver Board of Trade was reported to have received word that the Dominion Government Merchant Marine Ltd.

It is stated that British shipping freights are about 50 per cent. in the continuous reduction of over 80 per cent. daily. The Canadian Industrial Reconstruction Association has prepared a memorandum for the consideration of the Dominion Government to bring about its return to stability, from which the following is selected: "Utilize Canadian service. Shipments should be made over Canadian carriers and in case of overseas exports through Canadian ports in Canadian ships." That this recommendation is sound, must be quite obvious. Why not assist in the building up of Canada's treasury by patronizing Canadian owned vessels? The Dominion Government is, at the public expense, establishing a merchant marine, known as Canadian Government Merchant Marine Ltd., operated by the Canadian National Ry. Bd. There are in service at this date, 26 ships in the following trade routes, viz., 11 to the United Kingdom; 10 to the British West Indies and

The s.s. Canadian Spinner, which, as reported in our last issue, was captured in the St. Lawrence River, near Matane, while on her voyage from Quebec to Halifax, N.S., was released subsequently from the ice, with the aid of the Dominion Government s.s. Montcalm, and arrived at Sydney, N.S., Jan. 13. She sailed from Quebec at 7 a.m. Dec. 29, with part of a general cargo for Rio de Janeiro, Santos and Buenos Aires, which was to be completed at Halifax and very soon experienced trouble with ice. She passed Crane Island Dec. 16, at 2 p.m., was off Murray Bay Dec. 17, at 9 a.m. and passed Red Island Dec. 18 at 10 a.m. Shortly afterwards she was reported as unmanageable through ice, and to be drifting with the current, with her rudder post broken. She passed Metis Dec. 23, and made some little headway, owing to a momentary slackening of the ice, which, however, closed in again about Dec. 27. Pointe des Monts was passed Dec. 29, and on Dec. 30 she was

Steel cargo steamship, Canadian Gunner; approximately 4,500 d.w. tons; for Canadian Government Merchant Marine Ltd.; built by Collingwood Shipbuilding Co., Collingwood, Ont.

would establish a steamship service between Montreal, Halifax and British Columbia ports, via the Panama Canal. We are advised that this matter has been brought to the Canadian Government Merchant Marine managements' attention on several occasions, and that the inauguration of such a service has been agreed, but the management has not been able to satisfy itself that it could be made to pay, and nothing definite has therefore been done in connection with the matter.

In reference to the petition sent by the Canadian Merchant Service Guild to the Minister of Marine, asking that a government passenger steamship service be established between Vancouver, Victoria and San Francisco, we are advised that the same has been referred to the Canadian Government Merchant Marine management in connection with the matter.

D. O. Wood, Traffic Manager, Canadian Government Merchant Marine Ltd., has issued a circular to Canadian importers and exporters as follows: "Freight discharges declare that trade returns show British trade is once more solvent.

Cuba; 3 to Brazil and South America; 2 to Australia and New Zealand, with 34 vessels to follow within 12 months. The attention of the principals of all exporting and importing firms is particularly drawn to these facts, and their co-operation is earnestly desired."

The s.s. Canadian Sealer, which was delivered to the Marine Department by the Nova Scotia Steel and Coal Co., Dec. 20, 1919, and which was sent subsequently with supplies for the Magdalen Islands, was reported to have been caught in the ice at Souris, P.E.I., Jan. 19. The D. G. S. Montcalm was sent to break the channel through to the Canadian Sealer and take the Magdalen Island supplies from that steamship to the Magdalen Islands, about 75 miles from Souris. The transfer of the supplies was accomplished and the Montcalm left Souris, Jan. 24, but by noon, Jan. 27, she had made barely 25 miles and was practically ice bound. It was later reported that she was drifting away from the Island with the current, and that she had been ordered to abandon the trip temporarily and try to make for Halifax, N.S.

off Cap Chats, being reported as about 15 miles from shore, with the wind and current gradually driving her farther out, and towards Cap Magdalen. The master reported by wireless that the ship was in no immediate danger, and that everything was well on board. On Jan. 2, she was reported about 5 miles off shore, and 3 miles west of Cap Magdalen. On Jan. 3 at 9 a.m., it was announced that she was nearly clear of the surrounding ice and about a mile east of Fame Point. During the drift, temporary repairs were made to the broken rudder post. The Dominion Government icebreaking s.s. Montcalm was ordered up the Gulf from Sydney, N.S., to aid the Canadian Spinner, and on Jan. 5 sighted her about 20 miles east of Fame Point, where she had again become ice-bound. At this time the Montcalm was about 50 miles east of Fame Point. A way was gradually made through heavy ice, the Canadian Spinner being off Southwest Point on Jan. 6, the ships meeting on Jan. 7. The Montcalm led the way out of the ice, and both ships were reported to be at 48 n. 60 w. at noon Jan. 12, arriving at Sydney, N.S.,

Mainly About Marine People.

Capt. Barrett, of the Keystone Transportation Co., has been appointed head of the School of Navigation, in connection with Queen's University, Kingston, Ont.

Commander Sir A. Trevor Dawson, R.N., one of the directors of Vickers Ltd., London, Eng., and of Canadian Vickers, Ltd., Montreal, also Chairman, Canada Steamship Lines London, Eng. Advisory committee, who was a knight bachelor, has been created a baronet.

A. E. Disney, heretofore Passenger Agent, White Star Line, Seattle, Wash., has been appointed Assistant General Manager, White Star Line, New York.

Chas. Duguid, Naval Constructor, Marine Department, left Ottawa, about the middle of January, for Great Britain, on official business, expecting to be away a month or six weeks.

A. C. Garden has been elected chairman of the Hamilton, Ont., Harbor Commission.

Capt. W. L. Gilchrist, master of the C.P.R. s.s. Princess Patricia, has been elected President of the Canadian Merchant Service Guild.

M. J. Haney, Vice President, Canada Steamship Lines, Ltd., and a director of Canadian Locomotive Co., has retired from the presidency of the Home Bank of Canada.

Francis King, of Kingston, Ont., General Counsel, Dominion Marine Association, whose portrait appears in this issue, was born at Kingston in 1870. He is an M.A. of Queen's University, Kingston, 1890, was called to the bar in 1892, and in 1903 formed a partnership with Geo. H. Smythe, B.A., son of the late E. H. Smythe, K.C., LL.D.; the firm name being King & Smythe. He assisted in the formation of the Dominion Marine Association in 1903, and has been connected with it since; first as Secretary Treasurer, and since as General Counsel. He has been a member of council of Queen's University since about 1900, and is now Counsel for the university. He is an Anglican, and has been Honorary Lay Secretary of Ontario Diocese for the past 10 years. He is a member of council of Ontario Bar Association, and chairman of its committee on legal ethics, a member of board of commissioners (three in number) appointed three years ago by the Ontario Government to act with commissioners from the other provinces in promoting uniformity of legislation throughout Canada, was President, Kingston Board of Trade, in 1917 and 1918, and is President, Frontenac Club, Kingston, 1919-1920.

Alphonse Arsene Laroque, who has been elected Second Vice President, Dominion Marine Association, was born at Henryville, Que., April 30, 1865. From 1904 to 1918 he was Managing Director, Sincennes-McNaughton Line, Ltd., Montreal, and since 1918 has been President of that company. He has also been President, Sorel Mechanical Shops, Ltd., Sorel, Que., from 1916; President, Montreal Drydocks and Ship Repairing Co., Ltd., Montreal, since 1917; and a director of the Banque d'Hochelega, Montreal, since 1912.

Capt. G. LeMarquand, formerly of Bay City, Wash., has been appointed Manager, Consolidated Whaling Co.'s plant, Victoria, B.C., vice S. C. Ruck, who has left the company's service.

Frederick Orr Lewis, President, Canadian Vickers Ltd., shipbuilders, etc., and of Lewis Bros., Ltd., wholesale hardware merchants, Montreal, who has

A. A. Laroque, President, Sincennes-McNaughton Lines Ltd., and Second Vice President, Dominion Marine Association and Canadian Lake Protective Association.

Francis King, M.A., General Counsel, Dominion Marine Association and Canadian Lake Protective Association.

spent a considerable portion of his time in England during the last few years, has been created a baronet. He was born

at Hamilton, Ont., Feb. 11, 1862, his father being a shipowner on the Great Lakes, who retired from active business in 1890.

A. E. Mathews, Managing Director, Mathews Steamship Co., Toronto, and President, Dominion Marine Association, and Canadian Lake Protective Association, is spending a few weeks in Florida.

J. C. Mitchell, has been appointed Assistant Manager; **N. R. Nichol** has been appointed Inspector of Construction, and **F. Rockwell** has been appointed Superintendent of Construction, Toronto Harbor Commission.

Thomas R. Percy, who was appointed General Agent Canadian Pacific Ocean Services Ltd., Yokohama, Japan, recently, was born in Ireland, Apr. 21, 1888, and entered transportation service in March, 1902, since when, he has been to April, 1907, freight traffic clerk, Belfast and Northern Counties Ry. (Midland Ry.), Belfast, Ireland; May, 1907, to Jan., 1916, steamship audit clerk, C.P.R., Montreal; Jan., 1916 to Aug., 1919, chief clerk, Passenger Department, Canadian Pacific Ocean Services, Ltd., Montreal. He travelled all over the world until 1905, with his father, who was an ocean captain, and who died while on a voyage from Calcutta to England. A brother is in Furness Withy & Co.'s service at Montreal.

C. P. Sargeant, heretofore Assistant Passenger Agent, White Star Line, Toronto, has been appointed Passenger Agent, White Star Line, Seattle, Wash., vice A. E. Disney, promoted.

D. A. Stewart, Deputy Port Warden, Montreal, died there Jan. 1, of pneumonia, aged 39. Prior to his appointment in April, 1914, he was for some years in C.P.R. ocean steamship service.

William George Swan, who has been appointed Chief Engineer, Vancouver Harbor Commissioners, was, prior to the war, in Canadian Northern Pacific Ry., service in connection with railway construction in British Columbia, with headquarters at New Westminster. He also supervised the building of the terminals at Port Mann. He spent three years on active military service in France, with one of the railway construction battalions, with the rank of major, and latterly has been in charge of construction of the Canadian National Rys. Kamloops-Vernon-Kelowna-Lumby Branch.

John Torrance, Manager, White Star-Dominion Line, Montreal, who has retired from that position, was entertained at dinner recently by the Shipping Federation of Canada, of which he was chairman of executive committee for the past three years. He first entered transportation business in 1876 with David Torrance & Co., agents for the Dominion Line, and remained with the Dominion Line after its absorption by the International Mercantile Marine Co., and its incorporation with the White Star Line.

R. Winter, heretofore, chief officer, s.s. Canadian Trooper, has been appointed captain, s.s. Canadian Raider, Canadian Government Merchant Marine, Ltd.

H. A. Young, formerly Traffic Manager, Canadian Lake Line, has been appointed agent for the Walford Forwarding Corporation of New York, with office at 53 Yonge St., Toronto.

Dominion Marine and Canadian Lake Protective Associations' Annual Meetings.

The Dominion Marine Association's annual meeting was held at Montreal, Feb. 10-11, 1920, at the Hotel St. James. W. J. McCormack, President of the Association, presided at the opening. A. E. Mathews, Managing Director, Algoma Central Steamship Line, and H. W. Cowan, President of the Dominion Marine Association, were also present.

The Dominion Marine Association's report for 1919, prepared by the executive committee, was presented by the president, W. J. McCormack. The report was read by the president, W. J. McCormack, and was adopted by the association. The report contained the following information: The Dominion Marine Association's annual meeting was held at Montreal, Feb. 10-11, 1920, at the Hotel St. James. W. J. McCormack, President of the Association, presided at the opening. A. E. Mathews, Managing Director, Algoma Central Steamship Line, and H. W. Cowan, President of the Dominion Marine Association, were also present.

The report also contained the following information: The Dominion Marine Association's annual meeting was held at Montreal, Feb. 10-11, 1920, at the Hotel St. James. W. J. McCormack, President of the Association, presided at the opening. A. E. Mathews, Managing Director, Algoma Central Steamship Line, and H. W. Cowan, President of the Dominion Marine Association, were also present. The report contained the following information: The Dominion Marine Association's annual meeting was held at Montreal, Feb. 10-11, 1920, at the Hotel St. James. W. J. McCormack, President of the Association, presided at the opening. A. E. Mathews, Managing Director, Algoma Central Steamship Line, and H. W. Cowan, President of the Dominion Marine Association, were also present.

It was resolved to obtain from the Upper Canada Tract Society a report as to the use made of the shipping register at Toronto, towards which the association has contributed certain amounts.

The executive committee having approved of a proposal for the merger of the Canadian Lake Protective Association in the Dominion Marine Association, the following resolution was adopted: Whereas the Canadian Lake Protective Association sprang from, and its members are all members of, the Dominion Marine Association, and whereas all these members have expressed their willingness that the Canadian Lake Protective Association should be merged in the Dominion Marine Association and conduct its proceedings as a committee or section of the parent organization; and whereas it appears to be expedient

the Dominion Marine Association hereby that this amalgamation or merger should take place; therefore, be it resolved, that

A. E. Mathews,
Managing Director, Algoma Central Steamship Co.
President, Dominion Marine Association and
Canadian Lake Protective Association.

H. W. Cowan,
President of the Dominion Marine Association and
Canadian Lake Protective Association.

agrees to the proposal and to accept the assets and liabilities of the Canadian Lake Protective Association and to carry

on its work, or otherwise act in the premises, in accordance with the terms of a resolution adopted by the Canadian Lake Protective Association in the annual general meeting this day.

J. F. M. Stewart, Point Anne Quarries, Ltd., introduced a suggestion for enlargement of the association's scope so as to include coasting or ocean trade, and after discussion and the reading of a letter from W. E. Burke on the same subject, the matter was referred to the executive committee.

It was resolved to amend the constitution in accordance with notice given and in accordance with the executive committee's recommendation so as to permit the election of an executive committee of 12 or more members.

Plans of improvements proposed at Kingston to provide facilities for transshipping cargoes arriving through the new Welland Ship Canal were submitted from the Kingston Board of Trade, as approved by the Public Works Department's District Engineer, the engineer engaged by the City of Kingston and the engineers for the three railway companies, and the plans were referred to the executive committee.

It was resolved that the executive committee be asked to present a protest against the arbitrary action of the Canadian Wheat Board, and also to make enquiry as to the method of ice breaking at the head of the lakes, with special reference to lack of assistance suffered by certain ships.

T. R. Enderby, Managing Director, Montreal Transportation Co., suggested that the Dominion Government's attention should be called to the absolute necessity of having the Port Colborne, Ont., elevator repaired and in service again for the opening of navigation this year. He said that the elevator was destroyed on Aug. 9, 1919, and ship owners have been very severely handicapped by loading and discharging grain there through the Maple Leaf Milling Co.'s house on account of the loading and discharging facilities not being as efficient as the government house. The last reports received on the repairs to the elevator did not show that the repairs were in a very advanced stage. It was resolved to ask the Dominion Government to have the elevator ready for operation by the opening of navigation in the spring.

The question of the half cent charge for transshipment at the Maple Leaf elevator at Port Colborne, Ont., protested against by the association, was referred to the executive committee.

The following were appointed a committee on aids to navigation: W. J. Bassett, J. D. Andrews, A. E. Mathews, W. J. McCormack, H. N. McMaster, W. H. Smith, J. F. Sowards and John Waller.

The following were elected members of the executive committee for one year: Nomination for the executive committee were then called for and the following were received: W. J. McCormack, Algoma Central Steamship Line; H. W. Cowan, Canada Steamship Lines Ltd.; W. H. Smith, Ontario Car Ferry Co., retiring members, and G. J. Madden, Geo. Hall Coal Co., of Canada; T. R. Enderby, Montreal Transportation Co.; E. W. Oliver, Niagara, St. Catharines and Toronto Navigation Co.; J. Wilkie, Marine Superintendent, Imperial Oil Ltd.; E. H. Beazley, Union Steamship Co. of British Columbia.

At a subsequent meeting of the executive committee the following officers were elected: President, A. E. Mathews, Managing Director, Mathews Steamship Co., Toronto; First Vice President, H. W. Cowan, Director of Operation, Canada Steamship Lines, Montreal; Second Vice President, A. A. Larocque, President, Sincennes McNaughton Line, Montreal.

Canadian Lake Protective Association.

The Canadian Lake Protective Association's annual meeting was held immediately after the Dominion Marine Association's meeting. In the absence of the President, W. J. McCormack, A. E. Mathews occupied the chair.

The executive committee having approved of a proposal for the merger of the association in the Dominion Marine Association, it was resolved that whereas the Canadian Lake Protective Association sprang from, and its members are all members of the Dominion Marine Association, and whereas all these members have expressed their willingness that the Canadian Lake Protective Association should be merged in the Dominion Marine Association and conduct its proceedings as a committee or section of the parent organization; and whereas it appears to be expedient that this amalgamation or merger should take place; therefore be it resolved that the Canadian Lake Protective Association be merged in the Dominion Marine Association, and that all its future proceedings be conducted or determined in such manner as may be decided by the last named association, which shall hereafter have full power and authority to deal in the matter as fully and effectively as with its own affairs; and that the President of the Dominion Marine Association, who is ex-officio Chairman of the Canadian Lake Protective Association, and the Secretary-Treasurer of the Canadian Lake Protective Association are authorized to transfer to the Dominion Marine Association, Victory Bonds for \$3,000, the funds in bank, and all other assets belonging to the Canadian Lake Protective Association and to sign all such documents as may be necessary.

The following were elected as the committee for 1920: A. E. Mathews, Chairman, Toronto; W. J. Bassett, Toronto; W. E. Burke, Montreal; H. W. Cowan, Montreal; J. D. Andrews, Montreal; T. R. Enderby, Montreal; W. J. McCormack, Sault Ste. Marie; J. Wilkie, Toronto; H. N. McMaster, Montreal; W. H. Smith, Montreal; John Waller, Montreal; A. A. Wright, Toronto.

Dominion Marine Association's Annual Dinner.

The Dominion Marine Association's annual dinner, the holding of which was suspended during the war, was held at the Windsor Hotel, Montreal, in the evening, was largely attended and was most enthusiastic and successful. A. E. Mathews, President, occupied the chair. The principal speakers were the Minister of Marine, Hon. C. C. Ballantyne, and the Minister of Railways and Canals, Hon. J. D. Reid, full reports of whose speeches appear further on in this issue. A. Johnston, Deputy Minister of Marine, and W. E. Becker, Cleveland, Ohio, the latter representing the Lake Carriers' Association, also spoke.

J. W. Troup, Manager, British Columbia Coast Service, C.P.R., is in Great Britain regarding the possible building of a steamship or steamships for the coast service.

Montreal Shipping Statistics for 1919.

During 1919 there arrived at Montreal 702 trans-Atlantic ships representing a tonnage of 2,041,638, compared with 644 ships in 1918, with a tonnage of 1,910,621. In 1910 the number of such ships arriving was 410, and in 1914, when war had not greatly affected the situation, the number was 551.

The grand total of sea going ships which arrived in 1919 was 786, with a total tonnage of 2,179,280, and the number of seamen who operated them was 46,448. The great bulk of this shipping was British, there being 503 ships with a tonnage of 1,646,532, under that flag; while the next in importance was United States with 229 ships, representing a tonnage of 384,555. For the rest, there were French, Italian, Norwegian, Greek, Dutch, Danish, Brazilian and Rumanian craft. Of this total 756 were of iron or

644, and in 1919 to 702. It must be borne in mind that certain ships which belong to the St. Lawrence have been withheld by the British Ministry of Shipping, and there were also some delays and breaks in the port's activities owing to strikes on the other side of the Atlantic.

The Maritime Provinces' shipping shows a distinct falling off since the war. The year 1910 saw 336 vessels, with a tonnage of 574,808, and that standard was adhered to fairly well up to 1915; then in 1916 the figures fell to 129 ships, with 68 for 1917, 30 for 1918, rising to 84 for 1919.

In the figures for inland transportation there is a similar decline. In 1910 there were 13,636 ships, and in 1915, the number fell to 8,572 from 12,225 in 1914. The number in 1919 was 7,499; but, the total tonnage of 1914 was 4,357,734, compared with 4,327,799 in 1910, which indicates that though fewer ships are plying up and down the river and lakes, they are of a larger type.

Demountable Wooden Ship, with Auxiliary Power.

The above shows a demountable wooden ship, designed by John Aylmott, Victoria, B.C., with the following approximate dimensions—length, 250 ft.; beam, 60 ft.; depth, 23 ft.; built up of lumber, with sails spread from 4 masts stepped in the cargo. Ships of this type will, it is announced, be operated shortly between British Columbia ports and Great Britain. On arrival at a British port, the ships will be demounted, the lumber cut to marketable dimensions, and the auxiliary machinery sold, or returned to British Columbia for further similar service. Canadian Railway and Marine World published a considerable number of interesting facts concerning this type of ship in its issues of July, Aug., and Sept., 1919.

steel, with a tonnage of 2,174,133, and 30 were of wood, representing 5,147 tons.

Shipping between Montreal and the Lower St. Lawrence, also inland shipping, showed some recovery, but far from the standard of pre-war days. Inland transportation was represented by 7,499 ships, the tonnage of which was 4,357,734, an increase of 1,397 ships and of 1,043,826 tonnage over 1918. The war period was a poor one for inland transportation owing partly to the fact that it was more expeditious to move food-stuffs by rail, and also on account of the fact that many small craft were diverted elsewhere for special war purposes.

River and gulf traffic between Montreal and the Maritime Provinces also showed a decided improvement, the number of ships in this category being 84, with a tonnage of 137,642, compared with 30 ships and 22,861 tonnage in 1918. In this case again the war had caused great interruption of traffic.

Statistics for the past decade shows that while the trans-Atlantic traffic has been steadily growing, the traffic between Montreal and the Maritime Provinces and the Great Lakes, dropped with the outbreak of war and has by no means recovered.

In 1910 the number of trans-Atlantic vessels that arrived in port was 411, in 1913 it was 477, and in 1914, 551. Then came the war, and the figures in 1915 dropped to 484. In 1916 the total rose to 569, in 1917 to 579, and in 1918 to

Proposed Development of Hamilton Harbor.

J. M. Wilson, District Engineer, Public Works Department, Central Ontario District, has reported to the Hamilton Harbor Commission on a proposed development of the port of Hamilton, Ont. The city has a population of 110,000, but is growing very rapidly, particularly in its industries. The proposed harbor scheme is intended to take care of the growth of the city for a number of years to come, but has certain provisions for early construction. The proposition resembles very much the new harbor development at Toronto, and shows the influence of the Toronto harbor engineers who acted in an advisory capacity. It provides, in general, for ships drawing 30 ft. of water, to dock in slips on the present shore line and along wharves built out into the harbor; the reclamation of considerable of the inner harbor area by dredging, which will deepen the central harbor, service of the industrial lines with cheap electric transportation concentrated on a marginal way; and the creation of park lands, recreation centers and a boulevard drive around the entire water front. The completion of the work would leave Hamilton harbor with an area of 4,380 acres or 6.8 square miles, having a general depth for navigation of 30 ft., compared with the present 4,500 acres having a depth of 18

Shipbuilders Petition Dominion Government for Bonusses.

A delegation waited on Sir Geo. E. Foster, Minister of Trade and Commerce, and acting Premier, Hon. C. C. Ballantyne, Minister of Marine, and other members of the Dominion Government at Ottawa, Jan. 7, to present a petition asking for bonusses in aid of shipbuilding, the companies named being represented as follows: British American Shipbuilding Co. Ltd., Welland, Ont.; H. M. Belfour and ... Davison; Canadian Allis-Chalmers Ltd., Bridgeburg, Ont., E. Jenking; Canadian Vickers, Ltd., Montreal, A. R. Gillham and P. L. Miller; Collingwood Shipbuilding Co. Ltd., Collingwood, Ont., H. B. Smith and J. S. Leitch; Davie Shipbuilding and Repairing Co. Ltd., Lauzon, Que., Sir David Watson; Halifax Shipyards Ltd., Halifax, N.S., M. J. Haney, J. F. M. Stewart and R. M. Wolvin; Midland Shipbuilding Co., Midland, Ont., J. Wilkinson; Port Arthur Shipbuilding Co., Port Arthur, Ont., P. E. Chace and J. Whalen; Three Rivers Shipyards, Ltd., Three Rivers, Que., H. L. Clifford; Tidewater Shipbuilders, Ltd., Three Rivers, Que., A. A. Wright.

The petition was addressed to the acting Premier, the Right Hon. Sir George E. Foster, as follows:—On behalf of the following shipbuilders viz.: Halifax Shipyards Ltd., Halifax and Dartmouth, N.S.; Nova Scotia Steel and Coal Co., New Glasgow, N.S.; Three Rivers Shipyards Ltd., Three Rivers, Que.; Davie Shipbuilding & Repairing Co., Lanson, Que.; Tidewater Shipbuilders Ltd., Three Rivers, Que.; Canadian Vickers Ltd., Montreal; Dominion Shipbuilding Co., Toronto; British-American Shipbuilding Co., Welland, Ont.; Canadian Allis-Chalmers Ltd., Bridgeburg, Ont.; Midland Shipbuilding Co., Midland, Ont.; Collingwood Shipbuilding Co., Collingwood and Kingston, Ont.; Port Arthur Shipbuilding Co., Port Arthur, Ont.; Yarrow Limited, Victoria, B.C.; Prince Rupert Dry Dock and Shipbuilding Co., Prince Rupert, B.C.; Victoria Machinery Depot Ltd., Victoria, B.C.; Wallace Shipyards Ltd., North Vancouver, B.C.; J. Coughlan & Sons, Vancouver, B.C.; We respectfully submit the following petition:—

Prior to the outbreak of war steel vessels were built in Canada in only a few shipyards, which produced intermittently a small tonnage of lake cargo and passenger vessels, scows, dredges, buoy steamers, etc. Subsequent, however, to the outbreak of war, all the existing companies, and a number of new ones, have energetically gone in for steel shipbuilding, and many extensive shipyard organizations have been built up. The capital actually invested at present is approximately \$47,000,000, exclusive of working capital, and the industry furnishes employment to approximately 23,500 men in the shipyards (not less than 25% of these men having served overseas) and almost another 23,500 men engaged in the construction of ship plates, shapes, machinery furnishings and equipment. Adopting the usual standard of dependents for each workman, over 200,000 persons are subsisting on this industry at present. An important feature to be noted is that the expenditure for labor and material in ship construction is almost entirely made within the country, whereas the product is chiefly for export, the result being additional wealth for the country.

Owing to the great demand for ton-

nage in 1916, the British Government, through the Imperial Munitions Board, induced the existing steel shipbuilding yards in Canada to construct steel ships were built, not only in the yards on the lakes, but also at Vancouver, Montreal and elsewhere. In the latter yards cargo vessels were constructed as large as 8,800 d.w. tons. When the present Dominion government came into power in 1917, it very wisely decided that Canada required a merchant marine of her own, and from that date up to now that work has kept the existing steel yards in Canada fully occupied. From the above some idea of the magnitude of the industry can be formed, and the importance to the country of continuing its operation is manifest.

The Minister of Marine has publicly referred from time to time to the results accomplished, and the shipbuilders feel confident that the government will assist them in maintaining their operations. Following the suspension of hostilities, the Canadian Government shipbuilding programme provided the necessary work to keep the yards occupied to full capacity, and, what was more important, Canada has been able to greatly expand her export business, and to supply ships that will be needed to co-operate with the Canadian National Railways; thereby greatly improving the government's transportation system. It must be gratifying to the government to know how enthusiastically its shipbuilding programme has been received throughout the country, and that when its fleet of ships is completed it will have placed Canada in the position of trading successfully with other countries.

The Minister of Marine, made the statement in parliament in May, 1919, that the government was nearing the end of its shipbuilding programme and clearly indicated that if the shipyards in Canada hoped to continue they would have to look for business elsewhere. When introducing the government's shipbuilding programme in Mar., 1918, the Minister of Marine made the statement that the government's policy was to encourage shipbuilding as a permanent industry, which policy was confirmed subsequently by the encouragement given to the erection of a large plate mill at Sydney, N.S.

The workmen employed in our Canadian shipyards have demonstrated their efficiency and ability to build ships in a sound and workmanlike manner, and equal in all respects to those constructed in any other country, and in fairness to the workmen and their dependents, and having regard to the large capital invested, we submit that the present time is most opportune for co-operation between the government and the shipyards to the end that this great industry be firmly established. A reasonable bounty would enable Canadian shipbuilders to compete in the markets of the world for business, and permit them to operate to their fullest capacity, resulting in the ultimate reduction of costs and the placing of the industry on a permanent basis. In addition to the world wide financial difficulties, the shipbuilders are also faced with the abnormal conditions of exchange, which at present militate so greatly in favor of Great Britain. Our shipbuilding industry commenced a few years ago, with wide difference in wages

and efficiency as compared with the British shipbuilder, skilled in his trade from the days of his apprenticeship. The experience received on the vessels we have built has gradually increased the efficiency of Canadian workmen, and if this industry can go on continuously for a term of years, the excess labor cost in Canada will disappear, and Canada will have a national asset represented not so much by \$50,000,000 of operating shipyards, as by an army of skilled shipbuilders. Skilled labor is a nation's greatest asset.

The applicants therefore ask as an essential to the life of their industry, that the Dominion Government grant for a term of 10 years a bonus of \$10 per load displacement ton, and \$10 per indicated horse power on steel ships built in Canada and completed after April, 1920. Without the assistance asked for, the existing plants cannot be continuously employed, and the breaking up of the organizations will necessarily follow, thereby throwing large numbers of men out of employment, and undoing much of the good which the government has achieved by the encouragement given to the shipbuilding industry, and in the employment of returned soldiers and men previously at work on munitions. We are convinced of the great merit of our request and respectfully ask your earnest and favorable consideration and prompt action in the matter.

Signed on behalf of the companies above named by J. F. M. Stewart, Toronto and W. L. Murray, Secretary.

Subsequently P. L. Miller, H. B. Smith, J. F. M. Stewart and R. M. Wolvin, were appointed a committee to go into details with the government.

A number of boards of trade and other bodies were advised that the shipbuilders intended asking the government for substantial co-operation, and resolutions urging the same from the following organizations were attached to the petition:—

Halifax, Kingston, Montreal, New Glasgow, Port Arthur, Stellarton, Three Rivers, Sydney, Toronto and Welland boards of trade; Collingwood Chamber of Commerce; Halifax, Kingston, Port Arthur, and Sydney City Councils; and Bertie Tsp. Council.

The Montreal Board of Trade at a recent meeting passed a resolution, as stated above, urging the government to seriously consider measures toward ensuring the continuance of the steel shipbuilding industry in Canada, Sir George Foster, and Hon. C. C. Ballantyne, acknowledged its resolution and gave assurance of their appreciation of its terms, which would receive the government's most careful consideration. Mr. Ballantyne referred to the matter at the Dominion Marine Association's dinner in Montreal, Jan. 9, and a full report of his remarks appears on another page.

Steamship Glencadam—Canadian Railway and Marine World for Dec., 1919, contained an item announcing that the Great Lakes Transportation Co., Midland, Ont., had bought the s.s. F. P. Jones from U.S. owners, and had transferred her to the Canadian register under the name of Glencadam. We were later advised that the name was Glencaden, and made this announcement in the January issue. The correct name is, as first mentioned, Glencadam.

The Minister of Marine, and the Minister of Railways and Canals, on the Dominion Government's Shipbuilding Programme, the Canals, Etc.

The Minister of Marine, Hon. C. J. Hanney, and the Minister of Railways and Canals, Hon. J. D. Ross, were the principal guests at a dinner given by the Hamilton Marine Association at the Windsor Hotel, Montreal, on the evening after the committee's arrival here.

Mr. Hanney, in referring to the course of his recent expedition, explained what had been done by the government in its shipbuilding programme, this being for the benefit of the visitors from the United States, though he admitted this programme had not been on anything like the scale of the United States Emergency Shipbuilding Corporation. He said: "It may interest you to know that we have 60 steel ships under construction. When they are finished, not later, I hope than this time next year, we will have a net tonnage of 360,000 tons. Twenty-three of these vessels are in service. Their tonnage ranges from the lake size vessels of 3,750 d.w. tons to as much as 10,500 tons, the latter ships are being built by the Halifax Shipyards Ltd., so you will see we have a pretty

marine roster entirely on the shoulders of D. B. Hanna and his board of directors. What routes they shall be used on, what freight they will carry, what the rates of freight will be, is not a matter for the Dominion Government to deal with.

"We have shipbuilding yards from Halifax to Prince Rupert. Canada's ship building programme is possible. A great deal of credit is due to Canadian ship builders for having risen to the occasion when the government asked them to undertake steel ship building, for the first time, in that they have done as well as they have. I am not stating anything beyond absolute facts when I say that the steel ships that have been built in our yards throughout Canada are equal in design, workmanship and efficiency to similar ships built in England, Ireland or Scotland. It is astonishing to find that the capital invested at present in the ship yards amounts to the very large sum of \$47,000,000. The number of men employed in ship yards only is 23,500. Not less than 25% of those men have served

handsome one indeed, and that reflects a great deal of credit on the Canadian Government Merchant Marine management.

"Our Canadian shipbuilders have demonstrated that they can build freight ships. I am happy to tell you that on the representations that have been made to Dr. Reid by Mr. Hanna for passenger ships of a one-class type, that is, a passenger ship of 15,000 gross tons, with speed of 18 knots and carrying both passengers and freight, the government has under consideration the building of such a type of steel ship. The government has no intention of ordering one outside of Canada, but it is the government's intention to have these passenger ships built in this country by our Canadian workmen and to use Canadian materials.

"If ever the time comes—and I do not know what the government's naval policy will be, as this is a matter that has not yet been discussed by the government—that Canada finds it necessary to build ships of war in this country, I am satisfied that Canadian shipbuilders will be able to build any war craft that may be

Steamship Canadian Rancher (left), and Canadian Settler (right), each approximately 5,100 d.w. tons, for Canadian Government Merchant Marine Ltd., built by Tidewater Shipbuilders Ltd., Three Rivers, Que. From photograph taken Nov. 25, 1919.

good nucleus now, and by this time next year, with our 60 ships, we hope to greatly expand Canada's export business. The country at present, due to the war and the other expenditures that were necessary, is of course rather handicapped. With a young and growing country like this, and more particularly if Canada will expand her export trade, everything will come out all right, and I hope that Canadian manufacturers of Canada will take full advantage of the Government Merchant Marine and go actively after foreign business.

"While these ships are built by the Dominion Government, and own by the government, they are not operated or managed by the government. The Canadian Government Merchant Marine, which is a subsidiary company to the Canadian National Railways, while it is owned by the government, is the company that operates and manages the Canadian Government Merchant Marine. D. B. Hanna and his board of directors have an absolutely free hand in the management of the government ships. As Minister of Marine I never assume to dictate to them in any way at all, neither does any other member of the government. The responsibility for the success of the government's merchant

overseas. Then in addition to that there are 25,000 men engaged in the construction of ship plates, ship machinery, furnishing, and so forth. Adopting the usual standard, there are at least 200,000 men who are subsisting at this time on these industries. Another important feature is that the material that enters into the construction of these ships is very largely produced in our own country and by Canadian workmen.

"Another very gratifying fact to the government is that notwithstanding when the war was on, Canada was able to produce steel ships at as low cost as any other nation was doing, and in a great many cases even less. Our ships contracted for during the war have all cost considerably less than \$200 a d.w. ton, and as soon as the armistice was signed the government was able to close contracts at \$25.00 a ton less than during the war. I think this speaks very well indeed for the efficiency and energy of our Canadian shipyards and the men who are engaged in them. Then in addition to that, and what is a great deal more important to the government, one of Mr. Hanna's officials has been good enough to give me figures as to the ships that are in operation, showing that their net profit of these ships has been a very

required by this country.

"The shipbuilders waited upon the government this week at Ottawa, asking in their modest way for a certain amount of protection of the shipbuilding industry. The matter will receive the consideration that it deserves at the hands of the government. I do not know what action the government may take, but I want to assure the shipbuilders here tonight that their representations will receive the most careful consideration of the government, and I hope before parliament meets that they will know whether or not they are going to get aid from the government. Their requests appear reasonable in view of the fact that there is no protection of any kind whatsoever on ships coming into Canada. Other industries in this country have received a certain amount of protection for a great many years, and in that way the country has been able to build up very large industries from one end of Canada to the other. If the government is able to see its way clear to assist shipbuilders in any way, I look forward to a very great expansion of the shipbuilding industry in Canada. I believe that a large number of the biggest shipbuilders in England will likely come to Canada to erect plants. I had

interviews with many of them when I was in England in 1918.

"You are aware that, as a result of our shipbuilding programme, the Dominion Steel Corporation was given a very large contract for ship plates. We want business, and as it is necessary to be as self-contained as possible, the government thought it well to enter into the large contract it did with the Dominion Steel Corporation. That corporation has erected a large mill at Sydney, N.S., at a cost of \$5,000,000. It is a very modern mill, and it hopes to turn out ship plates at the end of February."

The Minister of Railways and Canals' Speech.

Hon. J. D. Reid said:—"I can remember well the ships that passed through Welland and St. Lawrence Canals in the earlier days. They were probably of about 1,000 or 1,200 tons. They ran between Port Arthur and Montreal, and between Chicago and Montreal. We used to think they were great vessels. However, a short time afterwards public opinion, and the marine men themselves, decided that ships of that type were useless, that they would have to build larger ones and on the advice of the marine men submitting the class of ship that was required—the large ships that were required to travel between

bringing your seven, or eight, or ten thousand ton ships to Kingston, but, not only that, the scheme between Prescott and Montreal would be under way with a view of canalizing the St. Lawrence River.

"When the government decided that it was going to enlarge your canals, it was realized that to make a good, perfect, complete highway for the vessels there must be terminal facilities of a good character. The government of the day looked around for a man to get the proper facilities for the port of Montreal, and I want to say here (and I am saying it as sincerely as any man can), that if you had not got a man with the backbone and public spirit of Mr. Ballantyne, you would not have the terminal facilities in Montreal that you have. The very fact of Montreal getting such splendid terminal facilities, which were necessary for the men that are operating vessels, Halifax and St. John demanded the same, and the government was compelled to do for them what they did for Montreal, and therefore we have, not only at Montreal, but at Halifax and St. John, practically as good terminal facilities as any ports on the Atlantic. Up at the head of the Great Lakes the same thing had to be done because it was necessary.

"We had in Canada, prior to the war,

with them the marine, that is, they must have vessels inland carrying traffic to and from the railways, and they must have vessels at Atlantic and Pacific ports carrying traffic to and from our country. You all know that the government is now a large owner of railway systems in Canada. When I first entered parliament there were 16,000 miles of railway in Canada. Today we have at least 40,000 miles, and of that 16,000 miles are controlled and operated by the Dominion Government, and within a very short time we expect to take over the Grand Trunk, when we will have 22,000 miles, so that we have a great railway system in Canada.

"With that then, there is of course, the Canadian Pacific, the two great systems that practically own all of the railways in Canada, and let me say that while we have two systems, it is the governments duty to see that no injustice or unfair advantage is taken of our great C.P.R. because we happen to own the other half of the railways. In other words, the management of the Canadian National Rys. under instructions from the government, communicated through me is operating the government lines as a private railway, and it must go out in the open market and compete with the C.P.R. on fair and just and equal privileges, and in that way it must be

Steel cargo steamship, Canadian Planter; approximately 8,100 d.w. tons; for Canadian Government Merchant Marine Ltd.; built by Canadian Vickers Ltd., Montreal.

Port Arthur and Montreal, and do work on the Great Lakes—plans were made by the government to provide a water-way between Port Arthur and Montreal, and it was decided to enlarge the Welland Canal.

"It is historical—it is in the records of the House of Commons and in the department over which I preside—that the Chief Engineer of the department at that time, Mr. Page, who was a very able man, decided that in enlarging the Welland Canal, it would be 50 years before it would be found necessary to enlarge it again. Now, let me tell you this, because perhaps it is a secret that has been kept, but is not any longer necessary to keep. When the government decided to proceed with the enlargement of the Welland Canal, we never let it be known, at least, we could not emphasize the fact, we took the ground that it was intended to bring the ships from Port Arthur to Kingston, but we always had in mind that as soon as we got them to Kingston we could then start and enlarge the St. Lawrence so that we could take them through to Montreal. If it had not been for the five long years of war, you would be

in 1913, 1,200,000 registered tonnage. I know that a good many Canadian registered vessels were lost during the war, many more probably than is generally realized, and, on this account, the latest figures might have been expected to show a decrease. But I was agreeably surprised to see by the Marine Department's report that instead of 1,200,000 tons, we have increased our tonnage to 1,475,000 or 250,000 tons more than we ever had. When we come to the end of the present year we will probably have made that nearly 2,000,000, and it is gratifying to know that today we stand eighth among the largest ship owning countries of the world, and at the end of this year it is believed that we will be fifth in that class.

"It is very gratifying to me to know that in our inland waters, years ago when I first entered parliament, about 1,200 tons was the largest vessel that we had in Canada, and today we have on the upper lakes vessels of 12,000 tonnage, and we are able to use them at a profit.

"Railways, of course, must work with the marine. The railways could not operate successfully unless they had

made a success. I want to be in a position, if I can, before I pass away from this life, to be able to say that I can get on the government railway system, to go to Vancouver and get on a Canadian owned, built and controlled steamship, built in Canada of Canadian products, by Canadian workmen, and travel right around the world on Canadian property.

"Mr. Ballantyne has also referred to our great industry down by the sea, the Dominion Iron and Steel. Iron and steel is the basic industry of this country. That is a great plant, but we have one nearly as large in Ontario, the Algoma Steel Corporation, and we have other similar industries—iron products, out in British Columbia, but we have more than that—we have in Canada natural resources of every kind and nature that will build up this country and with immigration, we will be in a position to develop this country and make it equal to any country on the face of the earth."

The Toronto Harbor Commissioners sold recently, \$2,000,000 of 4½% bonds, guaranteed by the city and due in 1953, to Wood, Gundy & Co., at 80.67.

General Shipbuilding Matters Throughout Canada.

British Columbia Marine Railway Ltd. Vancouver, B.C., accepted a steamship building order for the *Union*, steamship Co. of British Columbia, which was directed by Mrs. L. H. Bonnell, wife of the president, company's general manager. The value of the order, with capacity for about 200 passengers, and it is intended to operate on a route from Vancouver to Seattle. This is the first vessel built by British Columbia Marine Railway Ltd., and it is expected that arrangements are being made for the construction of larger vessels.

British Columbia Shipyards—A Vancouver press dispatch of Dec. 31, stated that the total of steel and wooden ships launched at British Columbia yards during 1918, and 19 stood at 46,000, 170,000 d.w. tons. This is stated to be 14,000 d.w. tons more than in 1918. The yards are also stated to have orders for 65,600 d.w. tons, most of which is well on the way to completion.

Canada Steamship Lines Ltd. is reported to be contemplating building an excursion passenger steamship of somewhat novel design, for its Toronto-Lewiston-Queensdown service. It is said that the ship will embody a number of new

until the end of January or early in February. The damage caused by fire was estimated at \$100,000.

The Collingwood Shipbuilding Co.'s stock advanced in the unlabeled section of Toronto on January from 65 to 75 and none offering, and 95 was bid for its bonds. The Toronto Globe says: "Brokers are at a loss to explain the sudden activity, and two theories were advanced. One was new orders received by the company and the other alleged negotiations by which the company would join up with Dominion Steel and other corporations in a great merger. Collingwood Shipbuilding has issued stock of about \$1,880,000, out of \$2,500,000 authorized. It has plants at Collingwood and Kingston. There is very little of the stock available, and the bonds to be had are said to have been about all picked up in the last few days."

J. Coughlan & Sons, Ltd., has been incorporated under the British Columbia Companies Act, with \$5,000,000 authorized capital, and office at Vancouver, B.C., to take over the stock in trade, plant, contracts, etc., of J. Coughlan &

a few days shut down, during which some financial reorganization was carried through.

Dominion Shipbuilding Co., Toronto. completed the tenth steel steamship, *June 17*, which was named *Torontonian*, the christening being performed by Mrs. C. F. Easson. The ship is of the single deck type, with poop, bridge and fore-castle, steel texas on bridge, wing deck houses, with chart room and pilot house above, and the hull is built on the transverse system. There are 3 decks, main, bridge and boat, arranged on the 3 island plan, and there are 4 cargo hatches, each 22 x 18 ft. She is schooner rigged, with 2 pole masts, and the hull is divided into compartments by 4 water tight bulkheads and 1 screen bulkhead. There are 2 holds, with grain capacity of 151,466 cu. ft. The dimensions are: length, overall, 261 ft.; breadth, moulded, 43½ ft.; depth, moulded, 28 ft. 2 in.; d.w. capacity 4,300 tons. She is to be classed 100 A1 at Lloyd's for ocean service. The propelling machinery which is placed amidships, consists of a triple expansion inverted engine, with cylinders 20, 33 and 54 in. diam. by 40 in. stroke, 1,300 i.h.p., at 87.5 r.p.m., supplied with steam

Steel cargo steamship, *Canadian Spinner*: approximately 8,350 d.w. tons; for Canadian Government Merchant Marine Ltd.; built by Canadian Vickers Ltd., Montreal.

features, such as terraced decks, moving picture theatre, children's playground, dancing pavilion, etc. In addition to this, it is said that the lifeboats will be recessed into the sides of the ship, that the construction will be fireproof, and that the ship will have a speed of 18 knots an hour. No official information is yet available, but it appears probable that such a ship will be built if a satisfactory contract as to price can be secured.

Canadian Concrete Shipbuilding Co., North Sydney, N.S., is reported to have been organized to undertake the building of concrete ships, and to take over the yard operated for this purpose at North Sydney, N.S., by W. N. MacDonald, who is President of the new company. The concrete ship *Permanencia*, under construction there, information concerning which was given in our January issue, also being taken over. It was expected that she would be launched at the end of December, but owing to a fire on board, which destroyed all the wood work which encased the interior of the vessel, this had to be abandoned, and it was not expected that she would be launched

Sons, and to carry on the business of shipbuilding in all its branches, to build, own and operate drydocks, marine railways, etc., and conduct any other business incidental to shipbuilding.

Jos. Crane, New Westminster, B.C.—The New Westminster, B.C., City Council, on Jan. 12, received an application from Jos. Crane for the lease of a portion of the Indian reserve, bordering on the water front, for shipbuilding purposes. The applicant stated that he is building a large barge and scows on his present location, but there is shortage of room, and he is unable to build heavier vessels, owing to the presence of a bar in the vicinity which makes it impossible to launch anything but flat bottom boats. He is planning to build a 700 ton auxiliary schooner, about 200 ft. long. The council decided to lease him a 100 ft. water front lot at \$150 a year, which will be reduced to \$100 a year, when other property in the vicinity is taken up. It is the council's desire to foster boat building along the water front.

Davie Shipbuilding & Repairing Co., Lauzon, Que., resumed work Jan. 7, after

by 2 Scotch boilers, each 14½ ft. diam. by 11 ft. long at 180 lb. under forced draft, built by John Inglis Co., Toronto. The heating surface is 2,730 sq. ft. in each boiler, and there will be an approximate consumption of 20 1-10 tons of coal per 24 hr., with a speed of 10.2 knots an hour. The bunkers are arranged to carry 526.75 tons of coal. The propeller is 13½ ft. diam., of cast iron, with 4 blades 12 ft. 8 in. pitch. Accommodation for 35 officers and men is arranged on the bridge and in the poop. The ship is to be equipped with steam steering gear 7 x 7 in., 8 reversible single drum, 2 speed, 7 x 12 in. cargo winches, and anchor windlass 8 x 8 in.

The Foundation Co., Victoria, B.C., is according to B.C. press reports, dismantling its shipbuilding plant at Victoria on instructions from the company's head office in New York. The company has issued statistics covering its operations from Sept., 1918 to Nov., 1919, during which its contract with the French Government for the building of 20 wooden steamships of 3,000 d.w. tons capacity each, was carried through. The number of employes engaged at the

height of the work was 4,390, of which 65% were returned soldiers. The number of employees and their dependents is given as 12,655, of which 93.1% were British, 2.7% U.S., 1.6% Italian, and 2.6% other nationalities. The total pay roll was \$5,263,313.39; total material bought in British Columbia, \$3,733,150.43; bought in other parts of Canada, \$435,097.18. The investment in the plant at Victoria is given at \$616,174.57, and the total amount paid for labor and material in Canada \$10,048,735.57. The total amount of the contract was approximately \$11,000,000.

Grant & Horne, St. John, N.B.—The schooner *Cutty Sark*, launched at this yard recently, was built for Foster & Elkin, St. John, N.B., and has loaded number for the Canary Islands. She is 608 registered tons, and her dimensions are: keel, length, 159 ft.; beam, 36 ft.; draft, 13 ft.

National Shipbuilding Corporation, Three Rivers Shipyards Ltd., Division, Three Rivers, Que., has secured an order from French interests for building 6 steel cargo steamships of approximately 7,200 d.w. tons each, to be classed 100 A1 at Lloyd's, and equipped for a speed of 11 knots an hour, and also for 4

Erb, W. M. Wadden, H. B. Blanchard and I. M. Oettenhoefer, for an injunction to restrain other directors, W. E. Williams, E. Thompson, S. P. McMorde, E. C. Gibbons, F. F. Schellenberg and J. L. Mullen, from taking any part in the conduct of the company's affairs. N. Erb claims that the company was organized on his instructions, and he was elected chairman, and subsequently managing director, and that he secured the lease of the property from the Grand Trunk Pacific Ry., and also two contracts from the Dominion Government for building 2 steel steamships of approximately 8,100 d.w. tons each, at an approximate cost of \$3,207,600. He further alleges that the defendant directors usurped control of the plant, elected a new board of directors, increased the capital stock, and seriously disorganized the company's business, forfeited the Dominion Government's confidence owing to being behind with the contracts, and risked the cancellation of the lease of the property to the company. On the evidence submitted an interim injunction was granted for a few days pending further argument.

St. Martins Shipbuilding Co., Ltd., has been incorporated under the New Bruns-

British Columbia Coast Pilots and the New Pilotage Regulations.

The order in council reorganizing the British Columbia pilotage authorities, and the new pilotage regulations providing revised pilotage dues, etc., which were published in *Canadian Railway and Marine World* for January, became effective Jan. 1. These regulations are applicable to the former pilotage districts of Vancouver, Nanaimo and Victoria-Esquamalt, which have been abolished, and have been established as the Pilotage District of British Columbia, in charge of Commander B. L. Johnston, D.S.O., as Superintendent. The pilotage district of New Westminster has not been changed, and is still under a pilotage commission.

The pilots concerned held meetings during December and submitted to the Minister of Marine a number of criticisms of the regulations, which it was claimed would reduce their earnings considerably, and not remove grievances as to certain working conditions. As a result of these meetings, they made proposals that they should continue working at the old rates, and under the old conditions, receiving all earnings, and maintaining and operating their pilotage plant and stations, out of these earnings, for six months, and also make provision for pilots over age; or, that they come under the new authority on the understanding that the minimum wage to be paid any pilot be \$350 a month, that pilots over age be provided for, and that their pilotage plant be taken over at its present market value, together with the expense of operating the plant.

They claim that the new pilotage rates have been fixed below what were agreed upon many years ago, when the cost of living was considerably less than now, and that there is no definite assurance as to their remuneration. Though no threat was made by the pilots, local reports indicate that there was a strong probability they would cease operating under the government and offer their services as independent pilots.

The Vancouver Board of Trade, on Jan. 2, adopted a recommendation for submission to the Dominion Government, that the minimum paid to pilots be \$250 a month, with a maximum of \$350 a month. At a joint meeting of interested local boards, Jan. 7, a series of proposals was adopted for submission to the Dominion Government, with the view of terminating the dispute, and fixing the pay and working conditions of the pilots, and in the meantime it was announced, that an arrangement made is being continued for two months, whereby the pilots are working on a fixed salary of \$325 a month, and that at the end of that period the situation will be reviewed.

Pulpwood Terminal at Clayton, N.Y.—The Taggart Paper Co., Watertown, N.Y., has, according to a press report, bought 100 acres on the water front at Clayton, N.Y., opposite Gananoque, Ont., for a terminal for the reception of pulpwood from Canada.

Clyde Shipbuilding—It is stated that about 650,000 tons, were launched on the approximately 400 ships, with a total of Clyde River in Scotland in 1919, the output almost reaching the record for Clyde shipbuilding.

The Kennebecasis Steamship Co.'s s.s. *Hampton*, is having her sides rebuilt, and other repair work done at Hampton, N. B.

Wooden Steamship *Champlain*, approximately 3,000 d.w. tons, one of 20 similar ships built for the French Government, by the Foundation Co. of British Columbia Ltd.

steamships of approximately 3,200 d.w. tons, to be used as, what is termed, wine boats. We are officially advised that the 6 keels for the steamships first mentioned, will be laid about Feb. 15, and deliveries made during the autumn.

New Brunswick Shipbuilding Co. Ltd., has been incorporated under the New Brunswick Companies Act, with \$320,000 authorized capital and office at St. John, N.B., to build, own and operate steam and other ships of every description, with plant, docks, wharves, etc., incidental thereto. The incorporators are: A. F. Coughlan, J. D. P. Lewin, J. J. Stothart, St. John, N.B.

Prince Rupert Dry Dock and Engineering Co., Prince Rupert, B.C., is doing considerable repair work. The Grand Trunk Pacific Coast Steamship Co.'s steamships are being overhauled in turn, and work is proceeding on two 8,100 d.w. ton steel steamships for Canadian Government Merchant Marine Ltd., of an approximate value of \$3,207,600.

Application was made to the British Columbia Supreme Court, Jan. 10, on behalf of the Prince Rupert Dry Dock and Engineering Co., the Empire Ship and Dry Dock Corporation, Newman

wick Companies Act, with \$240,000 authorized capital and office at St. John, N.B., to build, own, and operate ships of every description with the plant, docks, wharves, etc., incidental thereto. The incorporators are: A. F. Coughlan, J. D. P. Lewin, J. J. Stothart, St. John, N.B.

Wallace Shipyards Ltd., North Vancouver, B.C.—The steamship which this company is building for the Union Steamship Co. of British Columbia will be of the following dimensions: length, 173 ft.; breadth, 30 ft.; depth, 14 ft., and she will have a deadweight carrying capacity of approximately 700 tons. She will be of the single deck, single screw, cargo type, equipped with triple expansion reciprocating engine of about 700 i.h.p., located aft, steam windlass, 4 winches, 4 derrick booms, 5 tons capacity each, one 20 ton derrick, and steam and hand steering gear. The accommodation for the master, engineers, and crew, will be arranged on the poop deck. The keel was laid in Dec., 1919, and we are advised that it is expected the ship will be launched about the first week in February and delivery will probably be made about Mar. 1.

The 10,500-Ton Steel Cargo Steamships for Canadian Government Merchant Marine, Ltd.

As announced in Canadian Railway and Marine World at the time, the Marine Department gave contracts to Halifax Shipyards, Ltd., Halifax, N.S., on Dec. 10, 1918, for 2 steel cargo steamships of approximately 10,500 d.w. tons each to be operated by Canadian Government Merchant Marine Ltd. The keels for them were laid as follows:—S.s. Canadian Mariner; Marine Department contract 21; builder's yard no. 1; Feb. 24, 1919, and s.s. Canadian Explorer; Marine Department contract 22; builder's yard no. 2; Mar. 15, 1919. It is expected that the first ship will be delivered before the end of this year. Their principal dimensions, etc., are as follows:—

Length between perpendiculars	430 ft.
Breadth moulded	56 ft.
Depth moulded	30 ft., 35 ft.
Sheer forward	7 ft.
Sheer aft	3 ft.
Lowest point of sheer	Amidships
Draft mean	28 ft. 11½ in.
Deadweight, in long tons, about	10,500
Speed loaded on 6 hours trial	11 knots
Complement, officers and men, about	63

These ships are of the shelter 2 deck type, having shelter, main and lower decks of steel, the shelter deck being surmounted by a forecastle deck forward, 45 ft. long, and a poop deck aft, 45 ft. long. They are being built to Lloyd's 100 A1 class and will have 8 w.t. transverse bulkheads, and a double bottom extending from peak bulkhead forward to peak bulkhead aft, dividing the ship into 24 w.t. compartments. A deep tank is provided abaft of the engine room. The frames and beams are of heavy bulb angle section, and the various decks are strongly supported by tubular pillars.

The cargo working arrangements are very complete. There are 4 hatchways, each about 30 x 18 ft. and 2 hatchways, each about 15 x 18 ft. commanded in all by 20 five ton derricks. The derricks will be operated by twenty 7 x 12 in. winches, of the Clarke Chapman type. In addition no. 2 hold is provided with a 30 ton derrick for heavy weights, such as machinery. The usual steam windlass forward is provided.

The steering engine is of the Wilson Pirrie type, 10 in. diameter by 10 in. stroke, direct connected to the rudder head. The ship will be electrically lighted throughout, being provided with duplicate sets of generating machinery, running in parallel 110 voltage. Two masts are provided, one forward and one aft, carrying the wireless aerials, the wireless set being of 1½ k.w. capacity.

Each ship will be provided with the following life saving equipment: 2 lifeboats, 28 x 8½ x 3½ ft.; 2 lifeboats 22 ft. x 6½ ft. x 2 ft. 10 in.; 2 working boats, 18 x 5½ x 2½ ft. All other parts of the livesaving equipment will be in accordance with the British Board of Trade and Canadian Steamship Inspection requirements. The anchor and cable equipment will be in accordance with Lloyd's as follows: 2 bowers, stockless, 72½ cwt.; 1 spare, stockless, 72½ cwt.; 1 stream, ex-stock, 20½ cwt.; 1 kedge, ex-stock, 9 cwt., and 300 fathoms of 2-16 stud link cable, with the usual steel wire and malleable hawsers, warps and towlines.

The accommodation for the officers and crew will be very complete. The engineers' cabins are placed in an island deckhouse on the shelter deck, about

amidships, containing cabins, dining saloon, lavatories, pantry, etc. The navigating officers will be in a deckhouse over on the lower bridge, and the captain's quarters comprising day cabin, sleeping cabin, office and lavatories, will be placed on the upper bridge, which will be surmounted by the chart room and wheel house on the flying bridge. The crew will be located aft, under the poop and shelter deck. A total complement of 63 officers and men is provided for. Forward under the forecastle deck will be the hospital, carpenter shop, paint store, oil room and boatswain's store. Steam heating at 20 lb. pressure will be supplied to all living quarters.

Cold chambers for the preservation of the ships' provisions will be abreast of the engine casing, on the main deck, and will have a total capacity of about 1,000 cu. ft. The refrigerating engine will be on the Clotbel principle, capable of maintaining a temperature of 28° in tropical climates.

The propelling machinery will consist of one set of inverted vertical direct acting surface condensing engines of the following leading particulars:—

29½ x 50 x 80 in.

54 in.

Steam will be generated in 4 single ended boilers working under Howden's system of forced draft and having a working pressure of 180 lb. per sq. in. The heating surface will be about 10,500 sq. ft. and the grate area 270 sq. ft.

The air and bilge pumps will be direct connected to the main engine. One pair of Weir's feed pumps will be provided, each capable of supporting the boilers at full power. The other auxiliaries will comprise general service pump, ballast pump, sanitary pump, evaporator, distiller, feed filter, feed heater, auxiliary condenser, ash hoist and turning engine.

There will be one funnel of double section, and the usual ventilation to the engine and boiler rooms.

These ships, which have been designed by the Naval Constructor of the Marine Department, for bulk, general and refrigerated cargoes, will be capable of a speed of 12 knots under load conditions.

Winter Moorings of Canadian Steamships.

Following are Canadian steamships and the ports at which they have been berthed for the winter, in addition to those given in Canadian Railway and Marine World for January:—

Canada Steamship Lines Ltd., Montreal—Steamships, Lucia, S. H. Dunn, Port Colborne, Ont.; Ionic, Kingston, Ont.; Sarnor, Sorel, Que.

Keystone Transportation Co., Montreal—Steamships Keybell, Keynor, Keyport, Keywest, Grand Trunk dock, Kingston, Ont.

St. John Steamship Co., St. John, N.B.—Steamship Glenholm, Annapolis, N.S.

A record for speed was achieved by the British torpedo boat destroyer Tyrian on her recent deep water trials, when she attained 45 miles an hour on a 4 hour trip.

Sorel Government Shipyards Superintendency.

Canadian Railway & Marine World for Dec., 1919, gave particulars of notice issued by the Civil Service Commission inviting applications to be sent in by Nov. 24, 1919, by residents of the Province of Quebec only, for the position of Shipyard Superintendent, for the government shipyard at Sorel, Que., at an initial salary of \$3,000 a year. Apparently no satisfactory applications were received, as on Dec. 24, another notice was issued inviting applications for the position and stating that the competition was open to all residents of Canada, as follows:—A shipyard superintendent for the Government shipyard at Sorel, Que., Marine Department, at an initial salary of \$3,000 a year, which will be increased on recommendation for efficient service at the rate of \$180 a year until a maximum of \$3,540 has been reached. Candidates must have education equivalent to graduation in engineering from a school of applied science of recognized standing; at least five years of experience in ship design and construction, two years of which shall have been in responsible charge of such work; thorough knowledge of various types of ships and ship machinery and the construction and repair thereof; firmness, tact, good judgment, and ability to manage men; preferably a knowledge of both French and English. No special age limit is fixed for this position, but the appointee must be of such an age as to ensure a reasonable period of satisfactory service after appointment. The successful candidate will be required to perform the following duties: under direction to have charge of the Sorel shipyard; to be responsible for the design, estimate, construction and repair of ships; to supervise the buying and safekeeping of stores and stock and the work of all employees; and to perform other related work as required. An examination will be held in education and experience along the lines indicated above. An oral examination of the best qualified candidates will be held, if necessary in the commission's opinion. This position was advertised Nov. 6, 1919, and is now readvertised.

As stated in Canadian Railway & Marine World for Dec., 1919, the vacancy was caused by the resignation of W. S. Jackson, who was appointed Superintendent, May 12, 1919. F. A. Willsher, Assistant Naval Constructor, Marine Department, Ottawa, has been acting as Superintendent since Mr. Jackson's resignation.

Shipbuilding and Naval Architecture Instruction — Brigadier General C. H. Mitchell, C.B., C.M.G., D.S.O., Dean of Applied Science and Engineering Faculty, Toronto University, in his recent inaugural address, said, among other things:—"The subject of shipbuilding and naval architecture, which appear to be now in some demand, especially with the revival of Canadian shipping on the Great Lakes, and the development of the harbor works at Toronto and elsewhere, are being kept in view."

The Canadian Brotherhood of Light-house Keepers' Association, New Brunswick branch, was organized at St. John, N.B., Jan. 18. The officers are: J. E. Collins, Cape Spencer, President; K. McClellan, Port Esquimaux, Vice President; F. Fauley, Port Lepreaux, Secretary.

The Marine Department's Annual Report.

The Marine Department's report for the year ended May 31, 1919, was issued on Jan. 1, 1920. Following are extracts from the report of the Deputy Minister, Mr. H. H. Hurd.

In the beginning of the last fiscal year the Marine Department was not aware of the magnitude of the losses of allied and neutral shipping during the war. It was not until April, after that time in ships due to enemy action and marine risk.

It was found in last year's report that the United States output of ships during 1918 would in all probability be a powerful factor in the defeat of the German. This was shown by the fact that the U.S. production of ships during 1918 has been remarkable, particularly when it is remembered that prior to her entry into the war the U.S. was not to any extent a shipbuilding nation, and had to establish yards before turning out ships.

The submarine peril, though much lessened, was far from removed despite all contributions to new shipping. Archibald Hurd, Naval Correspondent of the Daily Telegraph, gives the following figures illustrating this. During April, May and June, 1918, total shipping losses, allied and neutral, were 946,578 gross tons, compared with 2,236,934 gross tons for the same period in 1917. This average loss of approximately 1,000,000 tons a quarter, and a trifle over 300,000 tons a month was grave enough, though the losses in the course of a year had been more than cut in half. British losses due to enemy action and marine risk from April 1 to the end of July, 1918, were 1,312,315 gross tons; British vessels built and put afloat in the same period 763,246 tons, a decrease in British shipping during the first four months of the fiscal year 1918-19 of 549,069 gross tons.

Merchant Ship Losses and Building.

From Aug., 1914, to the signing of the armistice, Nov. 11, 1918, the total yearly losses suffered by the allied and neutral nations are given by the New York Journal of Commerce as follows:

Year	Losses (gross tons)
1914	1,312,315
1915	1,312,315
1916	1,312,315
1917	1,312,315
1918	1,312,315
1919	1,312,315

Following is a comparison of allied and neutral ship deliveries and losses for 1918 in gross tons:

Category	1918 (gross tons)
Losses	1,312,315
Deliveries	1,312,315
Gain	694,312

For each of the first four months in 1918 the losses exceeded ship building; the margin of losses, however, decreasing, and especially in March, falling quite sharply. From May to November in each month the building topped the losses, and in the last completed month of the war October, by nearly 500,000 tons, thus indicating clearly the progressive increase of building over losses during the year.

The proportional losses in 1918 were as follows in gross tons:

Category	1918 (gross tons)
Losses	1,312,315
Deliveries	1,312,315
Gain	694,312

This shows that the British losses nearly doubled those of the other allies and neutrals combined.

The proportionate yearly British and

other allied and neutral losses during the war were as follows in gross tons:—

Category	1918 (gross tons)
Losses	1,312,315
Deliveries	1,312,315
Gain	694,312

The losses in 1918, although slightly less than half those in 1917, were still greater than the losses in any war year preceding 1917, showing that German submarines were a grave danger to the end.

The British shipping loss of 9,000,000 tons comprised roughly (on the authority of Prof. W. S. Abell, Chief Surveyor of Lloyd's) 2,000 vessels, 500 liners and 1,500 tramp; the toll of lives among British merchant seamen was 15,000.

The losses sustained by the different allied and neutral countries during the war, as given by Archibald Hurd in the Daily Telegraph were, in gross tons, as follows:

Country	Gross Tons
United Kingdom and Dominion	9,000,000
United States	7,000,000
Belgium	1,000,000
France	1,000,000
Denmark	1,000,000
Holland	1,000,000
Italy	1,000,000
Greece	1,000,000
Japan	1,000,000
Norway	1,000,000
Sweden	1,000,000
Total	11,194,352

This total is slightly less than that given by the New York Journal of Commerce already quoted. The losses of the allied and neutral nations, apart from Great Britain, are put by Mr. Hurd at 5,138,584, Great Britain's losses being nearly double those of all the other given nations combined, 17 times those of the United States, and 10 times those of either France or Italy.

In 1915, allied and neutral losses exceeded building by 522,720 gross tons, in 1916 by 1,109,858, in 1917 by 3,686,837, but in 1918, owing to the 1917 losses being cut in half and to increased building activity, especially by U.S., the building surpassed the losses by 810,421 gross tons; 1914 being the only other similar war year, when the margin of safety was 303,733 gross tons.

British merchant shipping decreased during the war by 4,689,530 gross tons, that of the other allies and neutrals remaining almost stationary, with a small balance of 485,273 gross tons in favor of building over losses.

The total decrease of allied and neutral shipping during the war was 4,204,259 gross tons; this is serious enough, but worse is behind; taking Lloyd's figures, the gross steam merchant tonnage of the allied and neutral powers in 1914 was roughly 39,000,000, at the normal yearly peace increment increase of 5% this tonnage ought, in four years time, to have reached an additional 8,000,000; the real shortage of shipping for these nations to meet their peace requirements is therefore 12,000,000 tons, and the demands on sea transport after the war are bound to be excessive; this situation is somewhat relieved by the confiscation of 2,392,675 gross tons of enemy vessels in neutral ports, provided, of course, that these remain confiscated.

Britain was particularly hard hit; taking 20,000,000 as her gross tonnage in 1914 and applying the 5% principle, it will be found that the shortage amounts to about 9,000,000 gross tons for her

ordinary needs, and her needs for a considerable period after the war will be the reverse of ordinary.

Shipbuilding.

For the quarter ended Dec. 31, 1918, there were being built in Great Britain 424 steam and sail merchant ships, gross tonnage 1,979,352. Between one-third and one-half of the total number of steamships under construction in Great Britain for the quarter ended Dec. 31, 1918, were in the 5,000 to 6,000 gross ton class, or, put in deadweight tons, 7,500 to 9,000. In last year's report it was stated that the class of vessel giving the best return on outlay is one ranging between 7,000 and 10,000 tons deadweight capacity; the British programme gives practical support to this theory.

What is of peculiar interest to the Empire and to Canada, is a comparison between the returns for Britain and the dominions, and those for the United States, and the position taken by Canada herself among the other nations. The number of ships under construction in Britain and the Dominions was 619, total gross tonnage 2,258,663, in the United States 997, total gross tonnage 3,645,919. It can be readily judged what sort of part the United States is likely to play in the world's sea-carrying trade, and four years ago she was almost an on-looker. Comparing small things with great, the Canadian return is scarcely less remarkable.

Lloyd's statement includes returns from all the chief shipbuilding countries of the world with the exception of the Central Powers. In this company Canada's 1918 programme ranks third in the number of ships, 148 to Japan's 116; and fourth in tonnage 225,264 to Japan's 278,140; only 52,876 tons less; a notable showing in a short time, which augurs well for the future.

The French war output is only one-fifth of that for the four previous years, Britain's about one-half, Denmark and Norway show a slight increase, Italy increased her output by one-third, Holland by one-quarter. The Swedish output for 1915-18 is about double that for 1911-14, the Dominions about treble, the Japanese fourfold, and the United States fivefold; the main building increase for these three last countries taking place in 1918. The world's total output of tonnage for 1915-18 very nearly equals that for 1911-14, the difference in favor of the latter being 462,596 tons.

Ocean Freight Rates.

The sharp fall in ocean freight rates came somewhat as a surprise. The lead was taken by such British lines as the Cunard, Furness - Withy, International Mercantile Marine group, and Canadian Pacific, after notice had been given to the Director of Operation of the U.S. Shipping Board. This action was taken on their own initiative, as the rates on free space are fixed by the lines themselves, and are not subject to the approval of the British Ministry of Shipping, with the single exception of the rate on cotton. Upon the receipt of this notice the U.S. Shipping Board promptly followed suit by declaring a rate reduction of 66% on ocean freight from U.S. to European ports borne by its ships; these reduced rates only apply to U.S. Shipping Board vessels, and not to those privately owned, but as the Shipping

Board operates at least half of the U.S. Merchant Marine, the remainder is certain to be largely affected, and on routes where both are operating in common the Shipping Board's rates are certain to obtain. Whether or not the new revision will stand for any length of time is a moot question, but in U.S. shipwrecking circles the prevailing opinion seems to be that an approximate minimum has been reached and that the present scale of rates is not likely to go lower, although it may in some cases be increased; in the cases, however, of a number of shippers and exporters whose opinions were solicited by the New York Journal of Commerce, the majority favored a further and more general reduction. The tendency will be to restore and extend export business, and to lower the prices of commodities generally; the trades chiefly affected are cotton, steel, copper, hides, textiles, lumber, and groceries and foodstuffs; the profits of merchant ships, whether under private or government control, will of course, be curtailed. The comparison between the old and new rates per measurement ton was thus given by the New York Journal of Commerce, the new rates going into force on Feb. 1, 1919:—

America to United Kingdom	\$66.00 cut to \$20
America to French Atlantic ports	\$6.00 cut to \$26
America to French Mediterranean ports	71.50 cut to \$34

From the same source are taken the following U.S. Shipping Board rates on Webb high density cotton, present cargo space not warranting the shipment of loosely baled cotton:—

	Per 100 lb.	New	Old
From U.S. Atlantic ports to United Kingdom main ports	\$1.25	\$4.50	
France main Atlantic ports	1.00	4.75	
Main Mediterranean ports	2.00	5.25	
Holland, Rotterdam	1.50	4.75	
Belgium, Antwerp	1.50	4.75	
Portugal, main ports	1.50	4.75	
Spain, Barcelona	2.00	5.75	
Italy, main ports	2.25	5.50	
Shipments from U.S. Gulf ports	25c	extra.	

Merchant Marine.

In Aug., 1917, there were in the U.S., 61 shipyards, of which 37 were steel yards, with 162 yards. In Sept., 1918, there were 203 yards, with 1,020 yards; of these yards, 77 were steel, 117 wood, 2 composite, and 7 concrete. In 1916 the U.S. yards employed 50,000 men; they now employ 386,000. At the time of the entry of the U.S. into the war her merchant marine comprised 2,750,000 d.w. tons of seagoing ships over 1,500 tons burden; in Sept., 1918 (not including vessels of 1,500 tons), it consisted of:—

	No. D.w. tons.
Requisitioned U.S. ships	449 2,900,525
Ex-German and ex-Austrian ships taken over	100 644,713
New ships owned by Shipping Board	256 1,465,963
Old lake steamships transferred.	31 117,800
U.S. ships not yet requisitioned (over 1,500 tons d.w.)	377 980,459
Dutch steamers requisitioned	81 486,945
Foreign ships chartered to Shipping Board	291 1,208,411
Foreign ships chartered to U.S. citizens	600 1,707,099

Total 2,185 9,511,915
Of this fleet, 1,294 ships, total tonnage 6,596,405, fly the U.S. flag, 891 foreign vessels, total tonnage 2,915,510, are under charter, either to the Shipping Board or to private companies.

Australian Shipbuilding.

Following are the numbers and tonnage of ships built and registered in Australia from 1914 to 1917:

	No. Gross tons
1914	55 8,817
1915	14 1,278
1916	7 146
1917	6 383
Total	82 5,574

Australia's output for 1918-19 was expected to be about 40,000 tons. The importance attached by Australia to the building of ships may be judged by the fact that her programme for 1918-19 is seven times her total output for the four preceding years.

Shipping in the Future.

Sea transport after the war will, in all likelihood, be chiefly controlled by Great Britain and the dominions, the United States, Japan, and possibly Germany and Austria-Hungary. In 1914 the merchant steam tonnage of these countries, according to Lloyd's Register, was in gross tons:—

Great Britain and dominions	20,523,706	
Germany	3,143,700	
Austria-Hungary	1,052,280	6,187,000
United States		*1,813,775
Japan		*1,078,886

*This is sea going tonnage only. The U.S. had besides, 3,000,000 in lake tonnage.

The total steam tonnage of the world at that time was 45,403,877, Great Britain and the dominions owning 40% of it; post war conditions, however, may tend to somewhat modify this position.

The recent shipbuilding activities of the United States and Japan, coupled with their comparative immunity from submarine losses, will have a very considerable effect on the shipping situation of the future.

Britain, during the entire course of the war, despite her heavy losses, placed her merchant tonnage unreservedly at the service of the allies; in doing so she abandoned to a greater or lesser extent some of her former trade routes; this holds true in particular of the Pacific trade, of which she controlled 40% before the war, Japan's share being 30%. British tonnage on this route has now dropped by 10%, while the Japanese has doubled, but owing to the astonishing increase of U.S. shipbuilding during the war, Japan's most formidable rival there in the future will probably be the U.S.

In 1913 the value of Britain's imports was \$3,736,050,381, of her exports \$3,085,200,784; the adverse balance of trade of \$650,849,597 was offset in part by interest on foreign investments, but chiefly by the earnings of her merchant marine. Britain's merchant marine is literally her life-line, and its standing after the war in relation to that of other maritime nations will be of the utmost importance.

Mercantile shipbuilding in Britain since 1914 has been heavily handicapped; there has been a shortage of steel due to the pressing demand for guns and munitions, the drain on her man power stripped her plants, and men were put into the ranks who might better have served the allied cause in the yards. It was not until the spring of 1918, when the tonnage situation became acute, that 20,000 shipwrights were released from the army. She had to consider the imperative needs of her navy, and to maintain constantly at sea an immense fleet of first line battleships and cruisers, besides destroyers, trawlers, drifters, and all manner of anti-submarine craft.

Addressing visiting U.S. journalists in London in Oct., 1918, Admiral Sims, commanding the U.S. fleet in European waters, said that there were then about 5,000 anti-submarine craft operating day and night in the North Sea and vicinity; of this flotilla, 160, or 3% were U.S. vessels, the remainder being British; he stated that about the same proportion obtained in the Mediterranean. This is a striking tribute to the pre-eminence of Britain's navy, and of her merchant marine as well, for no small share of the

battle against German mine and submarine has been borne by the latter. During four years of war the displacement tonnage of the navy, including auxiliaries, increased from 2,500,000 to 6,500,000, and the personnel from 146,000 to 406,000. British yards of late have carried on an extensive work in the repairing and refitting of merchant ships damaged by mine or torpedo, hampering greatly the output of new shipping. Between June, 1917, and Oct., 1918, 10,000 British ships, besides a number of allied and neutral vessels, were repaired and made serviceable. In any estimate of Britain's capacity to build merchant ships under post war conditions, all these factors must be taken into account.

The Central Powers' Shipping.

In considering the merchant shipping output of the Central Powers during the war period, it must be borne in mind that they were largely free from the disabilities under which Britain has labored. Early in the war they gave up any attempt to keep the sea, confining themselves almost entirely to the use of submarines, thereby curtailing the building of the larger battleships. The repairing and refitting operations of their merchant shipyards were confined to their Baltic fleet, a mere trifle; they were thus able to devote the greater part of their building activity to the production of new merchant ships, and that they did this to a very considerable extent may be taken for granted from information that has leaked out from Germany. On the authority of the late Herr Ballin, there are at present building in German yards one ship of 56,000 gross tons, one of 35,000, two of 30,000, and a number ranging from 9,000 to 22,000 tons; Germany, as heretofore, evidently pinning her faith to the big freighters. The system of heavy subsidies started before the war is to be continued, especially to merchant ships completed within three years after the declaration of peace.

Of the merchant shipping of the Central Powers, 2,700,000 tons were interned in German or Austrian ports at the outbreak of war, the remaining 3,487,000 being in neutral ports; of the latter 2,392,675 tons were confiscated; irrespective of new output the Central Powers have at present 3,794,325 gross tons of merchant shipping. As their output of shipping in 1914 was roughly 600,000 gross tons, it may be assumed that they have at present at the least between four and five million tons for post war trade.

Canadian Shipbuilding Policy.

Owing to the drain on merchant tonnage generally and on British tonnage in particular, due to the war, the possession of ships has become of capital importance to the dominions, first to carry their own products overseas, and second to partake in the sea-carrying trade, and obtain the advantage of the high freight rates which are likely to obtain for a considerable post war period; it has already been shown how Australia has increased her shipbuilding activities.

The Canadian Government, recognizing how much the possession of a merchant marine, solely under Canadian control, either governmental or private, will mean to the future trade prosperity of Canada, has launched an extensive plan for the building of a Canadian merchant marine in Canadian shipyards.

In this connection it may be noted that rolling mills for the output of steel plates and steel shapes for ships have been es-

Canadian and American, N.Y. However, the latter of these (patent) and designs were issued in 1916, and have been in use since. It is probable that Canadian ships will be all that possess the patent.

At the time the *Imperial* of 1,100 tons, owned Canadian property, passed the department was in question, and the question of the Canadian flag was in the air. It is a fact that the *Imperial* was built in Canada, and the fact that the ship was built in Canada was a matter of fact. The ship was built in Canada, and the fact that the ship was built in Canada was a matter of fact.

The report of the Deputy Minister's report is as follows: a table giving some particulars of the first 4 steel cargo steamships ordered by the Marine Department for service on Canadian Government Merchant Marine Ltd. Fuller particulars of 60 ships, orders for which have been announced are given in the table which Canadian Railway and Marine World publishes monthly, and which appears on another page in this issue.

winches;
S.S. Collingwood, Port McNicoll, Ont., after bulkhead repairs, rebuilding wire-rope, and new deck house, and four new deck winches;
S.S. Collingwood, Port McNicoll, Ont., new bulkhead winches;
S.S. Haddington, Port William, Ont., all repairs to be completed and wale strakes renewed;
S.S. Cadillac, Port William, Ont., renewal of hatch coamings; deck winches removed and overhauled, wale strake and bilge repairs;
S.S. Sarnian, Buffalo, N.Y., new boilers, new steel deck house, and new hatch coamings.

Canada Steamship Lines' Winter Overhaul of Steamships.

Following are particulars of a number of Canada Steamship Lines' steamships which are being overhauled while laid up for the winter, with the names of the ports at which they are moored, and some details of the work being done on them:

S.S. T. P. Phelan, Kingston, Ont., reconstruction to make it suitable for grain carrying;

S.S. Ionic, Kingston, Ont., general rebuilding;

S.S. City of Hamilton and City of Ottawa, Toronto, new wale strakes, no. 1 hold bulk-head renewed, new deck houses and general repairs;

Winter Navigation of the St. Lawrence River.

Canadian Railway and Marine World for January contained an article on the possibilities of winter navigation on the St. Lawrence River by Hon. D. O. L'Esperance, President, Quebec Harbor Commission, in which he dealt exhaustively with the general average conditions existing in the St. Lawrence River and Gulf during winter. This matter has been discussed by various people interested in shipping in general, and those associated with Quebec in particular. The Quebec Board of Trade took the matter up recently with the Minister of Marine, and J. T. Ross, Chairman of the Board, received a reply from the Minister early in January, to the effect that it is his intention to take such steps as may be necessary to provide equipment that will be reasonably adequate to assist any vessel that may find it necessary to navigate the St. Lawrence after ice conditions have become severe. He said in part:—

"The casualty that befell the Canadian Recruit is very much to be regretted, indeed. The very severe ice conditions that resulted in the loss of the ship came about at a much earlier period than was anticipated here with regard to the experience of previous years. In so far as the Canadian Spinner is concerned, while the situation is extremely serious, it is hoped it may be possible to rescue this vessel from the other end. I have quite realized for some time that the facilities available for the purpose of assisting ships to navigate the River St. Lawrence after severe weather sets in are quite inadequate. For reasons that I am sure will commend themselves generally, the department consented to the transfer to the Russian Government of the ships that would be really effective in combating the ice conditions in the River St. Lawrence. My present intention is to take such steps as may be necessary to provide equipment that will be reasonably adequate to assist any ships that may find it necessary to navigate the St. Lawrence after the ice conditions become severe. The representations submitted by you on behalf of the board of trade as to the extent to which facilities should be provided will be borne in mind by me in the course of the further consideration that the question will receive."

The Webster Steamship Co.'s Steamships, which are operating generally in the coal and package freight business on the St. Lawrence and Great Lakes, are all named after the President's (Senator L. C. Webster) sons and daughters, the names being as follows: Colin W.; Eric W.; Howard W.; Marion W.; Muriel W., and Stewart W.

Dominion Wreck Commissioner's Enquiries, Judgments, Etc.

Enquiries have been held, and judgments delivered in connection with the following casualties,—

Lakeport-Howard W. Collision.

Held at Montreal, Dec. 16, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. C. Lapierre and C. A. Ouellette, as nautical assessors, into the collision between the s.s. Lakeport, owned by Peterson and Collins, Cleveland, Ohio, and the Webster Steamship Co.'s s.s. Howard W., of Montreal, Oct. 29, 1919, near Hamilton Island in the River St. Lawrence. The court found that the responsibility for the accident rested solely on the s.s. Howard W. The master was absent from the bridge at a time and place when his presence was most needed, especially so in view of the fact, that the mate, his son, is very young, with only very limited experience as a mate. While accepting the master's statement that his absence was obligatory, yet his evidence and that of the wheelman differ somewhat as to where he was at the time of the collision, and the court has heard similar excuses so many times that, while it cannot reject that part of the master's evidence, it finds it very peculiar that these absences coincide so frequently with shipping casualties. The two ships were meeting at a point where a slight alteration of course was necessary, the s.s. Lakeport, bound east, was descending with the tide, and the green light of the Howard W. on her starboard side was broad enough to permit the mate to assume that though they were about to pass on the wrong side of the channel, according to the International Rules of the Road, since at that time the adoption of the Rules of Road for the Great Lakes had not been specified by whistle, and in view of the fact that the Howard W. was well to starboard, from the situation of both vessels it was considered safe for the Lakeport to continue on her course. The green light on the Howard W. alone was seen with her masthead light. It was said by the Lakeport that the range light of the Howard W. was not visible, but this was disproved by independent witnesses, but it may, at the time, have been obscured by smoke. The exact direction of the Howard W. could not be ascertained, but when at a ship's length from each other, it was perceived that she was coming obliquely on to the Lakeport, a turn of the wheel to starboard was given and the collision occurred. The court expressed the opinion that the Lakeport was in such water as to permit her to go full speed, that continuing full speed was good seamanship, as a diminution or reversal would undoubtedly have caused more damage, by bringing about a collision of greater violence. There was no lookout, but the absence of this did not contribute to the casualty. The collision happening 200 ft. from the Hamilton light does not clearly indicate that the Howard W., after having been sighted well south of the channel had attempted to steer over to the north side whilst having the green light, or even the three lights of the Lakeport on her starboard side. There was ample proof that the Howard W.'s red light was not burning, or, if not, that it was so low as not to be seen by the Lakeport. Had this been in order when the Howard W. chose to cut across, its appearance would have caused, or compelled, the Lakeport to signal

sooner. Hence the court did not find any reason for criticism of the action of the Lakeport's crew. The Howard W. was being navigated, if not carelessly, at least with a lack of ordinary prudence. The master had left his post at a place where extreme caution had to be exercised on account of change of courses which descending and ascending vessels have to adopt, leaving the mate, his son, who had had but one season's experience. The Lakeport did not comply with the letter of rule 25 of the Rules of the Road of the Great Lakes, but the court expressed the opinion that the spirit of the rule had been observed. The court, therefore, found that the Lakeport, having the right of way, and it being clear weather, exercised the necessary precautions which the unforeseen situation demanded, and its officers were therefore exonerated from blame. With regard to the Howard W., there was lack of judgment and prudence on the part of mate L. J. Daigneault, and he was therefore held to blame for the collision, and for his failure to comply with rule 25, his certificate as mate was suspended for 7 months, from Dec. 20, 1919, to July 20, 1920. The master, L. Daigneault, was given the benefit of the doubt, as to his absence from his post, and he was warned that the same excuse could not always be accepted. The court also took occasion to advise owners and agents of ships, to impress upon their officers the importance of maintaining a look out.

Grounding of s.s. Canadian Volunteer.

Held at Montreal, Dec. 22, 1919, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. C. Lapierre and C. J. Stuart, as nautical assessors, into the Canadian Government Merchant Marine's s.s. Canadian Volunteer striking a buoy and bottom near buoy 90 Q, River St. Lawrence, Dec. 6, 1919.

Capt. E. C. Sears stated that the ship is built of steel, 1,910 tons net, 3,188 tons gross, 320 ft. long, 44 ft. 2 in. broad, and draws 17 ft. 2 in. forward and 19 ft. 4 in. aft, equipped with single screw and triple expansion engines for a speed of 10 knots, supplied with all necessary instruments for navigation, and has 36 of a crew, including 2 officers on this occasion and 3 engineers with certificates. He left Montreal Dec. 6 and experienced snow when he anchored, gradually proceeding later. On Dec. 8 he had been on deck practically all the time; but absented himself for two minutes to look at the chart, and reached the deck when the ship struck. The engines were stopped and helm put hard to port, then full speed astern, the ship striking a second time. It was found the ship was making water. At the time of grounding the steering pilot was acting on pilot Hamelin's advice and orders. The wind was light northeast. It was one minute after the buoy was seen that the ship came in contact with it.

Capt. J. D. Weir, Superintendent of Lights, stated that the buoy was reported as having disappeared.

J. O. Michaud, clerk of the Pilotage Office, stated that he had received orders from the agent for one pilot; but sent the two which were in turn on the list. He had been shown a letter purporting to be an agreement between the pilots and the Shipping Federation of Canada, with respect to placing the pilots on

board; but had not read it. He had also received telephone orders from the Superintendent at Quebec to that effect. He acknowledged having sent the second pilot on the request of pilot Hamelin.

F. Hamelin, pilot, stated that he had been a pilot for 13 years, 11 of which he worked steadily for the C.P.R. This was his first enquiry. He was on deck, the second pilot steering under his orders. He saw the buoy 90 Q a quarter point on the starboard bow, Grondines ranges were opened slightly to the south. He tried to detect St. Emilie range, the aids for the turning point; but could not do so in time. The current was setting to the south and the tide was half ebbing. He ported the helm, and saw it was done, but owing to the quantities of ice floating in the channel the ship did not obey as promptly as expected, and struck a buoy in the vicinity of the bridge on the starboard side. The ship's engines were stopped, the helm hard aported, then full speed ahead. The ship struck a second time, and then proceeded. The weather was clear, though sky cloudy, wind light and the ground was covered with snow, which prevented him from sighting St. Emilie range. He saw the buoy, which was about 3 ft. above water, when about 700 ft. distant, adopting the same method as in former navigation; but the current which was about 2½ knots, carried him on swiftly towards the buoy and the masses of ice prevented the ship from responding to the helm with the promptness required at this turn. The buoy, when first sighted, must be on the starboard side as it is necessary to make the turn to the north in order to counteract the current setting south, which would tend to throw the ship on the south bank. He stated that he was the responsible pilot, pilot Rivard acting only on his orders. The only time he left the latter to his own devices being when he had to absent himself from the bridge, selecting parts of the river where there was ample room.

F. X. Rivard, pilot, said his duties consisted of steering. He did not remember how the Grondines lights were opened. He watched the steering only and obeyed the orders given him by the pilot. He did not remember if the buoy was a quarter point or more on the starboard bow.

R. Proteroe, third officer, stated that he was on deck, on the port side of the bridge, the buoy when seen being half a point on the port bow. He noticed by the movements of the arms of the wheelman that the wheel was starboarded, bringing the buoy three points on the starboard bow, when the ship drifted towards the buoy, striking in line with the funnel. The helm was then put port; and hard to port, the ship striking a second time. The engines were stopped. He then left the bridge.

Having heard arguments by Hon. A. W. Atwater, K.C., for the Shipping Federation of Canada, and G. H. Bernier, for pilot Hamelin, the court adjourned to Dec. 27, when its judgment was announced, of which the following is a summary: The evidence shows a striking contradiction between the statements of pilot Hamelin and the ship's third officer. The pilot's evidence, which was corroborated by his assistant, was that the buoy was first sighted on the starboard side, while the third officer stated that it was first sighted on the port side, and

The court considered the recommendation made in 1915, to erect some aid to navigation at the Narrows of the Pacific as a guide for the turning point, and it considers that in such a narrow pass and sharp curve, where prompt action has to be taken, in view of the various elements which make this channel almost impassable, the St. Esprit is rather too distant for effectiveness. With regard to the carrying of an additional pilot, the court recommended that a definite understanding be arrived at between the Marine Department and the parties, so as to eliminate any cause of apprehension or friction which the presence or action of a second pilot may bring about. The court also expressed its appreciation of the efforts of the counsel engaged, and of Thos. Robb, Manager, Shipping Federation of Canada, in helping to bring to a successful termination a case, which at first presented a serious and acrimonious situation.

Contracts Let for Marine Public Works.

The Dominion Public Works Department has let the following contracts:—
Scotch Cove, White Point, N.S.; extension to breakwater; A. W. Girroir and W. F. MacKinnon, Antigonish, N.S.;

Dec. 22, 1919, extension of pier; Pas, Man.; construction of wharf; N. J. W. and L. Berry, Westport, Nov. 1, 1919; schedule of prices.
Naramata, B.C.; construction of wharf; S. Mills, New Westminster, B.C.; Nov. 3, 1919; schedule of prices.
Port Eslington, B.C.; landing float and approach; M. Hyatt, Prince Rupert, B.C.; Nov. 1, 1919, schedule of prices.
Meteghan, N.S.; repairs and renewals to public wharf; M. C. Denton and M. A. Condon, Digby, N.S.; Nov. 10, 1919; \$45.9 per cub. yd.
Beisdale, N.S.; wharf; E. Dickson, Louisburg, N.S.; Nov. 10, 1919; \$2,350.
Little Brook, N.S.; repairs to breakwater; H. F. Deveau, Meteghan, N.S.; Nov. 11, 1919; schedule of prices.
St. Jean d'Orleans, Que.; repairs to wharf; E. Nethot and J. E. Thibault, Montmagny, Que.; Nov. 26, 1919; schedule of prices.
Petit Rocher, N.B.; repairs to breakwater; T. P. Charleson, Ottawa; Dec. 2, 1919; schedule of prices.
Sorel, Que.; reconstruction of corner in concrete and other repairs to wharf; O. Poliquin, Portneuf, Que.; Dec. 9, 1919, schedule of prices.
The Southern Salvage Co., Liverpool, N.S., has been given judgment for \$300 against the schooner Frances P. Moquito.

Vessels Registered in Canada During November, 1919.

In compiling the following lists of vessels registered, steamboats and motor boats, operated by engines of less than 10 h.p., are eliminated, as also are sailing vessels of less than 100 tons register.

Canadian Notices to Mariners.

The Marine Department has issued the following:—

Ontario—Lake Ontario, Toronto Harbor During the past season, the Dominion Public Works Department has dredged the channel between the piers at the eastern entrance to Toronto harbor 200 ft. wide to a depth of 17 ft. below elevation 245.0 or zero of the Toronto Harbor Commissioner's gauge at Queens wharf.

Ontario—Lake Erie, Rondeau Harbor—The hand fog horn maintained on the outer end of the east breakwater pier was discontinued Dec. 31, 1919.

Ontario—Lake Huron, Kincardine—During the past season the entrance between the piers and a part of the basin in Kincardine harbor were dredged by the Dominion Public Works Department, to a depth of 14 ft. below the zero of the harbor gauge, which is 578.50 ft. above mean sea level, New York. The channel between the piers is 50 ft. wide from deep water to the inside end of the entrance piers, where the deepened area turns southward for 205 ft. The south end of the dredged area is 50 ft. wide, gradually widening to 90 ft., 108 ft. north. For the next 85 ft. the dredged area is 250 ft. wide, then narrowing gradually to 50 ft. at the inside end of the entrance piers.

British Columbia—Strait of Georgia, Sandheads at entrance to Fraser River—The two red steel conical buoys 10F, and 12F, established in 1919 on the south side of the channel at the entrance to the Fraser River will be discontinued; black buoy 9F, will be re-established on its former position 0.30 mile 66° 30' (N. 41° 30' E. mag.) from buoy 7; black can buoy 11F, will be re-established on its former position 0.27 mile 66° 30' (N. 41° 30' E. mag.) from buoy 9.

British Columbia—Chatham Sound, Prince Rupert Harbor, Barret Rock—On or about Mar. 1, 1920, when the gas and bell buoy will be withdrawn, and light and fog alarm established on the rock, lat. N. 54° 14' 32", long. W. 130° 20' 38"; character, occulting red acetylene light, automatically occulted at short intervals; elevation, 22 ft. Structure, white rectangular reinforced concrete tower, with pointed ends, surmounted by square concrete house with lantern on top; height, 44 ft. Fog alarm, diaphone, operated by air, compressed by electrici-

city, controlled from dwelling on shore, gives 2 blasts of 2 secs. duration every 30 secs.; the horn elevated 13 ft. above high water, and will be put in operation immediately; dwelling, rectangular wooden dwelling on shore directly east of beacon by submarine cable.

British Columbia—Strait of Georgia, Fraser River—Frasermouth Outer Range Lights; the fixed oil lights will be replaced by occulting acetylene gas lights, automatically occulted at short intervals; the front light will be changed from red to white, the back light to remain white as formerly; Garry Point Range Lights; front light, on Steveston jetty; fixed red light shown from a cluster of 3 incandescent electric lamps, at elevation of 15 ft.; visibility, 6 miles; structure, wooden pole; back light on same pole as Windgam back range light; fixed white light shown from a cluster of 3 incandescent electric lamps at elevation of 30 ft.; visibility, 10 miles in line of range; the lights in one astern bearing 305° (n. 80 w. mag.) lead up from the intersection of their alignment with that of the northside range lights to black buoy 25F.

British Columbia—Cousins Inlet, David Point—Lighted beacon established on northeast extremity of point; fixed red oil light at elevation of 16 ft.; wooden slatwork pyramid, surmounted by a slatwork ball having the lantern suspended from a bracket on the north face of the beacon; color, white; height, 26 ft.; the light will be maintained by Pacific Mills, Ltd., Ocean Falls.

Prince Edward Island—South Coast, Summerside Harbor—During the past season the Dominion Public Works Department has dredged the approach to, and a berth on the east side of Queens wharf, Summerside; from deep water 550 ft. south from the end of the wharf the approach was cleaned up to a depth of 18 ft.; the berth on the east side of the wharf is 250 ft. long by 80 ft. wide with 18 ft. water at the outer end of the wharf gradually decreasing in depth to 10 ft. at the inner end of the dredged area.

Quebec—Gulf of St. Lawrence, Moisie River—Owing to the back light of the Moisie River range lights having been moved northward, the bearing of the range has been changed to 272° (n. 62°

w. mag.); distance between front and back lights 436 ft.

Quebec—River St. Lawrence below Montreal, vicinity of Longue Pointe—The two red gas buoys that were placed to mark a reserved harbor area in the vicinity of Longue Pointe have been discontinued.

British Columbia, Fraser River, North Arm, change in character of lighted beacons—Westerly light, on south side of channel at outer entrance to North Arm, occulting white acetylene light, automatically occulted at short intervals, shown from a lens lantern, elevation, 18 ft.; easterly light, on south side of channel at turn in jetty, occulting white acetylene light, automatically occulted at short intervals, shown from a lens lantern, elevation, 18 ft.; both lights are unwatched.

Gulf of St. Lawrence Shipping and Trading Co.'s Services.

Canadian Railway and Marine World for December, 1919, contained some details of this company's projected winter services in the Gulf of St. Lawrence. It is further reported that a winter service down the Gulf as far as Blanc Sablon and Natashquan, on the north shore, and a summer service between Montreal and Gulf and Newfoundland ports will be undertaken. The winter service comprises a regular operation between Murray Bay, at the mouth of the Saguenay River, as far as Natashquan and Blanc Sablon, to which ports navigation has not yet been attempted in winter. The company's s.s. Labrador is, it is said, to be used in the service, which will consist of two trips a month. The company expects to obtain certain privileges from the Dominion Government to enable it to carry on the service to some advantage. Arrangements are reported to have been made for the chartering of a number of steamships for an extended summer service on the same line as carried out in 1919.

The Canadian Deep Waterways Association held a joint meeting with the Great Lakes and St. Lawrence Tidewater Association at Windsor, Ont., Jan. 21, and discussed plans for deepening the St. Lawrence system to allow ocean going vessels to pass to the head of the Great Lakes.

Grain Shipped from Port Arthur and Fort William, Ont.

The following table, prepared by the Board of Grain Commissioners, shows the quantity of each kind of grain shipped by vessels from Port Arthur and Fort William, Ont., during the 1919 navigation season, according to the ports at which the cargoes were discharged:—

To Canadian ports—	Wheat Bush.	Oats Bush.	Barley Bush.	Flax Bush.	Rye Bush.	Mixed lbs.	Screening tons.
Port Arthur	2,600,947-00	3,192,728-13	1,173,342-25	375,188-44	33,474-46	6,376,140
Godswich	10,157,321-40	2,952,263-04	2,144,640-16	671,074-31	4,539,691
Midland	8,195,470-10	2,084,812-32	1,806,603-10	66,000-00	35,548-28
Montreal	427,777-30	721,246-31	3,761,276-46	58,907-14	3,267,710
Port Colborne	21,657,569-10	2,918,282-11	1,848,365-39	54,378-42	66,945-03	5,908,408	161-1740
Port McNicoll	3,181,602-40	239,489-04	1,350,995-09
Tiffin	14,647,886-00
Total	86,486,174-10	12,108,823-27	11,059,234-31	494,567-30	785,550-10	20,182,993	161-1740
To U. S. ports—							
Buffalo	2,797,037-30	2,468,948-06	1,085,367-24	180,572-42	29,684-14	1,612-6750

Duluth - Superior	988,285-50	803,421-52	41,767-0980
Total	3,785,323-20	2,468,948-06	1,085,367-24	612,241-91
Winter storage cargoes.....	2,497,823-20	1,156,310-12	261,260-16	100,397-48
Grand total.....	92,769,320-50	15,728,082-11	12,405,862-23	1,207,207-01	1,088,972-06	20,182,949	41,929-0720

Atlantic and Pacific Ocean Marine.

The Dominion Public Ocean Service's *Montserrat* was damaged by fire in her cargo room while at Hong Kong, Jan. 10, 1919.

The *Goodly* was a steamer, which went ashore on Beaufort Island, near the end of 1919, will be salvaged shortly, a contract having been awarded to the Atlantic Salvage Co. The work commenced Jan. 18.

The German *ss. Keesepoort Frederich Wilhelm*, one of the ships seized by the allies at the outbreak of war, has been allocated to Canadian Pacific Ocean Services Ltd., for the north Atlantic route. It is said that she is to be cleaned and thoroughly overhauled and refitted, to make her equivalent to the company's ships of the *Empress* class.

The *White Star s.s. Olympic*, which has been engaged almost solely for some time in troop transportation, has been restored to her old condition and equipped with oil burning furnaces. She is said to be the first of the large passenger steamships to be so equipped. She will resume her service between Great Britain and New York during March.

The former German steamship *Germanicus*, which stranded on Northwest Reef, Bic Island, near Father Point, in Nov., 1919, is being offered for sale by the Salvage Association of London, Eng., as she lies stranded. She was built in England in 1901, passed to German owners, and during the war, was taken over by the British Ministry of Shipping. At the time of the casualty she was on her way to Montreal light to load grain for Europe.

The British *s.s. Yarmouth*, which left New York for Havana, Jan. 17, was reported by wireless to be in a sinking condition in lat. 49, north longitude 74 west, about 240 miles northeast of light vessel 3. She was formerly in the Dominion Atlantic Ry.'s service between Yarmouth, N.S., and Boston, Mass., and was sold recently to British purchasers. She was built at Dumbarton, Scotland, in 1887 and is screw driven by engine of 260 n.h.p. Her dimensions are: length, 220.3 ft.; breadth, 35.2 ft.; depth, 21 ft.; tonnage 1,452 gross, 725 registered. She eventually reached New York, where repairs were made, after which she proceeded on her voyage, Jan. 22.

The Canadian *Robert Dollar Co.* has announced that its first direct sailing from the Orient to New York, calling at Vancouver, will be made by the *s.s. Melville Dollar*, scheduled to arrive at Vancouver, April 25, and sailing thence for New York, May 4. She is booked to arrive at Vancouver, from New York, on the return trip, July 12. The first direct sailing from New York to the Orient, calling at Vancouver, will be made by the *s.s. Grace Dollar*, leaving New York, April 12, arriving at Vancouver May 11. Other steamships to be used in this service are: *M. S. Dollar*; *Hessie Dollar*; and *Harold Dollar*.

Maritime Provinces and Newfoundland.

The *Majestic Steamship Co.'s s.s. Champlain* is being thoroughly overhauled and having a new boiler installed at Gregory's yard, St. John, N.B.

The schooner *Madonna*, owned in Newfoundland, while en route from a New-

foundland port to Sydney, N.S., was driven ashore at Petit Point, outside Sydney Harbor, Jan. 3.

The *Reid Newfoundland Co.'s s.s. Dundee*, which ran ashore during a hurricane, Jan. 29, 1919, is expected to be a total loss. The passengers and crew were taken off by the company's *s.s. Clyde*.

The *Reid Newfoundland Co.'s s.s. Sagona* struck on the rocks at the entrance of Rocky Harbor, Nfld., early in January, but was able to proceed to Port aux Basques, Nfld., under her own steam.

The *St. John River Steamship Co.'s s.s. Elaine*, is reported to have been chartered by Cuban interests, and to have left St. John for New York, where some repairs are being made, before she proceeds to Cuba.

The sailing ship *Lucille*, which left Perth Amboy, N.J., Nov. 30, 1919, for Halifax, N.S., with a cargo of coal, was reported at the end of December to be missing, nothing having been heard of her or her crew since she left port.

The 3 masted schooner *Pelleen* was sold by auction at St. John's, Nfld., recently. She was built at Port Blandford, Nfld., in 1919 and is 430 tons gross, 388 tons net, and was offered as she lay in St. John's harbor, fitted and practically ready for sea.

The *s.s. Merle C.*, en route to Port Greville, N.S., sprang a leak in deep water near that point, and sank with her cargo of coal, Jan. 11, the crew having abandoned her. She was built at Port Greville, in 1919 and was owned by Capt. Robert Kerr and others of Parrsboro, N.S.

The schooner *Frances Gardiner*, owned by W. C. Smith & Co., Lunenburg, N.S., was abandoned at sea early in January, the crew having been rescued and taken to St. John's, Nfld., by a Norwegian steamship. She sailed from Newfoundland about Dec. 16, 1919, with fish for Oporto, Portugal.

The schooner *G. H. Murray*, 350 tons, owned by the Bissett Co., Halifax, N.S., and which was built by the Comeau Shipbuilding Co., Comeauville, N.S., in Sept., 1919, has been wrecked on the Colonoed reef, Cuba, and become a total loss. She took cargo at Walton, N.S., in Oct., 1919, for New York, where she reloaded for Havana, leaving New York, Nov. 10.

The Naval Service Department received tenders to Jan. 22, for the purchase of the Dominion Government *s.s. Thirty-three*, as she lies at Halifax, N.S. She was built of steel, at North Shields, Eng., in 1902. Her dimensions are: length, 80 ft.; breadth, 18.1 ft.; depth, 8.3 ft.; tonnage 79 gross, 33 registered. She is screw driven by engine of 21 n.h.p. at about 9 knots an hour.

The *Kingsley Navigation Co.'s s.s. E. D. Kingsley*, which grounded recently at Whitehead Harbor, N.S., on the second portion of her journey from the Great Lakes to Vancouver, B.C., was involved in an action at Halifax, N.S., Jan. 8, on a claim by Munro and Phalen for \$5,000, for salvage work. Mr. Justice Drysdale, of the Admiralty Court, awarded the plaintiff \$400 for salvage services, and costs, subject to a reduction of \$400 because of the excessive claim which had been made and which compelled the ships owners to put up bonds at an expense of \$500.

The *s.s. E. Ross*, which has been operated on the Indiantown, N.B., ferry service for some time, is reported to have been sold to the St. John Drydock and

Shipyards Co. She was owned by Capt. James Leonard, St. John, N.B., and was operated on a time charter agreement with the Lunenburg and Indiantown Ferry Commission. Some opposition to the sale has developed, and it is reported that an arrangement will probably be made with the new owners, either to allow the vessel to remain in the service, or for the commission to purchase it by a bond issue. The *E. Ross* was built at St. John, N.B., in 1894, and is screw driven by engine of 7 n.h.p. Her dimensions are: length, 41.9 ft.; breadth, 15.3 ft.; depth 5.1 ft.; tonnage 30 gross, 20 registered.

Ontario and the Great Lakes

The Hamilton Board of Control considered plans for harbor improvement, involving an expenditure of about \$15,000, recently.

The Canadian Towing & Wrecking Co.'s steam tug *A. B. Connee* was considerably damaged by fire at Port Arthur, towards the end of December, the loss being estimated at \$25,000.

The Toronto Harbor Commissioners have deposited with the Dominion Public Works Department, description of site and plans of the harbor head walls to be built in Toronto Bay between the western limit of York St. produced southerly, and the western limit of Yonge St. produced southerly, and have applied for permission to build them.

Canada Steamship Lines Ltd., has transferred the following of its steamships from the British register to the Canadian, A. E. Ames, Beaverton, Edmonton, H. M. Pellatt, and Mapleton. All of these were built in Great Britain, and were either owned by companies which have been absorbed by Canada Steamship Lines Ltd., or bought by that company.

The schooner *Oliver Mowat*, owned by W. H. Peacock, Port Hope, and W. Savage, Picton, Ont., is reported sold to T. L. Vandusen, and R. G. K. Hepburn, Picton, Ont., for use as a coal carrier between Oswego, N.Y., and Picton. She was built at Mill Haven, Ont., in 1873, her dimensions being: length, 116 ft.; breadth, 23.8 ft.; depth, 9.8 ft.; tonnage, 170 registered.

The U.S. Lake Survey reports the stages of the Great Lakes in feet above mean sea level for Dec., 1919, as follows: Superior, 602.33 ft.; Michigan and Huron, 580.18 ft.; St. Clair, 74.62 ft.; Erie, 571.81 ft.; Ontario, 245.54. Compared with the average December stages for the past 10 years, Superior was 0.03 ft. above; Michigan and Huron 0.08 ft. above; Erie, 0.12 ft. above; Ontario, 0.33 ft. above.

The *Keystone Transportation Co.'s s.s. Keyvive*, operated formerly in the Great Lakes trade, is now being operated under 12 months charter between New York and West Indies and Gulf of Mexico ports. Her first sailing under this charter was from Montreal, Nov. 26, 1919, when she left for Clark City for a cargo of baled pulp from New York, after discharging which she loaded coal at Hampton Roads for Cuba.

Canada Steamship Lines' *s.s. Chicora*, which sank at her moorings at Toronto in the latter part of 1919, and was refloated, is being offered for sale by tender. She was built at Liverpool, Eng., in 1864 for use as a blockade runner in the United States civil war. She

is paddle wheel driven by engine of 180 n.h.p. Her dimensions are: length, 221 ft.; breadth, 26 ft.; depth, 10.9 ft.; tonnage, 931 gross, 540 registered. She is equipped for wireless telegraphy.

The Toronto Harbor Commissioners' issue of \$2,000,000 of 4½% bonds, due in 1953, is to cover the estimated expenditure for this year's work, which comprises the acquisition of lands, ship channel bridge, piers and docks, sewers, general development, maintenance and general administration. Of the estimated expenditure during the year, 17% will take place on the eastern section (Ashbridge's Bay), 64% on the central section (bay front from Bathurst to Cherry Sts), and 19% on the western section (Bathurst St. to Humber River).

Manitoba, Saskatchewan and Alberta.

The Lamson-Hubbard Canadian Co. has under construction at Fort Smith, Alta., a stern wheel steamboat with accommodation for both passengers and freight, for operation on the Mackenzie River from Fort Smith northerly. The frame work is reported completed and the boiler installed.

The assets of the Peace River Trading Co., which is a subsidiary of the

be resumed. Connection for all points along the Slave, and Mackenzie Rivers to the Arctic being made at Vermilion Chutes.

British Columbia and Pacific Coast.

The C.P.R. s.s. Princess Mary ran aground, on a sand bar in the first narrows of Burrard Inlet, Dec. 28, 1919, but floated off with the tide, without sustaining any damage.

The C.P.R. s.s. Princess Charlotte collided with Frank Waterhouse and Co.'s s.s. Morning Star, in the first narrows of Burrard Inlet, recently, during a heavy fog, neither ship being much damaged.

The Union Steamship Co. of British Columbia's s.s. Capilano, was launched by B.C. Marine Railway Ltd., Vancouver, Dec. 30. The company has another vessel under construction by Wallace Shipyards, Ltd., North Vancouver.

The C.P.R. s.s. Princess Patricia arrived at Victoria recently in tow of the tug Nitinat, with a defective boiler. The repairs were undertaken by the Victoria Machinery Depot Co., and were expected to be completed by the end of January.

Steamboat Nipawin, operated during navigation season, between Pas. Man., and Sturgeon Landing, by Ross Navigation Co. Ltd., Pas.

Peace River Development Co. are reported sold to Lamson Hubbard Canadian Co., Boston, Mass. The Peace River Trading Co. forms a portion of the estate of the late Lord Rhondha (D. A. Thomas), and during the past four years has given a regular transportation service on the Peace River between Hudson's Hope and Fort Vermilion, with its steamships D. A. Thomas and Lady Mackworth, named after the late Lord Rhondha and his daughter, the present Baroness Rhondha, respectively. The Lamson-Hubbard Canadian Co. is principally a fur trading organization, with a number of trading posts along the Athabasca, Slave and Mackenzie Rivers to the Arctic Ocean, and also some stations on Hudson Bay. Under the new ownership, it is stated, the transportation service will be continued as heretofore, and on or about May 1, the regular weekly service on Peace River, will

Passenger fares on all steamships running out of Vancouver to northern ports, have been increased, as from Jan. 1, owing to increased cost of operation. For the present, the rates between Vancouver, B.C., and Seattle, Wash., remain as they were.

The Union Steamship Co. of British Columbia's s.s. Chilliwack, which ran ashore in Millbank Sound while returning from a northern trip recently, was docked by B.C. Marine Railway Ltd., and repaired. She was only out of service a few days.

The Vancouver Harbor Commissioners, on their return from Ottawa recently, are reported to have said that a start would be made on the harbor development scheme at once and that A. D. Swan, Consulting Engineer, Montreal, will be in charge of the work.

A C.P.R. official is reported to have stated recently, that the company will

probably build a steamship similar to the s.s. Princess Sophia, for the northern route, and that J. W. Troup, Manager British Columbia Coast Service, is in Great Britain in this connection.

The Union Steamship Co. of British Columbia's new steamship, which is being built by Wallace Shipyards, Ltd., North Vancouver, B.C., is expected to be launched early in February and to be delivered early in March. She will be used in the coastwise freight service.

The Union Steamship Co. of New Zealand's s.s. Waihamo was hauled out on the marine railway at Esquimalt for general overhaul and rivet tightening during January. She is a new steamship and recently completed her maiden voyage. She will be operated between Canada and the Antipodes in the mail service.

The auxiliary powered schooner Oregon, which was seized in 1916, by the British, in the Gulf of California, and brought as a prize to Victoria, has been released to her owners, with sufficient compensation to put her in seaworthy condition. The money realized by the sale of the cargo, with accrued interest, was also handed over.

It is reported that the Dominion Marine Department's new administration building on the Songhees Reserve, Victoria, is to be proceeded with immediately. The work was said to have been held up until an agreement had been reached regarding the Johnson St. bridge, and as this has been settled, it is expected that the work will be pushed.

The C.P.R. s.s. Princess Victoria was withdrawn from the Vancouver-Victoria-Seattle route, Jan. 7, and laid up at Victoria, for overhaul and refit. The service is being maintained by the company's steamships, Princess Alice and Princess Charlotte. The steamships Princess Adelaide and Princess Royal are running between Vancouver and Victoria, and the s.s. Princess Mary is on the Alaska service and running to Gulf ports as occasion requires.

At a meeting of the Victoria Inner Harbor Association, Jan. 8, Capt. C. D. Neroutses, Marine Superintendent, British Columbia Coast Service, C.P.R., and acting Manager, during the absence of J. W. Troup in Great Britain, urged immediate further dredging in the harbor, as owing to silting it is becoming unsafe to manoeuvre steamships. It was suggested that a dam and lock at the Gorge bridge might be a solution of the silting problem. The association's officers for this year are: President, G. A. Kirk; Secretary-Treasurer, T. C. Sorby; Board of Management, J. O. Cameron, C. J. V. Spratt, J. W. Troup, A. Bechtel, C. H. French and L. Gonnason.

The new pilotage regulations, as published in Canadian Railway and Marine World for January, applying to various classes of vessel engaged in British Columbia coastal service, became effective Jan. 1. Under these regulations, ships registered elsewhere than in Canada, engaged exclusively in the coastal trade between any port in British Columbia and any U.S. Pacific port, including Alaska, are compelled to pay pilotage dues on a different basis than Canadian registered vessels. This will effect the C.P.R. s.s. Princess Victoria, and the Grand Trunk Pacific Coast Steamship Co.'s steamships Prince George and Prince Rupert, and it is stated that these vessels will be transferred to the Canadian register.

Canadian Merchant Shipping Losses During the War.

Canadian Merchant Marine World War losses amounted to a list of Canadian merchant vessels that shipped goods and passengers to the United States. The information was obtained from a report by the Admiralty, London, to the British House of Commons, recently, by which we are enabled to see the losses of Canadian shipping. We have not noticed that these losses were much more than by German submarines, were omitted, as follows:

Aug. 10, 1914—St. Catharines, 2,214 tons, sunk off Newfoundland coast by German.

Aug. 14, 1915—First Prince, 1,227 gross tons, sunk off the English coast.

July 20, 1918—Charles Theriault (s), 1,200 tons, sunk off the Atlantic.

No lives were lost in either of these disasters.

The sailing ships, Clayton W. Walters and Marion Adams, part of the fishing fleet which was attacked by a German submarine on the Canadian Atlantic coast in Aug., 1918, and which were mentioned in our last issue as having been captured but not sunk, were, at the time we were advised, at Lunenburg, N.S.

Cunard, Anchor, and Anchor-Donaldson Lines' Atlantic Services.

The Cunard Line is operating a freight service between Canada, London and Avonmouth, Eng., and the Anchor-Donaldson Line is running between Canada and Glasgow, Scotland. All of the Cunard Lines' passenger steamships sailing between Canada and the United Kingdom, prior to 1914, were lost during the war, and new steamships are being built for the service. It is expected that the first of these will be ready shortly after the reopening of St. Lawrence navigation. The steamships operated formerly on the route were: Ausonia, Aurora, Ascania and Ausonia, and it is said that the steamships now being built will have the same names. The Anchor-Donaldson line is operating two steamships on the Glasgow route and two others are under construction.

In addition to the Canadian service the Cunard Line is operating from New York to London, Plymouth, Southampton, Liverpool, Avonmouth, Eng.; Havre, Cherbourg, France; Antwerp, Belgium; Rotterdam, Holland; Danzig, and Mediterranean ports; from Boston, Mass., to Liverpool, London, and Mediterranean ports; from Philadelphia, Pa., and Baltimore, Md., to Liverpool, and Avonmouth, Eng., and Glasgow, Scotland, and Mediterranean ports; and from Boston, Mass., to Glasgow, Scotland.

The Cunard Steamship Co. is announced to have increased its capital stock from £1,000,000 to £4,500,000, the new shares being offered to present shareholders at the rate of one new share for every two held.

The Grand Manan Steamboat Co. Ltd., has been granted supplementary letters patent, under the New Brunswick Companies Act, increasing its authorized capital from \$20,000 to \$60,000, and extending its powers, to cover the building, owning and operating of ships of every description, and the necessary structures for navigation and repair of ships.

Among the Express Companies.

Canadian National Express Company offices at Edmonton, Dutchman, Jasper, Kamour and Pelly, Alta.

The Canadian Ex. Co., which has paid \$200 and costs recently for a breach of the Ontario Temperance Act by carrying intoxicating liquors from one point to another in Quebec (Montreal to Hull), through a portion of Ontario, and appealed, has had the conviction quashed.

The Canadian Ex. Co. was sued at Riverfield, Que., recently, by a local farmer, who claimed \$235.85 damages on the sale of 9 pigs, alleged to have become unsaleable, while in possession of the express company for transit between Howick and Montreal. The evidence showed that the plaintiff did not conform to the rules for shipping goods, and that the pigs were shipped without proper wrappings, the judge therefore, disallowed the claim, but as the company had accepted the pigs in an improperly wrapped condition, it was ordered to pay its own costs.

Telegraph, Telephone and Cable Matters.

The British Secretary of State for the Colonies is reported as being preparing a scheme for Imperial wireless communication to link up all Britain's overseas possessions for commercial purposes.

Telephone communication was established between Ottawa, Ont., and Halifax, Jan. 22, the distance covered being approximately 1,300 miles, the connections being made by 4 telephone companies, one of which is a United States one.

The U.S. Government has completed, what is said to be the largest radio-telegraph station in the world, at Bordeaux, France, and it is stated that it will be in full operation in the spring. The aerials are swung upon 8 steel towers, each 900 ft. high.

The Great North Western Telegraph Co. has opened offices at Black Cape, Montmagny and Prouville, Que., Burwash, Ont., and Birch River, Man., and has closed its offices at Little Metis light-house and Perthuis, Que., Beauséjour, Beaumaris, Cardinal Canal, Carpenter (Winona), Mille Roches, Wilgar and Wyebridge, Ont.

The Montreal Telegraph Co.'s report for 1919 shows cash, accounts receivable, bonds and other securities as \$163,483, and liabilities \$132,586. The total assets are given as \$2,315,307 against \$2,314,422 in 1918. The usual dividends amounting to \$160,000, were paid during the year and the directors were re-elected for this year.

The Commercial Cable Co. announced early in January that the direct trans-Pacific cable to Manila had been broken, owing to coral formation. The break, it is stated is between Guam and Manila, where it broke early in 1919, when traffic was suspended for about 10 weeks. It is expected to have the cable in operation again early in February.

Restrictions on Immigrants—An order in council was passed recently, providing that immigrants into Canada from overseas who are mechanics, artisans, or laborers, skilled or unskilled, must on landing in Canada be in possession of \$250, as well as transportation to destination. This restriction is in force until March 31, unless otherwise ordered.

Trade and Supply Notes.

The market for iron appears to be the leading of the most active, from information received by the trade, and it is expected that the volume ordered for steel in producing the same will be much greater than in the past. The iron market is expected to be a very active one, and it is expected that the volume of steel ordered for the production of iron will be much greater than in the past. The iron market is expected to be a very active one, and it is expected that the volume of steel ordered for the production of iron will be much greater than in the past.

Taylor & Arnold Ltd.—Railway and Marine Supplies, Montreal, has changed its name to Taylor & Arnold Engineering Co. Ltd.

Calendars—Wall calendars for 1920 have been received from American Steel Foundries, Chicago; John Bertram and Sons, Dundas, Ont.; Cunard Steamship Co., Montreal; Dearborn Chemical Co., Chicago and Toronto; Lyman Tube & Supply Co., Montreal; Pratt and Whitney Co., Dundas, Ont.; Taylor & Arnold Engineering Co., Montreal.

Davis-Bournonville Co., Jersey City, N.J., and Niagara Falls, Ont., has issued an illustrated bulletin of 4 pages on its lead burners, outfits for welding lead sheets, storage battery connectors, lead pipes, chemical apparatus, and all lead work. The company has also issued the January number of its quarterly publication, "Autogenous Welding," which is devoted to oxy acetylene welding and cutting, and the education of operators.

Wilt Twist Drill Co. of Canada, Warkerville, Ont.—F. R. Humpage, Vice President and General Manager, has resigned to take effect Mar. 31. He has been in ill health for some time, and felt it necessary to divorce himself for the time being from all business activities and he left towards the end of January for Miami, Florida, where he expects to remain a sufficient length of time to secure entire restoration of health. He has been connected with the company for about 3½ years, during which, it is said, he has been successful in more than trebling the output and sales of the factory and has also added new lines to the company's products, among them being that of the manufacture of reamers and milling cutters on a large scale and more recently the manufacture of a full line of special Ford reamers.

Transportation Conventions in 1920

Feb. 10-11—American Wood Preservers' Association, Chicago, Ill.

Mar. 16-18—American Railway Engineering Association, Chicago, Ill.

May—Association of Railway Claim Agents, Atlantic City, N.J.

May—International Railway Fuel Association, Chicago, Ill.

May 1-2—Air Brake Association, Chicago, Ill.

May 12—Railway Accounting Officers' Association, Washington, D.C.

May 15-16—Master Builders' Association, Minneapolis, Minn.

June—American Association of Freight Agents, June 9-16—American Railroad Association's Mechanical Section, Atlantic City, N.J.

Oct. 1-2—Master Builders' Association, Detroit, Mich.

Oct. 19-21—American Railway Bridge and Building Association, Atlanta, Ga.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries unless otherwise stated:

American Association of Port Authorities. M. P. Fennell, Jr., 67 Common St., Montreal.

Belleville Railway Men's Educational Club. Misses 708, Tuesday, 7:30 p.m. F. A. Pinkston, Belleville, Ont.

Canadian Car Service Bureau—W. J. Collins, Manager, 401 St. Nicholas Building, Montreal.

Canadian Railway and Marine World

March, 1920

The Canadian Pacific Railway's President's Speech at Winnipeg.

During his recent trip of inspection over the C.P.R., to the Pacific coast, the President, E. W. Beatty, K.C., was entertained at luncheon by the Canadian Club at Winnipeg, and made the following remarks:—"Since I had the pleasure of visiting western Canada in May last, a very important change in the transportation situation has taken place, through the sudden consummation of a plan for the acquisition of the Grand Trunk and Grand Trunk Pacific Railways with a view to their incorporation into the Canadian National Railways System. In due course, when the legal and other formalities have been fulfilled, this consolidation will take place and the test of the possibility of successful administration of a vast system of railway under the aegis of the government will be made. It is probably the most ambitious and comprehensive task which any government or any people has taken upon themselves, except temporarily and in emergent necessity. It may be a test over a period of years and the results may be expensive, but under honest management, with independent and nonpolitical administration, and above all with accurate information supplied to the public as to the result of these operations, the people of this country will be able to determine for themselves whether that system is the best and if not what improvement should be made in it. I make no comment on the wisdom or otherwise of this further extension of government ownership of railways in Canada. The matter has been settled by the representatives of the people. I am sorry, however, that a little more time and information were not given, both to the people themselves and their parliamentary representatives, because I would have been better satisfied that the decision then represented the view and desire of the vast majority of the people of this country, especially of the business communities, which have a particular stake in the railway situation and a particular knowledge of what constitutes efficient railway service. The decision has been taken, however, and the consolidated system will be administered by a board selected by the government, with experienced railway operators and executives in immediate charge of the property, with parliament, as is inevitable, in full control of the financial support to be given, and the government of the day with full responsibility for the expenditures of the monies voted for such purposes. The result of this means that the railway situation in Canada is now completely changed, and the country must depend, for some time at least, for additional railway facilities, where needed, upon the Canadian National Rys. or the C.P.R., because with preponderating mileage under government control, it is not likely that much capital will be attracted to new railway enterprise for the rewards which such investments might bring. Therefore, I think it may be fairly stated that such additional construction as takes place within the next few years

will depend upon the willingness of the Canadian National Railways and the C.P.R. to appreciate these needs and their financial ability to meet them. This is a situation which is without parallel in any place in the world where a government-owned and operated railway and a privately owned and operated railway, not greatly different in the matter of mileage, both with, of course, adequate credit, have in their hands the almost exclusive right to remedy transportation insufficient at most places throughout Canada. It is true, I think, that this will provoke a highly competitive condition. How effective this competition will be will depend upon its honesty and its fairness. If political methods are to be introduced into the competition, and facilities provided in accordance with political expediency, or if political rewards follow the extent of the support or otherwise which is granted by shippers to the Canadian National Rys., then I should say the competition would be unfair, and of doubtful commercial or national value.

"During the course of the year, Canadian railway companies had to meet a great many problems, due to the emergencies which prevailed, which were unusual and of great importance, and which required new methods to secure their being dealt with competently. For that purpose the Canadian Railway War Board was constituted, and through it the efforts of all railways were co-ordinated to meet the extraordinary demands through the movement of war traffic and soldiers. The work was well and efficiently done; was so well done, in fact, that not one hour's demurrage was caused to Atlantic shipping by delays on Canadian railways. I have received a letter recently from Sir Joseph MacLay, British Minister of Shipping, in which he points to this fact as a conspicuous example of the effective way in which the work of the Canadian railways was performed. Since the war, there has been constituted the Railway Association of Canada, whose executive comprises the presidents of the principal railways in Canada, and in the organization of which is contained various committees, from the operating, financial and traffic officers of the companies, who are constituted to act jointly, when joint action would be in furtherance of the traffic necessities of the people or of the railways. Mr. Hanna and I sit on the executive committee, and I am very hopeful that with the experience he there gains, he will be confirmed in his original decision to be a railway man and not a politician.

"I have known Mr. Hanna for a great many years, and my appreciation of his personal qualities, and official ability as disclosed in the numerous exacting and difficult positions he has been called upon to fill, is very great. The fact that he was trained in his earlier years in the C.P.R. service and has always, both personally and officially, retained a very sincere affection for his former company

has not detracted from my appreciation of him.

[Editor's note.—Mr. Beatty's reference to Mr. Hanna having been in the C.P.R. service was evidently made under a misapprehension, and probably arose from the fact that Mr. Hanna was from 1886 to 1896 in the Manitoba & North Western Ry.'s service, but he left that company before its property was taken over by the C.P.R., on a lease for 999 years, from July 1, 1900.]

"Mr. Hanna and I have a great many problems in common, and others which are individual, because peculiar to the different systems of railway operation, in which we are respectively involved. Occasionally it may be necessary in public utterances for us to refer to each other, or the interests which we represent, but I recognize that these references will be few and far between, because I can imagine nothing of much less public interest or public importance than my opinion of the Canadian National Railways and Mr. Hanna, unless it is Mr. Hanna's opinion of the C.P.R. and myself. Mr. Hanna rather departed from the rule a few weeks ago in Toronto, and with his characteristic Scotch pawky humor, whatever that means, said that the trouble with me was that I did not believe in public ownership, but that I would hope for its success, and that notwithstanding the fact that the C.P.R. had occupied a very unique and strong position within the empire, in a few months time it would be number two instead of number one, and that was where the shoe was pinching. As I say, Mr. Hanna intended this to be a humorous remark, but Scotch humor is sometimes hard to understand, and his audience, a most intelligent Toronto audience, misunderstood him, and applauded his prophecy of the advent of another railway system, bigger and better than the Canadian Pacific. I imagine that Mr. Hanna and I could sit down today and discuss with the utmost candor the general railway situation. Incidentally to that we could, I think, agree without much discussion as to which was number one and which was number two. I say this without any hesitation or reservation, because I know what a wise and experienced man Mr. Hanna is. I can say with equal confidence, I think, that five years from now Mr. Hanna and I could discuss the question with equal frankness, and agree between ourselves as to which was then number one and which was number two. Of course, it would be the same railway, but as I have said, Mr. Hanna is a very wise man. Five years hence he may even be wiser than he is now, but that would not be necessary to enable him to reach a correct conclusion.

"Mr. Hanna has recently adopted the role of prophet for the Canadian National Rys. He is a cheerful prophet, and he paints a glowing picture of the future of the properties under his charge. This is as it should be, and he is wise in making it as attractive as possible. He has recently taken his

result is based and added together the best advantages of the Canadian Northern, International, National, Pacific, Great Western, Grand Trunk and Great Northern Railways in Canada and the United States, to have likewise added the number of passengers and cars of all companies, the tons of freight carried on all systems, and to have concluded the Canadian National Rys. are, or will be, the greatest in the world. I do not think it is necessary to bother with the matter of mileage, and I do not believe it is of much public importance whether the gross earnings of the combined systems are greater or less than the C.P.R. Up to the present they are less, although the mileage is greater, but I do say that the test of the best or worst railway is not necessarily determined by mileage, and 'best' and 'biggest,' are not necessarily synonymous terms. Comparisons must stand or fall on the character of the service they render, and if one railway's service is consistently better than another's, if its officers are more efficient, its service more expeditious and its business transactions with the public more satisfactory, it is the railway which will be rightly regarded as the best, whether its mileage be somewhat more or somewhat less than its rivals'.

"The Canadian National Railways and ourselves are confronted with conditions of operating which are almost without precedent, and which, with the largest measure of support we can both receive, still render these operations extraordinarily difficult. We both appreciate that the people is a jealous and exacting mistress, but we also know that the public is a generous and persistent friend, once its confidence is secured. We know, too, that no sentiment will control the success of our efforts. Heretofore in Canada there has been, I think, a prevailing decency in competition, which has been encouraging. I have no reason to expect that that will change, or that the Canadian National Rys. to further its interests, and extend its business, will be any less reputable than those taken by the C.P.R. or by the Canadian Northern, the Grand Trunk, or any other system, which is now consolidated, or to be consolidated into the Canadian National Railways, but there is always the danger of political methods being adapted to the business of railroading, and political influence being used where business methods fail to accomplish the desired result. I was very glad to read Mr. Hanna's strong plea for independent administration, which means business administration, because I would dislike to see post offices, docks, and public works and institutions of all sorts made dependent upon whether the community desiring them gave support to the Canadian National Rys. If that happened, we might have to establish libraries, hospitals, theaters and parks, in order to meet that new and peculiar political railway competition. The foundation of competition should be the same. The legislative control of parliament, the regulatory control of the Board of Railway Commissioners should be the same in respect of all railways operating under the federal jurisdiction. This is not the case as yet, the government having reserved by statute special rights to the Canadian National Rys. not enjoyed by private companies, and withheld it in certain particulars from the Board of Railway Commissioners' jurisdiction, but I am hopeful that in time this will be remedied. The ac-

counting methods and financial returns of all companies should likewise be absolutely identical. Given these essential premises and the Canadian National Rys. the independent administration which their officers desire, and you will see railways competing in this country under conditions which will stimulate their efforts and redound to the advantage of all those who do business with them. Whether these conditions will prevail, I cannot say, because the almost irresistible inclination of those who supply the money is to demand a voice in its expenditure and in the management of the institutions for the financing of which they are responsible.

"I do not pretend to speak for the Canadian National Rys., but no doubt, as in the case of the C.P.R., large sums are required to complete work that has been heretofore impossible to undertake, and to extend facilities to meet the rapidly increasing needs of the country. Neither of us can stand still; we must progress if we are to receive our fair share of the country's prosperity. In order to do this we must have money, and money can be obtained only in two ways, by stock or bond issues, or by revenue. Operating increases cannot be taken care of by the former. The extraordinary recent costs of maintenance and operation can be met only in one way and that is by increased revenue to the companies, and in this we need the sympathetic support of the people, who demand a high standard of railway operation and railway service which can be secured only, in view of the prevailing high prices, by paying a transportation charge at least equal to the increased cost of operating. You are all aware that in 1918 railway wages were increased in Canada by an amount aggregating \$77,000,000, an amount greater than the interest on the whole of Canada's war debt; the rates were at the same time increased and they brought in \$43,000,000 additional revenue to the companies; in other words, the increase in rates failed to equal the increase in wages by the enormous sum of \$34,000,000. There can be only one end to that condition, unless the revenues are readjusted to meet these increasing costs. While rates will have to be again increased, they cannot be increased indefinitely, and our great struggle from now on will be to reduce costs in order that in time rates themselves may be lowered. There are only two ways of reducing railway rates; one is by large increase in the volume of traffic, and the other is by decreased cost in the carrying of traffic. No ordinary increase in business will be sufficient to take care of the extraordinary increases in the cost of labor and material which the railway companies have experienced in recent years. I know that you, gentlemen, are very well informed on the subject of railways. I know that many of you are, or have been, persistent users of the railways, that you have competent critics, and that you have come in contact with their operations in a more intimate way than most citizens of this country. You will I think be the first to appreciate the accuracy of my statement when I say that at no time in the history of this country has there been more need for an appreciation of the problems of the railways and more need for support to the railways than now.

"There is little if any, merit in that old time aloofness with which railway companies dealt with the public. The

C.P.R. is a citizen of Canada, not the first citizen of Canada, but one of the most corpulent. Its problems are the problem of Canada; it has a grave interest in the economic and industrial future of Canada. I can imagine nothing which concerns Canada's progress that does not concern directly, or indirectly, the C.P.R. It is, therefore, proper in its own interest and that of its shareholders, that its officers should take an interest in its commercial and trade problems, and further the solution of them to the best of their ability. It is equally proper that Canadians should concern themselves somewhat with the problems and administration of the C.P.R., and there is no occasion, so far as the C.P.R. or any other railway, is concerned, for the people to regard them as soulless corporations, when their stake in the country is so great, and their interests and your interests so much in common. There is always in the minds of some people a mystery in the existence and operation of any large corporation, whether government owned or privately owned. It is supposed to conceal within the walls of its offices machinery for many things not directly connected with its enterprise. Nothing could be further from the facts. Being public utilities, they are open to more criticism than other institutions. Their affairs are more public and their officers better and more widely known. They are easier to understand, though they are huge in size, and their ramifications are great. Since 1904 Canadian railways have been required to justify every rate, act and practice which affected the public or the public interest. Can this be said of any other enterprises?

"The problem of increased costs practically brings the railway companies in common position with other Canadian citizens. The cure for it is greater production and trade expansion, hard work and thrift. It sometimes seems to me that we lose sight of the very fundamentals on which the prosperity of this country has been heretofore based. The foundation of our economic stability rests upon perseverance, work and the rewards which come from it. We have no more right to expect to receive high wages and high compensation unless we can give an adequate return in service, than we have a right to expect to appropriate and keep what does not belong to us. The necessity is preached from one end of the country to the other, and it cannot be preached too often, because unless it is practiced this country will not enjoy its share of the world's prosperity and will not be able to meet the very disquieting conditions which have resulted from the economical upheaval of the last five years. Heads of financial interests see it, and advise economy of all kinds. Individuals appreciate it and to some extent are practising it. Governments, federal, provincial and municipal, must also see it, and practice it, or else hard times will succeed our present era of prosperity. It has always seemed to me that hard times do succeed any era of great spending or extravagance, and it is a serious commentary on the common sense and sanity of people that it is necessary for the realization of these consequences to be obtained by experience, instead of by a careful appreciation of the trend of events, and by modification and prudence anticipate and prevent the natural consequences of extravagance and

imprudence. I am an optimist; I do not see how anyone could be anything else so far as Canada is concerned, with its natural wealth, and the virility of its people, but with great optimism can go equally great discretion, and the fact that a man, or a nation, is full of hope and confidence, does not mean that he should disregard the warnings of the times or with his eyes on his own future fail to observe the economical pitfalls immediately in front of them.

"I would seriously urge upon you all the paramount necessity of quiet, sane consideration of Canada's economic problems as they develop. It is, I think, now conceded that most of the errors made in past years have been due to a too ready acquiescence in ilconsidered policies, and a serious indifference by the people as a whole to the correctness, or otherwise, of the conclusions reached. I am, I think, quite within the mark in saying that our principal railway and economic mistakes have been due to the lack of keen appreciation in those whose concurrence permitted the adoption of these policies. There is no time in the history of this country when the views of extremists should prevail as little as now. The difficulties which confront us are not insurmountable, if the solution of them is given the moderate and sane consideration which is indispensable to a correct conclusion. Appeals to prejudice and traditional hostility are fruitless of permanent good. Given the proper recognition of the diversity of economic necessities which inevitably exists in a country the size of Canada, and a serious and single desire to meet and dispose of them in the interests of the country as a whole, and I would have every confidence that our errors would be reduced to a minimum and the economic strength of the country increased beyond the possibility of serious setback."

Change in Maintenance of Way Flagging Rules for Impassable Track.

The Board of Railway Commissioners passed general order 280, Dec. 23, 1919, as follows: Re general order 188, April 23, 1917, approving regulations for uniform maintenance of way flagging rules for impassable track, and general orders 216 and 248, amending the same, and the board's direction that part of the said orders affecting flagging, other than manual flagging, stand for further consideration. Such further consideration having been had, it is ordered that general order 248, Aug. 19, 1918, be amended by striking out regulation 9 on page 2 of the order and substituting therefor the following, viz.: "That a signal of a serviceable type, to be approved by the board, be used to display the signals directed to be provided under rules 3 (b) and 6 (yellow signal) of this order and rule 35 (yellow signal) of the Uniform Code of Operating Rules."

Regulation 9, of general order 248, which has been repealed, was as follows: "9. That the Brennan signal device, as approved by the board, or a signal of an equally serviceable type attached to the base of the rail, to be approved by the board, be used to display the signals directed to be provided under rule 3 (b) and 6 (yellow signal) of this order and rule 35 (yellow signal) of the Uniform Code of Operating Rules."

Birthdays of Transportation Men in March.

Many happy returns of the day to—
W. G. Annable, General Passenger Agent, Canadian Pacific Ocean Services, Ltd., Montreal, born at Ottawa, Mar. 3, 1875.

John Archibald, Locomotive Foreman, C.P.R., Coquitlam, B.C., born at Edinburgh, Scotland, Mar. 13, 1872.

Allan Cameron, Superintendent, Land Branch, Department of Natural Resources, C.P.R., Calgary, Alta., born near Owen Sound, Ont., Mar. 14, 1864.

H. S. Carmichael, Passenger and Freight Manager, Canadian Pacific Ocean Services, Ltd., London, Eng., born at Glasgow, Scotland, Mar. 7, 1874.

F. G. J. Comeau, District Freight Agent, C.P.R., Halifax, N.S., born at Meteghan River, N.S., Mar. 10, 1859.

W. A. Cooper, Manager, Sleeping, Dining and Parlor Cars and News Service, C.P.R., Montreal, born there, Mar. 22, 1871.

A. E. Cox, General Storekeeper, Canadian National Rys., Winnipeg, born at Huddersfield, Eng., Mar. 12, 1863.

Senator N. Curry, Chairman, Canadian Car & Foundry Co., Montreal, born in King's Country, N.S., Mar. 26, 1851.

C. C. Curtis, Manager, Cape Breton Electric Co., Sydney, N.S., born at Battle Creek, Mich., Mar. 27, 1883.

C. T. Delamere, Engineer of Construction, Eastern Lines, C.P.R., Montreal, born at Brainerd, Minn., Mar. 18, 1881.

H. G. Dring, European Passenger Manager, Canadian Pacific Ocean Services Ltd., London, Eng., born at Easton, Northamptonshire, Eng., Mar. 8, 1881.

Patrick Dubee, Secretary - Treasurer, Montreal Tramways Co., Montreal, born there, Mar. 4, 1876.

Frederick Elliott, President, Victoria Navigation Co., Ltd., Thurso, Que., born at Montreal, Mar. 8, 1858.

M. P. Fennell, Jr., Secretary-Treasurer and Comptroller, Montreal Harbor Commissioners, and Secretary, American Association of Port Authorities, Montreal, born there, Mar. 13, 1885.

W. R. Fitzmaurice, Superintendent, Division 2, Maritime District, Canadian National Rys., Campbellton, N.B., born at Bedford, N.S., Mar. 19, 1870.

R. A. Gamble, General Yardmaster, Winnipeg Terminals, C.P.R., born at Dublin, Ireland, Mar. 1, 1876.

J. Halstead, Division Freight Agent, C.P.R., Calgary, Alta., born at Bracebridge, Ont., Mar. 2, 1877.

R. M. Hannaford, Assistant Chief Engineer, Montreal Tramways Co., Montreal, born there, Mar. 22, 1865.

C. A. Hayes, Vice President, Traffic, Canadian National Rys., Toronto, born at West Springfield, Mass., Mar. 10, 1865.

H. T. Hazen, Engineer, Maintenance of Way, Canadian National Rys., Toronto, born at Truro, N.S., Mar. 14, 1870.

J. I. Hobson, Treasurer, Canada Steamship Lines, Ltd., Montreal, born at Guelph, Ont., Mar. 30, 1872.

N. J. Holden, President, The Holden Co., Ltd., Montreal, born at Nobleton, Ont., Mar. 22, 1866.

A. R. Holtby, Master of Bridges and Buildings, Mountain Division, Grand Trunk Pacific Ry., Smithers, B.C., born at Rawdon, Que., Mar. 23, 1859.

Frank Lee, Engineer, Maintenance of Way, Western Lines, C.P.R., Winnipeg, born at Chicago, Ill., Mar. 7, 1873.

J. M. McKay, Superintendent, Saska-

toon Division, Saskatchewan District, C.P.R., Saskatoon, born at Tiverton, Ont., Mar. 13, 1868.

J. B. McLaren, General Auditor, G.T.R., Montreal, born at Perth, Ont., Mar. 5, 1878.

M. Magif, Superintendent of Car Service and Telegraphs, Central Vermont Ry., St. Albans, Vt., born at Planks Point, N.Y., Mar. 24, 1852.

Sir Donald D. Mann, President, Canadian North Eastern Ry. and ex Vice President, Canadian Northern Ry., Toronto, born at Acton, Ont., Mar. 23, 1853.

H. H. Melanson, Passenger Traffic Manager, Canadian National Rys., Toronto, born at Scadoue, N.B., Mar. 9, 1872.

P. J. Melvin, Contracting Freight Agent, Marine Navigation Co. of Canada Ltd., Montreal, born at Trim, Ireland, Mar. 3, 1872.

W. T. Moodie, Superintendent, Division 3, Central District, Canadian National Rys., Port Arthur, Ont., born at Glasgow, Scotland, Mar. 10, 1882.

Peter Paton, ex Purchasing Agent, Canada Steamship Lines, Ltd., Montreal, now President, Mackenzie, Milne & Co., Ltd., Sarnia, Ont. born at New Lovell, Ont., Mar. 13, 1868.

F. W. Peters General Superintendent, British Columbia District, C.P.R., Vancouver, born at St. John, N.B., Mar. 25, 1860.

J. W. Pugsley, Secretary, Department of Railways and Canals, Ottawa, Ont., born at Amherst, N.S., Mar. 12, 1861.

L. G. Robin, Master Mechanic, Prairie District, Canadian National Rys., Saskatoon, Sask., born in Prince Edward Island, Mar. 24, 1864.

C. J. Smith, Manager and Secretary, Montreal Warehousing Co., Montreal, born at Hamilton, Ont., Mar. 10, 1862.

G. L. Snelling, Secretary - Treasurer, Ottawa Electric Ry., Ottawa, Ont., born there, Mar. 2, 1880.

W. Y. Soper, Vice President, Ottawa Electric Ry. Co., Ottawa, Ont., born at Oldtown, Me., Mar. 9, 1854.

E. F. L. Sturdee General Agent, Passenger Department, C.P.R., Seattle, Wash., born at St. John, N.B., Mar. 29, 1876.

G. W. Vaux, ex-General Agent, Passenger Department, Union Pacific Rd., Chicago, now General Manager, Zeigler Coal Co., Zeigler, Ill., born at Montreal, Mar. 21, 1866.

A. T. Weldon, Assistant Freight Traffic Manager, Eastern Lines, Canadian National Rys., Montreal, born at Dorchester, N.B., Mar. 6, 1876.

D. O. Wood, Traffic Manager Export and Import Department, Canadian National Rys., Toronto, born at Kleinburg, Ont., Mar. 16, 1864.

C.P.R. War and Employment Figures.

The following figures, revised to Jan. 31, show C.P.R. employees who enlisted, and who have been given employment on their return from overseas:

Total reported as joining the army.....	10,931
Died.....	1,963
Wounded.....	2,060
Re-employed in the service.....	6,586
Other soldiers given employment.....	8,728
Total soldiers given employment to Jan. 31.....	15,314

of franks must be made up by the general paying public, a policy which is entirely inconsistent with the express provisions of the Railway Act against discrimination."

The foregoing was concurred in by Hon. W. B. Nantel, Deputy Chief Commissioner and Commissioners Boyce and Goodeve.

Assistant Chief Commissioner McLean submitted the following memorandum relating to the Chief Commissioner's memorandum: "Page 1, line 14: I would suggest adding the word 'specifically,' before 'allowing,' which is the last word in the line. This will make the meaning clearer."

"I agree in the memorandum of the Chief Commissioner. At the hearing on Jan. 20, he made a statement as to this memorandum having been prepared. His intention is that it should issue as an interim judgment, giving an opportunity, within a reasonable time, for hearing, if such is asked for. As what is primarily concerned is the power of express companies to issue franks, and the types of persons to whom same may be issued, it seems to me that, subject to whatever may be developed in further discussion, the express companies are really the only people who shall be given an opportunity to speak to the matter at a hearing. The recipients of franks do not receive them as a matter of right."

Commissioner Rutherford agreed with the Assistant Chief Commissioner.

The Rhondda Interests in the Peace River Valley.

The late Lord Rhondda, the Welsh colliery proprietor, held extensive interests in the Peace River Valley and adjacent territory of northwestern Canada, including coal and oil lands. In order to provide for the development of these areas a charter was secured from the Dominion Parliament for the Peace River Tramway and Navigation Co., to build two pieces of railway to connect navigable stretches of the river, so as to secure an extensive trading route in the northwest. In connection with this enterprise a steamboat, the D. A. Thomas, was built on the river, and the Peace River Trading Co.'s assets were acquired. It was also reported that control of a railway charter for building a railway from Edmonton northerly to navigable water, and another for building a railway from tidewater on the northern British Columbia section of the Pacific coast inland had been acquired. All of this was done prior to the outbreak of the war in 1914. A recent visit of Lady Rhondda to the Peace River country has revived interest in the company's activities. The first result of the visit appears to have been the decision to give up the trading business, which a press report states has been disposed of to the Lamson, Hubbard Canadian Co., with head office at Boston, Mass. This transaction, it is stated, includes the stores at Peace River crossing, Fort Vermilion, Vermilion Chutes and Hay River. The transportation interests do not seem to be affected by this sale, as the report states that other steamboats will be added to carry freight through to the Arctic Ocean, in addition to the present steamboats operating from Hudson's Hope to Fort Vermilion.

Classification, Qualifications and Salaries for Railway Engineers.

The Engineering Institute of Canada's Toronto branch adopted and recommended recently the following classification of engineers employed in railway work. The sums mentioned being the minimum salaries:

1. Chief Engineer, \$10,000.
2. Assistant Chief Engineer, \$7,200.
3. (a) Engineer of Maintenance. Should preferably be a graduate from an engineering school recognized by the institute and should have 8 to 10 years practical experience in engineering work, or, if not a graduate, should have from 12 to 15 years practical experience and should be thoroughly familiar with the mathematics of engineering, \$6,600. (b) Engineer of Construction—Same qualifications as for Engineer of Maintenance, \$6,600. (c) Bridge Engineer—Same qualifications as for Engineer of Maintenance, \$6,600. (d) Principal Assistant Engineer—Same qualifications as for Engineer of Maintenance, \$6,000.

4 (a) District Engineer—Should preferably be a graduate from an engineering school recognized by the institute and should have 6 to 8 years practical experience in engineering work, or, if not a graduate, should have from 10 to 12 years practical experience and should be familiar with the mathematics of engineering, \$4,800. (b) Signal Engineer—Should preferably be thoroughly familiar with the theory and practice of signalling and of train operation, and should have had, in addition, at least five years practical experience in mechanical and electrical signal work on railways, \$4,800. (c) Architect or Engineer of Buildings—Should have sufficient architectural training to design railway stations, shops, locomotive houses, dwellings, etc., of normal types, and should have 6 or 8 years practical experience in responsible design of railway buildings, \$4,000. (d) 1st Assistant Engineer—Same qualifications as for District Engineer, \$4,200. (e) Assistant Bridge Engineer—Should preferably be a graduate engineer with from 5 to 6 years practical experience in the office and in the field, \$4,800.

5. (a) Division Engineer—Should preferably be a graduate engineer with 3 or 4 years experience of practical engineering, or, if not a graduate, should have 8 to 10 years practical experience and should be well grounded in the mathematics of engineering, \$3,600. (b) 2nd Assistant Engineer—Same qualifications as for Division Engineer, \$3,000. (c) Chief Draftsman—Should have a thorough knowledge of general drafting, but not necessarily knowledge of design, and should be able to control a number of subordinates and supervise their work, \$2,500. (d) Designing Engineer in Structural Department—Should be thoroughly grounded in the theory of design and detail in his particular department, and should be able to control a number of subordinates and supervise their work, \$3,600. (e) Leading draftsman in architectural department—Same qualifications as given for Designing Engineer in structural department, \$2,400. (f) Signal Supervisor—Should be thoroughly familiar with the mechanical and electrical details of signalling, should have sound elementary knowledge of the principles of signalling and should be quali-

ged to carry out and supervise construction and maintenance of all types of signal plants, \$2,400.

6. (a) *Resident Engineer (construction only)—Should preferably be graduate engineer or have 3 or 4 years practical experience in the junior branches of engineering work, \$2,700. (b) 3rd Assistant Engineer—Same qualifications as for Resident Engineer, \$2,400. (c) Draftsman—Should be able to plot accurately from field note or notes and sketches supplied to him by a senior officer, \$1,800. (d) *Inspector, class A—Should have a thorough knowledge of the class of work that he is employed to inspect and in the case of steel or reinforced concrete structures, should be a man of sufficient intelligence to understand the elementary principles of design and realize the necessity for close adherence to plans, and must be able to read and interpret plans correctly, \$2,400.

7. (a) *Junior assistant or instrument man—Should have sufficient training in the use of level, or transit, or both, to do accurate work at a reasonable rate of speed, and should be thoroughly grounded in the mathematics required for the proper reduction and application of his instrumental work, \$1,800. (b) Inspector, class B—Should have some practical experience in the class of work that he is employed to inspect, and have sufficient intelligence and firmness to enforce the carrying out of specifications, \$1,800. (c) Junior Draftsman—Should have passed through his training as a tracer, and should have working knowledge of the use of drafting instruments, \$1,500.

8. (a) Chainman—No previous experience required, \$1,200. (b) Rodman—No previous experience required, \$1,500. (c) Tracer—No previous experience required, \$1,200.

*Indicates that expenses are paid.

Assessment of Transportation Companies, Etc., in Toronto.

The Toronto Assessment Commission's annual report for 1919, shows that the various public service corporations in the city are assessed for \$42,088,278, equal to about one-fourteenth of the entire assessment of the city. Following are the assessments of the steam and electric railway and telegraph companies:

	1920	1919
Grand Trunk Ry.	\$12,191,304	\$11,571,267
Canadian Pacific Ry.	9,307,271	9,302,203
Canadian National Ry.	1,389,337	1,385,696
Toronto Ry.	4,886,457	4,996,328
Toronto & York Radial Ry.	360,560	369,130
Toronto Suburban Ry.	46,669	76,268
C.P.R. Co.'s Telegraphs.	210,078	204,170
G.N.W. Telegraph Co.	211,720	205,434

Caraquet & Gulf Shore Ry. Proposed Sale—In reference to the information in this connection, published in Canadian Railway and Marine World for February, pg. 77, we were advised from Ottawa, Feb. 11, that no negotiations in regard to the acquisition of the line by the Dominion Government, were then going on. As stated previously, parliament provided \$200,000 in the estimates, to buy the line, and should the company be willing to accept this, no doubt arrangements will be made for taking it over.

Canadian Northern Railway System Annual Report.

The Canadian Northern Ry. System's 41st annual report, dated Sept. 15, 1919, was issued early in February, from the signature of D. B. Hanna, President, as follows:

The directors submit herewith the 41st annual report of the Canadian Northern Ry. System for the year ended Dec. 31, 1918. The first annual report was for the 11 months ending June 30, 1917, since which date the company's fiscal year had been changed to conform with the general practice of most other railway companies on this continent. The results of operation from June 30 to Dec. 31, 1917 are shown in the statements included in the present report.

Since the last annual report the Canadian Government, by the acquisition of 600,000 additional shares in your company (having previously acquired 400,000 shares by way of bonus for guaranteeing certain securities of the company), became the beneficial owner of the company's entire capital stock then outstanding, with the exception of five shares which were issued in exchange for an equivalent amount of Canadian Northern Ry. 5% income charge convertible debenture stock. The purchase was made as of Sept. 30, 1917, the price payable by the government being subject to arbitration, on the conclusion of which and the delivery of the shares, the actual control of your company passed to the government, and a new board of directors was appointed in Sept., 1918.

The results of the operations of the system for the fiscal year ended Dec. 31, 1918, were as follows:—

Gross earnings	\$ 3,829,444.14
Expenses	3,757,889.20
Expenses, unallocated items	1,211,881.95
Manufacturers' earnings	2,545,967.25
	\$47,510,011.91
Interest and profit	
from Canada and	
other subsidiary com-	
panies, investments,	
etc.	1,752,706.00
	\$39,960,712.90
Working expenses	\$44,062,949.94
Profit of companies	
Canadian and	
manufacturers' charges	1,599,026.32
	\$ 4,661,271.26
Net earnings	\$ 3,800,197.21
Interest charges	17,898,246.98
Net deficit	\$14,097,809.74

Mileage—The average mileage operated during the year was 9,452 miles, and at Dec. 31, 1918, the mileage in operation was 9,566.5 miles, an increase of 133.1 miles over 1917.

Operating Revenues—Gross earnings for 1918 increased by \$5,839,990.07 over 1917 or 14.08%, but, as referred to later on in detail, this increase in gross is due to the increased rates which took effect during the year under review.

Traffic Movement—Passenger traffic during the year shows an increase of \$769,016.63 over 1917, notwithstanding that 388,993 passengers less were carried. The fact, however, that the passengers carried have averaged a larger mileage indicates that your company is securing an increasing share of western and Pacific business.

The number of revenue tons carried decreased by 545,035 tons as compared with 1917, and the average length of haul decreased by 10.27 miles. This is due largely to the shrinkage in grain

tonnage due to the poor crop of 1917. The commodity statement shows a decrease of 18,986,113 bush. of grain handled as compared with the previous year. There was also less lumber carried, less building material, and less miscellaneous tonnage. While there was a substantial increase in flour traffic of 1,765,571 sacks of 100 lb. and in coal traffic of 247,651 tons, and a good increase in live stock traffic, these did not produce enough tonnage to overcome the loss in grain and other traffic.

Operating Expenses—In considering the 12 months under review, it must be remembered that the year had a most inauspicious beginning. Jan., Feb. and Mar., 1918 completed a winter which, for severity, stands without parallel in the history of railway operation. The intense cold and heavy snowfall which was general throughout Canada and all the northern states made operations so burdensome that net earnings for all lines thus affected were entirely wiped out, and many roads, including the most important trunk lines, accustomed to operate at a comparatively low ratio during the winter, showed large deficits. The cold weather extended well into April, and later on during the autumn and winter of 1918, the operating staff was badly crippled by the very serious influenza epidemic.

The effect of these adverse conditions was increased by other events which made further inroads on net earnings. The United States Government on Dec. 26, 1917, decided to take over the operation of all U.S. railway mileage of importance from Jan. 1, 1918, and one of the first acts of the administration was to establish a commission to enquire into the requests for increased wages which were then collectively before the managements of the U.S. railways. This commission's report was issued on Apr. 30, 1918, and recommended substantial increases for all railway employees. These recommendations were largely accepted by the Director General, and promulgated in his order 27, May 23, 1918, better known as the McAdoo award. There was an immediate and insistent demand from Canadian railway employees that the scale of increases provided in the McAdoo award be adopted in Canada. Many requests for wage increases were pending at the time. Wages on Canadian lines have in recent years been on a par with those on U.S. lines, the fact that the large brotherhoods of railway employees on this continent are international, having a direct bearing on the matter. The situation was a serious one, and governmental action was necessary, as it was apparent that the railways could not pay the increased wages without substantial increase of revenue.

Concurrently with the promulgation of general order 27, the U.S. Railroad Administration found it necessary to raise tariffs on freight and passenger business. Similar action was taken in this country, but only in respect of freight tariffs. While it was felt at the time that the increase in rates would largely compensate the railways for the heavy burden thrown on them in respect of increased wages, yet subsequent conditions have shown that the wage increases granted (which have applied to every department of railway operation) have enormously exceeded the increased rev-

enue obtained from the higher scale of tariffs. The new scale of rates for employees in the shops and mechanical plants of Canadian railways took effect from May 1, 1918, and for other classes generally from Aug. 1, 1918. Supplements have been issued from time to time, augmenting the allowance to various classes of employees, shortening the hours of service, and generally adopting the 8 hour day, with many other specific improvements in working conditions, all having the immediate effect of largely increasing the employees' compensation. The result of this was that at the end of the calendar year the company's payroll which had previously averaged \$1,890,000 a month, reached the enormous total of \$2,815,000 a month, equivalent to an additional \$925,000 a month, representing an increase of almost 50% over the wages paid up to the date the McAdoo award took effect. Besides wage increases, other items of operating expenses continued to show large advances. Under these exceptional circumstances, the cost of operation for the year advanced by \$10,036,297.51, or 29.49%.

Land Sales for the period since the last annual report were 81,661.346 acres for \$1,588,264.14, an average of \$19.45 an acre, compared with an average of \$17.82 for the preceding year. During the same period, sales previously entered into, aggregating 58,920.10 acres, were, by mutual agreement, cancelled, so that the acreage of land available for sale has been decreased by 22,741.246 acres, leaving a total of 818,958.532 acres unsold.

Car Trusts Obligations—Since the last annual report additional car trusts obligations have been created to the extent of \$5,000,000, for the purchase of equipment of different kinds, and \$4,705,500 has been repaid in respect of previous obligations, thus making a net increase on this account of \$294,500.00.

Freight and Passenger Rates—In the previous annual report reference was made to certain rate increases which took effect on Mar. 15 and June 1, 1918. As already mentioned in this report a further increase in freight rates only was arranged for in connection with the adoption of the McAdoo scale of wage increases. This latter increase has been popularly known as a 25% increase, but, in actual application (being coupled with the previous increase and being utilized in the direction of equalization of rates as between eastern and western Canada) has only produced an increase in freight revenue of about 15½%, so that, putting the two increases together, freight tariffs are increased by less than 30%.

Conditions and Prospects—Shortly after the signing of the armistice, traffic began to fall off, and from January to the date of this report, the tonnage carried shows a large decrease compared with the same period of the previous year. The present situation is, therefore, a very serious one. In the first place, the wage increases under the McAdoo award have greatly exceeded the increase in revenue granted to offset them, largely due to the supplements to the award which were not contemplated at the time the tariffs were increased, and also due to the fact that business on which the increased tariffs were estimated to apply has fallen off to a considerable extent. The prices of materials and supplies still stand at the highest

point, and so long as these conditions continue no improvement can be expected in net revenue.

Construction and Betterments—Prior to the war the company had in western Canada a number of branch lines under construction, but work on these lines, owing to limitation on spending of capital moneys, and also the difficulty of obtaining material, was necessarily discontinued. Since the signing of the armistice, urgent requests from settlers along the projected lines were renewed, and after many delegations from various sections of the prairie provinces had been received by your directors and the executive, and after the entire situation had been carefully reviewed, a programme of construction was adopted providing for the completion of certain partly constructed and projected lines which would serve new districts where settlement had preceded the railway and where the settlers were suffering most through lack of transportation facilities. Provision for this construction programme and for the company's betterment and equipment requirements, have been made in the government estimates for the current year and the work is under way. Due to the difficulty of securing material, expenditures beyond those actually required for current operation where not incurred during the war, and the shortage in some respects was so great that actual operating requirements could not always be met, with the result that in the year under review, only a comparatively small amount of betterment work could be undertaken. For this reason the programme of betterment work submitted by the management for the present year was an extensive one, and your directors have approved the expenditure of a substantial sum to be devoted to providing improvements to the physical property of your system.

New Equipment—To provide for additional train service and to take care of new mileage, equipment was ordered and delivered during the year as follows—60 consolidation locomotives; 10 six-wheel switching locomotives; 10 passenger refrigerator cars; 140 forty ton freight refrigerator cars; 5,000 forty ton steel underframe and side frame box cars; 300 thirty ton wooden stock cars; 500 forty ton steel frame flat cars; 250 fifty ton steel underframe gondola cars; 250 fifty ton wooden dump cars; 25 fifty ton steel tank cars; 15 forty ton steel tank cars.

Lines Acquired—The Toronto Suburban Ry. (operated by electricity) with 46 miles of suburban line from Toronto to Guelph, and 19 miles of urban lines, mostly within the City of Toronto, and the Toronto Eastern Ry. (electric) with 19 miles of partly constructed line between Bowmanville, Oshawa and Whitby Ont., have been acquired by your company. The operations of these lines will be included with those of the Niagara St. Catharines and Toronto Ry. in a separate statistical statement, the net return alone being included in the system accounts.

Leaside Terminals—The first units of the Leaside terminals at Toronto, which were about completed at the close of 1918, were put into operation in the early summer of 1919. This plant will provide repair facilities for Ontario lines which have hitherto lacked suitable shop accommodation. The shops are conveniently located near the North Toronto terminals in which your lines have a

joint interest with the C.P.R.

Montreal Tunnel—On Oct. 21, 1918 last, service through the Montreal tunnel was inaugurated, and since then, regular service between Montreal, Ottawa and Toronto has been given, using the new short line between Hawkesbury and Montreal.

Ocean Steamship Services—Early in 1918 the Dominion Government, realizing the need for a mercantile fleet to develop Canadian export trade, placed orders with Canadian shipbuilding firms for a large number of ocean-going steamships. The government has arranged for these ships to be operated by a company under the charter name of the Canadian Government Merchant Marine Ltd., the directors of which company are members of your board. Up to date 12 ships have been delivered, and the following services have been established: Between Montreal and St. John's, Nfld., Cuba, the West Indies, South America and various United Kingdom ports, which services will continue from Halifax, or St. John, during the winter. Cargoes have also been carried to French ports, and from Vancouver to United Kingdom ports via the Panama Canal, and a service from Vancouver to Australia is just about to be established. Additional services have been arranged for as soon as further vessels are delivered by the builders, and the operation of the boats is confidently expected to reflect most satisfactory results in the building up of Canadian trade and from which the Canadian National Ry. should receive substantial benefits in traffic returns.

Vancouver-Victoria Car Ferry—During the year, the car ferry Canora was completed at Quebec, and made the trip from there to Vancouver via the Panama Canal. It is now in regular operation between Vancouver Island and the mainland.

Organization—Immediately following their appointment, the directors took up the reorganization of the official staff of the Canadian Northern Ry. System. This matter was under way when, by order in council passed on Nov. 20, 1918, your directors were constituted a board of management for the Canadian Government Railways. This necessitated a more extensive rearrangement of official personnel, and the amalgamation of the staffs of the two systems. In anticipation of post-war developments, the Resources Department has been strengthened and is carrying on active work. It will handle immigration matters.

The use of the collective title "Canadian National Railways," as representing both the Canadian Northern System and the Canadian Government lines, was authorized by order in council passed Dec. 20, 1918, and by special act of the Dominion of Canada, the Canadian National Ry. Co. has been incorporated, in order that the various railways under federal control may be operated by the new company for the government.

The members of your board have made inspections of most of your lines, and additional inspection trips will be made from time to time, so that your board may have first hand information as to the general condition, upkeep and operation of the railway.

Your board is glad to welcome back to the service of the railway those officers and employees who have been serving with Canada's expeditionary forces in the great war. To those who have suffered bereavement, the directors desire to convey their sincere sympathy. The

board expresses to the management and employees its thanks for loyal and efficient services rendered throughout the year. In this connection it should be remembered that the epidemic of influenza created conditions of great hardship, and resulted in overtaxing those on whom fell the burden of carrying on, during the periods when many employees were forced to remain out of service. To the families of those who succumbed to the attack of this dread disease, the board desires to tender its sympathetic condolences and to record its sense of loss by the death of a number of valued officers and employees.

Income Statement Year Ended Dec. 31, 1918.

Average miles operated for fiscal year..... 9,452

Summary of Mileage.

Milage owned by Canadian Northern Ry.	
Station	Miles
Toronto to Rosedale, G.T.R.	3.8
Grand Trunk Crossing, Orillia, C.P.	
R.	2.8
Harrowsmith to Kingston, C.P.R.	18.6
Kingston to Ottawa Union Sta-	
tion, G.T.R.	1.7
Current River to Peterborough, C.P.	2.1
Chip Lake to Obed, G.T.P.	77.8
Snaring to Geikie, G.T.P.	21.0
New Westminster to Vancouver.	
Great Northern	13.8
Halifax to southwestern Jet. C.G.R.	6.0
Midland Jet. to Peterborough, C.P.	2.5
Quinlan to D.W. & P. Jet. No. 2.	2.5

Lines leased—Northern Pacific in Manitoba	347.3
Total mileage operated	9,566.5

Suit Against Express Company for Damage to Strawberries.

The Quebec Court of Appeal gave judgment at Montreal, recently, on the appeal of H. V. Clogg, trading as J. R. Clogg and Co., fruit importers, against a Superior Court decision, dismissing an action brought against the Canadian Express Co. and the American Express Co. to recover \$424.74 loss on a car load of strawberries which had deteriorated in quality in transit from Independence, La. The fruit was consigned from Independence by the American Express Co., May 5, 1916, and was transferred on Clogg's instructions to the Canadian Express Co., at Port Huron, Mich. The cost laid down in Montreal was \$1,725.94. On delivery it was found that the fruit had deteriorated, and it was sold for \$1,301.20. Clogg alleged that the deterioration was due to the carrier's negligence in not keeping the car sufficiently cooled, and sought to recover the difference in value from the Canadian Express Co.—the American Express Co. being subsequently added as a defendant. The Superior Court dismissed the action, and Clogg appealed. After argument, Justice Demers found that the consignment was shipped in good order and there was a new contract when the car was transferred to the Canadian Express Co. at Port Huron. Article 1675 of the Civil Code provides that carriers are liable for loss or damage of things entrusted to them unless they can prove that such loss or damage was caused by a fortuitous event or irresistible force, or arose from a defect in the thing itself. It was not Clogg's duty to show how the loss was occu-

proved. It was evident that the Canadian Express Company feared loss of cargo if that material was to be taken to the port sufficiently hot to take away a collector car from another company. It was necessary to assume in this case to believe that this car was not in a proper condition when taken over at Port Huron. As it was admitted the temperature of the car was too high when it arrived at Montreal, it was probable that it had not been sufficiently iced between Port Huron and Montreal. The Superior Court's decision dismissing the action as against the American Express Co. was affirmed and reversed as against the Canadian Express Co. Judgment for \$24,744 with interest and costs was entered against the Canadian Express Co.

Railway Situation in Gaspé Penninsula.

A meeting of merchants, lumbermen and others interested in the development of the Gaspé Peninsula was held in Quebec, Feb. 5, to consider the railway situation in their district. It is served by the Quebec Oriental Ry., from Matapédia on the Intercolonial Ry., to New Carlisle 98 miles; and the Atlantic, Quebec and Western Ry., from New Carlisle to Gaspé Basin, 104 miles; both lines being under one management. After hearing reports as to the condition of the roadbed, the rolling stock and the service being given, an association for the improvement of the railway situation on the Gaspé coast was formed, with Hon. J. H. Kelly as President, and a number of resolutions were passed. The two important ones were: To authorize the executive committee to place before the Dominion Government the real situation as to the railways, and to ask that the government acquire the lines either by agreement as to value, or by arbitration, and that meanwhile the Board of Railway Commissioners be asked to order the companies to furnish a daily mail and passenger service in each direction between Matapédia and Gaspé Basin.

Ice Railway at Port Arthur—The Contractors for the extension of the breakwater at Current River, Port Arthur, Ont., Chambers, McQuigge, McCaffrey & Co., have laid a single track narrow gauge railway, with passing tracks, over the ice from the mainland to where the breakwater is being built. The rolling stock consists of 4 locomotives and a large number of dump cars. Each train consists of 6 cars, the load being about 50 tons, about 1,000 tons a day being dumped into 40 ft. of water. The contract covers the construction of 1,500 ft. of breakwater.

Cornwall International Bridge Taxation—The Ontario Legislature is being asked to ratify a Cornwall Tp. Council bylaw confirming an agreement made between the council and the Ottawa and New York Ry., fixing an annual assessment of \$150,000 on the portion of the international bridge between Canada and the United States, which is in Cornwall Tp.

stables were damaged by fire Feb. 6 the loss being put at \$1,500. About 4 horses in the stables were saved.

Spanish Railway Companies have asked authority to increase freight rate 35% to meet increased operating expenses.

Mainly About Railway People Throughout Canada.

W. R. Baker, C.V.O., formerly Assistant to the President, and Secretary, C.P.R., who returned to Montreal from Europe recently, passed through Vancouver, at the end of January, on his way to California, intending to return to Montreal in the spring. Mrs. Baker is spending some time in Austria.

John Bollen, Foreman, Locomotive Shops, C.P.R., Winnipeg, who has retired from active service, was presented with a case of pipes and a purse of money by his staff, Feb. 13.

George Hugh Brown, whose appointment as Commercial Agent, G.T.R., Minneapolis, Minn., was announced in our last issue, was born at West Lebanon, N.H., Oct. 17, 1876, and entered G.T.R., service Jan. 2, 1882; since when he has been, to Jan. 1, 1898, messenger, stenographer, clerk, Chicago, Ill.; Jan. 1, 1898 to July 1, 1915, Soliciting Freight Agent, Chicago, July 1, 1915, to July 1, 1918, Commercial Agent, Omaha, Neb.; July 1, to Nov. 1, 1918, Tariff Inspector, Chicago; Nov. 1, 1918 to Jan. 1, 1920, Traveling Representative, Chicago. His father, David Brown, was in G.T.R. service from 1866 to 1903, retiring as First Assistant General Freight Agent, Chicago.

R. L. Burnap, who has been appointed Right Traffic Manager, G.T.R. lines in the U.S., west of Detroit and St. Clair Rivers, Chicago, Ill., was born Sept. 20, 1872, and entered railway service in 1894, since when he has been, to May 1, 1896, consecutively, clerk in Local Freight Agent's office, Central Vermont Ry.; clerk in Division Freight Agent's office, Ogdensburg Transit Co., and clerk in Division Freight Agent's office, Central Vermont Ry., Ogdensburg, N.Y.; May 1 to Sept. 1, 1896, clerk in Commercial Agent's office, Central Vermont Ry., New York City; Sept. 1, 1896 to Feb. 1, 1900, Travelling Freight Agent, Central Vermont Ry., New London, Conn.; Feb. 1, 1900 to Aug. 1, 1905, Commercial Agent, Central Vermont Ry., New York City; Aug. 1, 1905 to May 1, 1908, General Freight Agent, Central Vermont Ry., St. Albans, Vt.; May 1, 1908 to Oct. 16, 1911, Assistant General Freight Agent, G.T.R., Chicago, Ill.; Oct. 16, 1911, to May 1, 1918, Assistant Freight Traffic Manager, G. Y. R., Chicago, Ill.; May 1, 1918, to Mar. 1, 1920 Traffic Manager, Grand Trunk Western Lines Rd. (U.S. R.A.) Chicago, Ill.

William Byers, car inspector, G.T.R., Niagara Falls, Ont., after 43 years service, retired under the company's pension rules, early in February. He commenced service with the Great Western Ry. in 1872, and continued with the G.T.R. when the former company was taken over.

Hon. Frank Cochrane, ex Minister of Railways and Canals, who died some months ago, left an estate valued at \$423,974.93. Mrs. Cochrane is to receive one-half of the income for life; the son and daughter are each to receive one-quarter of the income during Mrs. Cochrane's life, after which the estate is to be divided equally between them.

A. E. Corbett, locomotive foreman, Canadian National Rys., St. John, N.B., was accidentally killed while at work recently. He was 34 years old, and had been in government railway service for 8 years.

Edward Cassidy Elliott, who has been

appointed District Passenger Agent, G.T.R., Montreal, was born there, Oct. 12, 1877, and entered G.T.R. service, June 15, 1894, since when he has been, to Feb. 1, 1898, junior clerk; Feb. 1, 1898 to June 1, 1902, clerk; June 1, 1902 to June 1, 1907, freight clerk; June 1, 1907 to June 1, 1913, excursion clerk; June 1, 1913, to Jan. 1, 1916, chief clerk to General Passenger Agent; June 1, 1916, to Feb. 1, 1920, chief clerk to Passenger Traffic Manager, all at Montreal.

D. W. Fraser, heretofore Managing Director, Montreal Locomotive Works, Montreal, has been appointed Vice President, in charge of sales, American Locomotive Co., and Montreal Locomotive Works, with office in New York, N.Y., succeeding J. D. Sawyer, who has retired. He will be succeeded at Montreal by Mr. Butler, heretofore Works Manager.

F. E. Gautier, Purchasing Agent, Western Lines, C.P.R., who died at Winnipeg some little time ago, left an estate valued at approximately \$60,000, which, owing to a peculiar codicil to his will, appeared to have been left to the St. John Ambulance Association, but by a recent decision of a local court, has been handed over to his widow.

G. E. Graham, General Manager, Dominion Atlantic Ry., Kentville, N.S., who was injured in a train wreck on the C.P.R. at North Bay, Ont., at the end of January, expects to return to his duties early in March.

Grant Hall, Vice President; F. L. Wanklyn, General Executive Assistant, Allan Purvis, General Superintendent, Ontario District; A. Williams, Superintendent, London Division, and M. H. Brown, Division Freight Agent, C.P.R., were the principal guests at a dinner given by the London, Ont., Chamber of Commerce directors, Feb. 11.

John Hall, formerly roundhouse foreman, G.T.R., died at Hamilton, Ont., Feb. 20, aged 89. When 16 years old, he was fireman on a locomotive at Newcastle, Eng., built by Geo. Stephenson, and for two years ran a locomotive on the old railway between Liverpool and Carlisle, Eng. He was locomotive man on the first train that ran between Madrid and Aranquy, Spain. He came to Canada in 1853, entered Great Western Ry. service at Hamilton and ran the first train between Hamilton and Niagara Falls, Ont., and continued with the G.T.R. when the G.W.R. was taken over.

H. H. Hamill, who has been appointed General Agent, Freight Department, G.T.R., Detroit, Mich., was born at Somerville, Mass., Apr. 6, 1874, and entered transportation service with the Johnson Steamship Line, Boston, Mass., in 1893, and from Feb. 1, 1900, to June 1, 1906, was city solicitor, National Dispatch Line, Boston, Mass.; June 1, 1906, to Apr. 1, 1910, Travelling Agent, National Dispatch-Great Eastern Line, Boston, Mass.; Apr. 1, 1910 to Nov. 1, 1911, Soliciting Freight Agent, G.T.R., New York City; Nov. 1, 1911 to June, 1914, Travelling Freight Agent, G.T.R., New York; June, 1914 to Nov., 1918, Commercial Agent, G.T.R., Detroit, Mich.; Nov., 1918 to May, 1919, General Agent, Freight Department, Lines in Canada, G.T.R., Detroit, Mich.; May, 1919 to Mar. 1, 1920, General Agent, Freight Department, Grand Trunk Western Lines Rd. (U.S.R.A.), Detroit, Mich.

D. B. Hanna, President, Canadian National Rys., Mrs. Hanna, and their two daughters, returned to Toronto, Feb. 9, after spending some three weeks at Miami, Florida.

J. M. Hanna, who has been elected President, Northern Pacific Ry., was born at Claremont, N.H., Nov. 19, 1850, and entered railway service, June, 1866, as clerk in the general freight offices, Central Vermont Ry., St. Albans, Vt. He entered Northern Pacific Ry.'s service May 11, 1872, since when, he has been, to May 1, 1879, chief clerk, General Freight Department; May 1, 1879 to 1881, Assistant General Passenger Agent; 1881 to Aug. 1, 1883, General Freight Agent, Eastern Division, Aug. 1, 1883 to Mar. 1, 1884, Assistant Superintendent, Freight Traffic; March 1, 1884 to May 1, 1886, General Freight Agent, main line and branches; May 1, 1886 to 1890, Traffic Manager; 1890 to Feb. 1, 1899, General Traffic Manager; Feb. 1, 1899 to April 1, 1902, Third Vice President; April 1, 1902 to Aug., 1913, Second Vice President; Aug., 1913 to the taking over by the U.S. railways by the U.S. Railroad Administration, President; and during the last named period he was Federal Manager, Northwestern Region, U.S.R.A. He is also President, Northern Pacific Ex. Co.

Lieut.-Col. T. A. Hiam, who, before the war, was private secretary to Sir Donald Mann, at Toronto, has been appointed Vice President, Canadian North Eastern Ry. Co., and Vice President, Pacific Coast Exploration Co., of both of which companies Sir Donald Mann is President. His office is at Stewart, B.C. He went overseas with the Canadian Buffs in the autumn of 1916 as a lieutenant, and was at Witley Camp, Eng., for nearly a year, while the Buffs formed part of the 5th Canadian Division, and during which time he was promoted to captain and made assistant quartermaster. On the Buffs being broken up, for reinforcing purposes, he transferred to the Imperial Railway Troops, going to France in Feb., 1918 as captain, and was engaged for some time in railway operating work. He returned to England in Oct., 1918 on leave, and was sent almost immediately to Salonica, as railway transportation officer, and after being there a very short time, was transferred to Constantinople, promoted to major and made Deputy Assistant Director of Railway Transport, which department had charge of the Orient Ry. in European Turkey (Compagnie d'Exploitation des Chemins de Fer Orientaux) and also the Bagdad Line, which commences on the Bosphorus and extends to Bagdad, with a break from Nissibin to Samarra, which is still under construction. This line is operated by the Societe Imperiale Ottomane de Chemin de Fer de Bagdad. From Constantinople he was transferred to Haidar Pasha as Assistant Director of Railways, and was promoted to lieutenant-colonel.

Robt. Hobson, President, Steel Company of Canada, and one of the Canadian National Rys. directors, has resigned from the Dominion Council for Scientific and Industrial Research, and has been succeeded by Lloyd Harris.

Sir Herbert Holt, one of the C.P.R. directors, and President, Royal Bank of Canada and Montreal Light, Heat and Power Co., has been elected a director of Canadian Fur Auction Sales Co.

Chas. R. Heymer, one of the C.P.R. division men, has been elected President, New Canadian Hotel Co., Montreal.

W. C. Hunter, who has been appointed Air Brake Inspector, Eastern Division, Canadian National Ry., Montreal, was born at St. John, N.B., Jan. 3, 1866, and attended many schools in that province when he has been, to Nov. 1, 1901, consecutively, car oiler, locomotive wiper, fireman, and locomotive man, Intercolonial Ry., New Brunswick. In 1904, General A. B. Drake Inspector, P.R. In 1909 he was appointed Master, N. & H. Ry., and Coal, and a few years later, left railway service for the railway supply business. He returned to railway service in 1919 with the Canadian National Ry. He was for a time Second Vice President of the Air Brake Association, and thus a prominent part in its work.

Howard G. Kelley, President, Grand Trunk Ry. and Grand Trunk Pacific Ry., is reported to have left Montreal, Feb. 26, with Hon. J. A. Calder, acting Minister of Railways, to meet the Prime Minister, Sir Robert Borden, in New York.

W. A. Kirkpatrick, whose appointment as acting Assistant Superintendent, Division 2, Central District, Canadian National Ry., Sioux Lookout, Ont., was announced in our last issue, was prior to Nov., 1911, Assistant Superintendent, Canadian Northern Ry., Winnipeg; Dec., 1911 to Sept., 1913, Transportation Inspector, same road; Sept. 1, 1913, to Sept., 1915, Assistant Superintendent, same road, Neepawa, Man.; Sept., 1915 to Dec., 1919, Trainmaster, same road, Neepawa, Man.

Capt. David Kyle, M.C., Vice President, Algoma Steel Corporation, which controls the Algoma Central and Hudson Bay Ry., Algoma Eastern Ry., and International Transit Co., died at Sault Ste. Marie, Ont., Feb. 5, from pneumonia.

T. J. Macabe, Registrar and Transfer Officer, Canadian National Ry., Toronto, who has been seriously ill with pneumonia, is convalescing.

Col. A. H. Macdonald, K.C., who had been Secretary of the Guelph Junction Ry. Co., since its inception, died at Guelph, Ont., Feb. 12, aged 71.

J. D. McDonald, who has been appointed General Passenger Agent, also in charge of Baggage Department, Lines west of Chicago and St. Clair Rivers, G.T.R., Chicago, Ill., was born at Toronto, Aug. 27, 1885, and entered G.T.R. service in 1868, since when he has been, to 1870, messenger, Toronto; 1870 to 1875, Assistant Ticket Agent, Toronto; 1875 to 1896, Ticket Agent, Buffalo, N. Y.; 1896 to May, 1902, City Passenger and Ticket Agent, Buffalo, N.Y.; May, 1902 to Mar. 1, 1911, District Passenger Agent, Toronto; Mar. 1, 1911 to Oct., 1918, Assistant General Passenger Agent, Chicago, Ill.; Oct., 1918 to May, 1919, Assistant General Passenger Agent, Chicago, Ill.; Oct., 1918 to May, 1919, Assistant General Passenger Agent, Eastern Regional District, U.S. Railroad Administration, Chicago, Ill.; May, 1919 to Mar. 1, 1920, General Passenger and Baggage Agent, Grand Trunk Western Lines Rd. (U.S.R.A.), Chicago, Ill.

C. W. McMullen, City Freight Agent, C.P.R., Toronto, was presented with a number of electrical appliances by the freight department staff recently, on the occasion of his marriage to Miss M. Dalby.

G. P. Magann, who died at Toronto, Feb. 15, aged 71, was President, Magann and Hargreaves Co., and has carried out some important construction works on the G.T.R., and C.P.R. as well as for the Dominion Government.

A. Z. Mullins, who has been appointed Division Freight Agent, G.T.R., Grand Rapids, Mich., was born at Appin, Ont., Feb. 14, 1862, and entered G.T.R. service Feb. 10, 1884, since when he has been, to May, 1887, telegraph operator, Komoka, Ont.; May, 1887 to Oct., 1896, rate clerk, chief clerk and Travelling Freight Agent, Buffalo, N.Y.; Oct., 1896 to Apr., 1900, Agent, National Despatch—Great Eastern Line, Grand Rapids, Mich.; Apr., 1900 to June, 1907, Agent, Lackawanna—Grand Trunk L. & E., Detroit, Mich.; July, 1907 to Apr. 30, 1919, Commercial Agent, Grand Rapids, Mich.; May, 1919, Division Freight Agent, G.T.R., Grand Rapids, Mich.; May, 1919 to Mar. 1, 1920, Division Freight Agent, Grand Trunk Western Lines Rd. (U.S.R.A.), Grand Rapids, Mich.

Patrick Nelson, formerly roadmaster, G.T.R., Hamilton, Ont., died there, Feb. 20, aged 78.

George Henry Nowell, who has been appointed Master Mechanic, Lethbridge Division, Alberta District, C.P.R., Lethbridge, was born at Montreal, Nov. 13, 1885, and entered railway service, July 2, 1889, since when he has been, to July 2, 1904, machinist apprentice, C.P.R., Montreal; July 2 to Nov. 5, 1904, machinist, C.P.R., Montreal; Nov. 5, 1904 to Feb. 15, 1905, machinist, C.P.R., North Bay, Ont.; Apr. 15 to Sept. 1, 1905, machinist, G.T.R., Montreal; Sept. 1, 1905, to Sept. 30, 1908, machinist, C.P.R., Montreal; Sept. 30, 1908 to Jan. 15, 1910, leading hand, C.P.R., Montreal; Jan. 15, 1910 to Jan. 15, 1913, charge hand, C.P.R., Montreal; Jan. 15, 1913 to Sept. 5, 1915, Erecting Shop Foreman, C.P.R., Ogden, Alta.; Sept. 5 to Dec. 1, 1915, Locomotive Foreman, C.P.R., Cranbrook, B.C.; Dec. 1, 1915 to Feb., 1920, Master Mechanic, Nelson Division, British Columbia District, C.P.R., Nelson.

F. H. Phippen, K.C., formerly General Counsel, Canadian Northern Ry., returned to Toronto, Feb. 23, after a business trip to England.

Joseph Quinlan, District Passenger Agent, G.T.R., Montreal, after 43 years faithful service, will retire under the provision of the company's superannuation fund on April 1. He has held his present position for 18 years. He was granted leave of absence, Jan. 30.

Hon. J. D. Reid, Minister of Railways and Canals, returned to Ottawa at the end of February after spending about a month with Mrs. Reid at St. Augustine, Florida.

James Rogers, who died at Montreal, Feb. 2, aged 83, was formerly a railway contractor, and carried out considerable work on the G.T.R., C.P.R., Lake Superior and Sudbury branches, and at Port Arthur, Ont., the Baie des Chaleurs Ry., etc. He served during the Fenian Raid, as a lieutenant in the Grand Trunk Engineers.

H. T. Ruhl, Engineer, Maintenance of Way and Superstructures, Delaware and Hudson Rd., Albany, N.Y., died there, Feb. 16, of pneumonia, after 10 days illness. He was born at Milliflinburg, Pa., Sept. 29, 1882, and entered railway service, Sept. 22, 1902, since when he had been, to June, 1904, rodman, C.P.R.,

Newburgh, Que., June, 1904, to July, 1905, transit man, Construction Department, Residency 2, Toronto—Sudbury Branch, C.P.R.; July to Aug., 1905, transit man on location, C.P.R., Ingersoll, Ont.; Aug. to Oct., 1905, transit man, on bridge surveys, C.P.R., Coldwater, Ont.; Oct., 1905, to Jan., 1906, transit man, on bridge surveys, C.P.R., Parry Sound, Ont.; Jan. to May, 1906, transit man on location, C.P.R., Parry Sound, Ont.; May, 1906, to Jan., 1908, Resident Engineer on Construction, C.P.R., Point au Baril, Ont.; Jan. to Oct., 1908, Resident Engineer on Construction, C.P.R., Muskoka, Ont.; Oct., 1908, to Nov., 1909, transit man on construction, C.P.R., North Bay, Ont.; Nov., 1909, to Oct., 1911, Resident Engineer, C.P.R., Sudbury, Ont.; Oct., 1911, to Sept., 1913, Resident Engineer, C.P.R., Farnham, Que.; Sept., 1913, to Nov. 20, 1915, Resident Engineer, Intercolonial Ry., New Glasgow, N.S.; Nov. 20, 1915, to June 15, 1917, Division Engineer, Canadian Government Railways, Moncton, N.B. From June 15, 1917, Engineer, Maintenance of Way and Superstructures, Delaware and Hudson Rd., Albany, N.Y.

Henry Russel, Vice President and General Counsel, Michigan Central Rd. Co., died at New York, Feb. 25, of pneumonia, just prior to embarking for Europe to bring back the body of his son, Lieut. W. M. Russel, who was killed in an aeroplane fight with the enemy in France in Aug., 1918. He was born at Detroit, Mich., and entered railway service in 1877 as attorney, Michigan Central Rd.

John Vass, who has been appointed Locomotive Inspector, lines in U.S., west of Detroit, and St. Clair Rivers, G.T.R., Milwaukee Jct., Wis., was born at Braidwood, Scot., and went to the U.S. in 1888, and was, to 1894, locomotive fireman, Wabash Rd., Chicago, Ill.; 1894 to 1895, locomotive fireman, G.T.R., Battle Creek, Mich.; 1895 to 1903, locomotive man, G.T.R., Battle Creek, Mich.; 1903 to June, 1918, Road Foreman of Locomotives, Nichols, Mich.; June, to Oct., 1918, Assistant Master Mechanic, Ont.; Oct., 1918 to Jan., 1920, Assistant to Superintendent of Motive Power, Ontario Lines, G.T.R., Allandale, Ont.

J. D. Wells, who died at Montreal, Feb. 20, aged 83, was interested in the Central Ry. of Canada project, and was Secretary of the company from 1903.

H. E. Whittenberger, who has been appointed General Manager, G.T.R. lines in the U.S., west of Detroit and St. Clair Rivers, Detroit, Mich., was born at Peru, Ind., Nov. 9, 1869, and entered transportation service, in 1885, since when he has been, 1885 to Feb., 1897, in various positions, Wabash Rd.; Feb., 1897 to May, 1902, Trainmaster, Middle Division, G.T.R.; May, 1902 to Sept., 1904, Superintendent, Denver & Rio Grande Ry.; Sept., 1904 to Jan., 1906, Superintendent, Cincinnati, Hamilton & Dayton Rd., Indianapolis, Ind.; Jan., 1906 to Sept. 30, 1907, Superintendent, Kansas City & Southern Rd.; Sept. 30, 1907 to Oct. 17, 1912, Superintendent, Eastern Division, G.T.R., Montreal; Oct. 17, 1912 to Jan. 14, 1913, Superintendent, Middle Division, G.T.R., Toronto; Jan. 14, 1913 to May 1, 1918, General Superintendent, Ontario Lines; G.T.R., Toronto; May 1, 1918 to May 1, 1919, General Manager, Grand Trunk Western Lines Rd. (U.S.R.A.), Detroit, Mich.; May 1, 1919 to March 1, 1920, Federal Manager, Grand Trunk Western Lines Rd. (U.S.R.A.), Detroit, Mich.

The Taking Over of Grand Trunk Railway System by Dominion Government.

The G.T.R. shareholders met in London, Eng., Feb. 19, to consider, and, if thought advisable, approve of the agreement made between the Dominion Government and the directors for the taking over by the government of the G.T.R. property. The terms of the agreement were discussed fully in the Dominion Parliament when the act was before it in Oct., 1919, and a summary was given in Canadian Railway and Marine World, for Nov., 1919, pg. 593.

Sir Alfred Smithers, Chairman of the board, having explained the agreement and the circumstances leading up to its being adopted is reported to have stated to the meeting that the G.T.R. had been forced by the government to carry on under impossible conditions, and he felt that they were being held up. He had received figures showing that the profits were being swallowed up in increased wages, without the company being granted power to charge increased rates, thus meaning a loss to shareholders of at least \$1,250,000 to \$1,500,000 in each of the last three years. In regard to the G.T.P.R., he felt that the G.T.R. was entitled to be shown the same consideration as the Canadian Northern Ry. He continued: "Under the agreement if the maximum amount is awarded it will still leave the preference and ordinary shareholders compelled to make a sacrifice. It becomes more apparent when you contrast it with the treatment given to the Canadian Northern. I have received letters suggesting that we should break off all negotiations and let the government do its worst. I am sure the writers do not realize what that means. To enter on an unknown sea of litigation with the government would carry us no one knows where." In concluding he said: "We have fought hard for nearly two years, and now we earnestly and unhesitatingly ask you to accept the agreement."

There was considerable discussion on the agreement, the most outspoken criticism being offered by Rev. L. Dawson, a former resident of British Columbia, who expressed the opinion that the chief opposition directed against the company was because it was a British owned and managed concern. He is reported to have said: "Speaking quite frankly, you are dealing with a Canadian Government, which has no morals. I have had to fight the government there myself over local matters. If we had had a real Canadian board, who really understood conditions, the men who were on the floor of the house and in the lobbies, and who could say to the government like the C.P.R. say: 'If you do that mind what you are about because an election will come,' then we should be better. I know it is not a nice way to conduct a country, but unfortunately that is the way things are done here. I am sorry to say it. I have been a Canadian citizen and like the country. I believe this will lead British investors to send no more money to Canada."

The agreement was approved by the shareholders present with about a dozen dissentients. At a subsequent meeting of these dissentients a resolution protesting against the terms of sale was passed.

Arbitration Proceedings.

The act passed by the Dominion Par-

liament in 1919 provides for arbitration as follows:—"The value, if any, of the first, second and third preference stocks and the common or ordinary stock of the Grand Trunk now issued and outstanding to the face values above mentioned (hereinafter together called the "preference and common stock") shall be determined by a board of three arbitrators, one to be appointed by the government, one by the Grand Trunk, and the third by the two so appointed, or, failing agreement, by judges to be designated in the said agreement. New guaranteed stock, to an amount not exceeding the value, if any, so determined, carrying a dividend as hereinbefore authorized, shall be distributed among the holders of the preference and common stock, upon the transfer to or vesting in the government of such stock in proportions which shall be determined by the arbitrators."

The Dominion Government's counsel for the arbitration will be W. N. Tilley, K.C., Toronto; Pearce Butler, of the Minnesota Bar; H. A. Lovett, K.C., Montreal; Hector MacInnes, K.C., Halifax, N.S., and E. E. Fairweather, Solicitor, Railway Department, Ottawa. The G.T.R. will, it is said, be represented by W. H. Biggar, K.C., Vice President and General Counsel; F. H. Phippen, K.C., Toronto; A. W. Atwater, K.C., and Eugene Lafleur, K.C., Montreal.

G.T.R. Board of Management.

The act provides that as soon as the agreement has been ratified by a majority of the holders of the stocks enumerated in the preamble, "a committee of management shall be formed, consisting of five persons, two to be appointed by the Grand Trunk, two by the government, and the fifth by the four so appointed, to ensure the operation of the Grand Trunk System (in so far as it is possible so to do) in harmony with the Canadian National Ry., the two systems being treated in the public interest as nearly as possible as one system. The committee shall continue to act until the preference and common stocks are transferred to or vested in the government, when it shall be discharged." The agreement provides for the entrusting to the said committee of management by the Minister of Railways and Canals as receiver of the G.T.P.R. system, on terms to be approved by the governor in council, of the exercise of such of his powers as receiver as the Governor in council may deem requisite in order that the operation and management of the said G.T.P.R. system may be conducted in harmony with the operation of other railways and properties under the control of the said committee.

Canadian Railway and Marine World is of the opinion that the government will appoint as its two members of the committee of management, C. A. Hayes, Vice President in Charge of Traffic, and S. J. Hungerford, Assistant Vice President, both of the Canadian National Ry. Press reports say that the G.T.R. will select its two representative from among W. D. Robb, Vice President in Charge of Operation and Maintenance, G.T.R., W. P. Hinton, Vice President and General Manager, G.T.P.R., and J. E. Dalrymple, Vice President in Charge of Traffic, G.T.R. It is also stated that

Howard G. Kelley, President, G.T.R., and G.T.P.R., is likely to be chairman of the committee.

Canadian National Railways Earnings.

	1919	1918
January	\$ 6,741,913	\$ 4,698,567
February	6,000,312	4,421,504

Approximate earnings for Jan., 1920, \$5,054,084, and for 3 weeks ended Feb. 21, \$32,327,886, against \$4,402,229, and \$2,827,568, for same periods, 1919, respectively.

London and Lake Erie Ry. Liquidation

—We are advised that out of the proceeds of sales of rails, and other material and equipment, from this dismantled line, the company has been able to pay off about 30% of its outstanding bonds.

Canadian Pacific Railway Construction, Betterments, Etc.

New Brunswick District.—A press report states that the appropriations for betterments on this district during this year include the laying of 80 miles of new rail between St. John, N.B., and Moncton, Que., the rail track up to be raised on trestle above the district; 20 miles of track to be rehabilitated; about 4 miles of apron bridges to be placed along sections where the snow drifts interfere with operation. The grain conveyor serving no. 2 berth at Sand Point, St. John, will be rebuilt and so placed that ships may be loaded at all tides; the trackage at Fairville yard is to be enlarged to accommodate the increased business. A 2-story frame station is to be built at Westfield; an improved station is to be built at Westfield; an improved station is to be built at Fredericton, the present site being utilized; a 100,000 gal. steel water tank is to be built at Brownville Jet, and 4 section foremen's houses are to be built at different points on the line in Maine.

St. John Cold Storage Plant.—A press report states that additional property has been acquired adjoining the company's cold storage plant on Main St., St. John, N.B., and that it is probable the plant may be added to.

St. John, N.B., Bridge.—A press report states that provision has been made in the appropriations for this year for the putting in of the substructure for a new bridge across the St. John River at the reversible falls at St. John, N.B., and that the contract for the superstructure, to be erected in 1921, will be let. The bridge will have a steel span of 413 ft., supported on concrete abutments, and will be located between the two bridges which now span the river at that point.

St. Maurice River Bridge.—The Board of Railway Commissioners has authorized the rebuilding of the bridge across the St. Maurice River, at mile 1.8, Cap de la Magdeleine Subdivision, Que.

Ontario District.—A press report states that permission has been given for the closing of King St. and Bay St., Kingston, Ont., running to the harbor, in order so that the C.P.R. may carry out its plans for a new freight yard. The plans are said to include the erection of a freight shed and locomotive house.

Plans for the season's betterments on the London Division are said to include a station at Ayr, to cost \$23,000; a station at Puslinch; the remodelling of Galt station at a cost of \$16,000, and considerable improvements at Chatham at a cost of \$45,000.

Fort William Locomotive House.—Tenders will be received to Mar. 5 for building a 4-stall addition to the locomotive house at Fort William, Ont.

Western Lines Contracts.—We are officially advised that contracts have been let as follows:

To Canadian Construction Co., Winnipeg, for grading 20 miles of the Rose-town south branch line; in addition to 25 miles awarded in 1919 and not yet completed.

To Canadian Construction Co. for grading 25 miles of the Empress-Milden branch line; in addition to 34 miles awarded to Stewart and Welch in 1919 and not yet completed.

To A. G. Creelman Co. of Calgary, Alta., for building 18 section houses on the Manitoba District; and for building stations at Lydiatt, Harrowby and

Schwitzer, Man., and to H. G. McDonald, Edmonton, Alta., for completion of 5th and 6th floors of the office building at Edmonton.

Western Branch Line Extensions.—The Dominion Parliament is being asked to authorize the building of the following additional branch lines: From near Cory, Tp. 36, Ranges 5 or 6, west 3rd meridian, northwesterly to Birch Lake, Tps. 61 and 62, Ranges 15 and 16, west 3rd meridian, Sask.; from near Asquith, Tp. 36, Ranges 9 or 10, west 3rd meridian, northwesterly to near Cloan Tp. 42, Range 20, west 3rd meridian, Sask., from near Rosetown, Tp. 30, Range 15, west 3rd meridian, to near Keppel, Tp. 35, Ranges 12 or 13, west 3rd meridian, Sask.; from near Kelfield, Tp. 34, Range 19, west 3rd meridian, easterly to Tps. 32 or 33, Range 14, west 3rd meridian, Sask., from near Amulet, Tp. 8, Ranges 20 or 21, west 2nd meridian to Dunkirk, Tp. 12, Range 28, west 2nd meridian, Sask., from near Kipp, Tp. 9, Range 22, west 4th meridian easterly and north-easterly to near Retlaw, Tp. 13, Range 17, west 4th meridian, Alberta. Power is asked to issue bonds for \$40,000 a mile for the construction of these lines.

Manitoba District Betterments.—Tenders will be received to Mar. 5 for building concrete culverts and bridge abutments at various points in the district, and for the following works: Mess room and locomotive foreman's office, Winnipeg; extension of air brake shop at Weston; and a car cleaners' building at Winnipeg.

Saskatchewan District.—Tenders will be received to Mar. 5, for the following works in the Saskatchewan District: Two bridge abutments at Weyburn; 4 bridge abutments on Shaunavon Subdivision; 2 bridge abutments on Govanlock Subdivision; 4 concrete arch culverts on Colonsay Subdivision; 6 concrete arch culverts on Sutherland Subdivision; 12 concrete arch culverts on Wilkie and Hardisty Subdivisions.

A press report states that the betterments to be done during this year on the Regina Division will include extensive improvements to Regina station, the building of a coal dock, a 4-stall addition to the locomotive house, and other improvements to the tracks in the yards. The total expenditure proposed at Regina is said to be \$200,000.

The Board of Railway Commissioners has approved route map showing general location of a branch northerly from Rosemary, Sask., mile 0 to 25.03.

Consul to Assiniboia Loop Line.—Replying to a general question as to railway construction in Saskatchewan in the Legislature, Feb. 2, Hon. Mr. Dunning gave the following information relative to this line: During 1919 there were graded 12.3 miles, and the Saskatchewan Railways Department had been advised that it is the company's intention to complete, as early as possible this year, the balance of the grading of the 25 miles for which contract was let last year, but it is not in a position to state whether any work in addition to the completion of this mileage may be undertaken this year.

British Columbia District.—A press report states that a permit has been issued by Vancouver City Council for the erection of a cold storage plant at the foot of Nelson St., to cost \$14,500. The permit is in the name of the Mainland

Cold Storage Co., but the report says the plant is to be used by the C.P.R. dining car department.

A press report states that a contract has been let to the Pacific Construction Co., Vancouver, for the dredging and filling for the construction of the new dock to be built between piers A and D, the work to be completed in 8 months.

Quebec Subsidies for Railway Construction.

The Quebec Legislature has passed an act authorizing the granting of subsidies in aid of the construction of the railways on conditions to be fixed by the government.

Montreal, Joliette and Transcontinental Junction Ry. Co.—A subsidy of 4,000 acres of land a mile, not convertible into money, by the government, for a railway from Mercier-Maisonneuve Ward, Montreal, northerly across the Hochelaga, Assomption, and Montcalm Counties, to Joliette, thence northwesterly to St. Michel-des-Saints, and thence to Parent on the National Transcontinental Ry., 60 miles. Unless the company completes 25 miles by Dec. 1, this subsidy will be cancelled.

Quebec, Montreal and Southern Ry.—A subsidy of 2,000 acres of land a mile, not convertible into money by the government, in lieu of the subsidy voted in 1912, for an extension of its line from St. Philomen de Fortierville in the direction of Levis, 52 1-3 miles.

Malbaie to Ha Ha Bay.—A subsidy of 4,000 acres of land a mile, not convertible into money by the government, to a company building a railway from near Malbaie to Ha Ha Bay, 75 miles. The Roberval-Saguenay has a charter to build this line.

Chicoutimi to St. Felicien.—A subsidy of 4,000 acres of land a mile, not convertible into money by the government, to a company building a railway from near Chicoutimi, on the Quebec and Lake St. John Ry., to St. Felicien, to the west of Lake St. John, running through the region situated east and north of the lake, as well as all branch lines authorized, the length of main line and branches being 120 miles.

Quebec Central Ry.—A subsidy of 2,000 acres of land a mile, not convertible into money by the government, for the extension of its line from St. Lucie de Beaugard (Lac Frontiere) to St. Pamphile, 25 miles.

Canadian Pacific Ry.—A subsidy of \$1,600 a mile, in lieu of the subsidy voted in 1919, in aid of the construction of a line from the present terminus of the company's branch line at Timiskaming or Kipawa, northeasterly to the Riviere des Quinze, by way of Ville Marie, 66 miles. In the event of the Dominion Government not granting a subsidy for the construction of this line, the act provides that a further sum of \$6,400 a mile shall be paid by the province.

J. G. Scott, ex-General Manager, Great Northern Ry. of Canada, and Quebec & Lake St. John Ry., and Chairman of the Quebec Board of Trade's transportation committee, writes Canadian Railway and Marine World from Quebec:—"I congratulate you upon your last issue. It was full of information."

Canadian National Railways Construction, Betterments, Etc.

Betterments, Extensions, Etc.—The President and several other chief executive officers have been devoting considerable time recently to the preparation of estimates for betterments, new construction, etc., to be done this year, these have been submitted to the directors, and subsequently to the Minister of Railways and other members of the government. The betterments will necessarily be extensive, and will require the expenditure of many millions, but construction of new railway lines is likely to be limited, owing to the necessity of keeping the public expenditures down as much as possible.

Springhill Jct., N.S.—A recent press report states that Springhill Jct., N.S., will probably be made a divisional point, eliminating Oxford Jct., and lessening the work at present divided between a number of other points. A second track is under construction between Springhill Jct., and Athol, and the report, after referring to a good deal of survey work, which has been going on during the winter, suggests that it all points to some rearrangement of lines, which would give a direct line along the north shore, shortening the distance between Sydney and Moncton, and bringing eastern Nova Scotia several hours nearer to Upper Canada.

The Guysboro, N.S., Municipal Council is reported to have endorsed a route outlined for a branch line to open up the Guysboro district. The route is said to be from Sunny Brae along the Salmon River Valley to Guysboro Town, then passing to the north shore of Chebucto Bay to the Strait of Canso.

Alfred Center Station—The Board of Railway Commissioners have approved of location and plant of a station for Alfred Center, Que., mileage 70.2, Grenville Subdivision.

Brockville-Westport Subdivision—A press report states that municipalities along the old Brockville, Westport and Northwestern Ry., from Brockville to Westport, Ont., 44 miles, have been asked to request the Hydro Electric Power Commission of Ontario to report on the cost of electrifying the section.

Orient Bay Bridge—The Board of Railway Commissioners has authorized the rebuilding of the bridge at Orient Bay, mile 44.1 from Jellicoe, Ont., Thunder Bay District.

Construction in Saskatchewan—The Saskatchewan Legislature was informed by Hon. Mr. Dunning, Feb. 2, that during 1919 the C.N.R. graded 146.77 miles of new lines and extensions in the province, and laid 63.18 miles of new track. The government had been advised that survey parties were working on the territory west of Bengough during the past season, but the reports thereon had not been submitted. It is the company's intention to take the matter of the construction of a line westerly from Bengough into consideration when the 1920 construction programme is being decided upon, and estimates are prepared to submit to the Dominion Railways Department for approval.

The Saskatchewan Legislature has passed an act extending for a year the time for building lines proposed to be built by the Canadian Northern Ry., and the Canadian Northern Saskatchewan

Ry., and in respect of which bonds were issued and sold within the province's guarantee as to principal and interest. This act will release for construction purposes the unexpended balances now held by the Saskatchewan Government in respect of several partially completed branch lines.

Lampman-Peebles Line—The Board of Railway Commissioners has authorized the crossing of 13 highways by this branch line now under construction in Saskatchewan.

Macrorie Westerly Branch—The Board of Railway Commissioners has authorized the temporary opening for traffic of the extension of the Macrorie Westerly line, from Glidden, mile 105 to Edam mile 115, Sask., speed of trains to be limited to 19 miles an hour.

Gravelbourg-Swift Current Line—A recent press report states that rails had been laid into Hodgeville.

Acadia Valley Branch—The Board of Railway Commissioners has authorized the crossing of the road between Sections 29 and 20, Tp. 26, Range 28, west 3rd meridian, Sask., by this branch now under construction.

Hanna-Medicine Hat Line—The Board of Railway Commissioners has authorized the C.N.R. to build across and divert the road between Sec. 36, Tp. 28, Range 20, and Sec. 31, Tp. 28, Range 19, west 4th meridian, Alta.

Munson-Wayne Second Track—The Board of Railway Commissioners has authorized the carrying of the second track between Munson and Wayne, Alta., across 12 highways.

Kamloops - Kelowna - Vernon - Lumby Line—The Board of Railway Commissioners has authorized the diversion and crossing of roads at miles 63.35, 64.54, 64.72, 65.37 and 69.03, on this line now under construction in British Columbia. The board has rescinded a former order approving location of the line between miles 66 and 82.22.

A report on railway construction laid before the British Columbia Legislature, recently, showed that about 62% of the grading on the line had been completed.

Vancouver and Victoria Terminals—The annual report of the British Columbia Railways Department, laid before the legislature recently, shows, according to a press report, that during the 11 months ended Nov. 30, 1919, the government paid out of funds in its bonds \$340,740.66 on account of terminal construction. Work on the Vancouver terminals is in progress, the present plans providing for yardage, the erection of a 5-stall locomotive house, a machine shop, coaling station, turntable, temporary station and freight shed. There had been expended up to Nov. 30, 1919, on account of these works, \$34,000.

Vancouver Island Lines—The report of the B.C. Minister of Railways for the year ended Nov. 30, 1919, laid before the legislature recently, states, according to a press report, that 52.5 miles of track has been laid on the Victoria-Alberni line; that a bridge is being erected over the Kokesila River, and that track laying and other construction work will be gone on with on this line during the ensuing construction season. (Feb., pg. 75).

United States Railway Notes.

It was stated in Washington, Feb. 7, that, according to a forecast of operating results for the year, only 2 1/2 % was earned by U.S. railways on their total investment of \$19,000,000,000 in 1919, the second year of government operation. The figures show while railway revenues passed the \$5,000,000,000 mark for the first time in the country's history, the high cost of labor and material resulted in net operating income of only \$515,000,000.

Acting Secretary Crowell, at the Railroad Administration's request, signed an order at Washington, Jan. 30, commanding 72,500 tons of steel rails, in addition to the 42,500 tons contracted for previously by the government. The order is to be filled by various steel rail mills, on the basis of their productive capacity, and it is stated that the price will be decided later.

The Director, Division of Purchases, U.S. Railroad Administration, reports that more than a billion dollars were spent through that division during the first 10 months of 1919 in obtaining materials for railways under government control. The report lists value of material bought for railways as follows: Fuel, \$403,815,632; rails, \$60,764,970; cross ties, \$108,232,363; other material, \$568,119,009.

According to official calculation at Washington the operation of the railways, Pullman lines, express companies and waterways, unified, under federal control, has cost the U.S. approximately \$700,000,000 since they were taken over two years ago. Figures made public by the administration revealed a net loss of \$594,200,000 from railway operation alone in the two year period. Statistics gathered from official sources, as to operating costs of Pullman lines, and waterways, and express companies, while operated by government show the addition of \$100,000,000 to the transportation costs.

Non-Prepayment of Freight to the United States.

The following circular was issued by Canadian railways, recently: "Effective Mar. 1, on account of the existing adverse rate of exchange, and in order to avoid discrimination as between shippers, agents must not accept prepayment of charges from shippers or connecting railways on freight traffic from Canada to the United States, except on such classes of traffic as the classification or commodity tariff applicable, requires prepayment."

The Montreal Board of Trade's Transportation Bureau has protested to the Board of Railway Commissioners, against the regulation being put in operation on the ground that it is illegal, and that it should not be enforced until a hearing shall have been given to interested shippers. The matter is expected to be brought before the Board of Railway Commissioners at Ottawa, Mar. 2.

The Port Arthur, Ont., Public Utilities Commission, for this year, which operates the Port Arthur Civic Ry., and other city utilities, is composed as follows: M. C. Campbell, Chairman; E. J. Blaquiere, W. Marriagan, R. Tourtellot, and I. L. Mathews, Mayor. M. M. Inglis is Manager.

Grand Trunk Railway Construction, Betterments, Etc.

Work Done in 1919—The length of the G. T. R. reconstructed and operated under separate control, and conducted of lines under the Union Station Railroad Administration, during 1919 was 1,100 miles. Of this in Canada, 280 miles of new 85 lb. rail were laid during 1919, of which 111 miles were laid on the east of Toronto and the balance west of there. Seventy-three miles of 100 lb. rail were laid, where there is long heavy and hot traffic on the main line. Partly worn 80 lb. rail was laid to replace rail of lighter sections, on the more important branch lines, and 15 miles of partly worn 100 lb. rail were relaid on the St. Thomas Division, joint section between Fort Erie and Welland Jct., Ont. Approximately 250,000 cu. yd. of ballast were put under the track on Ontario Lines, west of Toronto, and about 310 miles on the Eastern Lines, east of Toronto, were lifted, surfaced and dressed with new ballast. During the year 2,287,000 cross ties were renewed, this quantity being about equally divided between the Eastern and Ontario Lines. The company bought and applied 296,000 rail anchors and about 234,000 tie plates for all lines in Canada.

At Gravenhurst, Ont., important work was done in connection with track changes, and in constructing a new brick and wood station, concrete platform, restaurant and freight shed, immediately adjacent to the main street and a short distance from Gull Lake summer resort. A mechanical coal chute has been practically completed at Muskoka Jct., about half a mile south of the new station at Gravenhurst. A coal chute was built and put into operation at Victoriaville, Que.

A shop for fabricating steel bridges was built at East Toronto. The locomotive house at York, near Toronto, which had been closed for a number of years, was repaired, remodelled and reopened.

A new yard was constructed at Port Colborne, Ont., containing 3 1/4 miles of track, to serve the Canada Cement Co., the Maple Leaf Milling Co., and the Dominion Government elevator. The locomotive house at this point was enlarged to take care of additional locomotives.

One mile of double track was laid through the yard at Welland Jct., Ont., and between that point and Fort Erie the embankment was strengthened by putting in 15,000 cu. yd. of filling.

New 100 lb. rail was laid across the Niagara Falls steel arch, the floor system was strengthened and an entirely new deck put on it.

The building of concrete piers on the Narrows swing bridge at Atherley Jct., Ont., was taken in hand, piling was driven and coffer dams completed and, it is ready for cement work, preparatory to the construction of the draw span.

New ties were framed and placed on 6 spans of the Victoria Jubilee Bridge, and the planking on the roadway of this structure was renewed. A number of bridges were renewed.

A pumphouse, with electric pumps, was built at Richmond, Que. A 60,000 gal. water tank was built at Bowmanville, Ont. A 100,000 gal. water tank and extension to freight shed were built at Madawaska, Ont., were erected, this point being a district terminal for the 31st district between Ottawa and Depot

Harbour. At the latter point an office building was erected.

The renewal of the ferry dock at Cobourg was completed. From this point a subsidiary company operates car ferry steamships to Rochester, N.Y.

A number of stations were extended at various points and stations were built at Mitchell, Palgrave, St. Agapit and Mille Roches. A heating system is being installed at Stuart St. station and offices at Hamilton, Ont. The track scales at Midland, Ont., were moved to Tiffin, and new scales were installed at Windsor, Ont., at a cost of about \$7,600.

A great number of bridges, buildings, water tanks, etc., were painted, culverts renewed, single and double tool houses constructed, ties renewed on bridges, and numerous concrete crossing signs, whistle posts and section posts were built. In the track department, while it was possible to keep regular sections fairly well manned, there was more or less difficulty in obtaining labor for the extra gangs and it was necessary to pay very high rates for this class of labor. On the Eastern Lines there were from 1,500 to 2,000 men employed during the summer, doing extra work, such as lifting in new ballast, laying rail, applying tie plates and rail anchors, etc. In the bridge and building department there was a considerable shortage of mechanics, especially on lines west of Toronto.

The amount of money spent on maintenance and new works during 1919, greatly exceeded that of former years, partly due to the fact that there was a considerable amount of maintenance which it was absolutely necessary to defer during the war period.

Montreal Division Bridge Rebuilding—The Board of Railway Commissioners has authorized the use of the bridges rebuilt recently across Little Trout Creek, mile 94.99, near Kingsey, District 3, Montreal Division, and has authorized the rebuilding of the bridge on Lot 27, s.w. Concession, St. Rogers, in St. Isidore Parish, Que.

Ottawa Tracks—The Ottawa Rotary Club discussed recently the G.T.R. cross town tracks in that city, and advocated a petition asking for their removal, or the separation of grades.

Bridge Rebuilding East of Toronto—The Board of Railway Commissioners has authorized the rebuilding of the bridge carrying the highway across the company's tracks between Lots 14 and 15, Broken Front Concession, East Whitty Tp., at mile 301.70, Belleville Subdivision, about 1.25 miles west of Oshawa, Ont., and has authorized the use of the bridges built recently at mile 10.30, Lot 10, Range 6, Markham Tp., Ont., at mile 15.88, Lot 21, Range 8, Markham Tp., and bridge 61 on line of Bethune St., Peterborough, Ont.

Highway Bridge near Georgetown—The Board of Railway Commissioners has authorized the rebuilding of the bridge carrying the highway over the company's tracks, at mile 29.62, district 15, Stratford Division, near Georgetown, Ont.

London Division—A press report states that about \$425,000 has been appropriated for betterments on the London Division to be done during this year. The work is reported to include the relaying of 85 miles of track between Paris and London, Ont., with 100 lb. steel

rails; the 85 lb. rails at present in use to be relaid on other lines; the building of stations at Cambridge and Hawtrey, on the Port Dover branch, and the remodelling of stations. The question of the signal system to be adopted between London and Paris has not yet been announced, but the report states that an electric block system is favored.

The company is, according to a press report, prepared to go ahead with laying out of a reclamation yard at London, Ont., details of which were given in Canadian Railway and Marine World for Dec., 1919. The question of closing Wilson Ave., in connection with the carrying out of the work is before the London City Council.

London and Sarnia Ice Houses—A press report states that ice houses are being built at London and Sarnia, Ont., to store ice for the company's use, and that the ice is being cut by the company on Lake Simcoe, for the first time in several years. The building under construction in London will, it is stated, have a 1,400 ton capacity. (Jan., pg. 18).

Northern Alberta Tourist Route—A press report states that arrangements are being completed for the carrying of tourists through from Edmonton, Alta., to Fort McPherson. After leaving the railway at Peace River they will be carried by the Peace River Development Corporation (controlled by the Rhondha estate), and the Lamson Hubbard Canadian Co. Beginning May 1, the report says, a regular weekly service will be provided from Peace River to Hudson's Hope, B.C., and Fort Vermilion, whence other river steamboats and smaller craft will be used to carry passengers along Slave River, to Great Slave Lake, and along the Mackenzie River to Fort McPherson. A portage route of 90 miles is contemplated from the Mackenzie River to the Yukon River, which will give a through route to the Pacific, making a scenic tour of unique interest. V. Lloyd-Owen, Vancouver, B.C., represents the Rhondha interests, and J. H. Bryan, is Vice President and General Manager of the Lamson Hubbard Canadian Co.

The Railway and Steamship Employees Club has been incorporated under the Quebec Companies Acts with a capital of \$20,000 and office at Montreal, to establish a club for the accommodation of members and their friends, and among other purposes, to buy clothing, provisions, and other necessities to be divided amongst the members on a co-operative basis. The incorporators are: A. Clair, J. P. Picard, W. Shore, W. J. Ryan, L. T. Bourdeau, L. Toussaint, L. McGlynn, and D. Robert, clerks, all of Montreal.

The Railwaymen's Club has been registered under the British Columbia Beneficent Societies Act with offices at 1015 Granville St., Vancouver, to promote "social intercourse, mutual helpfulness, mental and moral improvement and rational recreation." The first directors are: G. M. Alexander, F. M. Goodman and P. W. Baumgardner, switchmen.

The C.P.R. Co. is applying to the Dominion Parliament for the amendment of its act of 1902, sec. 12, by changing the maximum number of directors from 15 to 16.

Aerial Transportation Notes.

The London, Ont., Aviation Club is reported to have appointed a committee to find a site near the city for an aerodrome.

A press report states that the Nova Scotia, New Brunswick and Prince Edward Island governments are being asked to guarantee the Eastern Canada Air Lines' bonds.

Major K. E. Clayton-Kennedy, of the Aircraft Manufacturing Co., London, Eng., is reported to have made arrangements for an aircraft service for the Newfoundland seal fishing fleet.

Capt. E. C. Hoy, D.F.C., Vancouver, B.C., is reported to be applying to the Dominion Government, for permission to operate an aerial mail service daily between Vancouver and Victoria.

N. A. Yarrow, of Yarrows Ltd., ship-builders, etc., Esquimalt, B.C., is reported to have announced that that company is prepared to proceed with the manufacture of aeroplanes as soon as there is a sufficient demand.

A press report states that it has been announced in London, Eng., that new air routes between London, Paris and Brussels, for the operation of freight as well as passenger and mail traffic, will be announced early in the spring.

A Montreal press dispatch states that a group of steamship owners, airship building companies, business, engineering and transport companies, are combining to buy aircraft of all kinds to establish a weekly trans-Atlantic service.

The Second Assistant United States Postmaster General stated, Feb. 9, that a powerful mail plane is being developed to carry mail over the mountains to San Francisco, and that a new British triplane is to be tried between Chicago and Omaha.

The United States Post Office Department on Feb. 9 asked the Senate Post Office Committee for an appropriation of \$3,400,000 to establish new aerial mail routes between New York and San Francisco, Pittsburg and Kansas City, Detroit, Toledo and Cleveland, New York, Washington and Atlanta; and St. Paul, Chicago and St. Louis.

Capt. J. W. Hobbs, of the Canadian Air Board, is reported to have advised the establishment of a seaplane base at Vancouver, B.C., with refueling stations at several interior points, in connection with government departmental work. Seaplanes are recommended for use, as natural landings are obtainable throughout the province without any expenditure.

A Washington, U.S., press report states that an air route from Mineola, N.Y., to Nome, Alaska, has been planned by the army air service. The route will cross the Canadian border at Minot, N.D., thence to Hazelton, B.C., where it will turn north between the Coast Range and the Rockies to White Horse, Yukon, and will cross the Yukon-Alaska border at Fort Egbert.

Plans are reported to have been completed for the inauguration of an air service between Winnipeg, Man., and St. Paul, Minn., a press report stating that bookings for air trips between the two cities have been made for April. One of the intermediate stations will be at Grand Forks, Minn. The service will, it is said, be operated by the recently

incorporated Aerial Transport and Taxi Co., Winnipeg.

It was reported from Ottawa, early in February, that numerous applications were being received by the Canadian Air Board, for certificates as private pilots, but at that time, only 10 certificates had been issued. It was stated that all former members of the Royal Air Force are entitled to private pilots' certificates, provided they were physically fit on leaving the force. The board has also received a number of applications for the establishment of aerodromes.

The Eastern Canada Air Lines Co., is the successor of the Prince Edward Island Aerial Transportation Co., which was incorporated by Dominion charter about a year ago. The authorized capital of the new concern is \$500,000 and it proposes to establish three routes, viz., from Charlottetown to the Magdalen Islands and Newfoundland; from a New Brunswick point to Boston, New York or Philadelphia, and from a New Brunswick point to Quebec and Montreal. The Air Craft Co. of Montreal, is reported to be interested in the venture. Charlottetown is being asked to take \$25,000 of the company's capital stock.

The Civil Service Commission has announced a competition open to all residents of Canada, for the position of aeronautical intelligence officer for the air board at an initial salary of \$2,400 a year, which will be increased, on condition of efficient service, by \$120 a year, to a maximum of \$2,800, and the initial salary will be supplemented by whatever bonus is provided by law. The duties are, to gather and distribute information, relative to aviation, aeronautical signs, aeroplanes production, and all relative subjects, to supervise the preparation and editing of the Aeronautical Year Book, and to assist the Secretary of the Air Board, and perform other related work as required.

The Aero Club of Canada held its first annual meeting in Toronto recently when the following officers were elected: Hon. President, Lieut.-Col. Barker, V.C.; President, Lieut.-Col. A. K. Tyle, O.B.E.; Vice President, Major V. S. Wemp, D.F.C.; Vice President for Ontario, Major A. M. Shook, D.S.O., D.F.C.; Hon. Secretary, A. F. Penton; Hon. Treasurer, Capt. E. A. McKay, D.F.C.; directors, Major M. M. Sissley, A.F.C.; Capt. Joe Clark, D.F.C.; Capt. H. A. Hember, Lieut. M. C. Purvis, J. K. Shook. A resolution was adopted to be presented to Ottawa, urging the necessity of forming a volunteer air force, independent of the military or naval forces of the country, on somewhat similar lines to the Canadian militia.

The Aeronautical Association of Canada, held its first annual dinner in Montreal recently, when the Governor General and Col. O. M. Biggar, Vice President of the Canadian Air Board, were the chief guests. The latter spoke of the work already done by the air board and said that the board had put forward proposals which he believed would be favorably received by airmen, but he did not divulge their nature. He however, intimated that development in the immediate future will be upon the lines of the creation of special air routes by the government in the more isolated areas, to the exclusion of the populated

centers, and suggested that if municipalities want to encourage air transportation, they must afford the inducements by providing the necessary landing facilities.

The Civil Service Commission of Canada invited applications recently for the following positions under the air board; the tenure of office to be three years, renewable, at the salaries named: Air Station Superintendent, \$3,360; Air Substation Superintendent, \$2,940; Air Equipment Officer, \$2,400; Air Photographer Inspector, \$2,340; Air Wireless Inspector, \$2,340; Air Pilot Navigator, \$2,460; Airship Pilot, \$2,460; Air Pilot, \$1,920; Air Foreman Mechanic, \$1,500; Air Photographer, \$1,500; Air Wireless operator, \$1,500; Air Engineer fitter, \$1,080; air rigger, \$1,080; fabric worker, \$1,080; hydrogen plan operator, \$1,080. In addition to salary the Air Board will make provision for insurance against injury or death due to accident while on or about aircraft. Preference will be given to persons who have been on active service overseas.

Regulations controlling aerial navigation issued in Ottawa provide that aircraft must be registered under conditions somewhat similar to those governing marine craft, all their operations from taking off to alighting being under strict regulation. "Air harbors," "seaplane stations," "aerodromes," "customs air harbors," "air worthiness," are new terms which will come into common use. The qualifications of pilots and engineers are set forth at length. All machines must bear, on top, bottom and sides, letters indicating nationality, for the information of the customs. The painting of buildings, raising of lights, or marking of ground in a way which might lead aircraft to alight by mistake are forbidden. Water craft must keep clear of portions of harbors set aside for the lighting of aircraft, and arrivals and departures of aircraft will be chronicled just as marine craft are now. Machines must carry white lights fore and aft, and green and red lights on right and left, respectively. Stations to report the arrival of aircraft will be established, and mail aircraft must be specially authorized.

Major Lincoln, in reporting to the Canadian Air Board as to the possibilities of aircraft in Saskatchewan, is reported to have made the following recommendations: The establishment of air service stations in the north part of the province; the establishment of an air service training school in Regina; the establishment of air patrols to cover the forest areas in the northern sections of the province; the possibilities of the use of aircraft for commercial purposes, such as bringing down small shipments of valuable furs from the north country; aeroplanes available for police service in the north country as well as on the border line between Saskatchewan and the United States; aeroplanes for use in photographing the unsurveyed areas of the north country to assist in mapping out the districts which are available for ranching, etc., the use of aeroplanes on certain mail services in districts where the present mail service is very poor, owing to lack of railway facilities. Major Lincoln is reported to have made similar recommendations for the development of an aeroplane service in Alberta.

Railway Rolling Stock Orders and Deliveries.

The C.P.R. has ordered 18 steel sleeping cars from the National Steel Car Corporation.

The Dominion Government Ry. has ordered 60 sleeping cars from National Steel Car Corporation.

The Royal Canadian Ry. has ordered 80 motor cars from National Steel Car Corporation.

The G.T.R. has ordered 2 steel passenger trucks, 6,000 lb. capacity. These cars will carry 40 passengers.

The Canadian Car & Foundry Co. is stated in a Montreal press report to have some \$20,000,000 of orders booked.

The Grand Trunk Pacific Ry., will, it is reported, be in the market in the near future for locomotives and freight cars.

The C.P.R., between Jan. 14, and Feb. 12, ordered 3 vans from its Angus shops, Montreal, and bought 67 automobile cars.

The C.P.R., between Jan. 14, and Feb. 12, received 2 vans, 1 single track steel snow plough, and 2 locomotives from its Angus shops, Montreal.

The Minneapolis, St. Paul and Sault Ste. Marie Ry. is reported to be in the market for 5 locomotives and 1,000 flat cars, 40 tons capacity.

The C.P.R. is stated in a Montreal press report to have ordered some \$5,000,000 worth of rolling stock, principally freight cars, from Canadian Car & Foundry Co.

The Canadian Locomotive Co. has delivered 3 12 wheel (4-8-0) locomotives to the Jamaica Government Rys. Details of these were given in our February issue, pg. 69.

The Nova Scotia Steel and Coal Co. is having 2 stock pile cars, 10 tons capacity, built by the Eastern Car Co. They will have hopper bottoms, side doors entered from end to trip levers, four 12 in. wheels, one fixed bearing and one floating bearing.

The G.T.R. is reported to be about to build 25 six-wheel (0-6-0) switching locomotives at its Point St. Charles shops, Montreal, and is also reported to be in the market for 3,000 automobile box cars, 1,000 flat cars, 50 baggage and express cars, 15 express refrigerator cars and 10 express horse cars.

The Canadian Car and Foundry Co., shipped recently, 3 sleeping cars to Canadian National Rys., 92 repaired box cars, and 147 repaired hopper cars to G.T.R. The company has on hand orders for 35 steel frames for sleeping cars, for C.P.R.; 25 air dump cars, 20 yds. capacity, for Great Winnipeg Water District; and 15 frames and bogies, and 2 extra bogies, for Dorado Extension Ry.

The British American Nickel Corporation is having built, 3 furnace charging cars, 35 tons capacity, by Eastern Car Co. They are a special type of car, with 4 hopper compartment doors on one side of car only, operated by shaft levers, and fitted with Canadian Fairbanks-Morse Co.'s scales, with scale hook indicating weight of car contents. The trucks will be of the special arch bar type, with 8 wheels, modified M.C.B. axles and journal boxes, special draft gear rigging and couplers. The inside dimensions will be: length, 31 ft. 4 1/2 in., width 5 ft. 7 1/2 in.

Canadian National Rys., as announced in our last issue, has ordered 80 ca-

bogies from Canadian Car & Foundry Co., which will be built at Amherst, N.S. They will have wooden underframe, reinforced at draft rigging with 7 in. channel 20 lb., and wooden superstructures. Following are the chief details:

Length over end sill	31 ft. 4 1/2 in.
Length over end sill	31 ft. 4 1/2 in.
Wheel base	10 ft. 0 in.
Wheel base of engine and tender	20 ft. 0 in.
Head end surface	17 1/2 sq. ft.
Head end surface	17 1/2 sq. ft.
Head end surface	17 1/2 sq. ft.
Head end surface	17 1/2 sq. ft.

The Pacific Great Eastern Ry. has ordered 3 Mikado (2-8-2) locomotives from Canadian Locomotive Co. Following are the chief details:—

Length over end sill	31 ft. 4 1/2 in.
Length over end sill	31 ft. 4 1/2 in.
Wheel base of engine	10 ft. 0 in.
Wheel base of engine	10 ft. 0 in.
Wheel base of engine	10 ft. 0 in.
Wheel base of engine	10 ft. 0 in.
Head end surface	17 1/2 sq. ft.
Head end surface	17 1/2 sq. ft.
Head end surface	17 1/2 sq. ft.
Head end surface	17 1/2 sq. ft.

Cylinders, diam. and stroke	22 x 28 in.
Boiler, type	Extended wagon top, radial stayed
Boiler, pressure	190 lb.
Tubes, number and diam.	24—5 1/2; 189—2 in.
Tubes, length	15 ft.
Injectors	Nathan No. 2
Safety valves	3 in. Lankenshaw
Air brakes	Westinghouse American
Packing	King, metallic
Superheater	Locomotive Superheater Co., type A
Trailing truck	Commonwealth
Valve motion	Walschaert
Headlight	Electric
Weight of tender loaded	153,500 lbs.
Tank capacity, oil	2,700 imp. galls.
Tank capacity, water	6,000 imp. galls.
Tank, type	Water bottom
Tank, type	Equalized
Wheel, diam.	33 in.
Wheel type	Steel tread
Journal, diam. and length	5 1/2 x 10 in.
Brakebeam	Safety simplex

Imperial Oil Ltd., as announced in a previous issue, is having built by Canadian Car and Foundry Co., 100 general tank cars, 8,000 gall. capacity, without heaters; 125 tank cars for asphalt, 8,000 galls. capacity with heaters; 50 general service tank cars, 6,500 galls. capacity, with heaters, and 25 three compartment general service tank cars with heaters.

The underframes of all the cars will be the same, the center sills consisting of two 15 in. channels, 35 lb. with 1/2 in. top and bottom cover plates, side sills of 9 in. channels, 15 lbs., extending from under sill to bolster, on all the cars except the three compartment cars, on which the sills will extend the full length between the end sills, cast steel tank saddles at bolsters and 40 ton capacity trucks. The tanks will all be 76 in. inside diam. and in accordance with M.C.B. specifications for class 3 tanks. The cars will be equipped with Westinghouse 10 x 12 air brakes, Cardwell friction, draft gear, and Sharon 6 x 8 in. type D couplers. Following are the chief details:

8,000 Gallon Cars.	
Length over coupler knuckle	40 ft. 8 in.
Length over end sill	37 ft. 10 in.
Length over end sill	37 ft. 10 in.
Wheel base	27 ft. 6 in.

6,500 Gallon Cars.	
Length over coupler knuckle	34 ft. 11 1/2 in.
Length over end sill	31 ft. 3 1/2 in.
Length over end sill	31 ft. 3 1/2 in.
Wheel base	27 ft. 6 in.

Three Compartment Cars.	
Length over coupler knuckle	54 ft. 4 in.
Length over end sill	31 ft. 7 in.
Length over end sill	31 ft. 7 in.
Wheel base	6 ft. 6 in.

Canadian National Railways Orders.

The Dominion Government passed an order in council early in February authorizing the expenditure of \$20,000,000 for rolling stock, for Canadian National Rys., and this has since been supplemented, or will be, by a further \$5,000,000. Canadian Railway and Marine World for February gave particulars of orders placed for cabooses, and of tenders invited for other rolling stock by Canadian National Rys., in addition to which options were taken on additional requirements. Up to Feb. 28, the following orders had been placed this year:—

42 Pacific type (4-6-2) locomotives; (10 heavy, of 40,000 lb. tractive effort, and 32 medium, of 38,000 lb. tractive effort), and 25 Santa Fe type (2-10-2) locomotives from Montreal Locomotive Works Ltd.

30 six-wheel switching (0-6-0) locomotives and 15 Mikado locomotives, Canadian Government Rys. standard, from Canadian Locomotive Co., Kingston, Ont.

18 sleeping cars, 73 1/2 ft. long; 12 dining cars; 20 baggage cars; 1,000 box cars, 40 tons capacity; 600 refrigerator cars, 30 tons capacity with steel sub sill, and 80 cabooses, from Canadian Car and Foundry Co., Montreal.

500 box cars, 40 tons capacity; 1,150 general purposes (coal) cars, 50 tons capacity, and 6 steel snow plows from Eastern Car Co., New Glasgow, N.S.

350 ballast cars, 50 tons capacity, from Hart-Otis Car Co., Montreal.

1,500 box cars, 40 tons capacity from National Steel Car Corporation, Hamilton, Ont.

20 cabooses from Preston Car and Coach Co., Preston, Ont.

Four 120 ton industrial wrecking cranes; one industrial self propelling pile driver; four 100,000 lb. all steel Jordan ballast spreaders; two 1/2 yd. Erie steam ditchers; from F. H. Hopkins & Co., Montreal.

One 15 ton 8 wheel Brown hoist, second hand, from T. J. McGovern, Toronto. One 60 ton Lidgerwood rapid unloader, second hand, from Canadian Equipment Co., Montreal.

Some of the rolling stock ordered, as stated above, will probably be allocated to the Grand Trunk Pacific Ry.

The C.N.R. has also invited tenders for 350 stock cars, and has under consideration the ordering of 30 more cabooses.

Railway Employees Purchases—The Brotherhood of Maintenance of Way Employees and Railway Ship Laborers, according to a Detroit, Mich., press report recently announced the purchase of four clothing factories from which goods will be sold at price reductions ranging from 25 to 60%. Negotiations are reported to be underway for the purchase of two other factories. This is part of a movement among labor unions in the United States in the direction of co-operation in order to meet the high cost of living.

Paper Pulp from Flax Straw—The C. P.R., which has been investigating the problem of manufacturing paper pulp from flax straw, will give full particulars to any accredited organizations interested in the commercial development of the process in Canada. Application should be made to Colonization and Development Department, C.P.R. Montreal.

Romance of the Telegraph, Telephone and Wireless.

By H. Hulatt, Manager of Telegraphs, G.T.R. and G.T. Pacific Ry.

In the Grand Trunk Pacific Telegraph Co., of which it is my privilege to be Manager, the slogan of our selling force is:—"Efficiency is the conservation of time; time is money; telegraphing saves time." The thought created by this slogan is by no means a new one; the need for more prompt method of communication other than verbal or by courier was felt even by the ancients. Various schemes in those ancient days were adopted to overcome the difficulties of communication. Theseus devised the method of colored sails, to convey messages from ship to ship of the fleet, and incidentally caused the death of his father by his failure to handle the signals properly. He sailed into conflict with the enemy, with black sails set, the signal of battle and of death. Unfortunately when the battle was over, and he was the victor, in the excitement of the moment he forgot to lower the black sails and replace them with red, which it was understood would represent victory. His venerable father, Aegeus, seeing the black sails from afar, believed the signal reported his son defeated and dead, and, without waiting to make further enquiries, drowned himself.

Ancient Persians carried messages by having them shouted from sentinel to sentinel, instead of adopting the slower method of by courier. A similar method of communication was also used occasionally by the ancient Gauls. Caesar records that the news of the massacre of the Romans at Orleans was sent to Auvergne, a distance of nearly 150 miles, by such a method, the information reaching Auvergne the evening of the day of the battle. A perusal of the history of the Red Indians of the North American continent, the Aztecs of Mexico, and the Incas of Peru, shows that they also had various methods of signalling, by means of smoke rings and puffs by days, and by signal lights and fire arrows by night.

Doubtless many readers have seen in old books references to the lodestone, and the following legend may be of interest. A shepherd, Magnes, whilst tending his sheep in ancient Greece, found that his crook was attracted by a strange rock; thus was the lodestone, the natural magnetic iron discovered. It is claimed the words magnet and magnetism are derived from the name of the shepherd. The ability of amber, when rubbed, to attract straws was also known to the early peoples, and as a matter of fact the word electricity is derived from elektron, the Greek name for amber. Prior to the 18th century, the old alchemists, who, while they knew nothing about electricity, had discovered the peculiar properties of the lodestone and of amber, for many years derived, due to their knowledge of such peculiar properties, a lucrative business fooling the public. Incidentally, however, they ran the risk of being charged with dabbling in the black art, the penalty for which was death, by being burned at the stake, or drowned.

It was not until the latter half of the 18th century that scientists began to make any extensive investigations or experiments in connection with the possibility of developing the use of electricity. It is needless for me, I am sure, to state that as to what electricity ac-

tually is, even at this date, no one really knows; all we do know is that it is a power which scientists have been able to control in such a way as to prove of utility to mankind. Credit for the first steps towards an electric telegraph must be given to an unknown writer at the middle of the 18th century. Scott's Magazine of Feb. 17, 1755, contained an article signed simply "C.M." The writer's idea was to lay an insulated wire for each letter of the alphabet, the wires to be charged from an electrical machine in any desired order, and at the receiving end they would attract discs of paper marked with the letter which that wire represented, thereby enabling any message to be spelled out. Such a scheme was not, of course, commercially practicable, but the article undoubtedly caused thinkers to experiment, and ultimately led to the development and subsequent demonstration of the commercial practicability of an electric telegraph system.

As an indication of the importance of speedy communication in the carrying on of the activities of life in this old world, it is interesting to record that the early scientists, experimenting in the control of electricity, considered the problem from a communication standpoint, rather than to utilize electricity for transportation and machinery purposes. There were several pioneers in the early 19th century, who concentrated on the problem of the electric telegraph, among others Ampere, the celebrated Frenchman, after who mis named the ampere, one of the units of electrical measurement, Profs. Gauss and Weber, of Gottingen, and Edward Davey of England. The two outstanding men, however, in the development of the telegraph from a practical commercial point of view were undoubtedly Wheatstone of England, and S. F. B. Morse, of the United States.

The actual first working telegraph line in England placed at the service of the public was in 1841 on the Great Western Ry. It did not, however, commend itself to the public, until its utility was strikingly demonstrated by the capture of a celebrated criminal called Kwaker. Early one morning a woman was found dead in her home in the suburbs of London; a man had been seen leaving the house and enquiry revealed the fact that he left on a slow train for London. Without the telegraph he could not have been apprehended, but fortunately this particular telegraph line was available and the police in London was by this means instructed to arrest him. The message read: "He is dressed as a kwaker." The reason for incorrectly spelling the word Quaker was due to the fact that on the receiving instrument there was no provision for the letter Q, and the incorrect spelling very nearly resulted in the criminal getting away.

Morse conceived the present application of electricity to telegraphy whilst on board a ship in 1833 en route to America. He developed his thoughts, and his apparatus was first exhibited to the public in 1837 and to the members of the Royal Society in London in 1839. The first actual telegraph line erected in the United States was between Washington and Baltimore, it being put into service on May 23, 1844. Morse's great

problem was how to tie the wire to the poles, and his first procedure was to bore through the top of the pole a hole sufficiently large to let the wire through. It was found in practice, however, that in rainy weather there was too big a leakage of current, and consequently he subsequently enlarged the holes, and insulated the wire at the poles, by inserting the neck of a bottle in the holes. Consequently the neck of a bottle may be said to be the preliminary development of the glass insulator so commonly in use today.

One of the railways I represent was one of the first in America to go to the expense of erecting a telegraph line. In 1852 the Grand Trunk Ry. gave a contract to the Montreal Telegraph Co. to build a telegraph line consisting of a pole line and one wire from Longueuil to Portland for £12 7s 6d a mile. The G.T.R. was also the first railway to experiment in wireless telegraphy from a moving train, in Oct., 1902.

As a result of the development of land line telegraphs, thought was naturally given to the possibility of laying a submarine cable across the Atlantic, and many attempts were made without success; the first being in 1858. In 1864, no success having then been obtained, and as an indication of how hope of ever being successful had practically been given up, despite the fact that at that time the field telegraphic cable was under construction, the Western Union Telegraph Co. undertook to connect Europe and America by land line telegraphs from San Francisco to the Yukon, thence through Alaska to the Behring Sea, the latter to be crossed by a short submarine cable, connecting in Siberia with a telegraph line to be built to the mouth of the Amur River, where it would connect with the Russian Government telegraph line already built; and so continue throughout Europe. The erection of this land line telegraph was a matter of agreement between the United States, the British and the Russian Governments (Alaska at that time being owned by Russia), and the work was placed in charge of Col. C. S. Bulkley, U.S. Army Telegraph Corps. Construction was proceeded with promptly, the line running through Canada from New Westminster, via the Cariboo trail to Quesnel, thence via Fraser Lake, and Hazelton to the Naas River, the latter point being reached in July, 1866, a distance from New Westminster of 850 miles. The Bulkley River and Bulkley Canyon, in Northern British Columbia are both named after Col. Bulkley. On July 29, 1866, the construction party of 250 men, on receiving news that the field telegraphic cable referred to previously, had on that date been completed and successfully operated, without waiting further instructions, quit their work and left all material and supplies behind. The famous Indian bridge over the Bulkley River was built by Indians from the material left behind by the telegraph construction crew. It consisted of wood and telegraph wire, and the most astonishing thing is that, despite the fact that these Indians so far as it is known had never seen a suspension bridge, and also had not the assistance of white man in the construction, built a bridge conforming to all the standard principles usually

employed in connection with suspension bridges. It is only recently that the same has been taken to the construction of long distance telegraph lines.

In 1856 the Western Union Telegraph Co. laid the telegraph line between New Westminster and the Fraser River, to the British Columbia Government, which in turn transferred it to the Dominion Government and then British Columbia came into the possession of it in 1871. The Dominion Government subsequently, due to the Klondike rush, extended the line to Dawson and it is in operation today, in fact is in connection part of the way with the telegraph line of which I have spoken.

The telegraph was first used in connection with the dispatching of trains on the Erie Rd. in 1861, due to the initiative and vision of Chas. Minot, then General Superintendent, and it sounds almost ludicrous today to read what trouble he had, in connection with the first telegraphic train dispatching order, to make the train crew realize that it was perfectly safe to operate under it and go ahead.

Developments in the telegraph field, after Morse had successfully inaugurated it, were not very great until a few years ago, although there had been developed the duplexing and quadding of wires, enabling 2 and 4 messages to be transmitted over the same wire simultaneously, and also the use of motor generators as against gravity cells for the supply of requisite current.

No progress can be made if people are all absolutely satisfied and contented. The increased speed of communication brought about by the telegraph, after people had become used to it, failed to satisfy, a still more flexible means of communication being desired. This led to the discovery and development of the telephone, which was invented largely as a side line in connection with the study of means for educating deaf and dumb people, undertaken by Alex. M. Bell in Scotland starting in 1849. Dr. Graham Bell, the actual inventor of the telephone, being his son.

Dr. Graham Bell proceeded to develop his ideas, with the result that the first telephone was exhibited at the Centennial Exhibition in 1876, and the first telephone conversation was made over a telegraph wire owned by the Walworth Manufacturing Co., Boston, to its factory at Cambridgeport, two miles distant. This took place on Oct. 9, 1876, and created world-wide astonishment. In passing, simply as an indication of the wonderful development in telephone transmission, I may say that early in 1916 it was my privilege to be the first subscriber of the Bell Telephone Co. of Canada to talk over its long distance wires from Montreal to Vancouver, B.C. Dr. Bell had a tremendously hard time in developing and demonstrating his invention, which was very different from that of today, being extremely cumbersome, and it was operated by only one wire, which limited the distance of conversation possible, and also, due to ground noises, etc., did not permit of a very quiet talking circuit. Instruments have since then been tremendously improved and to eliminate ground noises, etc., telephone companies now erect, in connection with their circuits, two wires, known as metallic circuits.

A most wonderful performance, in the opinion of the public at that time, took place in Montreal in 1878, when five telephones were connected at one end of a circuit, and one telephone at the other

end, enabling the party using the latter telephone to talk to five different people at one and the same time. This was the first step probably in demonstrating the feasibility of what today is known as a party line.

The pioneers in the commercial telephone field had quite a hard task, and needed a great deal of courage to hang on, in fact in connection with the Bell patents in Canada, I believe the original holders sold them about 1880 at a ridiculously small sum.

Canada and the United States have, I believe, generally speaking, a telegraph and telephone service unexcelled by any other countries in the world. In 1916, the last figures I have available, there was one telephone to every 14 people in Canada, and in the United States there is a still greater number of telephones per capita in use. In England, where both telegraphs and telephones come under the Government Post Office Department, neither system has ever proved profitable, and the public in connection with both services, has never received service that could begin to compare with that given by the companies on this side of the Atlantic. Anyone who has been in England and has had to use the long distance telephone lines will realize the truth of this statement.

The telegraph and telephone companies, particularly the American Telegraph and Telephone Co., which controls the Bell companies of the United States, and, while it does not control, works very much in harmony with the Western Union Telegraph Co., have always maintained, at tremendous expense, engineering research departments, and it is due to the wonderful work done by the men of such departments and the enterprise displayed by the companies referred to that we have the remarkable facilities we enjoy today.

Up to within 10 years all railways operated their trains by telegraph. It was considered that they could not do so by telephone, due to the fact that they would, at the best, have only one pair of wires available for telephones, and, if 20 stations cut in on the line, code ringing would have been necessary when the dispatcher wished to raise an office, and every receiver would undoubtedly have been taken off the hook and everybody on the line would have been listening in; furthermore the dispatcher would not be sure whether he had got the right office or not. In 1906 and 1907, there was invented what is known as the selector, which, installed on metallic circuits, enables the train dispatcher, by the twisting of a key, to ring the bell of any specific office, and at the same time does not allow the bells in any other office to ring. As a consequence today, all the main trunk lines of railways are equipped with telephone train dispatching apparatus, resulting not only in the more prompt movement of trains, but, what is more important, increasing tremendously the safety, not only of the public, but employees. There was naturally considerable opposition, on the part of the old train dispatchers, to the inauguration of the telephone in connection with train dispatchers, to the inauguration of the telephone in connection with train dispatching, probably due to the thought that such inauguration would result in their losing positions. In practice, needless to say, this is not the case; there are very few dispatchers who, once having used a telephone, would care to go back to straight telegraph train dis-

patching. As a result of railways adopting telephone train dispatching, and the consequent expense of erecting heavy copper wires, thought was given to the possibility of not only using the two wires for telephone purposes, but at the same time to use them for telegraph transmission. This resulted in the development of a simple apparatus known as the simplex panel, which permits simultaneous operation of telegraph and telephone over the same circuit without conflict.

Both in the telegraph and telephone field we have been very largely dependent upon employes, who, in order to fulfill their duties, had very often to go through quite a lengthy period of training. Some few years ago there was introduced in the telegraph field the printer telegraph, which has since been brought to a high state of development, by means of which I could take stenographers from any office and within a comparatively short time have them sending messages between Montreal and say, Toronto or Winnipeg, faster and possibly just as correctly as the average telegraph operator.

The automatic telephone has been developed and brought to a high state of efficiency and there are several installations in successful operation in Canada, viz. at Edmonton, Regina, Calgary and Saskatoon, and a big installation is contemplated in Winnipeg.

Before discussing very briefly the subject of wireless I would like to say a few words as to what is called "wired wireless." I have, I hope, given some idea as to how the telegraph and telephone companies have endeavored to increase the uses to which existing plant can be put, thereby obviating the necessity for additional heavy capital expenditures, and in this connection I may say that some considerable time ago telephone companies developed and put into use what is known as a phantom circuit. Where a telephone company has copper wires on a pile line erected on the same plane, by a system of what is known as transpositions, it can from those 4 wires obtain 3 telephone circuits, and by means of a simplex at least 2 telegraph circuits. The new wired wireless is simply a still further development of the principles that have been previously put into effect. It has been largely developed by Gen. Squires, of the U.S. army, and also by American Telephone and Telegraph Co. engineers. They have had an experimental line in operation in the U.S. and so far have been able, over one circuit, to get 8 to 10 telephone conversations and 1 or 2 telegraph communications in operation simultaneously without conflict.

In connection with wireless, Marconi, whose mother was Irish, and who was himself a pupil for sometime at Bedford Grammar School and Rugby School in England, secured his first patent in June, 1896, and the first commercial use it was put to was in the autumn of 1897. Since then there have been very great developments. One of the perpetual troubles up to recently in connection with wireless was static, a condition in the atmosphere which completely put the wireless out of commission. This trouble was particularly prevalent during summer, and it may be of interest to know what it has been overcome by a discovery by Chief Engineer Wegeant, of the Marconi Co. in the U.S., and a graduate of McGill University, Montreal.

A recent development in connection with wireless is a device invented by C. A. Hoxey, Engineer of the General Electric Co., whereby wireless messages are visualized and also photographed. One of the troubles in connection with wireless has been the fact that signals heard in the received are often very faint. This invention provides a check on the safe copying of wireless messages by the receiving operator. The signals are recorded by a beam of light being reflected from a small mirror attached to a galvanometer of special design. This galvanometer is placed in parallel with telephone receivers of an ordinary wireless receiving set, a portion of the energy of the incoming signal being used to operate the galvanometer. By this means the mirror is made to vibrate very rapidly, whenever a dot or dash is impressed upon the circuit. The source of light comprises 2 incandescent lamps of special design, the reflection of one being used to make a record on the sensitized tape, the light from the other being projected on a small ground glass screen, thus making the vibrations visible, which enables the operator to properly adjust the machine and also read the message if the rate of sending is not too rapid. The sensitized paper is automatically passed through a developing and fixing bath, and washing and drying tubes, to a basket at the end of the machine, the elapsed time between the time of exposure and its delivery in the basket being about 2 minutes. Whereas heretofore the speed at which a wireless operator could transmit a message was regulated very largely by the capacity of the receiving operator, this machine, it is claimed, will ultimately be capable of recording at a speed of 1,250 letters, or 250 words a minute.

Wireless telephony has made remarkable strides during the last 2 or 3 years, though up to the present most developments have been made in receiving, rather than in transmitting features. One of the great features in the develop-

ment of wireless communication since 1914 is the invention of the Thermionic or French valve, for the perfecting of which much credit must be given to our Signal Corps in France and Flanders. One of these valves amplifies sound 6 times, 2 valves 36 times, 3 valves 216 times, and so on. The Australian station used 15 valves recently, receiving from Carnarvon, Wales. This number of valves, at a short distance, sounds like a steam whistle, and a signaller remarked that with any more in service he would surely have heard the angels singing.

I have my dreams as to what future developments will be, but I think readers will agree with me that the improvements so far attained have been of tremendous benefit to mankind, and what is more that they will appreciate such developments, and the future developments to be, will result in the closer binding together of the different peoples of the world in different localities, and thereby, by bringing them into closer contact, and a better realization of one another's problems, tend very largely to remove what is a very prolific source of discord and strife, namely, a lack of knowledge of one another.

Editor's Note—In the foregoing no mention is made of the fact that Dr. A. G. Bell invented the telephone in Brantford, Ont., and that many experiments with it were carried on there. We therefore think it well to give the following synopsis of a letter he wrote, when a memorial was proposed to be erected there to commemorate the event. The following are the facts he stated:

Invention of the telephone at Tutela Heights, Brantford, 1874 (summer). First telephone constructed and speech sounds heard, Boston, Mass., June, 1875. First draft of telephone patent specification prepared, Brantford, Sept., 1875. Complete sentences first clearly understood by telephone, Boston, Mar. 10, 1876. Telephone exhibited at Centennial

Exhibition, Philadelphia, June 25, 1876. First attempts to transmit speech over telegraph lines, Boston, July 7, 9 and 12, 1876. First successful attempt to transmit speech over telegraph lines Brantford, Aug. 10, 1876. First public demonstration of ability to speak over a telegraph line, Brantford, Aug., 1876. First transmission of a number of voices simultaneously over a telegraph line, Brantford, Aug., 1876. First conversation by telephone over a telegraph line (reciprocal communication), Boston, Oct. 9, 1876. First long distance conversation over a telegraph line (143 miles), Boston, Dec. 3, 1876. First newspaper dispatch sent by telephone, Salem, Mass., Feb. 12, 1877. First telephone line opened, Boston, April 4, 1877.

Dr. Bell also wrote as follows: "In this way, Brantford became my thinking place; here the telephone was invented, the first draft of the patent specification prepared, the proper relation of the parts of the telephone to enable it to be used on long lines were worked out; and the first transmission of the human voice over miles of telegraph line was actually accomplished. Here also the first public demonstration of this result was given to the world. I think, therefore, that Brantford is fully justified in considering itself as integrally associated with the development of the telephone, and I need hardly say that I am deeply grateful to Brantford for seeking to perpetuate this association by the magnificent memorial you are now establishing in your city."

The following Brantford, Ont., press dispatch of Feb. 12 is of interest, in connection with the foregoing: The death of Norbert Burnett at Ogdensburg, N.Y., recalls the first telephone wire built in this city, by the deceased for Prof. A. G. Bell, when the first sound of the human voice was transmitted by telephone. Burnett was employed by the Montreal Telegraph Co. and erected six poles between Brantford and Tutela, using beer bottles as insulators.

Freight and Passenger Traffic Notes.

Since the closing of Broad St. station, Ottawa, at the beginning of the year, 36 trains arrive at, or leave, the central station daily.

A U.S. press report states that three shipments of cattle, totalling 110 cars and 3,645 animals, reached Denver, Col., recently, from Cardston, Alta., en route for Texas.

A St. John, N.B., press report states that an office for the transfer of baggage to and from the union station in that city was opened at the station there, Feb. 2.

The Canadian National Railways put in operation, Feb. 20, on the night trains running between Toronto and Ottawa, the club compartment cars, Marmora and Bancroft.

The Canadian National Rys. are opening a ticket office on the upper floor of the building at pier 2, Halifax, N.S. When this office is completed the C.N.R. city ticket office on Hollis St., Halifax, will be refitted.

The Canadian National Rys. put in operation, Feb. 6, a parlor car service between St. John, N.B., and Halifax, N.S., on trains 13 and 14, in addition to the sleeping car and other accommodation provided on them.

The Board of Railway Commissioners has dismissed the application of the Wawota, Sask., for an order requiring better train service on the C.P.R. Reston and Wolseley Branch, with connection at Wolseley with the westbound train.

The Canadian National Rys. has been authorized by the Board of Railway Commissioners to open for freight traffic its line from the junction with the Patricia Bay line, mile 1.80 from Victoria, to mile 26.5 in the direction of Alberni, B.C., the speed of trains being limited to 10 miles an hour.

Victoria, B.C., merchants waited on the B.C. Government recently and asked for equitable freight rates from Victoria to points on the Pacific Great Eastern Ry. on the mainland. The premier replied that he would have a conference with Canadian Pacific and Canadian National Rys. officials.

The C.P.R. is reported to have carried over 4,000 tons of fruit, including 30 carloads of prunes, from the Grand Forks district during 1919, and 3,822 carloads of fruit and vegetables from the Okanagan Valley, between July and Nov., 1919. In the latter case there was an increase of about 1,000 carloads over 1918.

The Ontario Vegetable Growers' Asso-

ciation is reported to have asked the Board of Railway Commissioners to consider the adoption of a protective service under which railways will assume liability for damage to freight due to freezing, or artificial overheating, during transit.

The C.P.R. is reported to have handled on its Lethbridge Division, Alta., between Aug. 1, and Dec. 31, 1919, over 133,000 cattle, representing 5,200 carloads. About one-half went to Chicago, Ill.; one-quarter to Calgary, Winnipeg or other stockyards, and the remainder were shipped from point to point for feeding purposes.

The Fredericton and Grand Lake Coal & Railway Co.'s and New Brunswick Coal & Railway's bylaws authorizing their respective passenger traffic managers and assistant freight traffic managers to prepare and issue passenger and freight tariffs, respectively, have been approved by the Board of Railway Commissioners.

The Dolly Varden Mines Ry., an ore carrying railway line from the Dolly Varden Mines to Alice Arm, B.C., closed down for the winter. A press report states that small quantities of high grade ore are being sent by teams to Alice Arm for shipment, and that large

one change are being accommodated at the station awaiting the opening of the new road in the spring.

The Province of British Columbia is reported to have received a letter from D. B. Hackett, President, Canadian National Ry., explaining that under present circumstances, it is not feasible, without the disposition of a large sum, which the business offering in such a short section does not justify, to put on a train service on the Victoria and Sooke section of the company's line on Vancouver Island.

Traffic in 1919 over the Fraser River bridge at New Westminster, B.C., owned by the B.C. Government, and used by the railways trading by the Great Northern Ry., and the Canadian National Ry., is reported to have been as follows: Passenger trains, 6,720, carrying 32,187 passengers; freight trains, 4,260 with a total of 62,788 cars; mixed trains, 2,326, with a total of 7,854 cars. The auto traffic was heavy, at times as many as 65 cars at one crossing.

D. C. Coleman, Vice President, C.P.R., Western Lines, in addressing the Western Canada Fruit Jobbers' convention at Vancouver, B.C., recently, is reported to have said that the company's programme for 1920 calls for the building of 500 refrigerator cars at a cost of approximately \$1,500,000. The representations of the convention as to the type of car suitable for the fruit trade in western Canada would be given every consideration before the type was finally decided upon.

The G.T.R. was ordered by the Quebec Superior Court, Jan. 18, to pay J. G. Heon, \$281.55 damages for delay in transportation of a carload of oats from Richmond to Sherbrooke, Que. The oats were shipped April 15, 1918, and were not delivered in Sherbrooke until May 2, between which time the price had fallen, and Heon claimed that he lost the amount claimed. It appeared from the evidence that the car containing the oats did not leave Richmond until May 2, arriving in Sherbrooke a few hours afterwards. Justice Pouliot held that this was an unreasonable delay, which the company had not attempted to justify or explain. Judgment was given for the full amount claimed with costs.

The Board of Railway Commissioners, sitting in Montreal, Feb. 24, heard a large volume of evidence in support of complaints made by residents along the route of the New York Central Rd. trains into Montreal, as to the service given. The company's officials stated that steps had been taken to remedy the matters complained of, and that it was willing to readjust its time schedule to suit the public. Hon. F. B. Carvell, Chief Commissioner, intimated that it appeared to be a case where a railway secured an entrance for its through traffic into Montreal and paid little attention to the needs of local traffic. As matters were being rectified the board would take into consideration the only remaining question, viz., whether an order should be issued directing the giving of the increased service asked for.

The Canadian National Ry. announced recently with the G.T.R. for an optional interchange by which tickets issued by either line, and reading from Toronto or points south or west of it, to Winnipeg, or any place beyond, or vice versa, will be accepted for travelling either by Canadian National train 1, which runs via Port Arthur, or G.T.R. National train via North Bay and Cochrane. The for-

mer leaves Toronto union station 9.15 p.m., Sunday, Monday, Wednesday and Friday, and the latter at the same hour Tuesday, Thursday and Saturday, so that travellers from Windsor to the west to Halifax in the east, are thus afforded, via Toronto, a daily service between

eastern and western Canada, in addition to that given by the C.P.R. Both trains carry full transcontinental equipment, standard and tourist sleeping cars, compartment, observation, library cars, dining cars, first class and colonist cars, etc.

Telegraph and Telephone Franks Discussed by Board of Railway Commissioners

Hon. F. B. Carvell, Chief Commissioner, prepared the following memorandum, dated Jan. 17: "As the question of telegraph and telephone franks has frequently been brought to my attention during the past two months, owing to certain changes in the Railway Act in 1919, I deem it my duty to give expression to my views on the rights of telegraph and telephone companies, under the provisions of the act. Sec. 375 deals explicitly with these companies and first defines what is a telegraph company, and then sets forth in a general way its chief powers, and as all the telegraph companies in Canada come within the provisions of this section, what will apply to one will apply to all, and also to all telephone companies coming under the board's jurisdiction.

"Subsec. 12 makes, subject to certain reservations, the Railway Act, apply to telegraph and telephone companies, and leaving out the unnecessary portions, would read as follows: 'Without limitation of the generality of this subsection by anything contained in the preceding subsections the jurisdiction and powers of the board, and, in so far as reasonably applicable . . . the provisions of this act respecting such jurisdiction and powers . . . and the other provisions of this act (except . . . shall extend and apply to all companies as in this section defined.'

"Secs. 345, 436 and 347 deal with reduced and free transportation, and therefore, wherever reasonably applicable, the telegraph and telephone companies possess the same rights in issuing free or reduced transportation of messages as the railway companies possess as to reduced transportation of passengers, etc. The provisions for tolls, filing of tariffs, etc., as to these companies is provided for in Sec. 375, subsections 2, 3 and 4, and, generally speaking, are entirely subject to the board's approval and may be revised by the board from time to time, and therefore I can find no provision for free carriage of messages, excepting what may be found in secs. 345 and 346 as hereinbefore referred to. Sec. 346 deals with members of the Senate and House of Commons, the members of this board, and such officers and staff of the board as we may determine.

"Sec. 345 gives to the railway companies, and therefore telegraph and telephone companies, the right, if they so desire, of granting free transportation to persons, and certain classes of persons, therein specifically designated, and to such other persons as this board may approve or permit, subject always to the provisions regarding discrimination, and sec. 347 expressly provides the following: 'Subject to the provisions of secs. 345 and 346 of this act, no company shall hereafter, directly or indirectly, issue or give any free ticket or free pass, whether for a specific journey or periodical or annual pass, and no company shall otherwise arrange for or permit

the transportation of passengers except on payment of the fares properly chargeable for such transportation under the tariffs filed under the provisions of this act, and at the time in effect.' It also provides that nothing shall affect the furnishing of free transportation where such is specifically provided by any other general act of the Parliament of Canada.

"First, as to those persons who are entitled to free transportation by sec. 346. As they receive their right to free transportation by law, I take it they are entitled to only what is specifically mentioned therein, and in general words this includes free transportation to members of the Senate and House of Commons, with their baggage, and free transportation to members of this board and such officers and staff of the board as we may determine, with our baggage, equipment, and official car, and I am unable to convince myself by any course of reasoning that the provisions of sec. 345, being the section stating what the railway companies may do on their own initiative, could be held reasonably applicable to this section, and, therefore, the persons mentioned therein are not entitled to receive telegraph and telephone franks, but I have not the same view regarding the persons referred to in sec. 346, because, as that provides what the railway companies may do in the granting of free or reduced transportation, I feel it reasonably applicable that telegraph and telephone companies have the same rights of granting free transportation for messages, that the railways would have in granting free transportation to the parties therein referred to.

"The opinion which I have already expressed regarding the provisions of sec. 345 with respect to express companies applies very largely to franks by telegraph and telephone companies, with the addition that the exchange of telegraph, telephone, and cable franks is expressly provided for with other telegraph and telephone companies, their officers, agents, and employees, and it is my opinion that in carrying out the privileges granted the telegraph and telephone companies by the act, very great care should be exercised in the distribution of franks, because an application is now pending before this board by the telegraph companies, asking for a very substantial increase in their rates, amounting to from 30 to 35% of the rates now in force, and any revenue lost by the giving of franks must be made up by the remainder of the community. Holding these views, I consider it my duty to express them as I have done, and trust that the telegraph and telephone companies will be guided, as far as possible, by the interpretation of the Railway Act as herein set forth."

The foregoing memorandum was concurred in by Hon. W. B. Nantel, Deputy Chief Commissioner and by Commission-

ers Boyce and Goodeve. S. J. McLean Assistant Chief Commissioner added the following: "I agree in the Chief Commissioner's memorandum. At page 1, line 29, after the word 'and,' being the first word in the line, I would suggest the addition of the words 'not being excluded.' This will make the meaning clearer. At the hearing on Jan. 20, the

Chief Commissioner made a statement as to this memorandum having been prepared. His intention is that it should issue as an interim judgment, giving an opportunity, within a reasonable time, for hearing, if such is asked for. As what is primarily concerned is the power of telegraph and telephone companies to issue franks, and the types of persons

to whom same may be issued, it seems to me that, subject to whatever may be developed in further discussion, telegraph and telephone companies are really the only people who should be given an opportunity to speak to the matter at a hearing. The recipients of franks do not receive them as a matter of right." Commissioner Rutherford concurred.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canada Steamship Lines Ltd.—J. H. B. ADAMS, has been appointed General Agent, Import and Export from Mar. 15. Office, Montreal.

D. D'E COOPER, heretofore Agent, Import and Export, Toronto, has been appointed General Agent, Import and Export from Mar. 15. Office, Toronto.

J. H. EDWARDS, heretofore chief clerk, Claims Department, Montreal, has been appointed Assistant Freight Claims Agent, succeeding J. J. Lynch, deceased. Office, Montreal.

W. J. HUGHES, heretofore agent, Victoria Pier, Montreal, has been appointed District Freight Agent from Mar. 15. Office, Montreal.

W. J. KING, heretofore Division Freight Agent, Montreal, has been appointed General Freight Agent from Mar. 15. Office, Montreal.

W. P. O'BRIEN, heretofore agent at Quebec, has been appointed agent, Victoria Pier, Montreal, from Mar. 15.

JOHN F. PIERCE, heretofore Assistant Traffic Manager, freight and passenger lines, Prescott and east, has been appointed Passenger Traffic Manager, with jurisdiction over all passenger lines. The position of Assistant Traffic Manager is abolished.

Canadian National Rys., Canadian Government Merchant Marine Ltd.—WILLIAM PHILLIPS, heretofore, Canadian Representative, Cunard Line Steamships, Montreal, has been appointed European Manager, C.N.R. and C.G. M.M. Office, Orient House, London, Eng.

Canadian National Rys.—R. N. BLACK has been appointed airbrake instructor, Eastern Lines. Headquarters, Moncton, N.B.

E. BRODERICK, heretofore chief clerk, Right of Way Department, Winnipeg, has been appointed Right of Way and Property Agent, Western Lines. Office, Winnipeg.

T. J. GRACEY, heretofore Auditor Auditor of Disbursements and Accountant, Timiskaming and Northern Ontario Ry., Toronto, has been appointed Auditor of Disbursements, Canadian Northern Ry. System, vice T. R. Ralph, deceased. Office, Toronto.

J. HAWKINS, heretofore Road Foreman of Locomotives, has been appointed Assistant Master Mechanic, Ottawa Division, Ontario District, and his former position has been abolished. Office, Ottawa, Ont.

W. C. HUNTER has been appointed Airbrake Inspector, Eastern Lines. Headquarters, Montreal.

D. W. STEEPER, heretofore Assistant Superintendent, Division 2, Central District, Sioux Lookout, Ont., has been appointed acting Superintendent, Division 4, Central District. Office, Winnipeg.

W. G. STRACHAN, heretofore Road Foreman of Locomotives, has been appointed Assistant Master Mechanic, Superior Division, Ontario District, and his former position has been abolished. Office, Hornepayne, Ont.

Canadian North Eastern Ry.—Lieut. Col. T. A. HIAM, who, prior to the war, was private secretary to Sir Donald Mann, at Toronto, has been appointed Vice President of this company, of which Sir Donald Mann is President. Office, Stewart, B.C.

Canadian Pacific Ocean Services Ltd.—A. R. DEAN, has been appointed Traveling Passenger Agent, Chicago, Ill.

G. W. WOOD has been appointed Auditor, vice John Leslie, Comptroller, C.P.R. and Auditor C.P.O.S., who has resigned as Auditor, C.P.O.S., to devote his time to C.P.R. duties. Office, Montreal.

Canadian Pacific Ry.—G. BRUCE BURPEE, heretofore General Travelling Passenger Agent, Montreal, has been appointed Agent, Passenger Department, Cleveland, Ohio, vice G. A. Clifford, assigned to other duties.

R. H. ELLIOTT has been appointed Road Foreman of Locomotives, Kenora, Ont., vice J. McFadyen.

F. F. W. LOWLE, heretofore General Agent, Alaska and Yukon Territory, Juneau, Alaska, has been appointed Local Freight Agent, Edmonton, Alta., vice R. F. Richardson, whose appointment as General Agent, Alaska and Yukon Territory, Juneau, was announced in our last issue.

J. McFADYEN, heretofore Road Foreman of Locomotives, Kenora, Ont., has been appointed Trainmaster and Divisional Master Mechanic, Cranbrook, B.C.

J. V. McNAB, heretofore Roadmaster, Maple Creek, Sask., has been appointed Divisional Engineer, Saskatoon Division, Saskatchewan District, Saskatoon, vice C. H. Fox, promoted.

T. MOFFATT, heretofore, chief engineer, s.s. Princess Victoria, has been appointed Machine Shop Foreman, Victoria, has been appointed Machine Shop Foreman, Victoria, B.C., vice E. Scaplen, resigned to enter Consolidated Whaling Corporation's service.

W. M. NEAL, heretofore General Secretary, Railway Association of Canada, Montreal, has been appointed Assistant General Superintendent, Quebec District, C.P.R. Office, Montreal.

G. H. NOWELL, heretofore Master Mechanic, Revelstoke Division, British Columbia District, Revelstoke, has been appointed Master Mechanic, Lethbridge Division, Alberta District, vice G. Twist, transferred. Office, Lethbridge.

R. J. QUILTY has been appointed Trainmaster, Brownville Division, New Brunswick District. Office, McAdam, N.B.

D. M. SMITH, heretofore Master Mechanic, Cranbrook, B.C., has been appointed Master Mechanic, Medicine Hat

Division, Alberta District. Office, Medicine Hat.

H. G. STUDD, has been appointed Auditor for Europe. Office, London, Eng.

Grand Trunk Ry.—Upon the release of G.T.R. lines in the U.S. west of Detroit and St. Clair Rivers, and east of Norton Mills, Vt., from Federal control, Mar. 1, the jurisdiction of the company's executive officers will be extended over them.

Upon the release of G.T.R. lines in the U.S. east of Norton Mills from Federal control, Mar. 1, they will revert to and be embraced in the Eastern Lines, G.T.R. System, and the jurisdiction of the general and divisional officers of the transportation, engineering, telegraph, motive power and car departments is extended accordingly.

J. H. BURGIS, heretofore General Agent, Passenger Department, Grand Trunk Western Lines Rd. (U.S.R.A.), Detroit, Mich., has been appointed General Agent, Passenger Department, G.T.R., there.

R. L. BURNAP, heretofore Traffic Manager, Grand Trunk Western Lines Rd. (U.S.R.A.), Chicago, Ill., has been appointed Freight Traffic Manager, G.T.R. lines in the U.S., west of Detroit and St. Clair Rivers. Office, Chicago.

J. CAMERON, heretofore Chief of Tariff Bureau, Grand Trunk Western Lines Rd., Chicago, Ill., has been appointed Chief of Tariff Bureau, G.T.R., there.

J. D. EDWARD, heretofore Federal Treasurer, Grand Trunk Lines in New England (U.S.R.A.), Portland, Me., has been appointed Local Treasurer of these lines, on their release from federal control, Mar. 1. Office, Portland, Me.

E. C. ELLIOTT, of the Passenger Traffic Manager's office, has been appointed District Passenger Agent, at Bonaventure Station, Montreal, succeeding J. S. QUINLAN, who, after 43 years faithful service, will retire under the provisions of the company's superannuation fund, on Apr. 1, to which date he has been given leave of absence.

R. H. FISH, heretofore Superintendent, Stratford Division, Stratford, Ont., has been appointed General Superintendent, Eastern Lines, vice W. R. Davidson, transferred to Western Lines. Office, Montreal.

E. F. FLINN, heretofore General Western Freight Agent, Chicago, Ill., has been appointed General Freight Agent, Grand Trunk lines in the U.S., west of Detroit and St. Clair Rivers. Office, Chicago.

F. FOSTER, heretofore General Foreman, Ottawa, Ont., has been appointed Assistant to Superintendent, Motive Power, Allandale, Ont., vice J. Vass, transferred.

C. A. GORMALY, heretofore Division Freight Agent, Grand Trunk Western Lines Rd. (U.S.R.A.), Chicago, Ill.,

has been appointed Division Freight Agent, G.T.R., there.

H. H. HAMILL, heretofore General Agent, Freight Department, Grand Trunk Western Lines Rd. (U.S.R.A.), Detroit, Mich., has been appointed General Agent, Freight Department, G.T.R., there.

J. D. McDONALD, heretofore General Passenger and Express Agent, Grand Trunk Western Lines Rd. (U.S.R.A.), Chicago, Ill., has been appointed General Passenger Agent, also in charge of Baggage Department, G.T.R., there.

A. J. MULLINS, heretofore Division Freight Agent, Grand Trunk Western Lines Rd., Grand Rapids, Mich., has been appointed Division Freight Agent, G.T.R., there.

G. L. NELSON, heretofore General Freight and Passenger Agent, Grand Trunk Lines in New England (U.S.R.A.), Portland, Me., has been appointed Division Freight Agent, G.T.R., Portland, Me.

C. G. ORTTENBERGER, heretofore General Agent, Passenger Department, Grand Trunk Western Lines Rd. (U.S.R.A.), Chicago, Ill., has been appointed General Agent, Passenger Department, G.T.R., there.

H. W. PLOSS, heretofore General Agent, Freight Department, Grand Trunk Western Lines Rd., Milwaukee, Wis., has been appointed Commercial Agent, G.T.R., there.

W. PULFORD is reported to have been appointed Supervisor of Track, with territory from Guelph to Harrisburg, and Kitchener to Weston, Ont. Office, Guelph, Ont.

W. H. SAMPLE, General Superintendent of Motive Power and Car Department, Montreal, has also been appointed Consulting Engineer, Motive Power and Car Department, G.T.R. lines in U.S., west of Detroit and St. Clair Rivers.

W. H. SPICER, heretofore Assistant General Freight Agent, Grand Trunk Western Lines Rd. (U.S.R.A.), Detroit, Mich., has been appointed Assistant General Freight Agent, G.T.R., Detroit, Mich.

W. C. TOMKINS, formerly Local Treasurer, G.T.R. Lines west of Detroit and St. Clair Rivers, Detroit, Mich., resumes that position, on the release of the G.T.R. lines in the U.S., from federal control, Mar. 1.

JOHN VASS, heretofore Assistant to Superintendent, Motive Power, Allandale, Ont., has been appointed Locomotive Inspector, U.S. lines west of Detroit and St. Clair Rivers. Office, Milwaukee Jct., Wis.

H. E. WHITTENBERGER, heretofore Federal Manager, Grand Trunk Western Lines Rd. (U.S.R.A.), Detroit, Mich., has been appointed General Manager, G.T.R. Lines in the U.S., west of Detroit and St. Clair Rivers, effective on the release of G.T.R. lines from federal control, Mar. 1. Office, Detroit, Mich.

Grand Trunk Pacific Ry.—O. CARLSON has been appointed Roadmaster, Prince Rupert, B.C., with territory from Pacific to Prince Rupert, vice E. Gunderson, who has returned to his former duties as section foreman, Smithers, B.C. The office of the roadmaster of this territory will be moved to Pacific, B.C., in the near future.

P. McGETTIGAN, heretofore acting Roadmaster, has been appointed Roadmaster, Endako, B.C.

C. B. MÜLLER, heretofore Trainmaster, has been appointed Assistant Superintendent, Melville, Sask.

Guelph Junction Ry.—T. J. MOORE, C.M. Manager, Guelph, Ont., is reported to have been elected Secretary-Treasurer, Guelph Jct. Ry. Co., in succession to the late Col. A. H. Macdonald. The duties of the position are little more than nominal, and in making the present appointment the city, which owns the railway, will save the \$500 a year paid as salary to the late Secretary-Treasurer.

Oshawa Ry.—J. E. DALRYMPLE, Vice President (Traffic), G.T.R. and G.T.P.R., Montreal, has also been elected President, Oshawa Ry. (electric), vice E. W. Rathbun.

Railway Association of Canada.—C. P. RIDDELL, heretofore Assistant Secretary, has been appointed Secretary, vice W. M. Neal, resigned to re-enter C.P.R. service. Office, Montreal.

G. A. BALFOUR, heretofore Assistant to General Superintendent, Quebec District, C.P.R., Montreal, has been appointed, Assistant Secretary, Railway Association of Canada, vice C. P. Ridell, promoted.

Timiskaming and Northern Ontario Ry.—D. HAMILTON has been appointed acting Auditor of Disbursements and Accountant, Toronto, vice T. J. Gracey, resigned to enter C.N.R. service.

United States Railways Returned to the Companies by the Government.

The act to provide for the termination of federal control of railroads and systems of transportation, to provide for the settlement of disputes between carriers and their employees, to further amend the act to regulate commerce as approved, Feb. 4, 1887, and as amended, and for other purposes as passed by the U.S. Senate and House of Representatives, was sent to President Wilson on Feb. 25, and having been signed by him went into effect at 12.01 a.m., Mar. 1. It is divided into four parts, the first dealing with definitions. The second opens with the declaration that federal control of the railways and other systems of transportation shall terminate at 12.01 a.m., Mar. 1, and the following sections deal with the manner of the closing out of all matters as between the government control and the private owners.

A section dealing with the guaranty to carriers after the termination of federal control, provides that the companies shall file an acceptance of the terms by Mar. 15, upon filing of which the government guarantees to the railways, for six months, half a year's standard returns, and should there be any excess earnings over the guaranteed amount, one-half of such excess is to be paid to the general railroad contingent fund. During the guaranty period any of the companies concerned may make application to the Interstate Commerce Commission for advances on account of fixed charges and operating expenses in excess of the guaranty, and such advances may be made at 6%. Provision is also made for the ending to the companies for five years on capital account, \$300,000,000 to be used as a revolving fund.

Another section deals with the position of labor and provides for the establishment of the Railway Tribunal Board of Appeal to consist of nine members, three to represent labor; three the public, with power to take jurisdiction

of disputes between the companies and their employees which threaten interference with interstate commerce.

The headquarters of the board will be in Chicago, Ill., but it may hold sittings anywhere. The members of the board are to be appointed for five years, will be paid \$10,000 a year each, and must be approved by the Senate. This section also provides that wages and salaries not less than those in effect at the termination of federal control must be paid by the companies until Sept. 1, next.

The outstanding feature of the act is contained in sec. 4, which directs the Interstate Commerce Commission to establish rates that will yield to the carriers in each rate making group, a net railway operating income equal to 5 1/4 % of the aggregate property value of the roads in such group. The commission may add to this rate 1/2 % of 1% for additions, betterments and improvements, which under the commission's accounting rules, are charged to capital account. Earnings in excess of 6% will be divided equally between the railway's reserve fund and the federal general contingent fund, which will be administered by the commission in aiding the development of transportation, by loans to companies and the purchase of equipment to be leased to companies. The section also provides that after 120 days from the act going into effect, it shall be unlawful for any of the companies to issue new capital stock or bonds, or to assume any liability as lessor, guarantor, etc., except with the authority of the Interstate Commerce Commission.

The Canadian Traffic League, which was formed in Oct., 1917, consists of commercial traffic managers, and others in charge of traffic for firms shipping in Canada, and has a membership of nearly 100. The officers are A. W. Bell, Traffic Manager, General Motors Ltd., Oshawa, Ont., President; F. W. Dean, Traffic Manager, Steel Company of Canada; Hamilton, Ont., Vice President, and A. H. Thorpe, Traffic Manager, Wm. Davies Co., Toronto, Secretary-Treasurer. Regular meetings are held at the Canadian Manufacturers' Association's offices in Toronto on the first Wednesday of each month, but the meeting on Mar. 3 will be at the Board of Trade offices, Hamilton, Ont.

Dutch Railways Electrification.—A cablegram from The Hague, Holland, states that a commission of Dutch engineers will visit this continent shortly to study the electrification of railways, with a view to changing the motive power on the Dutch railway systems from steam to electricity.

The United Brotherhood of Maintenance of Way Employees and Railway Shop Laborers has opened a retail store in Windsor, Ont., for the sale of gloves, mittens, etc., and has made arrangements with other stores in the city for the supply of goods of various kinds to members at reduced rates.

The Canadian Brotherhood of Railway Employees is reported to have elected the following officers at a meeting in Montreal, Feb. 16: Chairman, C. E. Cole, Moncton, N.B.; Vice Chairman, L. E. Leferie, Toronto; Secretary, B. Cummings, Moncton.

U.S. shipbuilders are reported to be building or have under contract for private companies, 93 tank steamships of more than 1,000,000 d.w. tonnage, to cost \$200,000,000.

Results of Government Control of British Railways.

The Minister of Transport issued a re-
port recently showing the results of
working the railways during the periods
of government control of railways in
Great Britain, from Aug. 5, 1914 to Aug.
31, 1919, and in Ireland from Jan. 1,
1917 to Aug. 31, 1919.

For the period, Aug. 5, 1914 to Mar.
31, 1919, the revenue earned from all
sources exceeded expenditure and the
guarantee by about £2,000,000 to £7,000,-
000, according as the lower or higher
figure (£10,000,000 or £15,000,000), of
the value of the services rendered to the
government during the period of control
by the "other businesses" (i.e. apart from
conveyance by rail) is taken. There are,
however, to be set against this margin
serious deferred liabilities in respect of
replacement of stores and materials, ar-
rears of maintenance and abnormal wear
and tear. The amount of these liabilities
cannot at present be ascertained.

In the current financial year the re-
sults for the first five months show a
balance of revenue over expenditure of
£12,183,934. The proportion of the
guarantee for the same period is £21,-
226,600, and the deficit is therefore £9,-
042,666. Two important factors affect
the expenditure for the whole year as
compared with the first five months:
The increased price of coal, which took
effect on July 21, 1919, is not reflected
fully in the August figures, whereas it
will be a heavy item in the later months,
and various concessions to railwaymen,
not fully operative in the earlier months,
will also increase the wages bill. It
must further be borne in mind that rail-
way revenue accrues disproportionately
in the earlier months of the financial
year. The sum of £60,000,000 was taken
in the estimates to represent the an-
ticipated cash payments in the financial
year ending Mar. 31, 1920, which will
include a portion of the liabilities for
earlier years, but will not cover the
whole of the 1919-20 and other outstand-
ing liabilities.

An estimate of the deficit which will
fall on the exchequer in respect of the
financial year has been made, based on
the latest operating results, and is as
follows:

Estimate of Deficit for Year Ended Mar. 31, 1920.

OPERATING RESULTS.	
Receipts.	
Railway working—	
Public traffic.....	£157,400,000
Government traffic.....	19,200,000
Expenditure.....	£176,600,000
Net receipts.....	£ 3,100,000
Other businesses—Net receipts.....	800,000
	\$ 3,400,000

GOVERNMENT LIABILITY.	
Guarantee of 1913 net rev- enue.....	£17,100,000
Interest on new capital.....	1,000,000
	48,400,000
Deduct.....	
Net receipts as above.....	3,400,000
Net deficit falling on Exchequer.....	\$ 45,000,000

The figures thus show a probable de-
ficit of £45,000,000. Any improvement
in the position is mainly due to the ex-
traordinary increase in passenger traf-
fic last summer, and to the decision to
apply, from April 1, 1919, to govern-
ment traffic the same rates of increase
as have been made to the public. The
latter results in a credit to the railway
account of about £5,000,000, but this

credit involves a corresponding charge
to other government departments. It
should be added that the present esti-
mate of £45,000,000 as the amount of the
deficit may prove to be inadequate, if
the drop from the summer level of pas-
senger receipts is more marked than
usual, as may well be the case in view
of the unprecedented height attained,
and as a result of the dislocation of busi-
ness by labor troubles. On the other
hand, no allowance is made for any
growth of revenue from increases in
freight rates which may become opera-
tive before the close of the financial
year.

Toronto Viaduct and Union Station

The question of the erection by the
C.P.R. and the G.T.R. of a viaduct along
the Toronto water front to eliminate
level crossings, came before the Toronto
Board of Control, Feb. 17, when it was
decided to have a conference with the
Toronto Harbor Commissioners on the
matter. A meeting was arranged to be
held Feb. 26 between representatives of
the city, the Harbor Commission and the
Board of Trade. The mayor of Toronto
is reported to have said, Feb. 19:—"Both
the harbor commissioners and the city
are in favor of the viaduct order and
are opposed to any departure therefrom
in any particular. We have laid down
a policy which I think will be agreeable
to the city and the board of trade, that
if the railways will buy the right of way
of the viaduct, between Scott and
Cherry Sts., which will give us ample
evidence of their intention to go on with
the work, we will be glad to discuss with
them the temporary operation on the
level of the new union station, but not
otherwise. There has been some delay
owing to the change of owners of the
G.T.R."

Railway Finance, Meetings, Etc.

New York Central Ry. Co.—There has
been deposited with the Secretary of
State at Ottawa, an agreement dated
Jan. 24, between the New York Central
Rd. Co. and others, and the Guaranty
Trust Co. of New York as trustee, being
supplemental to a lease of June 8, 1910,
under the New York Central Lines
Equipment Trust of 1910.

Canadian National Rolling Stock Ltd.
has been incorporated under the Domini-
on Companies Act, with \$500,000 au-
thorized capital, and office at Toronto,
to build, own, operate, manager and deal
in engines, movable and stationary, and
rolling stock of every form and descrip-
tion, rails, ties, machinery, tools, stores
and equipment of all kinds for construc-
tion, operation and maintenance of rail-
ways, and ships of every description.
The incorporators are: D. B. Hanna, A.
J. Mitchell, G. Ruel, Toronto; E. E. Fair-
weather, Ottawa, all officials of Cana-
dian National Rys., and G. A. Bell, C.M.
G., Deputy Minister of Railways and
Canals, Ottawa.

The Canadian Transfer Co.'s directors
for the current year as elected at the
recent annual meeting at Montreal, are:
Hugh Paton, G. R. Starke, Sir Montagu
Allan, F. W. Molson and F. M. McRobie.
The Dominion Public Works Depart-
ment will receive tenders to April 15,
for packing of material and supplies for
points along the Yukon telegraph line,
between Hazelton and Atlin, during 1920,
1921 and 1922.

The Edmonton, Dunvegan and British Columbia Ry.'s Future.

The present position and future prospects of the Edmonton, Dunvegan and British Columbia Ry. and its two allied lines, the Alberta and Great Waterways Ry. and the Canada Central Ry., have just discussed at great length for the last year or so. The E.D. & B.C.R., which starts at Edmonton, Alta., and its two subsidiaries have a total length of about 600 miles; the present terminals being near McMurray, at the Peace River, at Grand Prairie, and at the Spirit River. There has been some grading done between the two latter points, the original intention having been to connect with the Pacific Great Eastern Ry., at the Alberta-British Columbia boundary. The total mileage in operation during 1919 was approximately 594 miles. Some negotiations took place in 1919 with the Dominion Government to have the lines taken over and linked up with the Canadian National Ry., but nothing definite was done. Other reports credited the C.P.R. with being desirous of acquiring these lines, but President Beatty, during his recent visit to the west, is reported to have stated positively that his company does not want them. Early this year negotiations were reported to have resumed with the Dominion Government.

The Premier of Alberta is reported to have made the following statement in the legislature on Feb. 20:

"At various times during the past year, particularly during the feed shortage, complaints have been made to the government as to the unsatisfactory service being rendered by the E.D. & B.C.R. Lack of proper transportation of both passengers and freight had created a situation which in the government's opinion, it was absolutely necessary to remedy. Default had already taken place in payment of interest, on the guaranteed bonds and the government commenced legal proceedings for the appointment of a receiver, under the provision of the trust deed by way of mortgage securing the bondholders and the government. J. D. McArthur then informed the government that negotiations were being carried on between the company and the Dominion Government either for financial assistance or purchase of the road. In informed him that, in order to stay proceedings under the deed of trust, it would be necessary for this government to have documentary evidence of the intentions of the Dominion Government in connection with this matter. In compliance with this request, evidence has been placed in the hands of this government, and at the conclusion of the address in reply to the speech from the throne, I will be pleased to lay copies of the correspondence on the table of the house."

The Premier of Alberta made the following further statement in the legislature, Feb. 23:—"I saw the contents of a letter from Sir Robert Borden to J. D. McArthur, informing him that he had appointed a committee of the government to deal with his request for assistance or purchase, just prior to his leaving Ottawa, in December, and I also saw a letter written by Sir George Foster to J. D. McArthur, copy of which I am placing on the table today. That we were not called upon by the railway company to pay interest on guaranteed bonds, which became due on Feb. 16, is evidence, I think, that the financial interests backing the company feel confident that the arrangement can be con-

sumated between the company and the Dominion Government."

The correspondence laid on the table consisted of the following letters:

From J. D. McArthur to Premier Stewart, Feb. 6, 1920:—"Just prior to the departure of Premier Borden from Ottawa last month, a sub-committee of the Dominion Cabinet was appointed to consider the applications which I had made to the Dominion Government for assistance to the E.D. & B.C.R. by way of subsidy or otherwise. This committee has since had the matter under consideration and I enclose a copy of letter received by me from Sir Geo. E. Foster, acting Prime Minister, which sets forth the government's decision in this matter. Negotiations referred to in Sir George's letter are in progress and in view of that fact, I trust that your government will see its way clear to withhold any contemplated legal action against the company by reason of any default on its part."

From Sir Geo. E. Foster to J. D. McArthur, Jan. 24, 1920:—"With regard to the application made by you in your letter of Jan. 20, for a subsidy or other assistance to the E.D. & B.C.R., and its branches. I beg to advise you that the government, after due consideration, has come to the decision that it would not be justified, under financial conditions now prevailing, to ask parliament to approve a cash subsidy to these lines. On the other hand, the government recognizes that the railway referred to was projected and constructed to open up, develop and colonize a very large and desirable section of western Canada in which practically all the natural resources are now owned and controlled by the Dominion and that for this reason there would have been justification in the past for granting a subsidy to assist in the construction of the lines mentioned to the extent of some three or four million dollars. The government must, however, take into consideration conditions as they now exist and as they are likely to continue for some years to come. Realizing that owing to the settlement of the Peace River country and its proper further development, the lines of railway referred to must continue to be operated and in all probability extended into new territory, the government has reached the conclusion that negotiations should be forthwith proceeded with for the purpose of ascertaining the possibility of arriving at an agreement whereby the E.D. & B.C.R. and its branches may be acquired and operated by the Canadian National Ry., as a part of its system, upon terms and conditions that the government will feel justified in submitting to parliament for approval at its next session."

New Brunswick Government and Transportation Interests.

The annual statements of the finances of the Province of New Brunswick for the year ended Oct. 31, 1919, were published in the N.B. Gazette, recently, signed by Price, Waterhouse and Co., chartered accountants, Montreal, who made the following observations thereon: "During the year, \$244,807.45, representing interest charges on the bonds and other indebtedness of the St. John

and Quebec Ry., less the province's proportion of the railway earnings, has been capitalized."

The statements contain the following information relative to the receipts and expenditures, liabilities and assets in respect of railways and other transportation interests.

The statement of cash receipts and expenditures on current account, includes among receipts, \$15,082.01, balance of St. John and Quebec Ry. earnings for the year ended Oct. 31, 1918 and \$10,000 deposit by the Railway Passengers' Assurance Co., and among the expenditures, \$101,727.91 balance of St. John and Quebec Ry. interest to Oct. 31, 1918.

The statement of revenue and expenditure contains the following items: Receipts—Taxes from incorporated companies—Express companies, \$500; telegraph companies, \$1,500; street railways, \$2,475.42; railway companies, \$57,197; Southampton Ry. earnings, \$2,149.69; rent reversing falls bridge, \$3,000. Expenditures—Southampton Ry. earnings, previously taken into revenue, not recovered, \$2,975.05.

The balance sheet as at Oct. 31, 1919 shows: Assets—Southampton Ry. earnings, \$793.47; New Brunswick Power Co., cash and bonds held by province to provide for retirement at maturity of bonds issued by St. John Ry. as required by N.B. Companies Act, 1916, \$250,521.08. Liabilities—New Brunswick Power Co., cash and bonds, \$250,521.08. A note to this statement says: "A contingent liability exists in respect of bonds guaranteed by the province amounting, as far as can be ascertained, to \$1,117,000. In addition to amounts held in trust stocks and bonds of a par value of \$176,500 and assignment of certain mortgages were also held in trust by the province. Claims in respect of maintenance and construction work have been filed by certain companies operating railways leased from the province, but in respect of which the liability of the province, if any, has not been determined."

The statement showing the capital assets and liabilities, contains the following as to transportation companies: Assets—St. John and Quebec Ry. investment, balance as at Oct. 31, 1918, \$6,488,584.17; construction expenditure to Oct. 31, 1919, less Dominion subsidy, \$214,032.04; interest on bonds and other indebtedness, less province's share of the company's earnings, \$244,807.45, total, \$6,947,423.66. New Brunswick Coal and Ry., taken over and leased by the province, \$1,246,431.77. Cash available for future capital expenditures—St. John and Quebec Ry., cash retained by the trustees for the bondholders under the provisions of the trust deed, \$388,473.87; amount receivable on account of railway earnings to Oct. 31, 1919, \$30,581.28. The capital liabilities specifically incurred for railway companies are—St. John and Quebec Ry. 5½% bonds, \$450,000; 4½% bonds, \$1,700,000; in addition to these bonds which were issued by the province in aid of construction, the province assumed liability for \$425,000 of 4% bonds issued sued by the company.

The liabilities on construction account of the St. John and Quebec Ry. are: Bank overdraft, \$770,022.99; construction holdbacks, \$12,766.66; contractors' deposit, \$75,000; interest accrued on bonds issued by and in aid of the railways, \$108,689.16, a total of \$966,478.81.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Alaska—A recent report to the United States Government on the government railway from Seward to Fairbanks, Alaska, states that the work to be done to complete the line consists of the completion of the rehabilitation of the Alaska Northern Ry., including construction of snowsheds and enlarging of tunnels, and the building of a line from mile 237, ten miles north of Talkeetna, to unite 365, five miles north of Nanana Canyon. This is the only gap in the line from Seward to Fairbanks, 471 miles, with the exception of the bridge at Nenana, crossing the Nenana River, and a permanent bridge at mile 373, over the Nanana River. The dock at Anchorage also has to be built. (Nov., 1919, pg. 602).

Alberta Hudson Bay Ry.—The Alberta Legislature is being asked to extend the time within which this company may build the railway authorized by its act of incorporation. The High River and Hudson Bay Ry., which was incorporated by the Alberta Legislature some years ago, to build a railway from High River to the Alberta-Saskatchewan boundary, obtained authority in 1917 to change its name to the Alberta Hudson Bay Ry., also an extension of time for the construction of line for the railway authorized previously, and power to build a number of branch lines between High River and the International Boundary in Pincher Creek district. The people who hold this charter also hold a Saskatchewan charter in the name of the Saskatchewan Hudson Bay Co., to build a line from the Alberta-Saskatchewan boundary across Saskatchewan. They also have Dominion charters to building railways under the titles of the Calgary and Fernie Ry., and the High River, Saskatchewan and Hudson Bay Ry. (May, 1918, pg. 186, and Sept., 1919, pg. 491).

Bagotville Ry. Co.—The provisional directors named in an act passed by the Quebec Legislature recently incorporating a company with this title, are:—J. L. MacDougall, W. Murdoch, H. Fitzsimons, C. Watt, B. Moses, Ottawa. Power is asked to build a railway from the Quebec and Saguenay Ry. at Nairn Falls, northerly along the Malbaie River to the Cabanie River, thence south of Lake Ha Ha, and the Mars River, or near either of them to Chicoutimi or as an alternative to follow the Mary's Road, together also branch lines. (Jan., pg. 18).

Canadian Niagara Bridge Co.—A press report says that M. C. Spratt, a Buffalo, N.Y., solicitor, stated recently that a sufficient area of land has been acquired on Grand Island, in the center of Niagara River, in connection with the project for building another bridge across the river, and that the New York Central Rd., Canadian Pacific Ry., and the Toronto, Hamilton and Buffalo Ry. are interested in the project. The bridge will, it is said, be a double track one, and will also be available for ordinary traffic. (Jan., pg. 18).

Dolly Varden Mines Ry.—A Victoria, B.C., press report says that counsel for the Dolly Varden Mines Co. has advised the B.C. Government that it is proposed to test the validity of the act passed by the B.C. Legislature, at its last session affecting the company's interests, and a later dispatch states that the B.C. Government has been advised that a peti-

tion has been sent the Minister of Justice at Ottawa, asking for the disallowance of the act on the ground that it was ultra vires of the legislature.

The Dolly Varden Mines Co. was given power, under the title of the Dolly Varden Mines Ry. Co. to build a railway from the mines to tidewater on Alice Arm, B.C. The Taylor Engineering Co. obtained the contract to build the line and some dispute arose over the cost of the work. When the company applied for further powers at the 1919 session of the legislature, the Taylor Engineering Co. protested and a special committee was appointed to investigate the matter. Upon the committee's report, an act was passed to enforce the terms of a settlement with the Taylor Engineering Co., which resulted in the latter obtaining control of the mines, subject to carrying out certain conditions. (Nov., 1919, pg. 602).

Dominion Atlantic Ry.—We are officially advised that tenders have been invited for the erection of a station building at Digby, N.S. It will be 2 stories high and 130 x 30 ft. The foundations and main floor will be of concrete. The floor plan provides for waiting rooms, baggage room, freight room office, restaurant and lunch counter. The platform will be of concrete.

A press report states that the management is contemplating laying out new yards and shops, but that whether they will be at Kentville or Middleton, N.S., has not been decided. W. E. Boyd, of the C.P.R., Montreal, and M. K. McQuarrie, of the D.A.R., were reported to have been in Middleton, Jan. 12, looking over possible sites. (Dec., 1918, pg. 541).

Esquimalt and Nanaimo Ry.—Victoria, B.C., ratepayers, by a vote of 2,986 to 445, carried a bylaw recently to raise \$420,000 to build a railway and general traffic bridge across Victoria Harbor at Johnson St., and provide the approaches. Negotiations for building this bridge have been carried on for several years. The E. and N.R. built a bridge across the harbor for its traffic, in connection with which there was some understanding with the city respecting the future erection of a traffic bridge there. When, about three years ago, the company proposed to replace the bridge by a heavier one, for the increased traffic, the city took up the question of carrying out the old understanding. As the result of lengthened negotiations an agreement was signed Dec. 27, 1919, by the Mayor of Victoria and R. Marpole, Vice President, E. and N.R., and a supplementary agreement was entered into on the same date between the city and the B.C. Government with respect to the bridge. The bylaw contains these agreements in full. The agreement between the city and the company, provides for a joint application to the Board of Railway Commissioners for approval of the agreement and for the construction of a railway and general traffic bridge from the foot of Johnson St., to the Songhees Reserve, with approaches. The bridge is to have a clear width of 20 ft., and is to be provided with a single track railway line on the north side, and is to be built of steel on pier of concrete or masonry or both. Plans for the bridge are annexed to the agreement, but the city may sub-

stitute truss span construction for plate girder construction, and place the bascule pier on the west side of the harbor channel instead of the east side. The city is to provide at its own expense the approaches to the highway portion of the bridge, and may permit street car or railway traffic on its portion of the bridge, subject to restrictions as to loading. The ties and rails for the present single track railway are to be furnished and laid by the E. and N.R. The agreement also provides for the payment of the cost of the maintenance of the bridge, and for various matters incidental to its construction. The company undertakes to pay the city \$100,000 towards the construction of the bridge. The agreement between British Columbia and the city providing for the construction of the bridge, grants the city certain lands necessary for approaches, and also provides for the payment of \$200,000 towards the work. The estimated cost of the bridge and its approaches is \$720,000.

Application is being made to the Dominion Parliament for an act authorizing the company to build a railway from its present terminus at Courtenay, northwesterly to Duncan's Bay on the east coast of Vancouver Island.

We were officially advised recently that application would be made forthwith to the Board of Railway Commissioners, and the Dominion Government for the approval of the bridge plans and it is expected that tenders for the bridge will be invited by the city early in May. The plans provide for approach spans of 120 ft. each, and a single leaf bascule with one 120 ft. channel. The approximate weight of steel in the superstructure will be 2,800,000 lb., and there will be approximately 10,000 cubic yards of concrete in the piers and abutments.

The city council is reported to have approved of the city engineer's recommendations as to the type of bascule span to be adopted, and to have passed a resolution that each step in connection with the bascule be subject to the approval and inspection of the engineers of British Columbia Government, the city and the E. and N.R. (Jan., pg. 18).

Kettle Valley Ry.—The Dominion Parliament is being asked to authorize the company to build a railway from near Coalmount, on the joint section operated by the K.V.R., and the Vancouver, Victoria and Eastern Ry., and Navigation Co., generally southerly to the Granite Creek coal areas, 12 miles. The company is also asking for a further extension of time for building following previously authorized lines: From Grand Forks, 50 miles up the North Fork of the Kettle River, and from near Otter Summit to the Aspen Grove mineral district, 30 miles. Power to issue bonds for \$70,000 a mile in respect of these lines is also asked.

The Board of Railway Commissioners has approved plan of standard trestle to be built on the Copper Mountain branch, now under construction. (Jan., pg. 18).

Lievre Valley Power, Traction and Manufacturing Co.—The bill introduced in the Quebec Legislature recently to amend the company's charter was withdrawn, and the legislature on Jan. 29,

ordered the return of the four per cent. loan at printing and translation. The contract was incorporated in 1904 as the *British Columbia Ry. Light and Power Co.*, the name being changed to the present one in 1906. It was power to build a railway, to be operated by steam, electricity, or any other motive power, from Hull to the mouth of the Fraser River, and along that river's valley to the National Transcontinental Ry. (Jan., pg. 10).

New Westminster Bridge.—The British Columbia Railways Department's annual report for 1919, contains the following information with respect to the bridge over the Fraser River at New Westminster, B.C.: New 80 lb. steel rails have been laid across the bridge; the southern highway approach has been reformed, and painting and general repairs have been completed. A painting machine has been bought. Contracts have been let for the renewal of lumber in the southern approach and for sidewalk carried by steel brackets on the upstream side of the bridge.

Normandin Farmers Ry. Co.—The provisional directors named in the act passed by Quebec Legislature recently, incorporating a company with this title, are: T. Bassiers, A. Villeneuve, farmers; B. Fraser, merchant, and S. N. Turcotte, notary, all of Normandin. The company's head office is to be at Normandin, but it is proposed to hold meetings at any other place in the county of Roberval, provided a bylaw to that effect is passed. The capital stock of the company is fixed at \$2,000,000. The railway to be built is to run through Roberval, Ashuapmouchuan, Demenles, Dufferin, Normandin, Girard, Albanel, Racine and Dolbeau Tps. to deep water on the Saguenay River at Saint Fulgence. Construction is to be commenced in 1920 and a line from Normandin to a connection with the Quebec and Lake St. John Ry. must be completed and put in operation within two years from the passing of the act.

Subparagraph 22, of article 6474 of the Revised Statutes of 1909, respecting the construction of branch lines for certain purposes is repealed and a new subparagraph substituted. With the exception of some verbal changes in the second paragraph of the subparagraph the only change is that the branch lines to be built are not to exceed in any one case 20 miles instead of the 6 miles authorized under the existing subparagraph. (Jan., pg. 18).

North Ry.—The Quebec Legislature has granted the company an extension of two years for the commencement, and of seven years for the completion of its projected railway. The North Eastern Ry. Co. was the title under which the company was incorporated in 1906, the provisional directors being: J. C. Heintz, P. Harnischfeger, New York; J. T. Marchand, J. B. Lapointe, Montreal; R. Chevrier, Ottawa, and the company was authorized to build a line from near Ville Marie, on the east shore of Lake Timiskaming, via the Des Quinze, Victoria and Kakabongwa Lake to Quebec City, with branches to the National Transcontinental Ry. near Lake Abitibi, from near the crossing of the Gatineau River to Nominig, from Lake Kakabongwa to Maniwaki and other branch lines not to exceed in any one case 15 miles. An extension of time for construction was granted in 1909, and also in 1912. The act of 1912 changed the company's name to the North Ry. Co.,

and it was given power to build a railway from Montreal to a junction with the National Transcontinental Ry., and thence to James Bay. In 1914 this company sold to the Dominion Government for \$250,000 its charter rights to build from Montreal to the National Transcontinental Ry. (May, 1915, pg. 171).

The North West Route Limited.—The Dominion Parliament is being asked to incorporate a railway and navigation company for the general advantage of Canada, with this title, to build a railway to be operated by steam, electricity or other power, from the westerly end of Baker Lake, northwesterly to the easterly end of Schultz Lake, and from the confluence of the Hanbury and Thelon Rivers, westerly and southwesterly to old Fort Reliance at the eastern end of Great Slave Lake, from the Hanbury and Thelon Rivers westerly to the northeasterly end of Artillery Lake, and from the southwesterly end of Artillery Lake southwesterly to old Fort Reliance at the eastern end of Great Slave Lake. The applicants desire power to dredge or otherwise improve Thelon River channel to build and operate steam and other ships, to build wharves, docks, elevators, warehouses, etc. Smeltic and Lewis, Ottawa, are solicitors for the applicants. Application was made to the Dominion Parliament at the regular session of 1919, for the incorporation of a company with the same title and similar powers. The bill was passed by the House of Commons, but the Senate's railway committee reported June 6, that the incorporation of the company would not be in the public interest, and the bill was thrown out. (July, 1919, pg. 382).

Pabos, Amqui and Edmundston Ry. Co. The Dominion Parliament is being asked to incorporate a company with this title to build a railway from Pabos, Gaspe County, along the valley of the Grand Pabos River, cross Pabos Seigneurie and run through Blais, Lepage, Amqui, Pineau and Jette Tp. in Matane County, Lake Metis Seigneurie in Matane and Rimouski counties; Rimouski County, Timiskaming Seigneurie, Timiskaming County, Que., to Edmundston, N.B., with a branch from Grand Vallée, on the St. Lawrence River to the main line by the shortest possible route. G. L. Dionne, Amqui, Que., is solicitor for the applicants.

Pacific Great Eastern Ry.—A report on railway construction in British Columbia in which considerable references are made to the P. and G.E.R. The report states that repairs to the roadbed and bridges of the sections in operation have been made, and cribwork to protect the line from washouts has been built. There have been used in maintenance 21,000 new ties, and the line has been placed in good condition. The Cheakamus bridge, which was burned, was rebuilt, traffic being interrupted for six weeks.

The Newport waterworks system has been acquired for \$14,256, and has been extended so as to provide adequate water supply for Squamish Town and the railway. A power wheel and electric generating plant had been installed, providing light and power for the railway works, and machine shop and the town.

Regarding new construction on the extension from Clinton to Fort George, the report states that work was gone on with throughout 1919 and is still in progress. The material assembled at Lone Butte locomotive house and machine shop consisted of 300,000 ties, 3,000

poles, 75 miles of fencing and 24,000 tons of other material. A water tank and temporary buildings were erected; 183 miles of new grading was done; bridges were built; 73 miles of track were laid, bolted and spiked to Sept. 15; spur tracks were laid to ballast pits, and 250,000 yards of ballast got out; 102 miles of telegraph line were strung; 49 miles of fencing put up; 15 bridges containing 1,750,000 ft. b.m. built; three 40,000 gall. water tanks were put up, and there were also built 7 stations, and 2 section houses, and 2 stock yards were laid out. Twelve cottages have been built at Squamish for railway workmen at a cost of \$18,989. The expenditure on new construction was approximately \$1,800,000, and the cost of engineering was 2.25%.

A contract to complete the railway to Fort George has been let to the Northern Construction Co., and the programme for the year is a heavy one. Forty-one timber bridges requiring 8,000,000 ft. b.m. and 3 steel bridges, regrading of 130 miles and the construction of 20 miles of entirely new line is required, 3 locomotives, 45 flat and 25 boarding cars additional will be required.

In order to avoid sliding hill sides and excessive cost for regrading and bridging, it was decided to divert the line at Quesnel and the crossing of the Cottonwood River. The Chief Engineer estimates as follows:

Cost of completing original line with bridges across Quesnel and Cottonwood permanent structures	\$1,281,822.00
New line	1,210,340.00

Difference in favor of new line	\$ 71,482.00
Capitalized operating value	600,000.00
Total saving	\$1,311,482.00

Besides the above economic saving the diversion will take the railway to the edge of the Fraser River at Quesnel, affording close connection between river steamers and the railway.

Surveys were made during last summer between Ashcroft and Clinton. Sixty-six miles of trial line were run. The projected line is 41.5 miles and with the exception of 6.8 miles at Ashcroft a 1% line has been obtained without excessive construction cost.

The report says that the West Vancouver ferry will be discontinued and the P.G.E.R. north shore line will handle the West Vancouver passenger traffic. This railway has handled 7,000 passengers in a single day between North Vancouver and Whitecliffe.

The report gives a brief summary of the resources of the country adjacent to the P.G.E.R. and concludes by estimating the cost of completing it to Fort George and supplying necessary equipment at \$4,000,000. The cost of the Peace River extension is estimated approximately at \$18,000,000.

Quebec and Chibougamau Ry. Co.—The provisional directors named in the act recently passed by the Quebec Legislature, incorporating a company with this title, are: J. C. Cote, G. E. Paradis, Quebec; P. C. Costo, Montreal; D. Roy, Beaumont, Que.; W. J. Ewing, Richmond, Que. The company's office is to be in Quebec, its capital is placed at \$1,000,000, and it is empowered to build a railway to be operated by steam or electricity, from Quebec northerly through Quebec, Montmorency, Charlevoix and Chicoutimi Counties to Chicoutimi on the Saguenay River, and thence through Chicoutimi and St. John Counties to Lake Chibougamau, and also branch lines. (Dec., 1919, pg. 655).

Quebec, Que., to St. Stephen, N.B.—The Quebec Board of Trade passed a resolution recently urging the Dominion Government to study the practicability of building a railway from Quebec City to St. Stephen, N.B. D. F. Maxwell, C.E., of St. Stephen, N.B., is reported to have informed the board that the line suggested would give a route of about 250 miles from Quebec to deep water at St. Stephen, with a 0.4% gradient, and would effect a saving of about 300 miles, as against the present route. This projected route was first surveyed in 1832. (July, 1919, pg. 382).

The Quebec Central Ry. has, we are officially advised, completed the location for an 8.11 mile extension of its line from Scotts, to connect with the Canadian National Rys. at 2.5 miles west of St. Isidore station, and that construction will be proceeded with in the spring. The company expects to make arrangements by which it will be enabled, by means of this extension, to operate its train service over the Canadian National Rys. lines and the Quebec Bridge into the Champlain St. terminal in Quebec City. (Jan., pg. 18).

Quebec Colonization Ry. Co.—The provisional directors named in the act passed by the Quebec Legislature, recently incorporating a company with this title, are: F. C. Harriman, by J. L. Bunnell, attorney, New York; J. S. Morrison, Outremont, Que.; E. de C. Porcheron, L. Saint-Jacques, Montreal. The company has power to build a railway from Mont Laurier, Labelle County, southwesterly to the C.P.R. near Maniwaki, and running through Campbell, Kiawika, Dudley, Pope, Robertson, Boutillier, Kensington, Cameron, Wabasse, Aumond, Egan, Maniwaki and Bouchillie Tps., or any of them, or through unorganized territory;

then from Maniwaki westerly, in the direction of Lake Expansé and Lac des Quinze, to the C.P.R., near Timiskaming, then southeasterly through Tabaret, Mercier and Gendreau Tps.; also to build a railway from the Coulonge River, in Pontiac County, northerly to near Nottawa on the National Transcontinental Ry., thence northerly to the Bell River north of Lake Shabogama; with connecting lines and branches, the lines to be operated by steam or electricity. It also has authority to develop water powers, to distribute electric energy, to carry on business as hotelkeepers, and to operate ships. (Jan., pg. 18).

Regina Spur Lines—A press report states that Regina, Sask., City Council is considering a bylaw authorizing the building of a spur line to serve the T. Eaton Co., and the Wood Vailance Co.'s premises.

Roberval-Saguenay Ry.—The Quebec Legislature has passed an act authorizing the building of a line from the Quebec and Lake St. John Ry., near Malbaie "passing by the most advantageous places." The company is also given power to begin building this and other authorized, but unconstructed lines, by Mar., 1922, and to complete them by Mar. 24, 1925. (Jan., pg. 19).

Salmon River and Northern Ry. Co.—The Quebec Legislature has confirmed the company's charter rights as given in the statutes of 1905, chap. 59, has extended the time for building the projected railway for 10 years, has given authority to build branch lines not to exceed, in any one case, 15 miles, and has changed the company's office from Montebello to Fasset, Labelle County. The line authorized in 1905, the time for the construction of which was extended on different occasions, is projected to

start at Grenville, and run westerly to Montebello, thence northerly along the Salmon River Valley, to the west side of Lake Papineau; thence northerly on the east side of the North Nation River and Lake Nominon to the Rouge River Valley, where it would turn to the south-east, and along the western valley of the Rouge River to the National Transcontinental Ry. (Jan., pg. 19).

Sydney and Louisburg Ry.—The locomotive house at Sydney, N.S., is reported to have been destroyed by fire, Feb. 1; the loss being estimated at \$10,000.

Vancouver Terminal Belt Ry. Proposed—H. H. Stevens, M.P., in the course of an address before the Vancouver Electrical Club, recently, at which W. G. Murrin, Assistant General Manager, British Columbia Electric Ry., presided, referred to the harbor improvements proposed to be made by the Dominion Government at Vancouver. He is reported to have said that the amount expended during the last seven years for the improvement of the harbor, including the building of the government elevator, dredging, widening the First Narrows, etc., had been over \$7,500,000. He also said he believed there was an absolute necessity for a belt railway system which would run along the north and south shores of the harbor and be connected by a bridge, probably at the Second Narrows. Such a railway must of necessity be under public control. All private lines should be granted free access so as to enable their cars to load and unload at the ships and docks. The railway should be built so as to serve every portion of the waterfront. The problem of the amount of trackage required from the piers to deal with freight is one on which the Dominion Government will consult experts.

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board to Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

Important traffic orders made by the board are given in full on another page of this issue.

General order 282, Jan. 29.—Amending general order 25, Jan. 25, 1909, respecting lighting systems to be used on trains.

29,283, Jan. 19.—Authorizing G.T.R. to build sidings and spurs for Lake Simcoe Ice Supply Co. and Chappmans Ltd., Belle Ewart, Ont.

29,284, Jan. 17.—Authorizing C.P.R. to build spur for T. Eaton Co., Regina, Sask.

29,285, Jan. 19.—Authorizing Alberta Public Works Department to make highway crossing over C.P.R. in north half of Sec. 2, Tp. 34, Range 1, west 5th meridian.

29,286, Jan. 22.—Relieving G.T.R. from providing further protection at Brenton's crossing, Corbyville, Ont.

29,287, Jan. 22.—Authorizing Canadian Northern Western Ry. to cross 24 highways with its Hanna-Medicine Hat Branch, mile 22.22 to 58.94, Alta.

29,288, Jan. 22.—Dismissing complaint of United Grain Growers, Ltd., Winnipeg, for Canadian National Rys. have refused compensation for loss by delivery to Thunder Bay elevator, instead of Paterson's elevator, of car of grain at Deepdale, Man., Dec. 5, 1918, consigned to complainants in care of C.N.R. terminal elevator, Port Arthur, Ont.

29,289, Jan. 22.—Authorizing C.P.R. to build spur for Northwestern Milling & Export Co., Moosomin, Sask.

29,290, Jan. 22.—Approving Grand Trunk Pacific Branch Line Co.'s clearance at coal tipples and works to build adjacent to tracks to serve Foothills Collieries, in n.e. ¼ Sec. 24, Tp. 47, Range 20, west 5th meridian, Alta.

29,291, Jan. 19.—Relieving Lake Erie & Northern Ry. from providing further protection at Gilkins St., Brantford, Ont.

29,292, Jan. 19.—Authorizing Essex Terminal Ry. to build siding across Walker Road, Walkerville, Ont.

29,293, Jan. 23.—Approving Toronto Suburban Ry. Standard Freight Mileage Tariff C.R.C. 1.

29,294, Jan. 23.—Authorizing C.P.R. to build temporary flood opening at mileage 92.7, Belleville, Ont.

29,295, Jan. 22.—Authorizing Canadian National Rys. to build spur to freight sheds over Regina Municipal Ry., Fifth Ave., Regina, Sask.

29,296, Jan. 23.—Authorizing C.P.R. to build spur for Gregory Tire and Rubber Co. Ltd., Westminster Jet, B.C.

29,297, Jan. 23.—Authorizing C.P.R. to close any divergent road or branch line at mile 16.71 east of s.e. ¼ Sec. 23, Tp. 13, Range 11, west 3rd meridian, Sask., and to close diverted road at mile 16.80 in s.w. ¼ Sec. 24.

29,298, Jan. 19.—Approving extension of Canadian National Rys. St. Rose du Lac Branch, mile 121.04 to 140.19, Man., and to build same across 19 highways.

29,299, Jan. 19.—Relieving Michican Central Rd. from providing further protection at the crossing east of Aylmer station, Ont.

29,300, Jan. 24.—Ordering C.P.R. to erect station buildings at Islington, Ont., in accordance with plan H22-67, work to be completed by July 31.

29,301, Jan. 22.—Approving location and plans of G.T.R. station to be built at Hawtrey, Ont.

29,302, Jan. 23.—Authorizing G.T.R. to use bridge 174, across Little Trout Creek, near Kingsley, Que.

29,303, 29,304, Jan. 23.—Authorizing C.P.R. to close and divert highway at mile 18.76, to cross at grade and divert road at mile 18.79, to close and divert highway at mile 15.94, to cross at grade diverted road at mile 21.96, and close and divert highway at mile 22, on its Archive-Wymark Branch, Sask.

29,305, Jan. 24.—Authorizing Canadian National Rys. to make highway crossing over its track, between Sec. 3, Tp. 23, and Sec. 35, Tp. 22, Range 29, west principal meridian.

29,306, Jan. 24.—Approving deviation of Grand River Ry. in Waterloo Twp. and Kitchener, Ont., and authorizing it to build diverted line across Maurice and Sydney Sts., Ida Ave., Carl St., Cedar Grove, Dundas and Prince Arthur Aves.

29,307, Jan. 23.—Authorizing Vancouver Power Co. to install gates in lieu of interlocking plant

at crossing of New Westminster Southern Ry. at Cloverdale, B.C.

29,308, Jan. 27.—Authorizing Canadian Northern Pacific Ry. to carry traffic from junction with Patricia Bay line, mile 1.80, to mile 52.5, B.C., speed of trains between mile 26.5 and 52.5 not to exceed 15 miles an hour, and over crossings 10 miles an hour.

29,309, Jan. 26.—Authorizing railways operating in western Canada to increase charge from \$3 to \$4 a car for lining cars used for flaxseed.

29,310, Jan. 26.—Ordering Canadian National Rys. forthwith to appoint station agent at Clair, Sask.; additional station accommodation to be further considered by the board.

29,311, Jan. 26.—Authorizing C.P.R. to build spur for Robin Hood Mills, Ltd., Moose Jaw, Sask.

29,312, Jan. 30.—Ordering C.P.R. to provide at least 125 cars and Canadian National Rys. at least 50 cars until otherwise ordered, at elevators at Port William and Port Arthur, Ont. for receipt, handling, and carriage of grain, other than wheat, also flaxseed, for domestic use in Canada; cars to be allocated in proportion to cars ordered for which the necessary documents have been submitted.

29,313, Jan. 28.—Approving agreement, Jan. 10, between Bell Telephone Co. and Sydenham Union Telephone Co., Grey County, Ont.

29,314, Jan. 25.—Authorizing Oshawa Ry. to build siding for Pedlar People Ltd., Oshawa, Ont.

29,315, Jan. 29.—Authorizing G.T.R. to build extension of siding for Durham Furniture Co., Durham, Ont.

29,316, Jan. 28.—Authorizing C.P.R. to build its Lundon North Branch, Man., to Empress, at grade across 36 highways in Alberta.

29,317, Jan. 28.—Authorizing G.T.R. to operate siding to be built by Toronto Harbor Commissioners for C.R. Peckover.

29,318, Jan. 29.—Suspending order 18,242, Nov. 19, 1912, which authorized City of Brandon, Man., to carry its municipal railway across Canadian Northern Ry. at First St., for 12 months from Jan. 29, during which, operation as authorized by order 21,106, Dec. 26, 1913, be continued.

29,319, Jan. 29.—Ordering Canadian National Rys. to build cattle pass on G. H. Dickson's pro-

Traffic Order by Board of Railway Commissioners.

C.P.R. Weyburn-Lethbridge Line Rates and Extension.

29,230. Jan. 2.—Re application of Associated Board of Trade and Saskatchewan Grain Growers' Association for a reduction in rates to stations on the C.P.R. Weyburn-Lethbridge line, and for the construction of the uncompleted portion of the line. Upon hearing the application at Regina, Mar. 1, 1919, the applicants, the Shaunavon Board of Trade, and the railway company being represented at the hearing, John George appearing in person, and what was alleged, it is ordered that the application be dismissed.

Fredericton and Grand Lake Coal & Ry.'s Freight Tariff.

29,263, Jan. 10. This order, as issued originally, and published in Canadian Railway and Marine World for February, pg. 71, has been changed to read as follows: Re application of Fredericton & Grand Lake Coal & Ry. Co., under sec. 330 of the Railway Act, 1919, for approval of its Standard Mileage Freight Tariff, C.R.C., no. 84. Upon the report and recommendation of the board's Chief Traffic Officer, it is ordered that said tariff of maximum mileage freight rates, to apply between stations on the Fredericton & Grand Lake Coal & Ry. Co.'s railway, be approved, the tariff, with a reference to this order, to be published in at least two consecutive weekly issues of the Canada Gazette.

New Brunswick Coal & Ry. Freight Tariff.

29,264, Jan. 10.—This order, as issued originally, and published in Canadian Railway and Marine World for February, on pg. 71, has been changed to read as follows: Re application of New Brunswick Coal & Ry., under sec. 330 of the Railway Act, 1919, for approval of its Standard Mileage Freight Tariff C.R.C. no. 51. Upon the report and recommendation of the board's Chief Traffic Officer, it is ordered that the said tariff of maximum mileage freight rates, to apply between stations on the New Brunswick Coal and Railway, be approved; and that the tariff, with a reference to this order, be published in at least two consecutive weekly issues of the Canada Gazette.

Supply of Grain Cars at Port Arthur and Fort William.

29,312. Jan. 30.—In pursuance of the powers conferred upon the board by the Railway Act, 1919, sec. 312, and order in council 1,589, July 31, 1919, as continued in full force and effect by act of the Parliament of Canada, 10 George V., chapt. 9, and of all other powers possessed by it in that behalf, it is ordered as follows: That on Monday, Feb. 2, 1920, and on each succeeding Monday until otherwise ordered by the board the C.P.R. provide at least 125 cars and the Canadian National Rys. at least 50 cars at the elevators at Port Arthur and Port Arthur, Ont., for the receipt, handling, and carriage of grain, other than wheat, also flaxseed, for domestic use in Canada; the said cars to be allocated in proportion to the cars ordered for which the necessary documents have been surrendered.

This order was amended by order 29,336 Feb. 5, as follows: Upon its being represented to the board that the effect of the order allocating the cars upon the

surrender of the necessary documents is to exclude users of private elevators which do not issue warehouse receipts from any benefit thereunder, it is ordered that order 29,312 be amended by striking out the words "for which the necessary documents have been surrendered," at the end thereof.

New Brunswick Coal & Ry., Passenger Tariff.

29,323. Jan. 30.—Re application of New Brunswick Coal & Ry., under sec. 334 of the Railway Act, 1919, for approval of its Standard Passenger Tariff, C.R.C. 4. Upon the report and recommendation of the board's Chief Traffic Officer, it is ordered that the said tariff, to apply between stations on the New Brunswick Coal and Railway, be approved; and that the tariff, with a reference to this order, be published in at least two consecutive weekly issues of the Canada Gazette.

Fredericton Grand Lake Coal & Ry. Co.'s Passenger Tariff.

29,370. Jan. 30.—Application of Fredericton & Grand Lake Coal & Ry. Co., under sec. 334 of the Railway Act, 1919, for approval of its Standard Passenger Tariff C.R.C. 4. Upon the report and recommendation of the board's Chief Traffic Officer, it is ordered that the said tariff, to apply between stations on the Fredericton & Grand Lake Coal & Ry. Co.'s railway be approved; the tariff, with reference to this order, to be published in at least two consecutive weekly issues of the Canada Gazette.

Free Time for Ordering and Paying Freight Charges.

29,389. Re application of Saskatchewan Supply and Fuel Co., for consideration by the board of the question of free time allowed for ordering and paying freight charges. Upon hearing the application at Saskatoon, Nov. 29, 1919, the applicant, the Canadian Freight Association, and the C.P.R., being represented at the hearing, and what was alleged, it is ordered that the application for a modification of rule 2 (b) of Canadian Car Demurrage Rules to afford free time for alternative placement orders for unloading cars, also for an allowance of free time for payment freight charges be refused.

Passenger Commutation Rates Tariffs Suspended.

29,407. Re complaints of City of Toronto; residents of Oakville, and stations between Oakville and Toronto; residents of Laval des Rapides, Que.; Gatineau Residents Association; E. N. Brown, of Montreal; the Town of Weston, Ont., and residents of the Town of Lasalle, Que., against proposed increase in commutation rates published by railway companies to become effective March 1. Upon hearing the complaint of the residents of the Town of Lasalle at Montreal, Feb. 25, the Town of Lasalle and the railway companies interested being represented at the hearing, and what was alleged and upon reading the submissions filed on behalf of the other parties interested, it is ordered that the following tariffs be suspended, pending hearing by the board, viz.: Tariffs C.R.C. 139, G.T.R. Tariff C.R.C. no. E-2822. Canadian National Rys. Tariffs C.R.C. no. W-90 and no. E-114. Toronto, Hamilton and Buffalo Ry. Tariffs C.R.C. 1, 279, 1,281, 1,284. New York Central Rd.

Supplement 4 to Tariff C.R.C. 9. Central Vermont Ry. Supplement 1 to Tariff C.R.C. 525.

Regulations for Car Lighting Systems.

The Board of Railway Commissioners passed general order 282, Jan. 29, as follows: Re general order 25, Jan. 25, 1909, prescribing lighting systems to be used on each and every car requiring lighting on the railway, or portion of railway, operated by every railway company, subject to Dominion jurisdiction. Upon reading what is filed on behalf of the Canadian Pacific, Grand Trunk, Grand Trunk Pacific, Canadian National Railways and the Wabash and Michigan Central Railroads, and the report and recommendation of the board's Mechanical Expert, concurred in by its Chief Operating Officer, it is ordered that general order 25, be amended by adding after sub clause (3) of clause (h), paragraph 3, the following, viz.: "4. That in all cases of derailment or accidents to passenger cars lighted with Pintsch gas or Commercial acetylene, the supply of gas must be shut off, if possible, by closing the stud valves in storage tanks underneath the body of the car. Arrangements must be made to place a key securely in the gauge box underneath the car, where it will readily be accessible. Instructions must be issued to train and wrecking crews to govern this matter, so that there will be no misunderstanding in case of accident."

Grain Inspected at Western Points.

The following figures, compiled by the Dominion Bureau of Statistics, show the number of cars of grain inspected at Winnipeg and other points on the Western Division, during January, and during five months ended Jan., 1920 and

	Jan., 1920	5 mos. to Jan., 1920	5 mos. to Jan., 1919
C.P.R.	5,564	50,363	51,662
C.N.R.	4,010	30,781	33,513
G.N.R. (Duluth)	20	476	709
T.T.R.	1,817	14,328	12,116
Totals	11,411	95,947	98,000

A Concordance of the Railway Act, statutes of Canada, 1919, chap. 68, by A. H. O'Brien, M.A., ex House of Commons Law Clerk, and counsel of the House of Commons Speaker, being a new edition of Currier's Concordance, has been issued. It contains the full text of the act, an analytical index of it, a table of reference from the old act to the new, a list of other acts affecting railways, and the Board of Railway Commissioners' rules and regulations, with index. It is published by Canada Law Book Co., Toronto.

Railway Lands Patented—Letters were issued during January for Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia as follows:

	Acres.
Canadian Northern Ry.	1602.00
Canadian Pacific Ry., roadbed and station grounds	1.09
Central Canada Ry.	8.77
Total	1606.86

W. B. Way, Superintendent, Canadian National Rys., Cochrane, Ont., in sending Canadian Railway and Marine World some suggestions, says: "I consider the circulation of your paper is of value to railways and railway men."

C.P.R. Scholarships in McGill University.

Grant Hall, Vice-President, C.P.R., has issued the following circular:—A free scholarship, covering four years tuition in agriculture, chemistry, civil, mechanical or electrical engineering at McGill University, Montreal, is hereby offered, subject to competitive examination, to apprentices and other employees engaged on the company's permanent staff and under 21 years of age, and to minor sons of employees. The competitive examination, which will be the regular entrance matriculation examination provided for in the university's annual calendar, will be held at the university, and at other centers throughout Canada, in June, 1920. The candidate making the highest average, and complying with the requirements of admission, will be awarded the scholarship and have the option of taking any of the above courses. Scholarships will be renewed from year to year, to cover a period not exceeding four years, if, at the close of each session, the holder thereof is entitled, under the rules, to full standing in the next higher year. In case a scholarship holder finds it necessary to interrupt his course for a year or more, notice must be given at the close of the session to the C.P.R. Co., and to the Dean of the Faculty of Applied Science of the University, in order that the scholarship may be open to other applicants. In order to establish prior claim to the next available scholarship, notice of the student's intended return must be given to the C.P.R. Co. and to the Dean of the Faculty of Applied Science, not later than Jan. 1, preceding the opening of the session in which such scholarship will be available. Applications for certificates entitling eligible persons to enter the competition should be addressed to C. H. Buell, Staff Registrar and Secretary, Pension Department, C.P.R., Montreal. Copies of the annual calendar containing the conditions of admission and announcement of courses may be obtained upon application to the Registrar, McGill University. Certificate holders should, not later than May 10, 1920, apply to the Registrar of the University, for admission to the examination, and such application must be accompanied by the company's certificate of eligibility.

Esquimalt and Nanaimo Ry. Land Grant—Replying to a question asked in the British Columbia Legislature, Feb. 10, as to the amount contributed by the E. and N.R. to the provincial revenue under the E. and N.R. Co.'s Land Grant Tax Exemption Ratification Act, 1912, the Finance Minister said: "The sum of 1 1/4c in respect of each acre of the company's land grant remaining vested in the company and exempt from taxation on June 30 in each year, the payments made on this account to date being as follows: 1913, on 1,101,725 acres, \$16,525.87; 1914, on 1,087,118 acres, \$16,307.77; 1915, on 1,063,254 acres, \$15,948.81; 1916, on 1,059,270 acres, \$15,890.55; 1917, on 1,057,992 acres, \$15,860.00; 1918, on 1,056,000 acres, \$15,840.45; 1919, on 1,054,302 acres, \$15,814.58."

Promoters of a railway to connect Antofagasta, Chile, and Buenos Aires, Argentina, at a cost of \$25,000,000, are said to be seeking capital for construction in North America.

Snow and Cold Paralyze Newfoundland's Transportation Facilities.

St. John's, Nfld., press dispatch, Feb. 10.—Owing to continuous snowstorms, the Reid Newfoundland Co. was unable to run any trains in January, and it is certain that all railway traffic will be abandoned until spring opens. The intense cold, reaching 38 degrees below zero, has made matters still more serious, the whole island having been for four weeks in a state of natural blockade by ice. Every bay is frozen over sufficiently to drive horses from side to side, a state unknown for 100 years.

The coastal service has collapsed and sealing steamships are powerless to carry food and coal to sections, suffering from the hardest deprivations. The steamships Prospero, Diana and Eagle, carrying foodstuffs north, are frozen in off Fogo, and will be unable to prosecute the seal fishery this year. This means that only seven ships will endeavor to face the Arctic floe. Sealing crews must walk from the northern districts to St. John's, distances ranging from 120 to 200 miles. A serious coal shortage intensifies the situation. Food shortage is so great in the lumber camps that horses have been killed for want of food, trains being snowbound.

The railway problem is the most serious the new government must face. The railway has run down, it lacks rolling stock and motive power, and only the expenditure of many millions can remedy the situation. Under the Reid railway contract, the Reid Newfoundland Co. is supposed to repair the line, but it is evident that it is not in financial position to do so, the railway, it contends, being a losing concern. A government expenditure of \$10,000,000 to repair the railway will place a heavy financial burden on the country.

To ease the situation the government has invited tenders for four steamships for the north and west coasts, and the press urges that the present bay service be doubled.

The ice blockade had seriously interfered with the export of fish to the Mediterranean, and fish exporters fear that the half million quintals of fish yet unshipped will reach Latin countries too late for the Lenten season, in which case a serious slump in prices may result.

Among the Express Companies.

The Canadian National Ex. Co. has opened offices at Neuville and Cap Rouge, Que., and Cronyn, Ont.

H. A. Fairborne, heretofore at Winnipeg, has been appointed agent, Dominion Ex. Co., Portage la Prairie, Man., vice A. W. Hodgson, transferred.

A. W. Hodgson, heretofore agent, Dominion Ex. Co., Portage la Prairie, Man., has been appointed agent, same company, Maple Creek, Sask., vice R. Fennell, given leave of absence on account of ill health.

The Canadian Ex. Co. has granted increases in wages to its employees, ranging from 10% to 20%, effective from Feb. 7. The negotiations between the company and the employees were conducted by the Canadian Brotherhood of Railway Employees, and it is stated that the agreement affects indoor clerks as well as outdoor employees.

The G.T.R. has been directed by the Board of Railway Commissioners' order 29,355, Feb. 9, to construct a building, at least 75 x 30 ft., at a point 50 ft. west of the station at West Toronto, Ont., for the Canadian Ex. Co. A sheltered platform, at least 30 ft. wide is to be provided at the east end of the building, for empty trucks, and the work completed by Aug. 31.

Telegraph, Telephone and Cable Matters.

John Stanton, Agent, Great North Western Telegraph Co., Port Dalhousie, Ont., for about 30 years, died there, Feb. 13, aged 69.

Representatives of Canadian telegraph employees will, it is announced, meet in Winnipeg during March, to revise and standardize wage agreements.

The Great North Western Telegraph Co. has closed its offices at Pokemouche, N.B.; Ameson, and Bala, Ont.; and Victoria Beach Man., and has opened offices at Kabina and Savoff, Ont.

Glyn Osler, Toronto, and G. D. Milne, New York, have been elected directors, Bell Telephone Co. of Canada, succeeding the late A. Lash, and the late N. C. Kingsbury, respectively.

The new cable line connecting Santos and Rio de Janeiro, Brazil, with the cable system at Montevideo and Buenos Aires, thus providing direct communication between the United States and Brazil, will be in operation about March 20.

The following transfers in the Pacific Cable Board's staff have been announced: H. Baxendale, from Sydney, New South Wales, to Bamfield, B.C.; R. S. M. McCombie, from Bamfield, B.C., to Fanning Island; T. F. Price, from Halifax, N.S., to Auckland, New Zealand, and H. K. Balcombe, from Montreal to Calgary, Alta.

A further development in the possibilities of commercial wireless telephone business, took place early in February, when W. Marconi, G.C.V.O., spoke between London and Canada by that system. He is reported to have stated that conversations across the Atlantic, will be more or less common in the near future, at a cost of not more than 24c for one minute.

The Mackay Companies' annual meeting was held Feb. 16, when it was reported that notwithstanding all the troubles due to the war, and to government operation, the gross receipts of the ocean and land line systems since the return of the properties to the companies' control on Aug. 1, 1919, have steadily increased, and the net profit is satisfactory. Sir Vincent Meredith, President, Bank of Montreal, resigned as one of the trustees, the vacancy not being filled.

The Farmers' Telephone Co., Hartland, N.B., at its annual meeting recently, passed its annual dividend, "on account of the extraordinary advance in the cost of supplies and operating expenses, without corresponding increases in rentals and tolls." It was announced that in order to keep the property in the present hands, additional capital would have to be forthcoming, and that rentals must be increased, in accordance with the increases in the cost of operating. It was also hinted that the company may pass under the New Brunswick Telephone Co.'s control.

Electric Railway Department

Increases in Electric Railway Freight and Passenger Rates.

British Columbia Electric Ry.—The Board of Railway Commissioners issued order 29,237, Jan. 10, dismissing complaint by Broadview Ratepayers' Association, Burnaby, B.C., against fares charged by B.C.E.R. in Burnaby district. Victoria City Council has applied to the B.C. Legislature for an act to amend its act of incorporation in various details. One of the sections of the bill provides for the passing of regulations by the city council as to jitney traffic, which would have the effect of prohibiting it within certain areas. The introduction of this section is the result of an understanding arrived at with the British Columbia Electric Ry., as a preliminary to an agreement for an increase of fares on the city lines. The proposed new contract between the city and the company is reported to contain the following sections: The company shall put into effect a fare schedule making the regular fare on all lines 6c with transfer privileges; 6 tickets being sold for 35c; special tickets for children under 12, at all hours, and for school children, during school hours, to cost 25c for strip of 10; children under 5 being carried free of charge. The same rates for electric lights to be in force in Victoria as in Vancouver. This would probably make the rate per kilowatt 6c, abolish meter rent and make the minimum per month 50c. That the company undertake to maintain the strip of roadway between the tracks within 18 in. of both sides of the rails.

Calgary Municipal Ry.—The Calgary, Alta., City Council's wage committee is reported to have recommended, after a consultation with representatives of employees of the various departments, the granting of increases in wages, estimated to amount to \$225,000. City Commissioner Graves is reported to have expressed the fear that these increases cannot be met without increasing the fares on the Calgary Municipal Ry., and the rates charged for other public utilities. The rate of wages recommended to be paid the motormen is reported to be 72½¢ an hour. The present rate is 65¢ and the men asked 75¢.

London and Port Stanley Ry.—A London, Ont., press dispatch stated recently that the L. & P.S.R. management had served the required six months notice on the Michigan Central Rd. that rates for hauling the latter's freight and passenger traffic between London and St. Thomas must be advanced next summer, it being claimed that the L. & P.S.R. is losing money on the Michigan Central business, because of the sharp advance in operating costs since the agreement was made in 1914, and that provision is made for rate adjustments in five-year periods, and for arbitration by the Board of Railway Commissioners in the event of failure to agree.

We were officially advised by the L. & P.S.R. management Feb. 20, that no such notice had been served, that under the agreement, it is impossible to advance rates for hauling freight next summer and that passenger rates are not controlled by the agreement.

Montreal and Southern Counties Ry.—Application has been made recently to

the Board of Railway Commissioners for an increase of 20% in the commutation fares between points on the Montreal and Southern Counties Ry. and Montreal. Following is a comparison between the present rates and those for which approval is asked:

	Present.	Proposed.
55 trip books	\$3.15	\$3.80
46 trip books	2.65	3.20
10 trip-slips	85	1.00

The company gave the following facts in support of its application. The financial results of the company's operations between 1914 and 1917 are set out in the board's judgment of July 10, 1918. The results of operations during 1918

Canadian Electric Railway Association.

Honorary President, Lieut.-Col. J. E. Hutcheson, General Manager, Montreal Tramways Co.

Honorary Vice President, Acton Barrows, Proprietor and Editor, Canadian Railway and Marine World.

President, A. Gaboury, Superintendent, Montreal Tramways Co.

Vice President, G. Gordon Gale, Vice President and General Manager, Hull Electric Co.

Honorary Secretary-Treasurer, pro tem, A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Railway Co.

Executive Committee, The President, Vice President, and F. D. Burpee, Superintendent, Ottawa Electric Railway Co.; C. C. Curtis, Manager, Cape Breton Electric Co.; A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Railway Co.; Geo. Kidd, General Manager, British Columbia Electric Railway Co.; M. W. Kirkwood, General Manager, Grand River Railway Co. and Lake Erie & Northern Railway Co.; A. W. McLimont, Vice President and General Manager, Winnipeg Electric Railway Co.; R. M. Reade, Superintendent, Quebec Railway Light & Power Co.; Lt.-Col. G. C. Royce, General Manager, Toronto Suburban Railway Co.; C. L. Wilson, Assistant Manager, Toronto & York Radial Railway Co.

Official Organ—Canadian Railway and Marine World, Toronto.

and the first 10 months of 1919, are as follows:

	Jan. to June, 1918	July to Dec., 1918
Gross revenue	\$144,702.78	\$180,290.43
Operating expenses (including rentals)	168,173.81	160,442.67
Taxes	2,700.00	3,400.00
Interest on unfunded debt at 5%	22,600.97	20,584.60
Gross revenue	\$183,907.65	\$143,368.94
Operating expenses (including rentals)	179,509.34	181,528.82
Taxes	4,300.00	4,000.00
Interest on unfunded debt at 5%	38,453.76	25,165.36
Deficit	88,865.45	17,325.24

The advances made to the company by the G.T.R. Co. for capital expenditure up to June 30, 1919, amounted to \$1,534,827.74. The increased rates authorized by the board's judgment above referred to became effective Aug. 11, 1918, and the total passenger revenue for the year ended June 30, 1919, was \$313,787. This figure, however, includes revenue for July and the first part of August before the increase became effective, amounting to \$45,540. The increase, therefore, is included in the balance of the total receipts for the year, viz: \$268,247.

The road has been properly and carefully operated and its affairs have been administered with a due regard for economy. The increase in operating expenses, evidenced by the above figures, is largely due to the increased wages which it has been necessary for the company to pay its trainmen. The following are the rates of pay for trainmen, in effect July 1, 1918; Oct. 1, 1918, and Aug. 1, 1919, in cents per hour:

Year	July 1, 1918	Oct. 1, 1918	Aug. 1, 1919
1	28-30	30-32	37-38
2	29-31	31-33	39-40
3	29-31	31-33	42-44
4	30-32	32-34	44-46
5	30-32	32-34	46-48
6	31-33	33-35	
7	31-33	33-35	
8	33-35	35-37	
9	33-35	35-37	
10	35-37	37-39	

The increases granted on Oct. 1, 1918, to shopmen, substation operators, station agents, trackmen, linemen, supervisors, dispatchers, and office forces, as well as to trainmen, produced an increase of 26% over the wages paid in 1917, and for 9 months ended June 30, 1919, amounted to \$32,917. The wage schedule effective Aug. 1, 1919, entails an increase of 30% over the rates previously in force, and as the amount paid for wages for the year ended June 30, 1919, was \$161,139.82, the increase will amount to \$48,341 a year.

The total passenger revenue for the year ended June 30, 1919, was \$313,787 on which a 20% increase would amount to \$62,757, assuming that the same traffic would continue. The proposed increase probably could not be made effective before Jan. 1, 1920. The proportion of this, which could be collected during the present fiscal year would not exceed \$30,000. The applicant's present maximum mileage rate is 2.875¢ a mile, whereas steam roads, operating in the same territory, have a maximum rate of 3.45¢ a mile, except the Quebec, Montreal & Southern Ry., which has recently been authorized to charge 4¢ a mile. The results of the applicant company's financial operations show that upon the present rates charged it has been unable to pay the interest on its fixed charges, to say nothing of earning any return upon the amount invested in the road.

The New Brunswick Power Co., owning the electric railway and gas and electric light and power plants in St. John, N.B., is applying to the New Brunswick Legislature for power to vary its rates for electric, gas and railway service to meet changes in their cost to make its charter conform to the recommendations of the Currier commission, and to give the company further relief. The Currier commission sat in the early part of 1919, and presented a report, a summary of which was given in Canadian Railway and Marine World for May, 1919, pg. 269. The legislature passed an act bringing the report into effect, provision being made for a reference to the N.B. Supreme Court as to the justice of the award. The court's decision has not yet been given.

Ottawa Electric Ry.—The arguments before the Supreme Court of Canada upon the three questions submitted by the court in the appeal to it on the pro-

passed, amount of fare, on the Britannia line, from Vancouver to Port Moody. The company declined to put an increased schedule of fares to operation on its suburban line to Britannia, and before referred permission by the Board of Railway Commissioners. An action was taken to the Supreme Court. The court heard arguments at the end of 1919, and subsequently rendered three judgments upon which it invited further arguments. The parties to the appeal were Napanis, Inc., the City of Ottawa and the Ottawa Electric Ry.

Toronto Suburban Ry. — Standard Freight Tariff C.R.C. 1, has been approved by the Board of Railway Commissioners, by order 29,293, dated Jan. 23. It is approved by Canadian Freight Classification on file with the Board of Railway Commissioners, and subject to the general rules and conditions of carriage published by the company; also by the car service, warehouse storage, switching rates and regulations in effect at shipping point and destination, and published in tariffs relating thereto, which are on file with the Board of Railway Commissioners.

The order was published in full in Canadian Railway and Marine World for February, pg. 71.

The Toronto and York Radial Ry. Co.—"On all railways subject to the jurisdiction of the board," submitted on Jan. 26 to the Ontario Railway and Municipal Board for its approval, Supplement 13 to Canadian Freight Classification 16.

United States Advances.—The Illinois, U.S., Committee of Public Utilities is reported to have given out a statement, Feb. 16, that street car fares have been increased in 460 cities throughout the United States. In 59 cities the fare had been increased to 10c. As an indication of the financial plight of the electric railway industry, the committee asserted that in 1919 forty-eight companies, with a total of 3,781 miles of track, went into the hands of receivers, while during the past three years 98 companies, representing approximately one-sixth of the mileage in the U.S., had become involved in bankruptcy courts.

Henry Ford is reported in discussing his new gasoline street car, to have said that practical fuel can be obtained by extracting alcohol from straw or fruit, in case of oil shortage.

Ottawa Electric Railway's Proposal for Service at cost.

Some information about this matter was given in Canadian Railway and Marine World for Feb. on pg. 79, in the form of a statement issued by the company's Superintendent, F. D. Burpee. Following is a copy of the letter sent to the Mayor and Board of Control of Ottawa, by the company:—"The franchise held by the Ottawa Electric Ry. Co. to operate a street railway in Ottawa expires in 1923, when the city will have the option of buying the property and operating the street railway, or of granting the company an extension of franchise. The company needs no spur of public demand to realize what Ottawa's growth necessitates in the way of increased street railway transportation. During the rush hours the cars are crowded, and, as the population of Ottawa is steadily increasing, this crowding can only be relieved by adding to the rolling stock and extending the system. As far as the company knows today, it goes out of business in 1923. It is therefore, not reasonable or advisable to make large capital expenditures upon extensions, rolling stock, car barns, additional power house equipment, etc., without knowledge whether an extension of the franchise is to be granted or the systems is to be taken over and operated by the city.

"There exists a simple and equitable plan now in operation in many cities, including Montreal and St. John, N.B., which, if applied to Ottawa, would afford almost immediate relief from existing conditions, and would also leave the city free to purchase the street railway properties upon the expiration of the franchise in 1923, or at any time thereafter. This plan is known as service at cost, and provides for the operation of a street railway, or any public utility, at the actual cost of producing the service. Included in that cost is a fair rate of interest on the actual value of the property. The method of ascertaining the value of the property under the service at cost plan is exactly the same as that provided for in the agreement between the Ottawa company and the city, if the latter assumes possession of the system at the expiration of the franchise, viz., by arbitration. To purchase the street railway the city would borrow the amount fixed by the board of arbitration as being the actual value of the property, and would pay for the money borrowed a rate of interest, depending upon the price which the city's bonds could be sold for at the time.

"The service at cost plan provides that the city shall become a partner of the company without any capital expenditure upon the part of the city. The plan provides for commissioners to be appointed by the city to act as joint controllers of the street railway. The commissioners shall have no financial interest in the company, and must be free from the influence of municipal politics. They shall have access to the company's books at all times, and the company cannot make expenditures without their authority. The plan further provides that if, at the end of year, the revenue has been greater than the cost of operation, the surplus shall be set aside to provide a fund which, in the course of time, will cause a decrease in the rate of fares. If extensions are made that are un-

profitable, or if greater service is called for than is justified, and the receipts are therefore inadequate to pay the costs of operation, then the fares are increased for the following year sufficiently to absorb the deficit. The plan therefore, provides a possibly fluctuating fare dependent upon the costs of operation; and it rests with the city through its commissioners to decide what those costs shall be. In other words, the cost to the riding public is based upon the actual cost of providing the service, no more and no less.

"The adoption of the plan in Ottawa would mean that instead of waiting four years, during which time the congestion on the cars will get steadily worse, the company could at once provide such additional rolling stock for the existing lines, and such extensions as the city considers necessary. The plan would ensure joint control by the city, through its commissioners, and the company, of the street railway system, without any investment by the city. The operation of the street railway would be continued under its present management, and, most important of all, the public would be assured of the best service for the least money. The company is ready to discuss this matter with the city's representatives, and respectfully suggests that no harm can come from a careful and immediate investigation of the suggested plan, and that no good can come from postponing its consideration."

The city council decided on Feb. 3 that a letter be sent to the company on the following lines:—"The council is not prepared to enter into any service at cost scheme such as suggested and, therefore considers it unnecessary to discuss general principles of this method of operating a railway. The council is disposed to entertain any reasonable proposition by which the O.E.R. Co. may be secured against loss due to any fall in prices in new equipment, plant or road bed acquired or constructed between now and the expiration of its franchise in 1923. That with a view to reaching a basis of discussion, the company be asked to forward a statement showing what new equipment or plant it deems necessary in order to ensure the efficient operation of the railway for the remainder of its franchise, with an approximate estimate as to the cost of the different kinds of equipment or plant. That the board of control be authorized, if it seems advisable, to meet representatives of the company with a view to discussing arrangements as to new equipment and plant.

As it is quite evident that the present city council is not in favor of service at cost, the company will probably drop the matter, at least as far as this year is concerned, but it continues to point out, through its weekly O.E.R. News, which is distributed on its cars, the excellent features which it claims for the plan.

The Ottawa City Council on Feb. 23 approved a draft bill to be introduced in the Ontario Legislature to enable the city to take over, extend and operate the Ottawa Electric Ry. system, and to provide for its management. The bill provides that the council may at any time, after the passing of the act, pass a by-law establishing a commission under the

name of the Ottawa City Railway Commission. The council also resolved that it is in favor of the city taking over the Ottawa Electric Ry. in 1923, under the terms of the agreement, and that notice be given the company in ample time to carry this into effect."

The Hydro Electric Power Commission of Ontario's Railway Projects, Etc.

In the voting by York Township rate-payers on Jan. 17 on a bylaw to raise \$381,587 towards the purchase completion and equipment of the Toronto Eastern Ry., from Bowmanville to Toronto, while there were 252 votes for and only 10 against, the total number of votes cast did not bear the proportion to the total number of voters required by the act. The council, when giving the bylaw its final reading on Feb. 17, was advised by the Hydro Electric Power Commission of Ontario that it is proposed to apply to the Ontario Legislature to amend the act of 1914, which requires bylaws granting aid to railways to be approved, not only by a majority of votes cast, but that one-third of the total electorate eligible must vote, so as to permit such bylaws to be carried by a majority of votes cast.

During February several meetings were held in the Niagara Peninsula to discuss the linking up of the whole of the electric railways in that area. This would involve taking over Niagara, St. Catharines and Toronto Ry. from the Canadian National Rys., and linking it up with the same local lines in the vicinity of Welland, on the one hand, and the taking over of the Dominion Power and Transmission Co.'s lines in Hamilton and vicinity. Negotiations are reported to have been in progress in connection with the two larger lines for some time past, and according to a recent statement in Hamilton, action is expected to be taken in regard to one or both during March.

Guelph, Ont., City Council is reported to have signed the agreement for the transfer of the Guelph Radial Ry. to the Hydro Electric Power Commission of Ontario, the transfer to be made on July 1. The commission is to put the line in first class condition and to provide a 10 minute service. The cost of the work is estimated at \$150,000.

The Sandwich, Windsor and Amherstburg Ry. will, it is reported, be taken over in the near future by the Hydro Electric Power Commission of Ontario under the agreement approved of recently.

The survey of the Sarnia, Ont., St. Ry. by the Hydro Electric Power Commission of Ontario's engineers, was reported on Feb. 13, to be completed. The report is being prepared and, it is expected that it will be presented to the Sarnia City Council at an early date.

Votes on Hydro Radial Railway By-laws—The Hydro Electric Power Commission of Ontario has announced that it will ask, at the Ontario Legislature's forthcoming session for an amendment to the Hydro Radial Railway Act, to provide that a majority of the votes polled, and not a majority of the possible votes, will carry any bylaw relating to the construction of radial railways under the commission's scheme.

Electric Railway Employees' Wages, Working Conditions, Etc.

Hamilton St. Ry.—A press report states that the company's employees have asked that a new wage schedule be put in operation upon the expiration of the present agreement in April. The present schedule has a minimum of 34¢ an hour and a maximum of 41¢. The new demand is as follows: First six months, 50¢; second six months, 55¢; second year, 60¢; and third year and over 65¢ per hour. Men operating snowplows and sweepers 5¢ an hour extra, and free overalls. They also want one week holiday a year, with full pay. All employees to operate on an 8-hour day straight, no runs to be less than 8 hours daily.

Niagara, St. Catharines and Toronto Ry. (Canadian National Rys. System)—The board of conciliation and investigation which was appointed by the Labor Department in connection with the dispute between the Niagara, St. Catharines and Toronto Ry. and its conductors, motormen, barn, shop and power house men and members of Amalgamated Association of Street and Electric Railway Employees of America Division 846 and which consisted of County Judge C. C. Snider, Hamilton, Ont., Chairman; J. D. Kelley, K.C., Ottawa, representing the company, and Jno. McAninch, representing the men, presented a unanimous report to which was attached a schedule of wages and rules drafted as an agreement to be signed by both parties to the dispute. The articles in the draft agreement submitted by the employees which were not included in the schedule were omitted on the ground that they were "of a character as should be in the control of the management of the employer."

The following are the principal provisions of the draft agreement:—Nine hours to constitute a day's work for all passenger trainmen, to be completed within 11 consecutive hours. Overtime to be paid 15¢ an hour for first hour, or part thereof, over 9 hours, and at time and a half for all time served over 10 hours. The rates of wages to be paid passenger trainmen per hour are as follows, to which we have added a column showing the rates paid hitherto:

	New	Old
First six months	38¢	39¢
Second six months	39¢	39¢
Second year	41¢	41¢
Third year and afterwards	45¢	41¢
Third year	43¢	43¢
Fourth year and afterwards	45¢	45¢

A bonus of 2¢ an hour to be paid after 10 years continuous service. Conductors or motormen to be paid 25¢ a day, or any part of day, extra for training a student. The company to pay half cost of uniform for each trainman who has been in its employ for not less than a year and to provide one uniform a year if required for each trainman thereafter paying one-half its cost. Cap to be supplied free by company.

The hours of trainmen employed in freight service shall be a minimum of 10 hours a day, 6 days a week, to be completed in the least number of hours possible. On week day wages of freight conductors and freight locomotive men during the first, second and third years of their service shall be 47¢; after the third year, 48¢, after 10 years of continuous service a bonus of 2¢ an hour will be allowed. Brakemen and polemen's wages shall be for first 6 months,

41¢, and after first year, 43¢. Freight trainmen will receive extra pay at rate of 15¢ an hour for the first hour, or part of an hour, after 10 hours service, and time and a half for all time after 11 hours service. All freight motors without cars shall be operated by at least 2 freight trainmen. The crews of all freight trains consisting of one or more cars, in addition to the motor, shall consist of not less than three men, and a fourth man shall be supplied in other cases where the freight is heavy enough to require it. Freight train conductors and locomotive shall receive 25¢ a day, or any part of a day extra, for training a student. The company will pay for meals of all trainmen who are kept out over 10 hours on snowplow work.

Hours of barn and shop men to be the same as existing heretofore. Time and a half to be paid for all overtime, including all time worked on Sundays and legal holidays when they shall be paid double time.

Baggage men, watchmen and ticket agents to receive \$100 a month, hours remaining as heretofore. Substation operators to be increased \$5 a month. Linemen to be paid 45¢ to 50¢ an hour; groundmen, 37¢ to 42½¢ an hour, hours remaining as heretofore. Time and a half for overtime. Company to supply rubber boots and gloves for line cars. Towerman to be paid, 1st class, \$80 a month; 2nd class, \$90 a month, hours as heretofore. Section foremen, \$100 to \$110 a month; section men, \$35 to \$40 a month, hours as heretofore. Time and a half for overtime.

All employees to get double time for Christmas Day and Labor Day. The agreement to be in force from Aug. 31, 1919 to Feb. 1, 1921.

We have been informed that some mistakes were made in some figures in the board's report as sent to the Labor Department, but up to Feb. 25, no corrections had been received by the department.

A St. Catharines press dispatch of Feb. 26 said the men had decided not to accept the board's award, and had voted to strike, if an appeal to the Minister of Labor should not be successful.

Grand Valley Ry. Financing—The investigation by the official referee at Toronto into the Standard Reliance Mortgage Corporation's affairs, has again brought into prominence the financing of the old Grand Valley Ry. from Brantford to Galt, Ont. The official liquidator stated that investigation had shown that the amount shown by C. S. Dimnick's books to have been invested in Grand Valley Ry. securities was, as a matter of fact so invested. The transaction, it was brought out, involved over \$600,000 in cash and securities belonging to the Standard Reliance Mortgage Corporation, being put in the project eventually to be written off as a complete loss. The loss was transferred to the Drovers Land Co., because Mr. Dimnick said the Standard Reliance could not afford to show such a loss on its own books.

The Nova Scotia Power Commission has been authorized to proceed with the development of an 8,000 h.p. unit at Margarets Bay, about 20 miles from Halifax. K. H. Smith is the engineer in charge.

Toronto Railway Co's Annual Report and Meeting.

Following are extracts from the report for the calendar year 1919, presented at the annual meeting in Toronto on Feb. 4:

The gross percentage decreased over 1918 by 1108.591, while the net remained only 111.1439 of last year's to be carried forward. The higher wages paid to employees and increased cost of materials, account for this very small balance.

Gross operating income	\$7,234,985.38
Less operating maintenance	5,971,586.58
Net balance from operation	\$1,579,236.81
Income tax on earnings	112,274.49
Wages and salaries	59,200.00
Material taxes	49,000.00
Payment to city	1,398,469.96
Percentage on earnings	\$1,122,274.49
Income tax on earnings	59,200.00
General taxes	145,100.00
Balance carried forward	13,274.49
	\$1,579,236.81

The gross earnings were \$7,234,985.38, an increase of \$708,593.01 over 1918. The payments to the city were \$1,398,469.96, an increase of \$97,203.78 over 1918.

The agreement with the employees expired in June, 1919, when new demands were submitted which the company could not grant, and negotiations for an amicable settlement being fruitless, the company applied for a conciliation board under the labor Act. The board was appointed by the government, but while it was sitting the men resorted to a strike which continued for 12 days. During the strike, the conciliation board made unsuccessful efforts to effect a settlement and the Ontario Railway and Municipal Board, under its powers, took over the property, making two offers to the men, both of which were refused. The conciliation board then made an interim report, suggesting an increase in wages, and changes in operating conditions, contingent upon an increase in fare being granted by the city. The Ontario Railway and Municipal Board thereupon made an offer to the men of these rates of wages and conditions, but stated that they had no power to change rates of fare. The men accepted the offer and returned to work. There was then no course open to the company but to carry out the undertaking of the Ontario Railway and Municipal Board. The obligations imposed upon the company by the action of the conciliation board and the Ontario Railway and Municipal Board involved an increase of 16c an hour in wages, together with a reduction in the working day to 8 hours; overtime after 8 1/2 hours and special rates for Sundays and holidays; the cost to the company amounting to approximately \$1,500,000 a year. We have paid the increased rates for only half the current year, or, to be exact, from July 4, 1919, when the strike ended, the men returned to work. For 1920 the increases will have to be paid for the full year.

The reason why dividends have not been declared this year is due entirely to the abnormal increase in wages during the past few years, combined with a rapidly increasing cost of materials. In 1916 we were paying a maximum rate of wages of 27c an hour. In 1917 an arbitration board increased this rate to 37c an hour; and before the agreement

had expired, the men sought a conciliation board and secured a war bonus of 2c an hour, bringing the rate up to 39c. In 1919, under the action of the conciliation board and the Ontario Railway and Municipal Board, the maximum rate was fixed at 41c and the length of the working day reduced from 10 to 8 hours, with provision for overtime rates as above mentioned. Thus, in three years, the rates of wages of employees have doubled, making the additional annual cost to the company approximately \$2,500,000. During the same period, materials have increased in price from 100 to 300%. In consequence, the money that would otherwise have gone towards improvement of the property and into dividends, has been swallowed up by increases in wages and increased cost of materials. And it must be remembered the company has had to face these expenditures with revenues drawn from rates of fare fixed 28 years ago, the average fare being 3.9c per revenue passenger, the lowest rate of fare on the continent for a city of Toronto's size. With the object of meeting the increase in wages, the company applied to the city council for permission to increase the fare, pointing out that about 400 roads in North America, many of them with agreements similar to ours, had obtained increases in rates of fare, but the city refused to alter the agreement. Your directors also approached the Ontario Government, seeking relief, but secured no assistance. The company then offered to make an immediate sale of the property to the city, upon the terms set forth in the franchise agreement for sale in Sept. 1, 1921, but council would not favorably consider the offer.

The ninth drawing of the company's currency and sterling bonds, under the terms of the mortgage deed, dated Sept. 1, 1892, took place on June 24. Under said terms the company draws annually during the last 10 years of its franchise, 5% of the amount of bonds issued, thus reducing, during the 10 years mentioned, the outstanding bonds to 50% of the original issue, and all bonds so drawn are to be redeemed on or after Aug. 31, following the date of drawing, from which date no interest is payable on bonds so drawn. There has been drawn to date a total of \$2,047,413.30.

Revenue Statement, Year Ended Dec. 31, 1919.	
Gross earnings	\$7,234,985.38
Operating maintenance	5,971,586.58
Income tax on earnings	112,274.49
Percentage on earnings	1,122,274.49
Payment taxes	285,011.01
	\$ 13,274.49

Profit and Loss Account, Dec. 31, 1919.	
Balance from 1918 still re-invested in the company's property	\$5,665,232.67
Surplus earnings after payment of all expenses, interest, taxes, etc.	13,274.49
	\$5,678,527.16

Comparative Statement, 1919-1918.	1919	1918
Gross income	\$7,234,985.38	\$6,826,392.37
Operating maintenance	5,971,586.58	4,809,691.33
Net earnings	1,119,266.81	2,016,701.04
Percentage on earnings	1,122,274.49	1,045,118.56
Percentage of charges to passenger earnings	79.5	71.7

At the annual meeting on Feb. 4, the President, in response to a question as

to whether the company had discontinued attempts to secure an advance in fares, said that nothing had been done for several months, and seeing that the end of the franchise was so near, he did not think there was much possibility of getting any relief.

H. H. Pitts, of Ottawa, one of the directors, in commenting on the report, mentioned the difficulties encountered during the year, in regard to labor and high cost of materials, and complained of the refusal of the company of the right to increase fares, which he considered was unfair and immoral. He spoke strongly against the present sentiment favoring the municipalization of public utilities, and considered that there would be a change on this question before long. He mentioned that a year ago he said the Toronto city hall officials were "a lot of fakers" and he would not take back a single word of it.

The directors were re-elected as follows: Sir William Mackenzie, President; Senator F. Nicholls, Vice President; Sir Henry M. Pellatt; Senator C. P. Beaubien, E. R. Wood, G. H. Smithers, H. Mackay, K.C., H. H. Pitts and F. W. Ross.

The Manitoba Public Utilities Act's Validity Questioned.

The question of the validity of the Manitoba Public Utilities Act has been raised in an action before Justice Curran in the Manitoba High Court. The Winnipeg City Council appealed to the Court to set aside the Public Utilities Commissioner's interim order fixing the fare to be charged by the Winnipeg Electric Ry. at 6c, until such time as a final order was made. Argument was begun Jan. 26, when the city's counsel argued that the commission had no power to raise fares, and that the whole Public Utilities Act was unconstitutional. The Deputy Attorney General argued that all the workings of the act were at stake, whereupon the city's counsel asked that the arguments be limited to the case of the electric railway, but Justice Curran held that the whole of the acts brought under the Public Utilities Act should be included. The company's counsel asked for the dismissal of the action on the ground that the order appealed against was merely an interim one; that sec. 29 of the act provides that no action of the commission can be questioned by an injunction action, and that sec. 70 prescribes the course to be taken to have the commissioner's acts reviewed. The arguments were continued on subsequent days, and a large amount of documentary evidence was put in, covering the whole period lapsed since the appointment of the commissioner in 1912. In the course of the putting in of the documents the judge remarked that the carrying out of the orders applied for by the city had caused the expenditure by the company of very large sums and had been a big factor in forcing the company to seek higher fares. On another occasion the judge intimated that if he upheld the city's contention he would not dream of interfering with the present rate of fares until time had been given to enable the company to carry the case to a higher court. Judgment has not yet been pronounced.

Electric Railway Projects, Construction, Betterments, Etc.

The British Columbia Electric Ry. is, we are officially advised, preparing to spend more than \$1,000,000 on extensions and improvements around Vancouver. Among the extensions planned is the double tracking of Hastings St. East, in addition to the extension of Granville St. south to Kerrisdale, which is now under way. The latter line will be in operation in March. Changes in the electrical equipment along the Fraser Valley line will cost \$500,000, and \$200,000 more is proposed to be spent on the equipment of other interurban lines. These expenditures are necessary, to take care of increased population and increased travel.

A press report states that Vancouver City Council is asking for the construction of a side track where cars could await the rush from the Coughlan ship yards every afternoon; the extension of the Broadway West line; the extension of the Nanaimo Road line to 22nd Ave., and the laying of tracks over the Georgia St. viaduct.

A press report states that the company will extend its Mount Talmie line on Vancouver Island, down the hill, provided Saanich Municipal Council will regrade Mount Talmie Road, eliminate the jitney traffic, and authorize the charging of a 6c fare to the terminus at Bay Road intersection. The proposition is under consideration by the council. (Feb., pg. 81).

Calgary Municipal Ry.—A press report states that a contract has been let for the supply of 8 tons of railway bolts at \$1,047.20, and that no tenders were submitted for the supply of track ties. (Feb., pg. 81).

Grand River Ry.—We are officially advised in reference to the proposed sale of the company's steam plant at Preston, Ont., that this power unit is now obsolete for the operations of the company's lines. This plant has not been used since 1911. The company has under consideration the question of the provision of a modern steam plant, but no definite decision has yet been reached in regard to it. (Jan., pg. 34).

Hamilton St. Ry.—The Hamilton, Ont., City Council's street railway committee is, a press report states, considering the advisability of asking the company to lay new tracks on its York St. line. (Sept., 1919, pg. 501).

Hull Electric Co.—A press report states that the alterations of the company's substation on Main St., Hull, Que., at a cost of \$30,000 will be completed shortly. Two new transformers, each with a capacity of 1,500 h.p., are being installed, increasing the power available from 200 to 300 h.p. The rearrangement is being made to provide for additional power, better facilities for the handling of railway loads, and improved light and power service. (June, 1919, pg. 324).

Kitchener and Waterloo St. Ry.—A press report states that the Dominion Tire Co. has asked the Kitchener Light Commissioners to extend the Kitchener and Waterloo St. Ry. to its plant, and that plans and estimates are being prepared by Superintendent McIntyre. In connection with the increase of traffic between Kitchener and Waterloo, a 5 minutes service is recommended, to make which possible it is said that a second

track will be required from Union St. to William St., Waterloo.

London and Port Stanley Ry.—About three years ago the London, Ont., City Council voted \$100,000 to the London Railway Commission to build a grain elevator at Port Stanley, the terminus of the line. Owing to war conditions, the work was not gone on with, and it is now proposed to undertake it. An elevator with a capacity of 20,000 bush. an hour, would, it is estimated, cost \$200,000 as against the original estimate of \$100,000. A press report states that the co-operation of the municipalities and boards, trade of the district will be asked to put the matter before the Dominion Government with a view of obtaining financial aid towards the project.

A press report states that the London Railway Commission proposes to erect a slip dock at Port Stanley, at an estimated cost of \$8,500. (Feb., pg. 81).

London St. Ry.—A London, Ont., City Council's committee has approved of the street paving programme for this year. It involves work on seven streets on which there are street railway tracks, on some of which, a press report, states, new track will have to be laid. (Nov., 1919, pg. 612).

Moncton Tramways, Electricity and Gas Co.—We are officially advised that the car barn and machine shop at Moncton, N.B., which were destroyed by fire Dec. 25, 1919, will be rebuilt in the spring. It is expected to put up a concrete building, but the plans have not been decided on. (Feb., pg. 81).

Montreal Tramways Co.—The Montreal Tramways Commission is reported to have had under consideration recently a plan for building a line to the top of Mount Royal to replace the disused incline railway. The proposal is to build a line from the Cote des Neiges Road to the mountain top, starting from the Shakespeare Road. These would be a 5% gradient, and a possible tunnel at the Outremont incline. The matter was left over for further consideration, and in the meanwhile engineers will prepare plans and estimates not only of the above route, but of a possible one via Guy St. (Feb., pg. 81).

New Brunswick Power Co.—The St. John, N.B., City Council is reported to have been advised that the city solicitor and council for the New Brunswick Power Co. have arranged to file briefs before the New Brunswick Public Utilities Commission, respecting the city's application for an order to compel the company to operate its main line cars down Rodney wharf. (Jan., 1919, pg. 40).

Nipissing Central Ry.—A press report of Feb. 21, states that the Liskeard, Ont., Board of Trade has been advised by the acting Chairman of the Timiskaming and Northern Ry. Commission, which operates the line, that as soon as the M. J. O'Brien interests begin the construction of the projected pulp and paper mill at North Timiskaming the railway will be extended there. The projected extension would be about 13 miles long and would run easterly from Liskeard.

The Ontario Premier was reported, Feb. 27, to have announced that an extension of about 17 miles extending from Liskeard, Ont., to the Des Quinze River

Falls, Que., will be built as soon as the government receives a guarantee from the M. J. O'Brien interests that they will build a paper mill at the latter point. (Jan., pg. 34).

The Oshawa Ry. is, we are officially advised, completing 9 new sidings for the General Motors of Canada, in Oshawa, Ont. The company contemplates building about half a mile of second track on its freight line, and putting in 2 new spur tracks at the Pedlar People's plant. It also has under consideration the addition of a 500 k.w. motor generator to take care of the increased business. (Feb., pg. 81).

Ottawa Electric Ry.—Application is reported to have been made to the Hull, Que., City Council for permission to build a loop at the terminus in Hull. The present line is a stub one, on which 2 two way operated cars are run. They are the oldest cars owned by the company, and, therefore, the least reliable. Nothing can be done to improve the service to Hull, until a loop, round which the one way cars could be operated, is built. (Jan., pg. 24).

Toronto Civic Ry.—Offers for the construction of the projected St. Clair-Mount Pleasant car line, were invited to be sent in by Feb. 17, but with the exception of some bids for roadway work in connection with it; no tenders were received. Whether the city will proceed with the construction by day labor is under consideration. (Feb., pg. 81).

Cars for Toronto Civic Railway.

The Toronto Works Department will receive tenders to March 16, for 13 double truck, double end, semi convertible electric cars, complete, with plain arch roofs, delivered at Toronto. Following are the general dimensions:

Length over body corner posts.....	31 ft. 8 in.
Length over each platform.....	7 ft. 8 in.
Length over bumpers.....	47 ft.
Width at drip rail.....	8 ft. 6 in.
Height, top of rail to top of trolley board.....	11 ft. 8 3/4 in.
Truck centers.....	19 ft. 3 in.
Truck wheel base.....	4 ft. 10 in.
Wheels, cast iron.....	33 in.
Seating capacity.....	48
Motors, per car.....	4
Top of rail to first step.....	14 in.
First step to platform floor.....	12 3/4 in.
Platform floor to body floor.....	10 1/4 in.
Weight of car body.....	20,890 lb.
Weight of trucks.....	12,750 lb.
Weight of electrical truck equipment.....	14,360 lb.

The motors specified are Canadian Westinghouse Co.'s type 533-T-4, to be interchangeable with those now in Toronto Civic Ry. service, and the controllers are to be type K-35, and equipped with an automotoneer. The motor driven air compressor specified is Canadian General Electric Co.'s type C.P.-27-A.

Australian Motor Bus Traffic—The Canadian Government Commercial Agent at Sydney, Australia, reports as follows: "Traffic by motor bus between Sydney and the suburbs is becoming increasingly popular and many new lines have been opened recently. The chief cause of this is the congested state of tram traffic, which is controlled by the state government, and the heavy increase in fares which has taken place recently. Many of the chassis of these vehicles are of a well known Canadian make."

British Columbia Electric Railway Company's Annual Report

The following report for the year ended June 30, 1919, was presented at the annual meeting in London, Eng., Feb. 10, 1920. The comparative changes have been made under the revenue account for the year.

Revenue and the fund	1919	1918
Revenue	£102,147 4 10	£102,147 4 10
Expenses	£102,147 4 10	£102,147 4 10

Challenged and accepted	1919	1918

September	1919	1918
October	1919	1918

Revenue and the fund for 11 days during July, 1919.

In last year's report it was stated that the Province of British Columbia had introduced a bill to establish a public utilities commission, which would have an important bearing upon your company. The bill became law in March, 1919, and provided for the appointment of a single commissioner with very wide powers over public utilities. Subsequently Major J. L. Retallack was appointed commissioner. Both the terms of the act and the commissioner's decisions have shown every indication of a desire to treat your company with justice.

British Columbia is the last of the Canadian provinces to establish a public utilities commission, and such commissions exist in all the other Canadian provinces and in nearly all the United States cities. The commissioner has power under the act to regulate the rates to be charged and the services to be rendered by the company, whether such rates or services are the subject of agreement or otherwise, and to this extent the act overrides the company's franchises and agreements. The commissioner is directed, in fixing any rates to have due regard on the one hand to giving the public utility company a fair and reasonable return upon the appraised value of the company's property, and, on the other hand, to the protection of the public from rates that are excessive as being more than a fair and reasonable charge for the service rendered. The commissioner is empowered to make an appraisal of the company's property for the purpose of ascertaining the value upon which the company is entitled to earn a fair return, and in making such appraisal the act provides that he "may enquire into every fact which, in his judgment, has any bearing on that value, including the condition and value of the company's undertaking as a going concern, and the amount of money actually and reasonably expended in that undertaking in order to furnish service reasonably adequate to the requirements of the community." The act gives a right of appeal from the commissioner's decision subject to leave being first obtained from the commissioner, and in the event of his refusal, from the Lieutenant Governor in council.

There is a special clause in the act relating to the 6c fare now being charged on the Vancouver city lines. As stated in last year's report, the Vancouver City Council in July, 1918, granted the company the right to charge a 6c fare for 9 months. The Public Utilities Act was passed before this period expired and provided for the continuance of the 6c fare, subject to the company being able to satisfy the commissioner that such rate is just and reasonable. The act also provides that until such proof is furnished to the commissioner's satisfaction, the amount received by the company in excess of the 5c fare charged previously, is to be deposited in a special account in a chartered bank in Vancouver, and that if the rate should be fixed at less than 6c the excess

amount is to be handed over to the Vancouver General Hospital. Owing to an amendment of the Dominion Railway Act, the company's railways passed from the jurisdiction of the Province of British Columbia and of the Public Utilities Commission to that of the Dominion of Canada and of the Dominion Board of Railway Commissioners, but it is anticipated that amending legislation will be passed early in 1920 which will place the company's railways again under the public utilities commission, and the company has joined with the local authorities in petitioning for this to be done. When this has been done it is expected that an investigation, which was commenced by the commissioner some time ago to ascertain the correct fare to be charged in Vancouver City, but which, owing to the circumstances reported above, has been temporarily adjourned will be resumed, and that an appraisal of all the company's property on the mainland will be made.

In June, 1919, the employees of the company and of most other industries in Vancouver went on strike, not for any increased wages, or any improved conditions, but in sympathy with the general unrest which was then prevalent in labor circles throughout Canada, particularly in Winnipeg. This strike, the longest in the company's history, lasted from June 5 to 29, when the men returned to work on the old terms. The company's revenues on the mainland from its railway system were reduced to almost nothing during the 24 days that this strike lasted. In Aug., 1919, a request was received for a further increase in wages, which was submitted to arbitration, and under the arbitration award increases were granted which will cost the company a large sum. The replacing of returned men has been a task of considerable difficulty, but the management have been able to reinstate all men who returned to the company from active service.

The directors consider that the improved conditions warrant a return to the practice of paying the dividend on the 5% cumulative perpetual preference stock half-yearly as before the war, and a half year's dividend of 2½% has been declared payable on Jan. 15, 1920. The end of the war and the gradual return to normal conditions is having a good effect upon the company's revenues. In addition to the return of the men who left British Columbia for overseas service, it is stated that a large number of men who enlisted in other parts of Canada went to British Columbia on being demobilized. Whether all of these men will find immediate employment in the province it is impossible to say. At present there is a great shortage of houses in Vancouver, but comparatively little building has yet been undertaken on account of the high prices of labor and materials. The shipbuilding industry, which employed several thousands of men during the last two or three years is expected to be gradually reduced in extent as the contracts in hand are completed; but, as apart from shipbuilding, Vancouver did not benefit to any appreciable extent by war industries, it is likely that the adjustment to normal conditions will be made without very serious dislocation.

In Sept., 1919, John Davidson, at the board's request, kindly consented to visit

In recommending the distribution of a bonus of 3% upon the deferred ordinary stock, the directors desire to point out that it must be regarded as an exceptional distribution, and not as an indication of a similar distribution in future years. The bonus is rendered possible this year, by profit on exchange in remitting moneys from Vancouver to London, and by the appropriation of certain moneys held for contingencies, which, under the altered conditions, the directors consider may now be safely distributed. It is also possible to recommend the distribution of a dividend of 3% on the deferred ordinary stock, and in this case the directors consider that the improvement in local conditions, as reflected in the current earnings shown below, is such as to justify reasonable hope that a distribution on the deferred stock may be maintained. The net earnings for the current year, as compared with the year under review, are as follows:

British Columbia to confer on the spot with the management on several important questions and inspect the company's properties. The visit proved eminently satisfactory and successful. The directors desire to record their very great appreciation of the valuable services rendered by the management and staff during the past year. Sir William Mackenzie and John Davidson, who are due to retire, offer themselves for re-election.

Expenditure on Appropriations on Capital Account, Year Ended June 30, 1919.

Rolling stock.....	\$ 3,948.93
Track extensions and improvements.....	\$8,598.66
Lighting and power extensions.....	113,931.21
Steam plant (credit).....	82.27
Lands and buildings and bridges.....	20,376.08
Electrical machinery.....	40,366.81
Transmission lines (credit).....	917.64
North Vancouver—Rolling stock, meters, transformers, and initial installations.....	247.93
Sundries.....	5,582.29
Railway feeders.....	6,008.92
Automobiles.....	18,280.48
Machinery, tools and loose plant.....	9,506.94
Crossings, fences, cattleguards and signs.....	3,196.61
Extending l. and p. system under municipal charter.....	10,703.44
	\$288,717.77

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and allied companies—

	6 mos. to Dec. 31, 1919	6 mos. to Dec. 31, 1918
Gross.....	\$783,324	\$691,065
Expenses.....	\$422,079	\$451,780
Net.....	\$266,245	\$239,305

Kitchener and Waterloo Railway—

	1919	1918
Receipts.....	\$81,203.11	\$58,788.55
Expenditures.....	77,154.97	57,473.69
Net profits.....	\$4,048.14	\$1,314.86

The profits are divided between the City of Kitchener and the Town of Waterloo in the proportion of 75% to 25%.

The Pictou County Electric Co., which operates the electric railway line in New Glasgow, and connecting the mining towns of Stellarton and Westville and Trenton, N.S., some time ago obtained permission to issue \$130,000 in 3 year coupon notes. It found these were not easily marketable and it applied recently to the Nova Scotia Public Utilities Commission, asking that the notes be changed to short term debentures for the same period. The greater security of the debentures, with the charge on the company's assets which they carry, was needed to enable it to find purchasers except at too heavy a discount. The interest on both securities was the same, 7%. The funds are required for paving the tracks and improving the rails.

Toronto Civic Railway—

	Jan., 1920	Jan., 1919.
Passenger revenue.....	\$41,949.41	\$32,232.12
Passengers carried.....	2,493,296	1,950,461

Winnipeg Electric Ry.—According to a report submitted to the Winnipeg City Council's finance committee, the Winnipeg Electric Ry.'s total earnings for 1919, on which are based the payment to be made to the city, were \$2,706,703.09, made up as follows: Cash fares, \$932,684.05; ticket sales, \$1,844,161.25; Sunday earnings, \$19,857.79. These figures show an increase of \$633,000 in 1918. The city is entitled to 5% on this amount, viz.: \$139,825. The number of cars in service was reported as 328.

Mainly About Electric Railway People.

Thos. Ahearn, President, Ottawa Electric Ry. has been re-elected President, Ottawa Light, Heat and Power Co.

O. E. Baldwin, who was appointed Manager, Guelph Radial Ry., recently, at a yearly salary of \$1,800, has resigned to enter a Guelph manufacturing company's service. We are officially advised that as the Hydro Electric Power Commission of Ontario is to take over the railway on July 1, it is not likely that the city will appoint a manager for the short time that it will retain possession of the railway.

Sir Adam Beck, Chairman, Hydro Electric Power Commission of Ontario, and Lady Beck, whose departure from England has been delayed, were, it was announced recently, expected back in Canada about Mar. 15. It has since been reported that Lady Beck has had to undergo an operation.

W. J. Brunless is acting temporarily as Superintendent, Edmonton Radial Ry., Edmonton, Ont. J. H. Moir having resigned, as stated in Canadian Railway and Marine World previously.

L. A. Cherrier, heretofore timekeeper, Dominion Power and Transmission Co., Hamilton, Ont., who has been in the company's service for over 20 years, has been appointed chief clerk, succeeding N. S. Cumming, who resigned on his appointment as Superintendent, Niagara, St. Catharines and Toronto Ry.

G. Comba is, according to a press report, acting as Superintendent, Calgary Municipal Ry., pending the appointment of a successor to T. H. McCauley.

J. E. Dalrymple, Vice President, Traffic, G.T.R., Montreal, has been elected President, Oshawa Ry. (electric), vice E. W. Rathbun, Deseronto, Ont.

G. Gordon Gale, Vice President and General Manager, Hull Electric Co., has been re-elected on the Royal Ottawa Golf Club's executive committee.

H. M. Hopper, heretofore General Manager and Secretary, New Brunswick Power Co., St. John, N.B., continues as Secretary, and has also been appointed Treasurer, succeeding G. M. O. Peters. Mr. Hopper has also been appointed General Manager, Eastern Electric Co. Ltd., a N.B. Power Co. subsidiary.

W. O. LeBer, heretofore Chief Dispatcher, Montreal and Southern Counties Ry., has been appointed Superintendent, Transportation and Maintenance Departments, vice A. F. Laberge, who has been appointed temporarily as Chief Dispatcher, Office, St. Lambert, Que.

J. B. Mack, who has had charge of the Calgary Municipal Ry.'s advertising and publicity department, is reported to have resigned to enter the New Brunswick Power Co.'s service at St. John.

T. H. McCauley, heretofore Manager, Calgary Municipal Ry., Calgary, Alta., has been appointed General Manager, New Brunswick Power Co. (street railway, gas, electric light, and power), St. John, N.B., succeeding H. M. Hopper, whose new appointments are referred to above.

John Murphy, Electrical Engineer, Railways and Canals Department, and Board of Railway Commissioners, addressed the Engineering Institute of Canada's Montreal branch, on Feb. 12, on ice formation.

Paul Paradis, Engineer, Montreal

Tramways Commission, died in Montreal, Feb. 10, after a long illness.

C. U. Peeling, Manager, Cornwall St. Ry., Light & Power Co., Cornwall, Ont., has resigned to enter the Illinois Traction Co.'s service.

J. S. Shepherd, for the past 10 years an accountant in the British Columbia Electric Ry.'s supply, died in North Vancouver Hospital, Feb. 18, following an operation for peritonitis.

Warren Y. Soper, Vice President, Ottawa Electric Ry., has been re-elected a director of the Ottawa Light, Heat & Power Co., and has also been re-elected Vice President, Royal Ottawa Golf Club.

Russell Stephens, who has been appointed assistant to City Manager Moore, at Guelph, Ont., will, it is reported, take over the office work in connection with the Guelph Radial Ry., heretofore handled by O. E. Baldwin, until the line is transferred to the Hydro Electric Power Commission of Ontario on July 1.

W. N. Warburton, General Manager, London and Lake Erie Ry. and Transportation Co., has been confined to his house at London, Ont., for some time, is reported to be in a serious condition.

The London Street Railway Situation.

The questions at issue between the London Street Ry. and the London, Ont., City Council have been discussed at length from various angles since the beginning of the year, but nothing definite seems to have been evolved in the direction of a settlement. A suggestion has been made that the operation of one man cars on the city lines would enable the company to give a more frequent service, and continue without the necessity for an increase in fares. The company is said to be favorable to adopting one man car operation as far as possible provided the city will sanction the use of the cars for a term of years. Another suggestion is said to favor the placing of the whole matter before the Ontario Railway and Municipal Board, and leaving the board and the company to agree to terms.

Niagara Falls, Wesley Park and Clifton Tramway Co.—A Niagara Falls, Ont., press dispatch of Feb. 24 says that C. U. Fairlie, of the Hydro Electric Power Commission of Ontario's Railway Department, had arrived there, with other members of the staff, and that they were going over the Niagara Falls, Wesley Park and Clifton Tramway Co.'s line in the city, which is owned and operated by the Niagara, St. Catharines and Toronto Ry. The dispatch also stated that the Niagara Falls City Council requested the Hydro Electric Power Commission to have the line examined, and report on it, as the ratepayers had voted in favor of its acquisition by the city, the franchise expiring Mar. 31.

Montreal Tramways Co. and Cost of Sewers.—The Quebec Legislature has passed an act adding a new section to the Montreal Tramway's Co's Act, providing that the company shall be relieved of paying taxes on its right of way for the construction of sewers, etc. Heretofore the company has had to pay one-half of the cost of sewers built on highways along its right of way.

Electric Railway Notes.

The Toronto Ry. Board of Control has decided to have a subway street car system.

The Toronto Ry. Board of Control has decided to have a subway street car system.

The Toronto Ry. Board of Control has decided to have a subway street car system.

The Toronto Ry. Board of Control has decided to have a subway street car system.

British Columbia Electric Ry. shareholders have, for the first time in five years, received a dividend of 3%, with a bonus of 3%.

The Nelson, B.C., City Council is reported to have decided against the operation of one-man cars on Nelson Electric Ry.

The Saskatoon, Sask., City Council is reported to be considering a project for building cars for Saskatoon Municipal Ry.

The St. Thomas, Ont., City Council is reported to be considering changing the cars on its electric railway for one-man operation.

The Fort William, Ont., Municipal Ry. is reported to have put in service, Feb. 8, two of the cars bought recently in Cleveland, Ohio.

The Niagara, St. Catharines and Toronto Ry., has placed an order for the remodelling of 12 local line electric cars with Ottawa Car Manufacturing Co.

The Montreal City Council arranged with the Montreal Tramways Co. recently for the use of 3 flat cars in the removal of snow from the streets.

The London, Ont., public utilities hydro department is reported to have notified the London St. Ry. that the power supplied for the operation of the railway will be reduced by one-half.

During January the cost of snow removal from the streets in Montreal on which the Montreal Tramways Co., operates was \$12,269.12 against \$26,835 for Jan., 1919. Half the cost of this work is paid by the company.

The Moncton Tramways, Electricity & Gas Co., Moncton, N.B., which had a passenger car and sweeper destroyed by fire on Dec. 25, 1919, advised us Feb. 6, that it expected to give an order to replace the same, in the near future thereafter.

An exceptionally severe snow storm struck St. John, N.B., Feb. 7 and 8, stopping street car service for several days. The New Brunswick Power Co.'s loss through the tying up of traffic and damage to property is estimated at \$20,000.

The Regina, Sask., City Council, has been asked by its special committee, which has been considering the question of operating one-man cars on the Regina Municipal Ry., to send a delegation to Edmonton and Calgary to make a personal investigation.

North Vancouver, B.C., has assessed the B.C. Electric Ry.'s three bridges and sub-station in the municipality. An amendment of the Assessment Act, passed by the legislature in 1919 has, it is claimed, rendered these properties subject to municipal taxation.

J. G. Glasco, Manager of Winnipeg's City Light and Power Department, is reported as expressing the opinion that within seven years motor omnibuses will be the prevailing system of transportation there, that the present street

railway system will be obsolete and that the tracks will be removed.

The Toronto Ry. proposed to the Toronto Board of Control, Feb. 19, that the city take over the railway at once, instead of in 1921, or buy the additional cars, which it desires the company to provide, and allow the company to operate them. The Board of Control has since declined to consider the company's proposals. In the meantime, the city is pressing an application to the Ontario Railway and Municipal Board, for an order on the company, with penalty attached, for the supply of additional cars immediately.

The Board of Railway Commissioners is reported to have called the attention of Edmonton, Alta., City Commissioners, to the fact that the Edmonton Radial Ry. was authorized in 1908 to operate its cars over the low level bridge until the completion of the high level bridge. The city solicitor is reported to have been instructed Feb. 2, to apply to the commissioners for a further order to permit the continuance of the operation of street cars over the low level bridge.

The Ottawa Board of Trade is reported as proposing to ask the Dominion Government to rearrange the hours at which civil servants go to and leave their offices, to do away, to some extent, with the crowding of Ottawa Electric Ry. cars. The board has expressed the opinion that it is unfair to expect the company to keep up a sufficient number of cars to transport 10,000 people at the same hour four times a day, and carry but a few people the remainder of the time.

R. Savignac, a former Montreal Tramway Co.'s employe was awarded \$9,000 damages and costs recently in an action which was carried to the Imperial Privy Council. The plaintiff, in order to secure his money, seized the company's movables and put a saisie of conservatoire into the hands of the Royal Bank against any of the company's funds it might have on hand. The amount of the damage was paid, but the amount of the costs, which was stated in sterling, was tendered in currency at the rate of exchange prevailing on the date of the judgment. This latter amount was accepted as account, and a court is being asked to decide whether it, or the statutory basis of the English pound, \$4.86 2-3 should be paid. The amount in dispute is said to be \$411.

London, Ont., ratepayers having defeated a bylaw to raise \$200,000 for London and Port Stanley Ry. purposes, the commissioners are without funds to buy additional rolling stock for which they were negotiating to take care of the increasing traffic. In order to finance the purchase, the commission was reported, Feb. 25, to have applied to a London City Council Committee for a line of credit of \$75,000 in addition to an increased credit of \$50,000 granted a year ago. The committee passed a resolution recommending that the commission be authorized to borrow \$125,000 from the Bank of Montreal to be applied for purchase of equipment and for working capital; the repayment of which is to be met out of the earnings of the L. & P.S.R. It is said the commissioners propose to buy an electric locomotive and 6 cars.

New Brunswick Power Co.'s Annual Report and Meeting.

Following are extracts from the report for the calendar year 1919 of this company, which owns and operates the electric railway in St. John:—

A bill, drafted by the Carrier commissioners and giving effect to their recommendations, was introduced at the last session of the legislature. Among other objections to the bill the city contended that the company's assets did not warrant a rate base of \$2,800,000 as established by the Carrier commission and at the city's instance this matter was referred by the legislature to the Court of Appeal for consideration. It is expected that the court will make a finding before the legislature meets early in March.

Operating expenses	\$701,000.74
Interest on bonds	\$1,000.00
Other interest	\$1,000.00
Net earnings to surplus account	\$115,180.79
	\$940,000.46

Dividends due Sept. 1, 1918, paid, May 24, 1919	\$23,000.00
Other dividends paid in 1919	\$2,541.67
Accrued on first preferred for Dec. 31, 1919	\$1,180.79
Transferred to profit and loss	\$155,180.79

The following special report was presented by President L. R. Ross at the annual meeting, Feb. 23:—The company regrets that, owing to the severe storm and extremely cold weather of the present winter, it is compelled to pass the dividends on its preferred stocks. In December and January certain of the city water mains were frozen, and burst, flooding the company's gas pipes, causing them to freeze and burst, thereby entailing a loss of several million feet of gas and putting the company to great expense in repairing the damage. The heavy February storms completely interrupted the street railway service for several days. Notwithstanding the utmost effort of our employes, and the employing of a large force of extra labor night and day, the full service has not yet been resumed. In addition to the loss of earnings, due to interrupted service, in consequence of the storm, very considerable damage was done to the electric light and power distributing systems. After the last storm a heavy rain flooded portions of the streets, in some places to a depth of several feet, burning out the motors of all the company's cars with the exception of 8. The total losses will aggregate upwards of \$40,000. The narrow margin afforded by the rates allowed, prevent the company from accumulating a surplus adequate to car for such contingencies.

The directors and officers were re-elected as follows: President, L. R. Ross; other directors: F. R. Taylor, H. P. Robinson, W. E. McGregor, P. W. Thomson, R. B. Emerson, and L. C. Gerry. H. M. Hopper, heretofore Secretary and General Manager, was appointed Secretary-Treasurer; T. H. McCauley, heretofore Superintendent, Calgary Municipal Ry., having been appointed General Manager.

Marine Department

Canadian Government Merchant Marine, Ltd., Shipbuilding, Operation, Etc.

Orders for Steamships—In addition to the 60 steel cargo steamships, particulars of which were given in Canadian Railway and Marine World for February, we are advised that the Marine Department has ordered 3 more ships as follows:

Port Arthur Shipbuilding Co., Port Arthur, Ont., one, approximately 3,890 d.w. tons, at \$182.50 per long d.w. ton, \$709,925, builder's yard nos. 15 and 16.

J. Coughlan & Sons, Vancouver, B.C., two, approximately 8,390 d.w. each; at \$167.50 per long d.w. ton; \$1,405,325 each.

The Marine Department has under consideration the placing of further orders, and it is said to be probable that at least 7 more steel cargo steamships will be ordered, which will bring the total number up to 70. Harbour Marine Co., Victoria, B.C., is endeavoring to obtain orders for 2 more ships.

The Minister of Marine is reported to have stated in Ottawa, Feb. 27, that the government will ask the Dominion Parliament for a further vote of \$20,000,000 to complete its present shipbuilding programme.

Passenger Steamships — Information in regard to the government's policy for adding passenger steamships to Canadian Government Merchant Marine Ltd., will be found under government building of 18 knot passenger steamships opposed by Quebec Board of Trade, on another page of this issue. The question of providing passenger services for trans-Atlantic and trans-Pacific traffic is undoubtedly being seriously considered by the Minister of Marine and will be discussed at a conference he will have with D. B. Hanna, President, Canadian National Rys., during the first week in March.

Launchings of Steamships — Since Canadian Railway and Marine World for February was issued, we have been advised of the following launching of a ship for Canadian Government Merchant Marine Ltd.

Feb. 24, s.s. Canadian Prospector; Marine Department contract 37; builder's yard no. 14; approximately 8,390 d.w. tons; J. Coughlan & Sons, Vancouver, B.C.

If weather conditions are favorable the steel cargo steamship, Canadian Miner; Marine Department contract 41; builder's yard no. 6; approximately 2,800 d.w. tons; which is being built by Nova Scotia Steel & Coal Co., New Glasgow, N.S., for Canadian Government Merchant Marine Ltd., will be launched early in March.

The steel cargo steamship, Canadian Otter; Marine Department contract 44; builder's yard no. 4; approximately 4,575 d.w. tons; which is being built by the British American Shipbuilding Co., Welland, Ont., for Canadian Government Merchant Marine Ltd., will probably be launched towards the end of March.

The steel cargo steamship Canadian Armourer; Marine Department contract 29; builder's yard no. 1; approximately 8,390 d.w. tons, which is being built for Canadian Government Merchant Marine Ltd., by Harbour Marine Co., Victoria,

B.C., will probably be launched about the middle of April.

The steel cargo steamship Canadian Observer; Marine Department contract 47; builder's yard no. 66; approximately 3,990 d.w. tons; which is being built for Canadian Government Merchant Marine Ltd., by Collingwood Shipbuilding Co., Collingwood, Ont., will not be launched until the weather is more favorable, the heavy snow and ice making it altogether too difficult and costly to launch at present.

Deliveries of Steamships—In addition to the steamships mentioned in Canadian Railway and Marine World previously,

Steamship Services—W. A. Cunningham, Export and Import Freight Agent, Montreal, issued the following notice to shippers, Jan. 30: "Effective with our next sailing from Halifax for the Argentine, we propose sending our steamships into one or more Brazilian ports on the southbound passage. At present the ports chosen are Pernambuco, Rio de Janeiro and Santos, and as a basis for the ocean rates we are following those in effect from New York. This is really the first opportunity Canadian shippers have had for a Canadian service to Brazil, and it is expected full advantage will be taken of it. The steamships are about 8,300

Steel cargo steamship Canadian Adventurer, approximately 3,400 d.w. tons, for Canadian Government Merchant Marine Ltd., built by Port Arthur Shipbuilding Co., and launched by the Prince of Wales, Sept. 8, 1919.

the following were delivered to Canadian Government Merchant Marine Ltd., on the dates mentioned.

Feb. 5; s.s. Canadian Importer; Marine Department contract 34; builder's yard no. 11; approximately 8,390 d.w. tons; J. Coughlan & Sons, Vancouver, B.C. This ship was loaded with general cargo and sailed Feb. 23 for Australia and New Zealand.

J. Coughlan & Sons, Ltd., Vancouver, B.C., advised us Feb. 13, that it expected to deliver the s.s. Canadian Exporter; Marine Department contract 35; builder's yard no. 12; approximately 8,390 d.w. tons; to the Marine Department about Feb. 26.

Officers of Steamships—The following officers have been appointed by Canadian Government Merchant Marine, Ltd. The first column contains the names of the ships, the second those of the captains, and the third those of the chief engineers:

Canadian Exporter	W. Bradley	J. D. Robertson
Canadian Importer	E. C. Sears	M. Honour
Canadian Navigator		
Canadian Raider		

d.w. tons, and should make the passage during the winter from Halifax to the first Brazilian port in about 20 days."

British American Shipbuilding Co., Welland, Ont., which has contracts from the Marine Department for 2 steel cargo steamships, approximately 4,575 d.w. tons each, advised us that the s.s. Canadian Otter; Marine Department contract 44; builder's yard no. 4; will probably be launched about the end of March.

Collingwood Shipbuilding Co., Collingwood, Ont., which is building a steel cargo steamship, Canadian Observer; Marine Department contract 47; builder's yard no. 66; for Canadian Government Merchant Marine Ltd., will not launch it until the weather is more favorable, the heavy snow and ice making launching at present too difficult and costly. This company also has orders from the Marine Department for 2 other steel cargo steamships of approximately 3,890 d.w. tons each.

J. Coughlan & Sons, Ltd., Vancouver, B.C., has received additional orders from

the Marine Department for 2 steel cargo steamships for Canadian Government Merchant Marine Ltd., of 8,390 d.w. tons each, at \$160.50 per long day, ton, the delivery date of each ship being 3/1/20.

This company delivered the s.s. Canadian Prospector, Marine Department contract 37; builder's yard no. 11, approximately 8,390 d.w. tons, to the Marine Department, Feb. 5. She was transferred to Canadian Government Merchant Marine Ltd., and loaded with a general cargo for Australia and New Zealand.

This company launched, on Feb. 24, the steel cargo steamship, Canadian Prospector; Marine Department contract 37; builder's yard no. 13; approximately 8,390 d.w. tons for Canadian Government Merchant Marine Ltd.

This company advised us Feb. 13 that it expected to deliver the s.s. Canadian Exporter; Marine Department contract 38; builder's yard no. 12; approximately

from the Marine Department, for a steel cargo steamship for Canadian Government Merchant Marine Ltd., approximately 8,390 d.w. tons, at \$182.50 per long d.w. ton, \$109,925. The builder's yard no. will be 45. This makes the seventh ship ordered from the company by the Marine Department.

This company expects to launch 2 steel cargo steamships, approximately 4,375 d.w. tons each, which it is building for Canadian Government Merchant Marine Ltd., as follows: Canadian Runner; Marine Department contract 32; builder's yard no. 43; about April 24. Canadian Carrier; Marine Department contract 33; builder's yard no. 44; about May 1.

Wallace Shipyards Ltd., North Vancouver, B.C., which was given orders by the Marine Department recently for 2 steel cargo steamships of approximately 8,390 d.w. tons each; builder's yard nos. 103 and 104; in addition to the 4 ships ordered previously, and delivered, ad-

Great Lakes trade, but, notwithstanding, there was more or less labor trouble both ashore and afloat, and many lines considered themselves fortunate to break even at the end of the season.

Steel Cargo Steamship, Canadian Importer; approximately 8,390 d.w. tons; for Canadian Government Merchant Marine Ltd.; built by J. Coughlan & Sons, Vancouver, B.C.

8,390 d.w. tons; to the Marine Department for Canadian Government Merchant Marine Ltd., about Feb. 26.

This company, which launched the s.s. Canadian Inventor; Marine Department contract 36; builder's yard no. 13; approximately 8,390 d.w. tons; on Jan. 24; expects to deliver her to the Marine Department early in March.

Harbour Marine Co., Victoria, B.C., which has orders from the Marine Department for 2 steel cargo steamships, approximately 8,390 d.w. tons each, Canadian Armourer and Canadian Composer, the keels of which were laid July 14, 1919, and Aug. 9, 1919, respectively, expects to launch Canadian Armourer about the middle of April. It is proposed to install the boilers and engines before launching the hull, if approved by the Marine Department. This company is endeavoring to secure contracts from the department for 2 more ships.

Nova Scotia Steel & Coal Co., New Glasgow, N.S., advises us that if weather conditions are favorable, the steel cargo steamship Canadian Miner; Marine Department contract 41; builder's yard no. 6; approximately 2,800 d.w. tons; for Canadian Government Merchant Marine Ltd., will be launched early in March.

Port Arthur Shipbuilding Co., Port Arthur, Ont., has received another order

vised us Feb. 18 of being unable to give any approximate date as to when the keels would be laid, owing to the fact that the Dominion Steel Corporation could not advise when it expected to roll the steel.

Great Lakes Seamen's Wages.

Detroit, Mich., press dispatch, Feb. 15. —With the approach of the opening of navigation on the Great Lakes, ship owners are beginning to hear rumors of renewed demands from various classes of marine labor. Among the requests to be made of the Lake Carriers' Association by members of the Seamen's Union is the granting of an 8-hour day, a 25% wage increase, and possibly a 3 shift system. Last season sailors and firemen on lakes were paid \$100 a month, including quarters and meals. Men doing similar work on ocean-going ships received only \$90 to \$95, but they also had an overtime allowance, which brought the average pay up to about \$125 a month. The lake sailors are preparing to demand the same rate of pay as their salt water brethren. The Seamen's Union will formulate their demands, which include some minor concessions in working conditions. Ship owners last year paid their employees the highest wages in the history of the

Details of the Different Types of Steamships for Canadian Government Merchant Marine Ltd.

The following are comparative details of the seven different types of steamships being built for Canadian Government Merchant Marine Ltd.:

	2,800 ton.	3,400 ton.	3,750 ton.	4,300 ton.	5,100 ton.	8,100 ton.	10,300 ton.

Orders for Steel Cargo Steamships for Canadian Government Merchant Marine Ltd.

The following is a complete list of steel cargo steamships which the Dominion Marine Department has been authorized, by order in council, to place orders for, and which orders are to be carried out. The following contractions are used in the column giving the type of the vessels to be built:—s.d., single deck; d.d., two deck; s.d., three deck; s.d., lake type; p, poop; b, bridge; f.c.s.e., forecastle.

Contract	Contract date	Name	Builder	Yard no.	Long tons d.w.	Price per ton d.w.	Total	Type	Classification	Speed knots	Keel laid	Launched	Delivered.
1	Mar. 4, 1918	Canadian Voyager	Canadian Vickers Ltd.	66	4,575	\$207.	\$ 947,025	S.d., p, b. and f.c.s.e.	Lloyd's	11	June 11, 1918	Nov. 23, 1918	Feb. 22, 1919

Steel and Wooden Cargo Steamships Built in Canada for British Government.

It was announced early in February, that the steel cargo steamships, War Munition and War Vessel, built by Canadian Atlantic Steamers Ltd., Bridgeport, Ont., for the British Government, under contract from the Imperial Munitions Board, had been delivered to the owners at Halifax, N.S., during January. An announcement by Canadian Railway and Marine World for Dec., 1919, these vessels were considered to sail from Bridgeport for the coast on Nov. 20 and 14, 1919, respectively. The delivery marked the completion of the orders placed in Canada for steamships, both steel and wood, by the Imperial Munitions Board on behalf of the British Government. As soon as this was accomplished, some of the daily newspapers in Canada, or the agencies responsible for the dissemination of news amongst the daily newspapers, seemed to have awakened to the fact that Canadian shipyards had actually been building steamships, and in placing the "facts" before what it apparently anticipated would be an astonished public, made the following astonishing statement:

"In the building, great secrecy had to be maintained, and this was the case of the Imperial Munitions Board in Canadian shipyards to the fact that they have made follow."

A more absurd claim than that a survey of the shipbuilding carried out in Canadian yards since 1917, published on Feb. 10, 1920, is the first that has been made public, could not have been made. With regard to the alleged secrecy of the work, we may say that in the early stages of the building, some attempt was made by some of the officials concerned, to withhold information as to orders placed, specifications, etc., but on Canadian Railway and Marine World taking the matter up with the higher officials of the Imperial Munitions Board at Ottawa, and with the British Ministry of Shipping in England, it was clearly shown that the "secrecy" was purely a local folly and was not endorsed by the heads.

Towards the end of 1916, Canadian Railway and Marine World published a statement covering the condition of shipbuilding in Canada, and announced that the Dominion Government had prohibited the export of ships without its consent, and again that it had granted permission for the building of 21 steel cargo steamships, by several Canadian shipbuilders, for export to allied or neutral powers, which, it was hoped would pave the way for the placing of shipbuilding in Canada on a permanent basis. In April, 1917, we stated that J. P. Esplan as representing the British Controller of Shipping, had arranged with the Imperial Munitions Board, at Ottawa, to secure all cargo steamships which might be available in Canada for delivery by May 31, 1918, and also that it was probable that the majority, if not all, of the steamships then building in Canada for export under permission, were to be taken over by the British Government. Details were also published of the building of a number of trawlers and drifters in Canada, for British use, and of the preparation of a number of shipbuilding plants, for further ship construction. In Aug., 1917, we announced that the Imperial Munitions Board had placed contracts for about 30 wooden steamships, and published plans and specifications of the hulls, which had been

adopted as a standard for steamships of this class, the plans and specifications of the propelling machinery being published in our issue of Feb., 1918. Our issue of Aug., 1917 also contained the first complete list to that date of all orders placed for steel and wood steamships in Canada by the Imperial Munitions Board, and also details of steamships which were under contract for neutral owners, and which were to be relinquished to the British Government. This list was added to, from time to time, and information as to the building progress, launching, equipping, completion, trials and delivery, was published each month in Canadian Railway and Marine World, until the completion of the contracts.

The number of steel steamships built in Canada under these orders, was 42, with an aggregate d.w. tonnage (ap-

proximate), of 243,100 tons; and of wood steamships, 46, with an aggregate d.w. tonnage (approximate) of 141,680 tons, a grand total of 88 steamships and 384,780 tons. Contracts were actually placed for 43 steel steamships, one steel steamship, named Alaska, built by J. Coughlan and Sons, Vancouver, B.C., for Norwegian interests, being taken over, and 2 steel steamships, out of an order for 4, placed with Canadian Allis-Chalmers Ltd., Bridgeport, Ont., being cancelled. The recent daily press review of the British Government shipbuilding in Canada, includes the car ferry Leonard, which was bought by the Imperial Munitions Board, but as this was not built in Canada, we have not included it in our figures. The first steel steamship, War Dog, was launched by Wallace Shipyards Ltd., North Vancouver, B.C., May 18, 1917, and the first wood steamship, War Songhee, was launched by the Foundation Co. of British Columbia, Victoria, B.C., Dec. 28, 1917.

The collection, classification and dissemination of news at the proper time, is the first duty of a newspaper to the

Dominion Marine Association.

President, A. E. Mathews, Manager, Director, Matthews Steamship Co., Toronto.

First Vice President, H. W. Cowan, Director of Operations, Canada Steamship Line, Montreal.

Assistant Engineer for Quebec Canals Staff.

The Civil Service Commission has given notice that applications will be received for appointment as an assistant engineer, at an initial salary of \$2,100 a year, which will be increased on recommendation for efficient service at the rate of \$120 a year until a maximum of \$2,580 has been reached. This initial salary may be supplemented by such bonus as is provided by law. Candidates must possess the following qualifications: Education equivalent to graduation in engineering from a school of applied science of recognized standing, with at least 4 years of engineering experience in canal work, one year of which shall have been in a position of professional responsibility; firmness, tact, ability to manage men and ability to speak and write fluently both English and French. While a definite age limit has not been fixed for this position, age may be a determining factor when making a selection. The successful candidate must be able to take responsible charge of canal design and construction work and be proficient in hydraulic and structural engineering work, reinforced concrete work, and roadway survey work. Candidates will be examined in the following subjects, which have the relative weights indicated: Education, training and experience, 300; oral interview, if necessary in the commission's opinion, 100. A written examination will be held to test the competency of technically suitable applicants in both languages.

German Marine Plant for Canada—Ottawa press dispatch, Feb. 16.—In the material which the allies are requiring Germany to deliver as compensation for the loss of German battleships at Scapa Flow are several floating docks, dredges, hydraulic cranes, etc. It is said that the British Government has asked the Canadian Government if it would like to acquire any of these on account of Canada's reparation claim, and the matter is now being considered by the government at Ottawa.

Oil fuel will, it is said, be used on 70% of the ships now building in Swedish yards.

Shipbuilding in Scotland in 1919 and 1920

A Glasgow correspondent writes: The shipbuilding returns for the United Kingdom for 1919 are somewhat disappointing. It was anticipated that after the war there would be a great and rapid advance in shipbuilding, but there has been practically none so far. In 1918, 1,244 ships of 1,840,029 tons were built; in 1919, 1,268 ships of 1,931,769 tons. It has to be remembered, however, that in 1918 a considerable volume of the work was naval. The department of the Controller-General of Shipbuilding, now demobilized, did its best to speed up the building of merchant steamships, but was tremendously handicapped by the amount of naval work on the stocks, and by refitting and repairing of the ships of the fleet which had to be given first place.

Neither does the output of the United Kingdom compare very favorably with that of the United States, where 1,337 ships were built of, approximately, 4,700,000 tons, and developing, approximately 2,590,000 i.h.p., while in the United Kingdom 1,268 ships of 1,931,000 tons and 3,210,000 i.h.p. left the ways. These figures show the U.S. tonnage to be more than twice that of the United Kingdom; but it consists of many ships for the lakes traffic and a very large number of wooden ships. The sea going value of the ships is fairly well represented by the indicated horse power, which is considerably greater in the case of the United Kingdom.

The Clyde production of 646,154 tons is an advance over 1918 of 114,000 tons, and is the second highest on record. It has been gradually recovering since 1915, when it dropped to 306,400 tons, the lowest output since 1897; but it has some little way to go before it reaches the record year of Clyde shipbuilding, 1913, when the output was 756,976 tons. The output on the Clyde compares favorably with that of the other large British rivers. Four hundred and twenty-two ships were built in 1919 on the Clyde of a tonnage of 646,154 and 1,479,771 i.h.p., while on the Tyne, Wear, Tees, and Lagan, together, 239 ships were built of a total tonnage of 968,174 and 1,164,081 i.h.p. Following is a comparison of the building on the different Scotch rivers:

	Ships.	Tons.	I.h.p.
Dee & Mersey Firth.....	68	13,488	20,640
The Clyde	422	646,154	1,479,771
The Forth	42	51,280	33,963
The Tay	13	17,765	27,520
	545	728,687	1,561,891

On the Clyde the increase in tonnage over 1918 was only about 114,000 tons. There was no corresponding increase, however, on the horsepower, which fell to an extent of almost 400,000. Several reasons may be given to account for the comparative failure in output in this area. First of all, labor remained in an unsettled state throughout the year, although recently it has become more stabilized, at any rate on the surface. Second, the working week had been shortened, without adequate compensation in an increase of numbers of workmen. Third, besides the usual repair work, there had to be done a great deal of work on the refitting of steamships which had been on war service. Lastly, many contracts which had been partially completed for the Admiralty, were cancelled. For example, one firm had contracts cancelled for a battle cruiser, a light cruiser, 2 torpedo boat destroyers,

and 3 submarines, on which a considerable amount of work had been done on the hulls and machinery.

The rescinding of the contracts for naval ships freed many of the stocks for ocean going craft; and 1919 may be said to have been the premier year of the tramp steamship. Of the total of 422 ships built on the Clyde, 96 were cargo steamships of a total of 378,512 tons; and only seven were passenger steamships of an aggregate of 28,142 tons. When it is taken into account that one of the vessels was the Cameronia of 16,500 tons, the tonnage of the other six must have been very small. Twenty-six war ships of 91,676 tons were launched and 10 oil tankers of 55,491 tons. Of the total of 422 ships, 235 aggregated only 30,537 tons. The Cameronia, the first liner laid down after the declaration of the armistice, was completed in the record time of 9½ months.

It is said that a considerable number of transoceanic liners have been placed on order with the big shipbuilding concerns so that as 1919 has been the year of the tramp steamship, 1920 may turn out to be the year of the liner. These liners will replace those torpedoed during the war. Many of them will be fitted with geared turbines, and oil fuel will be almost universally used, to the saving of bunker space. The accommodation for passengers should in consequence be improved; there will be economy in respect of the labor employed in firing the boilers; and a greater efficiency in driving power should result, making itself manifest in the rate of going. It should not be long either before more than a few vessels of the Lusitania type are crossing the Atlantic, and that within

the five days. The prospects of shipbuilding in 1920 are right; and, perhaps especially so in the Clyde area.—Christian Science Monitor.

Government Merchant Marine Operations Criticized.

W. J. Noble, President of the United Kingdom Chamber of Commerce, said in a recent address: "The rise of the United States merchant fleet is one of the world facts arising from the war. It would be a profound mistake to underestimate its growing strength. It probably will not continue at its recent rate of progress, but the ship building potentialities of the U.S. justify its people in hoping ultimately to occupy the supreme position. They are now, as in the middle of the last century, following closely upon Great Britain's heels.

"I have faith in my own countrymen as shipbuilders and shipowners. Britain is prepared to meet any fair competition. But no one can regard the present policy of the U.S. Shipping Board and that of our own dominions as fair competition. The policy of each is to build up a mercantile marine at any cost, relying upon the national purse to make good any deficiency, which is a serious menace to private enterprise."

In voicing his fear that the U.S. might capture the world's coal trade, Mr. Noble said: "The U.S. is now putting coal aboard steamships at 30 shillings a ton, as against England's present figure of 100 shillings. The discrepancy is due largely to the fact that only 8% of British coal is cut by machinery, while the U.S. is cutting 50% of her output by machinery. The U.S. miner is producing two and a half times the quantity put out by the British miner."

The United Kingdom's Shipbuilding Position.

The most noteworthy feature of the shipbuilding returns for the quarter ended Dec. 31, 1919, from a British point of view, is that on that date the gross tonnage of merchant ships under construction in the United Kingdom, for the first time for several years, exceeds the total United States figures, although the margin is a small one, the totals being respectively 2,994,249 tons against 2,966,515 tons. The detailed table of construction in the United Kingdom is as follows:

	Dec. 31, 1919.		Sept. 30, 1919.		Dec. 31, 1918.	
	No.	Gross tonnage.	No.	Gross tonnage.	No.	Gross tonnage.
Steamships—						
Steel	722	2,980,938	723	2,796,174	411	1,955,962
Ferro - concrete	5	1,700	8	2,482	—	—
Wood and composite	7	2,502	8	2,293	2	1,240
Total	734	2,985,140	739	2,800,929	416	1,977,202
Sailing—						
Steel	14	3,388	29	6,749	8	2,750
Ferro - concrete	8	5,571	13	9,005	—	—
Wood and composite	1	150	—	—	—	—
Total	23	9,109	42	15,844	8	2,750
Total (steam and sail).....	757	2,994,249	781	2,816,773	424	1,979,952

The total for the empire is increased by the 251,480 tons being built in the Dominions, of which 188,375 tons are Canadian. It is also satisfactory to learn from the table reproduced above, that while the United Kingdom figures mark a very large advance upon those of a year ago, there is an encouraging increase over the previous quarter. The shipbuilding work of the United Kingdom during the past three months was as follows:

	During quarter ended Dec. 31—		Steam.		Sail.	
	No.	Gross tonnage.	No.	Gross tonnage.	No.	Gross tonnage.
Ships commenced	159	601,572	16	2,060	—	—
Ships launched	187	451,915	16	7,139	—	—

The figures of the merchant ship construction in the whole world, show that the total production of other countries still largely exceeds that of the United Kingdom, the chief contributors, outside of the United States, already noted, being Holland, 328,338 tons; Italy, 314,547 tons; Japan, 309,474 tons, and France, 216,775 tons; while Norway, Spain and Sweden each have about 100,000 tons under construction.

The United States Shipping Board's Work and Future Policy

By John Barton Payne, Chairman, U.S. Shipping Board.

The shipping board has felt and now feels the keenest sentiment in bringing South America so close to the United States that we may shake hands almost daily, and we keenly realize that this can only be done by ships, and more ships. Indeed, the board's great desire to inaugurate and establish an adequate service to the important cities of South America has sometimes manifested itself as an optimism which the cold logic of fact has not justified.

This has not always been the board's fault. For instance, our great desire inspired Chairman Hurley to plan the inauguration of this service by sending the s.s. Mount Vernon to South America with a passenger list of representative business men. It was then assumed that the Mount Vernon and other ships would speedily be delivered to the board for use. In this we were disappointed. The Mount Vernon is still in the War Department's possession, and is out on the Pacific, and the government has found it necessary to retain the use of others of these ships for a much longer time than was then supposed necessary.

Prior to our entrance in the war in April, 1917, we had few ships, few shipyards, and only a small number of people in the business of shipping, and it is interesting to know our actual progress since then, for, by our actual accomplishment we can best show that, while we have been slow in starting, when the U.S. enters upon the business of shipping as it now has, it will go forward and establish a permanent merchant marine service.

In April, 1917, there were in the U.S. only 61 shipyards with 234 ways in which ships of 3,500 d.w. tons could be constructed. In Nov., 1918, when the armistice was signed, this number had increased to 223 yards with 1,099 ways. In 1917, the U.S. Shipping Board Emergency Fleet Corporation launched 106 ships, totalling 708,970 d.w. tons. Of these it delivered complete 49 ships, amounting to 302,115 d.w. tons. In 1918, the Emergency Fleet Corporation launched 812 ships, amounting to 4,244,126 d.w. tons, and delivered to the Shipping Board 532 of these ships completed, representing a tonnage of 3,026,006 d.w. In 1919, we launched 1,065 ships, representing 5,982,277 d.w. tons, and actually delivered 1,181 ships with a tonnage of 6,385,123 d.w. There remains of the war construction programme 534 ships of 3,661,767 d.w. tons. These will be completed and delivered by Aug., 1920. Besides this, we purchased or contracted with Japan for the building of 46 ships of 372,023 d.w. tons. The total of these Japanese ships actually received and in service is 18, of 148,323 d.w. tons.

These activities and the taking over of German and Austrian cargo tonnage have given the U.S. 8,700,917 d.w. tons of steel ships; 1,799,123 d.w. tons of wooden ships; 63,000 d.w. tons of composite and 10,000 tons of concrete ships, a total tonnage of 10,573,040 d.w., excluding the 3,661,767 tons to be completed in 1920. We have lost, reconveyed to former owners or sold 194 ships, representing 1,274,371 d.w. tons. Some of the ships now in operation we will sell for use by foreign flags, but the fleet as a whole, representing 1,688 ships of 9,298,669 d.w. tons, will be operated un-

der the U.S. flag as a permanent merchant marine, and will be available to serve the trade routes to South America and other countries.

The demand for ships to win the war—ships to carry men and food to France—was so imperative and so pressing, that passenger ships, as such, were not considered. Questions of this kind, however important, were compelled to wait. The result is we have much less passenger tonnage than we need, and much less than we could have had, had our fleet been built under peace conditions. It is not, of course, possible to inaugurate a passenger service to South America without an adequate number of passenger ships. We are building 26 passenger ships for delivery this spring, the War and Navy Departments have turned over to us 27 ex-German passenger ships, but these having been made into troop ships, are not in condition to be used for a passenger service until reconditioned. The first of these was the Moccasin, a small ship of only 4,630 d.w. tons. This was placed immediately under contract service, is now completed, and on its way to South America, and will be followed by other and larger ships as fast as they can be made ready for service.

It may be wondered why we inaugurate our South American service with so small and modest a beginning. This was not so much due to our modesty, as to the fact that we could not do better in the present circumstances. Our present plans for the passenger service to the East Coast of South America are: Five steamships, maintaining a two weekly service between New York, Rio de Janeiro, Santos, Montevideo and Buenos Aires. Southbound, these ships will proceed directly to Rio de Janeiro; northbound, they will call at St. Thomas for fuel. The 5 ships selected for this service are all ex-German steamships of 15 knots speed—the Aeolus, Huron, Pocahontas, Dekalb, and Princess Matoika. The Huron, Dekalb and Aeolus have been returned from the army and are being reconditioned. The Huron is expected to be ready for service in April, and the Dekalb and Aeolus in May. The Princess Matoika and the Pocahontas will be returned from the army shortly. They are all being completely remodeled, and will be converted to burn fuel oil. Their accommodations will be first-class in every respect, and part of their cargo holds will be refrigerated to care for the movement of perishable products.

The board regards the passenger service to South America as of paramount importance, and, pending the reconditioning of the 5 steamships mentioned above, is doing what it can to provide a temporary service. The Moccasin, a 12½ knot ship, sailed from New York, Dec. 29. The Callao will follow early in March, and it is hoped to secure temporary use of one of the vessels now in the army transport service to fill the gap and maintain for the present at least a monthly sailing. It is recognized that vessels of the Moccasin and Callao type are not suitable for this service, but it seemed to us wise to begin by even a temporary expedient. Our friends would at least know we are thinking of them.

For the year 1919, 100 Shipping Board steamships were dispatched from U.S.

ports to Brazil, carrying 444,400 tons of cargo. To the River Plate, 129 steamships with 689,600 tons of cargo. Of these steamships 21 proceeded from the Plate to Europe on their homeward voyages, carrying approximately 160,000 tons of cargo, and the remainder to the U.S., with homeward cargoes totalling 588,000 tons. We inaugurated a regular monthly service between the River Plate, Antwerp and other European ports in February, and will place on this run refrigerated cargo steamships capable of lifting approximately 3,000 tons of frozen beef, loading such general cargo as may be available. Further, cargo steamers will be added to this service from time to time, there being an ample reserve to care for cargo offerings.

Following its policy of encouraging established U.S. steamship companies rather than competing with them, the board will place in service under the management of W. R. Grace & Co., the Santa Theresa and the Santa Elisa, both 13 knot ships, now reconditioning after release from army service. These, together with the Santa Luisa and the Santa Ana, now operated by W. R. Grace & Co., are combination freight and passenger ships built especially for this trade. They will call at Callao, Arica, Iquique, Valparaiso, and will furnish a sailing every two weeks from New York. A sister ship, the Santa Leonora, still in the army service, will be added to these as soon as possible.

During 1919, 62 Shipping Board steamships loaded from U.S. ports to the west coast, carrying 179,000 tons southbound and 196,000 tons northbound. Such additional cargo steamers as this business requires will be allocated as needed. We are asked why we do not allocate the ocean greyhounds like the Leviathan to this service. There are certain physical difficulties, such as the fact that at Rio the depth of water is only 26 ft., that makes this impossible. Our friends in South America will know from this frank statement that if our own ability to supply this service could keep pace with our desire, they would have nothing to desire, and if they have any suggestions which they desire to have us consider, they will find the members of the board receptive and appreciative.

The question of national policy involved in the ownership and operation of passenger and cargo steamships constituting a merchant marine is one now occupying the earnest attention of the President and the Congress. It is hoped that the merchant marine may be owned and operated by private persons and corporations rather than by the government. As a step in this direction, we have advertised for sale 30 of our ex-German passenger ships and if these are sold, we hope to follow this by the sale of our remaining passenger vessels. This, however, will not affect the shipping programme which is here discussed. It is provided that the ships, if sold, are to be sold with reference to the particular routes selected and assigned by the Shipping Board, and whether we sell the ships to private persons or operate them by the board, the service here indicated will be carried out, and the board will see to it that the growing needs of South America are served by the U.S.

Canada Steamship Lines' Annual Report.

Following is the report for the calendar year, 1919:—The net earnings were \$4,580,272.96 and the net profit \$2,336,679.12 after deducting all fixed charges, including depreciation, making ample provision for government war taxes and providing reserves for all possible liabilities. Your directors are pleased to advise that both freight and passenger earnings have been eminently satisfactory during the past year. Considering that this is the first year that the company has operated its enlarged system under peace conditions, these results must be regarded as gratifying, and on this account there is every justification for looking to the future with confidence.

In conformation with our announced policy of extending the company's field of operations abroad, thus co-ordinating Great Lakes, river and ocean traffic, your directors have inaugurated several new services between Canada and Europe, and between New York, West Indies and South America, through the purchase of modern steamships. Some of these ships have passenger accommodation, as it is the belief of your directors that the immigration business will assume large proportions. The results obtained have already justified the policy adopted. The ocean services, besides enjoying a substantial revenue, have contributed to the increased earning power of all branches of the company's operations. The increase in the 1918 vessel property is \$5,619,247.83; the increase in fixed assets indicated under the heading "Real estate, buildings, docks and wharves" is \$296,872.57, and the increase in other fixed assets, etc., is \$398,343.27, the last two increases being attributable very largely to extensions made to our ship-building plant at Three Rivers.

After careful consideration, your directors have decided to place the common shares on a 7% per annum basis, payable quarterly.

All the company's properties have been thoroughly maintained and are in good condition.

The following statements include Canada Steamship Lines Ltd., and subsidiary companies.

Assets:	
Fixed assets:	
Ships at Dec. 31, 1918.....	\$20,078,575.98

Surplus Account, Dec. 31, 1919.	
Balance at Dec. 31, 1918.....	\$5,009,630.64
Profit for year ended Dec. 31, 1919, as per account.....	\$2,336,679.12
Net profit on sales, etc., of fixed assets.....	773,601.15
	3,110,280.27
	\$8,119,910.91
Deduct:	
Dividends for year ended Dec. 31, 1919:	
Preference stock 7%.....	\$75,000.00
Common stock 4%.....	480,000.00
	1,355,000.00
Surplus as per balance sheet.....	\$6,764,910.91

The total revenue, an increase of about \$1,150,000 over 1918, was the largest in the company's history. Operating expenses, however, increased \$903,828, the ratio of these to revenue being approximately 70% against 70.3% in 1918 and 71.1% in 1917.

The net profits increased \$12,581 over 1918, the earnings being at the rate of approximately 12.2 on the common stock, against 11.3 in 1918.

Although the year was a highly prosperous one, the position as to working capital underwent considerable impairment as compared with the end of 1918. Current assets increased by upwards of \$400,000, but liabilities of the same classification grew from \$2,602,725 at Dec. 31, 1918, to \$4,937,575 on Dec. 31, 1919, an increase of \$2,334,850. This was due chiefly to upwards of \$1,300,000 in accounts payable and bank loans of \$700,000, no obligations of the latter class appearing in last year's statement. The position as to working capital as indicated in the balance sheets of the two years is shown in the following:

	1919.	1918.
Assets.....	\$5,866,873	\$5,438,976
Liabilities.....	4,937,575	2,602,725
Working capital.....	\$929,298	\$2,836,251

The impairment in the way of working capital is reflected in an increase in fixed assets during the year, which stand at over \$5,000,000 higher than at the end of 1918, their valuation of \$28,916,912 being reached after allowance was made for depreciation reserve of \$4,564,921. These additions to the company's fleet and other properties are also indicated in an increase of nearly \$1,500,000 in first mortgage bonds outstanding, these amounting to \$2,220,886, against \$757,020 at Dec. 31, 1918.

Arctic Ice Conditions—Newfoundland newspapers state that ice conditions in the Arctic this year are the most severe in the memory of those having to do with them. The solid pack is reported to extend to eight miles south of Wainwright, about 100 miles north of Point Bar. Officers of the patrol ship Bear, who say that the pack extends farther south this season than any year in their experience, report that the lower edge of the pack is literally black with walrus and other animals, indicating that the ice is solid for a great distance north, as the walrus stay close to open water.

Quebec Shipping Corporation, Ltd., has been incorporated under the Dominion Companies Act, with \$1,000,000 authorized capital, and office at Montreal, to build, own and operate steam and other ships of every description, and carry on a general transportation business within and without Canada. The incorporators are: L. McFarlane, K.C.; G. Barkeley, W. B. Scott, A. Knatchbull-Hugessen and J. G. Cartwright, Montreal.

Vancouver Drydock to be Built by J. Coughlan and Sons, Ltd.

The Dominion Government passed the following order in Council, on 4115, Feb. 11, 1919, on the recommendation of the Privy Council, and before then a report, dated Feb. 10, from the acting Minister of Public Works, submitting as follows: That application be made under the Dry Dock Subsidies Act, 1910, chap. 17, and under chap. 51, 1919, an act to amend the Dry Dock Subsidies Act, 1910, for a subsidy for the construction of a dry dock and appurtenant works at Vancouver, the dimensions of the proposed dry dock are as follows:

Length from entrance step to head wall.....	700 ft.
Length from end of sill to head wall.....	700 ft.
Clear width at entrance at bottom.....	110 ft.
Width of entrance at top.....	116 ft. 2 in.
Depth over sill at entrance high water.....	32.48 ft.
Depth over sill at entrance under low water.....	30 ft.
Depth over sill at entrance under ordinary low water.....	25 ft.

The entrance to the dock will be closed by a steel or wrought iron floating caisson. The width of the dock proper, at coping level, will be 129 ft. with 110 ft. clear width from altar at sill level. The floor of the dock will be 4½ ft. below the level of the entrance sill, and will have a fall of 6 ft. from the center to the side drains. The detailed estimated cost of the dock and appurtenant works are given respectively by the applicant company and the Chief Engineer of the Public Works Department as follows:

	Applicant's	Chief Engineer's
Dry dock, equipment.....	\$1,408,000	\$1,244,215.50
Entrance and appurtenant.....	88,000	88,000.00
Foundations and appurtenant.....	700,000	600,000.00
Machinery and appurtenant.....	500,000	500,000.00
Land.....	200,000	Nil
Engineering and contingencies.....	100,000	\$117,619.88
Contingencies.....	100,000	100,000.00
Total.....	\$2,700,000	\$2,700,015.38

*Engineering, supervision and contingencies on the above.

The proposed dock will come, therefore, within the second class, and the subsidy to be allowed under the Dry Dock Subsidies Act, 1918, sec. 8, subsec. 1, paragraph b, as amended in 1919 by chap. 51, is 4½% on \$2,500,000 for 35 years, with provision for half-yearly payments on account of the subsidy at the rate mentioned, on 75% of the cost of all work done and materials provided at the time of such payment, such progress payments to be made when the work done and materials provided shall have cost at least \$500,000. The Public Works Department's Chief Engineer reported on Dec. 19, 1919, that the proposed dock is to be built on the main harbor front, in the immediate vicinity of the government wharf, that the site is easy of access for vessels, that there is sufficient room for shops and plant for handling repairs; and that the location is well situated in regard to railway accommodation. The Chief Engineer also reported on Nov. 24, 1919, in accordance with the requirements of the said acts, that the construction of the drydock at Vancouver is required in the interests of commerce. He certifies that the proposed drydock is of sufficient capacity to meet the public requirements of Vancouver. He has likewise recommended that if the application be granted the following conditions be imposed, in addition to those mentioned in the act: That further detailed plans of the work to be done be supplied when requested by the Chief Engineer. That the applicants commence work within six months from

the date of the signature of the subsidy agreement. That the applicants fully complete the graving dock, installation of machinery, etc., within two years from the date of the signature of the subsidy agreement. That the applicants agree to give any desired assistance to the departmental inspectors during construction. That the drydock and appurtenant works must be maintained in good condition and to the satisfaction of the Public Works Department's Chief Engineer, who is to be the sole judge as to what repairs and renewals are necessary.

It is to be noted that the drydock proposed by J. Coughlan and Sons, will have the following dimensions:

Length from caisson step to head wall.....	700 ft.
Length from back of sill to head wall.....	700 ft.
Clear width of entrance at bottom.....	110 ft.
Depth over sill at high water.....	30 ft.

While the minimum dimensions for drydocks of the second class are fixed, under the act, as follows:

Length from caisson step to head.....	500 ft.
Clear width at entrance.....	85 ft.
Depth over sill at high water.....	30 ft.
Depth of water over sill at ordinary low water in nontidal waters.....	25 ft.

It will therefore be seen that the dimensions of the Coughlan dock are considerably larger than the standard dimensions of a second class dock. The dock proposed can accommodate the largest vessels on the Pacific coast, plying between Vancouver and the Orient. The largest two are the Empress of Russia and the Empress of Asia, owned by the C.P.R., which are each 590 ft. long, and 68 ft. wide. Their net registered tonnage is 16,580 and they have a displacement of 30,625 tons.

The subsidy in the case of a first class dock is 4½%, on a maximum of \$5,500,000, or \$247,500 a year, for 35 years. The subsidy on second class docks is 4½%, on a maximum of \$2,500,000, or \$112,500 a year, for 35 years, and the difference between the first and the second drydock subsidy is therefore \$135,000 a year, representing as 5½% a capital investment of \$2,454,545.

Graving docks, when site and foundation are favorable, and easily accessible of approach, constitute in general the most satisfactory solution of the problem of docking large vessels, and the conditions obtaining with the present proposed dock are entirely in accord with the above.

While the Dry Dock Subsidies Act provides as stated above for the payment of half yearly subsidies during progress of construction, J. Coughlan & Sons, have waived this provision and desire payment of the subsidy only on the entire completion of the dock. J. Coughlan & Sons have been incorporated as J. Coughlan and Sons, Ltd., under the British Columbia Companies Act as a limited company, and have submitted evidence to that effect, in accordance with the provisions of the Dry Dock Subsidies Act, 1910, sec. 3, but it will be necessary for the company to secure Dominion incorporation as well, before a subsidy agreement can be executed with it.

The Minister considers that J. Coughlan and Sons, Ltd., have the ability to construct a drydock and appurtenant works at Vancouver, as referred to, and he recommends, in the circumstances, that an agreement be entered into with the company in the usual form, when it

shall have secured Dominion incorporation, for the payment to it by the Dominion Government for 35 years, of an annual subsidy of 4½% on the cost of the said works, when constructed in accordance with the plans and specifications attached hereto, such cost for the purpose of determining the subsidy being fixed at \$2,500,000 the payment of the subsidy to be subject to the provisions of the Dry Dock Subsidies Act, 1910, and the amending act of 1919 mentioned. It is to be understood, however, that no advances during the construction of the dock, as provided under the Dry Dock Subsidies Act, 1919, sec. 2, are to be made to the company and that the subsidy shall become payable only on the full completion of the dock; the payment of the subsidy to be subject to the further following conditions: That further detailed plans of the works to be done be supplied when requested by the Chief Engineer. That the company commence work within one month from the date of the signature of the subsidy agreement. That the company fully complete the graving dock, installation of machinery, etc., within two years from the signature of the subsidy agreement. That the company agree to give any desired assistance to the departmental inspectors during construction. That the drydock and appurtenant works must be maintained in good condition and to the satisfaction of the Public Works Department's Chief Engineer, who is to be the sole judge as to what repairs and renewals are necessary.

The committee concur in the foregoing recommendation and submit the same for approval.

Other Applications. As stated in Canadian Railway and Marine World for Nov., 1919 and Jan., 1920, other applications for aid under the Dry Dock Subsidies Act for the construction of drydocks at Vancouver were made as follows:

Davidson and Cameron—For a concrete graving dock, 1,150 ft. long, 125 ft. wide at the entrance, 38 ft. depth of water over sill at ordinary spring tide, to be built at Deadman's Island, at an estimated cost of \$6,600,000.

Wallace Shipyards Ltd.—For a floating drydock of 15,000 tons capacity, to be built just east of the ferry landing at North Vancouver, at an estimated cost of \$3,500,000.

Raymond Concrete Pile Co., Montreal—For a masonry graving dock of the first class at Burrard Inlet.

Kingston Harbor Improvements.—As stated in Canadian Railway and Marine World for February, pg. 92, plans of improvements proposed at Kingston, Ont., to provide facilities for transshipping cargoes arriving through the new Welland Ship Canal, as approved by the Public Works Department's District Engineer, an engineer engaged by the city of Kingston, and engineers for the three railway companies, were submitted to the Dominion Marine Association at its annual meeting and were referred to its executive committee. We are advised that it is not expected that any appropriation will be made by the Dominion Parliament for the proposed work this year, as it appears to have been decided that there will be ample time to do the work prior to the completion of the new canal.

National Association of Marine Engineers of Canada.

Ottawa press dispatch, Feb. 20.—The Grand Council of the National Association of Marine Engineers of Canada has concluded its biennial convention session. P. M. Draper, Secretary, Trades and Labor Congress, addressed the council, pointing out the advantages that would accrue from affiliation with that body, and the council decided to affiliate.

Proposed amendments to the Canada Shipping Act regarding conditions of employment, and wages paid on government steamers, were discussed and a deputation was appointed to wait on the Marine, Public Works and Railways and Canals Departments. Representations are to be made to the departments concerned on the variance in rates of pay on the Atlantic coast as compared with the Pacific. Marine engineers leaving Vancouver at certain rates of pay are, it is claimed, on reaching Atlantic ports, compelled to take their choice of considerably lower rates or make their way back to Vancouver at their own expense, and the council is attempting to establish a universal scale of wages throughout the country.

Wages and living conditions on government owned boats, as compared with those privately owned, were discussed, and representations will be made to the departments concerned with regard thereto; also as to lake boats not being fully manned at times.

The following officers were elected: Grand President, E. Reed, Vancouver; Vice President, Eugene Hamelin, Montreal; Secretary-Treasurer, N. J. Morrison, St. John, N.B.; Grand Conductor, A. E. House, Midland, Ont.

The Lord Strathcona Steamship Co. Ltd. has been incorporated under the Dominion Companies Act with \$1,500,000 authorized capital, and office at Montreal, to own and operate steam and other ships of every description, and carry on a general transportation business on land and water. The incorporators are: A. R. Holden, C. G. Heward, H. W. Shearer, A. B. Wright, and C. Arnold, Montreal.

Tugs for Fisheries Protection Service on Lake Erie—With reference to the advertisement published in Canadian Railway and Marine World for January, inviting tenders for the construction of 3 first class single screw tugs to be delivered at Port Stanley, or Kingsville, Ont., we are officially advised that, since tenders were invited, 3 ships, already belonging to the government, and which can be utilized for the purpose, have been made available to the Marine Department unexpectedly, and that it is not proposed to accept any of the tenders received.

Suggested Restrictions Favoring U.S. Ships on the Pacific.

Will Clark, who is described in a Washington, D.C., press dispatch of Feb. 20, as "of the Pacific Coast Steamship Co., Seattle, Wash.," is said to have told the U.S. Senate's Commerce Committee that amendments to the U.S. coastwise navigation laws are needed to prevent Canadian railways participating, through their ships, in the trade between the U.S. and Alaska, that present restrictions confining coastwise trade to U.S. ships are being evaded under departmental rulings, and that during the war Canadian ships were left in the trade, while U.S. ships were taken off and put into war service. He advocated the barring of all ships from the trade between the Philippine Islands and the U.S. except those owned by U.S. citizens. Senator Chamberlain, democrat, Oregon, suggested that freight rate regulation might be required under the circumstances, but Clark said that he considered shipping should be free from rate regulation for the present.

The latest editions of official guides do not show any Will Clark as being a Pacific Coast Steamship Co. official.

Sales of Trawlers—The steam trawler T.R. 57, which the Anderson Co. of Canada, Montreal, has sold to the Gulf Export and Transportation Co., Beaumont, Texas, was expected to clear from Halifax, about the end of February for Beaumont, and to make the trip of approximately 3,000 miles in 13 days, including the time which she would be tied up at the mouth of the Mississippi River. The trawler T.R. 41, which was sent to Europe for exhibition purposes, as stated in our last issue, arrived at Boulogne-sur-Mer, France, Feb. 11, having made the voyage from Halifax, N.S., in 15 days, which is considered remarkable performance for a ship of this type, at this time of the year.

Forester Navigation Co. Ltd. has been incorporated under the Dominion Companies Act, with \$47,000 authorized capital, and office at Sussex, N.B., to build, own and operate steam and other ships for the conveyance of passengers and merchandise, and to act as a common carrier. The incorporators are: N. G. White, H. H. Reid, Sussex, N.B.; J. A. Cleveland, F. P. Keirstead, Alma, N.B.; G. W. Smith, Apple River, N.S.

Chignecto Lighterage Co. Ltd. has been incorporated under the Dominion Companies Act, with \$40,000 authorized capital, and office at Sussex, N.B., to own and operate steam and other ships of every description and carry on a general navigation business. The incorporators are: W. Thompson, Sussex, N.B.; J. A. Cleveland, Alma, N.B.; E. Taylor, G. W. Smith, Apple River, N.S.; and W. E. Moore, Point Wolfe, N.B.

Canadian Shipping Losses During the War.

Canadian Railway and Marine World for January, contained some official information of Canadian merchant shipping losses, which occurred during the war, as supplied to the British House of Commons by the Admiralty. The list, as then published, did not purport to be a complete as to all Canadian ships lost during war time, but dealt with those which were actually lost by enemy attack, either by submarine or mine. Some figures published recently show that 149 steamships, operating on the Great Lakes, passed out of the St. Lawrence to the ocean, primarily for war purposes. It is estimated that the loss of Great Lakes steamships amounted to 297,103 gross tons, with a carrying capacity of 432,400 tons. Of the total number of steamships leaving the Great Lakes for war purposes, it is stated that 64 were of Canadian registry, of which 44 were bulk freight steamships representing 157,366 gross tons, with carrying capacity of 244,500 tons. Among the Canadian steamships lost, either through enemy action or from other causes, are mentioned the following: Carleton, Chemung, A. D. Davidson, Donnacona, Dunelm, W. H. Dwyer, George L. Eaton, Empress of Fort William, Empress of Midland, C. A. Jaques, Midland Queen, Northmont, Port Dalhousie, Scottish Hero, Stormount, Strathcona, Algonquin, Fairmont, Meaford, etc.

Several Canadian ships which went overseas during the war are still in service under British control, and it is not expected that many, if any, of them will return to the Great Lakes.

The Dominion Government s.s. Montcalm, which, as announced in our last issue, became icebound while on a trip to the Magdalen Islands with winter supplies, and which, it was reported, was ordered to abandon the trip and return to Halifax, N.S., was reported to have arrived within half a mile of Grindstone Island, Feb. 22, and was then unloading supplies on the ice. The Montcalm left Souris, P.E.I., Jan. 24, and became icebound three days later, having only made 25 miles in that time. She was then allowed to drift with the ice, and was carried past Cape North and into Cabot Strait, where gales scattered the ice and allowed her to proceed to the Magdalen Islands.

German Steamship Sales in United States—The U.S. Government requested tenders recently for the acquirement of several German steamships which have been allocated to it under the terms of the peace treaty, but owing to some political dissensions, the Senate requested that the sale be deferred until it is prepared to take some definite action in the matter. Several bids were received, including one of \$14,050,000 for 9 steamships for service between North America and United Kingdom and northern European ports, from the International Mercantile Marine Co., and another of \$13,100,000 for 6 steamships, from the same company. The Oriental Navigation Co. offered \$700,000 for the s.s. Black Arrow, trading recently in the Black Sea service, with the condition that she be retained in that service. An injunction was applied for to restrain the proposed sale, and it was later decided to decline all tenders and discuss the sale further.

Ships Built in 1919 and Exported Without Being Registered in Canada.

The following information has been furnished by the Marine Department:

From ports in:	Sailing Wood			Steam Wood			Steam Steel		
	No.	G.T.	N.T.	No.	G.T.	N.T.	No.	G.T.	N.T.
Nova Scotia	2	747	747	2	4,493	2,761			
New Brunswick				5	11,525	6,999	7	21,584	11,265
Quebec				10	14,756	8,102	8	10,545	6,983
Ontario									
British Columbia				43	82,818	50,660	3	17,245	12,723
Total	2	747	747	60	112,712	68,522	18	49,324	30,671
Grand Total				No. of vessels.	Gross tonnage.		Net tonnage.		
				80	162,783		99,310		

Ships Built in Canada in 1919 for Overseas.

According to figures supplied by the Marine Department, there were built in Canadian shipyards last year 50 ships which were sent overseas without having registered in Canada. A considerable proportion of these were built for French interests and there were several for the Imperial Munitions Board, as well as two or three for Norway. Total tonnage of the ships that left the country was 99,340, including wooden sailing ships, wooden steamships and steel steamships. Of wooden sailing ships there were only two built viz., in Nova Scotia, and were 747 net tonnage.

The number of wooden steamships built was 60, with a total net tonnage of 68,127. Of these British Columbia built 43, with 50,660 net tonnage; Quebec built 10; New Brunswick 5, and Nova Scotia 2. Ontario built none.

There were 18 steel steamships built with total net tonnage of 30,071. In this class Ontario built 8, total net tonnage 6,083; Montreal built 7, total net tonnage of 11,265; and British Columbia built 3, total net tonnage 12,723.

These figures relate only to ships built in 1919 to overseas orders. The orders for the British Government were all carried out by the Imperial Munitions Board. An order from the French Government for 50 wooden ships for the Mediterranean explains the activity of Pacific Coast and Quebec yards in wooden shipbuilding. The Quebec orders were filed by Fraser Brace & Co., Montreal, and Tidewater Shipbuilders Ltd., Three Rivers.

Canadian Notices to Mariners.

New Brunswick, Grand Manan Island.—To increasing the audibility of the fog signal at Swallow-Tail light station, to the northward and westward, the bell, which is 450 ft. southerly from the lighthouse, will be moved closer to the lighthouse in the near future.

Nova Scotia, South Coast, White Haven Harbor.—Uncharted shoal $4\frac{1}{2}$ cables, $348^{\circ} 30'$ (N. 13° E. mag.) from the most easterly extreme of Deming Point, east tangent of Fisherman Island, in line with west tangent of Sheep Island, depth 15 ft., shoal of small extent, smooth rock sloping off gradually on all sides to 6 fathoms.

Nova Scotia, Sydney Harbor.—Owing to the pier at southeast bar light station having been damaged by storms, it may be found necessary to suspend operation of light on short notice, and if so, a temporary light will be exhibited from the old lighthouse and fog bell discontinued; the light will be of the 4th order, dioptric, fixed red, acetylene gas, at an elevation of 30 ft.

Prince Edward Island.—The Souris east breakwater light has been moved to 60 ft. from the outer end of the breakwater.

New Brunswick, Miramichi Bay, Portage Island range light. Day beacon established on southern end of island; diamond shaped, wooden slatted, daymark on front range pole; color, white.

Nova Scotia, St. Mary Bay.—Change a portion of Grand Passage warning buoy, on or about Mar. 1, to about 1,600 ft. east of present position, and one mile from Peter Island; color, black and white, vertical stripes.

Quebec, River St. Lawrence, ship

channel between Quebec and Montreal—Cap a la Roche curve, change in numbers of buoys.—On the opening of navigation, the following changes will be made in the numbers of Cap a la Roche curve buoys, black gas buoy 93 $\frac{1}{2}$ Q, will be 94 Q, red gas buoy 94 $\frac{1}{2}$ Q, will be 95 Q; black can buoy 95 Q, will be 97 Q; red can buoy 96 Q, will be 98 Q; black gas buoy 97 Q, will be 99 Q; red gas buoy 98 Q, will be 100 Q; red spar buoy 100 Q, will be 102 Q.

Quebec, St. Lawrence River, ship channel between Quebec and Montreal, Batican traverse, change in character of buoy.—On opening of navigation, black spar buoy 111 Q, will be replaced by a black can buoy.

Ontario-Detroit River.—On the opening of navigation, a lightsip will be established at the junction of Amherstburg and Livingstone channels, in position formerly occupied by U.S. lightsip. She will be a wooden schooner with two masts, red painted hull, with "Bar Point No. 21" in white letters on each top side, with a red ball near the top of the foremast, and if for any reason she is off her station, the ball will be lowered. The illuminating apparatus will be dioptric, consisting of 3 fixed white lights round the foremast, visible all round the horizon, and elevated 30 ft. above water. During thick or foggy weather a steam whistle will give a blast of 10 seconds every 40 seconds.

Ontario, Lake Superior, Thunder Bay and port Arthur harbor.—On the opening of navigation the red spar buoy 8 A, on north side of channel, immediately inside breakwater, at main entrance channel, will be moved to a new position, 150 ft. from the lighthouse on north breakwater. The red spar buoys 2 A and 4 A, on north side of channel, at entrance to main harbor, will be discontinued.

Appreciation of Canada's Aids to Navigation.—Capt. Griffiths, of Canadian Pacific Ocean Services' s.s. Scandinavia, while in Canada recently, stated that he had been sailing to the Dominion for 23 years, first on the Beaver Line's s.s. Lake Huron, and later on C.P.R. steamships, and fully appreciated the great improvement in the navigation aids along the Nova Scotia and New Brunswick coasts, especially the distance finding stations at Canso, Camperdown and Cape Race, from which points any steamship losing her bearings, through fog or other causes, can obtain her location by wireless.

The Lady Mine Shipping and Fishing Co. Ltd. has been incorporated under the British Columbia Companies Act, with \$25,000 authorized capital, and office at Vancouver, B.C., to carry on a general fishing business, and to own and operate steam and other ships. The company has bought the schooner Lady Mine, from A. J. Bechtel, and is having her equipped with auxiliary power. She was built at Port Ludlow, Wash., in 1880, her dimensions being: length, 76 ft.; breadth, 21.9 ft.; depth, 8.4 ft.; tonnage 55 registered.

Contracts for Marine Public Works.—The Dominion Public Works Department has let the following contracts: Lauzon, Que., construction of lavatories, etc., at Lorne drydock; Jos. Gosselin Ltd., Levis, Que.; Jan. 30, \$3,150. Powell River, B.C.; construction of addition to wharf; Fraser River Pile Driving Co., New Westminster, B.C.; Feb. 7; schedule of prices.

United States Shipping and Shipbuilding Notes.

The Atlantic Shipbuilders' Association announces that steel ships totaling close to 1,500,000 d.w. tons, or 1,000,000 gross tons, are being built in U.S. shipyards.

The U.S. Bureau of Navigation reports 112 sailing, steam, gas and unrigged ships of 253,579 gross tons built in the U.S. and officially numbered during Jan., 1920.

Rear Admiral Benson, Chief U.S. Naval operations during that country's participation in the war, and since on the retired list, has been selected by President Wilson to succeed J. B. Payne as a member of the U.S. Shipping Board.

C. W. Morse, head of 2 steel shipyards, told the U.S. Senate Commerce Committee, Feb. 7, that government owned ships built during the war should be, and could be, sold to private operators for prices covering the cost, overhead, and total investment.

The aggregate authorized capitalization of shipping and shipbuilding companies organized in the U.S. during January, was \$76,305,000, the second highest investment in new shipping enterprise for any one month since the outbreak of war in 1914.

The U.S. Bureau of Navigation announces that the total number of masters, officers, and men required at present to man U.S. registered, enrolled, and licensed vessels, including 1,450 documented yachts, and aggregating in round numbers 15,325,000 gross tons, is about 266,000.

The U.S. Shipping Board announces that one of its committees has recommended awards totaling \$12,089,149 on the claims of foreign ship owners for vessels and materials requisitioned during the war. Of a total of 55 claims filed by Norwegian, Russian, Italian, French and Danish interests, three were for ships and the remainder for shipbuilding materials.

The U.S. Commerce Department's reports state that steel merchant shipbuilding on a commercial basis in the U.S. is making steady progress, private shipyards on Feb. 1 having 183 steel ships of 791,911 gross tons for private shipowners under construction or under contract to build, compared with 165 ships, of 679,170 gross tons, on Jan. 1.

Chairman Payne, of the U.S. Shipping Board, has asked Henry M. Robinson, formerly Shipping Board Commissioner, to serve as chairman of a committee of bankers to discuss problem of obtaining a wide public interest in shipping securities with view to disposition of government fleet. It is anticipated that within the next few years vessels to value of more than \$2,000,000,000 must be sold.

A Cleveland, Ohio, press dispatch says that shipbuilders on the Great Lakes turned out 188 steamships and 29 tugs during 1919, making a total of 217 ships for the U.S. Emergency Fleet Corporation for salt water service. Not all the ships that were ordered for 1919 delivery were completed, 57 steamships and 19 tugs being carried over. Not a single steamship was built for lake trade last season, as the yards were all busy on government work. A number of steamships have been ordered for salt water service for 1920 delivery, and some bulk freighters may be built for the lake trade this year.

Mainly About Marine People.

Sir Montagu Allan, formerly of the Allan Steamship Line, was reported, Feb. 21, to be in a critical condition with pneumonia at Montreal. It was stated, the following day, that he had had a slight attack of influenza, but was convalescent.

Hon. C. C. Ballantyne, Minister of Marine, was the chief guest at a dinner given by the Canadian Federation of Returned Soldiers and Sailors at Montreal, Feb. 9. A day or two afterwards he was reported to be suffering from a mild attack of influenza, from which he recovered satisfactorily.

Henry Blackwell Beaumont, who has been appointed General Agent, Passenger Department, Canadian Pacific Ocean Services, Ltd., Montreal, was born there, Aug. 3, 1887, and entered steamship service in June, 1904, since when he has been, to June, 1909, clerk; June, 1909 to July, 1911, private secretary; July 11, 1911, to Jan., 1913, chief passenger clerk; Jan., 1913 to July 1917, City Passenger Agent, Allan Line Steamship Co., Montreal; July to Oct., 1917, City Passenger Agent, Canadian Pacific Ocean Services, Ltd., Montreal; Oct., 1917 to June, 1919, chief passenger clerk, same company, London, Eng., June, 1919, to Jan., 1920, Assistant to Passenger Manager, same company, London, Eng.

H. W. Cowan Director of Operation, Canada Steamship Lines, Ltd., Montreal, returned to Canada, Feb. 10, after a three months trip to Europe, in connection with the company's ocean services and connections.

B. Guerard, harbor master, Port Arthur, Ont., died there, Feb. 9, aged 94, from pneumonia.

James J. Lynch, Assistant Freight Claims Agent, Canada Steamship Lines Ltd., Montreal, died there Feb. 1, aged 31, from pneumonia, after a short illness. He entered transportation service with the G.T.R. at Hamilton, Ont., in the freight department, and was later in Central Illinois Ry. service at Chicago, Ill. He returned to Canada, as agent, Canada Lake Line, at Windsor, Ont., and was appointed to his last position early in 1919.

John A. Mara, who died in Victoria, B.C., Feb. 12, aged 79, was one of the pioneers of inland water navigation in British Columbia, and was one of the founders of the Columbia & Kootenay Navigation Co., of which he was President, when it sold out its steamboats, etc., to the C.P.R. He was born in Toronto in 1840 and on April 23, started from Queenston, Ont., with a party, travelling by the usual stage route to St. Paul, Minn. From there they proceeded to Georgetown on the Red River, and had to wait for the completion of a stern wheel steamboat, which was building for the trade. The party reached Fort Garry in May after a six weeks trip. Later on the steamboat was captured by Indians, and a number of the passengers and crew were murdered. They arrived at Fort Garry, now Winnipeg, on May 18 and left there June 2. They had Red River carts drawn by oxen, mules and horses, most of the carts being covered in. At night the transport was drawn up in a triangular group, with the carts in a wedge shape, with sufficient room for the animals to pass inside the area so provided, the tents being round the triangle. Outside sentries

were posted to give warning of hostile attack. Fort Edmonton was reached without molestation, on July 21. There an exchange of carts took place for pack saddles, and a guide was secured to pilot the party to Tete Jaune Cache. As the party approached the foothills of the Rockies, the herds of buffalo and the numerous species of wild game gave place to mountain sheep, and the furred inhabitants of the foothills. Jasper House was reached by forest and swamp, and then the parties proceeded by the valleys of the Athabasca and Mayette Rivers to the Yellowhead Pass. Tete Jaune Cache was reached on Aug. 28, and then the parties divided for the descent of the Fraser River. With the exception of three men, the remainder got through in safety, and reached Quesnel on Sept. 11. Owing to the mines being closed, the majority went on to the coast to winter. Mr. Mara went into business at Yale. He was elected to the B.C. Legislature at the first election after that colony entered confederation, and remained a member until 1886, from which date until 1896 he represented Yale in the House of Commons.

W. Grant Morden, M.P., arrived in Montreal Feb. 17, from England. He was elected recently a member of the Dominion Steel Corporation's London, Eng., advisory committee, and is also a member of Canada Steamship Lines' London advisory committee.

Commander P. C. Musgrave, R.N., in charge of hydrographic survey work on the British Columbia Coast, died suddenly at Esquimalt, B.C., Feb. 17.

J. W. Norcross, President and Managing Director, Canada Steamship Lines Ltd., has been elected a director, Dominion Steel Corporation.

J. B. Payne, Chairman, United States Shipping Board, has been appointed U.S. Secretary of the Interior.

Jas. Playfair, President, Great Lakes Transportation Co., Midland, Ont., and Mrs. Playfair, are spending some time in California.

H. B. Smith, President, Collingwood Shipbuilding Co., and Northern Navigation Co., also a director of Canada Steamship Lines, has bought a house on St. Clair Ave., Toronto, and will remove there, with his family, from Owen Sound, Ont., in the spring.

W. L. Stamford, heretofore Assistant Engineer, Dominion Marine Department, Victoria, B.C., was presented with a smoking set, by the department staff there, Feb. 12, on leaving for Prince Rupert, B.C., where he has been transferred as engineer.

P. D. Sutherland, whose appointment as General Passenger Agent for the Orient, Canadian Pacific Ocean Services, Ltd., Hong Kong, China, was announced in our last issue, was born at Toronto, Nov. 2, 1879, and entered C.P.R. service in the General Freight Department, under his father, J. N. Sutherland, subsequently transferring to the Passenger Department at St. John, N.B., where he spent four years in the City Ticket Office, and the West St. John Atlantic Terminal, and was then transferred to Toronto as chief clerk in City Passenger and Ticket Agent's office, and was from 1906 to Feb. 1, 1920, General Agent, Passenger Department, C.P.O.S., Hong Kong.

Mrs. C. J. Thorley, who died in Toronto Feb. 25, aged 86, from pneumonia, was the mother H. G. Thorley, Passenger Agent for Ontario, International Mercantile Marine Co.

J. W. Troup, Manager, British Columbia Coast Service, C.P.R., Victoria, returned to Canada, Feb. 7, via New York, from Great Britain, where he had been in connection with the possible building of an additional steamship for the service to northern B.C. ports.

Jas. Watson, returned soldier, Toronto, has been appointed junior draftsman, Marine Department, Ottawa, at an initial salary of \$900.

Shipping Federation of Canada.

The report for the past year, presented at the annual meeting at Montreal, Feb. 11, showed that additional new tonnage is coming on the market, and competition for the freight offering is increasing, that freight rates are tending downward and operating expenses upward. During 1919 shipping conditions at Montreal were reported good, with a good supply of freight and passenger traffic, which was limited only by a shortage of steamships. The value of exports from Montreal is given as \$700,000,000, thus placing it the second North American port, regarding value of exports. Pilotage conditions were unsatisfactory, especially in Montreal district, as the pilots had commenced pooling their earnings in a similar manner to that adopted in the Quebec district, and this had a tendency toward lack of incentive and increase of slothfulness. The shipping interests, therefore, petitioned the government to throw open the pilotage districts of Montreal and Quebec, by abolishing the compulsory payment of pilotage dues, and it is said that this will be taken up during this year. There were no labor disturbances at Montreal during 1919, the various unions having kept to their agreements. The report was signed by John Torrance, President, who has now retired and who was not at the meeting, being in the south on account of ill health. A resolution was passed expressing regret at his retirement, coupled with the hope that his health will soon be restored.

Officers for this year were elected as follows: President, R. W. Reford; Treasurer, J. R. Binning; Assistant Treasurer, E. W. Foulds; executive council, J. R. Binning, D. W. Campbell, P. A. Curry, A. E. Cook, W. R. Eakin, A. M. Irvine, A. MacKenzie and R. B. Teakle.

Dominion Marine Association's Activities—At a meeting of the executive committee in Montreal, Feb. 13, a committee, consisting of H. W. Cowan, Canada Steamship Lines, T. R. Enderby and L. Henderson, Montreal Transportation Co., Francis King, the association's General Counsel, and two Ottawa members, were appointed to wait upon certain ministers and officials at Ottawa, with regard to important pending questions, including the completion of the Port Colborne elevator, and transshipping matters at that point, regulations for steamboat inspection, ice breaking at the head of the Great Lakes, the Canadian Wheat Board, pilotage on the St. Lawrence River, and several other matters.

General Shipbuilding Matters Throughout Canada.

Alberta Motor Boat Co., Edmonton.—This company is reported to be building a number of motor boats for service on the northern lakes and rivers to the Arctic Ocean, and one for a private owner, who intends operating it on northern waters during the summer.

Canadian Allies-Chalmers Ltd., Bridgeburg, Ont.—which, as announced in previous issues is building 2 steel steamships, similar to the 2 built recently for the British Government, under orders from the Imperial Munitions Board, has sold them to the American Metal Transport Co., New York. They are being built under yard nos. 302 and 303, the keel of the first having been laid in Mar., 1919, and that of the second in Nov., 1919. It is expected that the first one will be launched during April, and completed in June, while the other will follow about two weeks later.

Cholberg Ship Co., Victoria, B.C.—In connection with the building of 4 wooden auxiliary powered schooners at this yard, under the Dominion Government's loan scheme, as outlined in our last issue, British Columbia Shipowners Ltd., has been organized to finance and control the construction. It is stated that, in addition to a number of local business men, several of those who will be engaged on actual construction of the vessels, as well as of those who will supply material, have taken shares. The company's directors are: R. P. Butchart, S. Hoard, Capt. H. C. Hansen, W. Mead, Capt. M. D. Harbord, F. Pemberton and W. Spencer.

Dominion Shipbuilding and Repairing Co. Ltd. has been incorporated under the Dominion Companies Act with \$3,000,000 authorized capital, and office at Toronto, to build, own and operate steam and other ships of every description, and carry on a general shipbuilding, shipowning, transportation and forwarding business. The new company is a re-incorporation of the Dominion Shipbuilding Co., with extended powers and increased capitalization, and will take over the whole of the latter company's assets and continue its business.

Dominion Steel Corporation, Sydney, N.S., is, a press reports states, considering the construction of a drydock and shipbuilding plant at South Bar, Sydney, and that dredging will be started there in the near future. Sydney officials of the company, are reported as stating that they have no knowledge of the proposal.

Foundation Co. of British Columbia Ltd., Victoria, B.C.—It was reported recently that negotiations were proceeding with the company by Capt. E. V. Argon, on behalf of French interests, for the purchase of the company's shipyards at Victoria. It is stated that appraisers have been over the plants at Point Ellice and Point Hope, and that considerable French capital is behind the project. The building of wooden steamships will, it is said, be carried out on a large scale. A press dispatch of Feb. 20, states that the company has declined the offer made, and that the yards will be dismantled.

Halifax Shipyards Ltd., Halifax, N.S.—At a meeting of the Halifax Board of Trade, Feb. 3, a letter was read from J. E. McLurg, General Manager, Halifax Shipyards, Ltd., and a member of the board's council stating that it is the company's intention to place a float-

ing drydock, with a capacity up to 20,000 tons, in the harbor shortly, and that the company's representatives are in Great Britain, in connection with the acquisition of such a dock. We are officially advised that Mr. McLurg has been misquoted in the press report, and that he did not say that the company will build a 20,000 ton drydock. It is reported that negotiations are proceeding between the company and the British Government for acquiring one of the floating drydocks, which Germany

mentioned vessel, it is said, is to be practically refitted internally, and up to date accommodation provided for 100 passengers, comprising staterooms, cabins, dining room, smoking room and crew's quarters.

J. E. McLurg, General Manager, in speaking at a dinner given on Feb. 20, by the company's departmental heads, is reported to have said: "We are builders, not bankers. The French are anxious to place orders and the Halifax Shipyards could accept them, but for the

Steel cargo steamship Canadian Raider, approximately 5,100 d.w. tons, for Canadian Government Merchant Marine Ltd., built by Wallace Shipyards Ltd., North Vancouver, B.C., loading lumber at Dominion Government dock, Vancouver.

has surrendered to the allies, under the terms of the peace treaty.

During February work was carried out on the United States Shipping Board's s.s. Buffalo Bridge, a new tail shaft and propeller being fitted. Canadian Government Merchant Marine s.s. Canadian Spinner was also overhauled, after her experience in the ice in the Gulf of St. Lawrence during January, and she is awaiting a new rudder stock which is being made at New Glasgow, N.S. The U.S. steamship Wakulla was also dry-docked during February, for examination and overhaul, as was also the Quebec Steamship Co.'s s.s. Kamerina. The last

present condition of exchange. The payment would be in French bonds, but not at the existing exchange. They want the bonds taken at a rate to be agreed upon, but that is a hopeless proposition." He expressed the belief that the plant would be the best in Canada and the equal of any on the Atlantic coast.

Nova Scotia Steel & Coal Co., New Glasgow, N.S., laid the keel for a steel cargo steamship; builder's yard no. 7; on Jan. 5. This ship is being built for the company's account, and will be exactly the same as its ships 5 and 6, Canadian Sealer and Canadian Miner, approximately 2,800 d.w. tons each,

which it built under orders from the Marine Department for Canadian Government Merchant Marine Ltd.

Polson Iron Works, Ltd., Toronto.—G. T. Clarkson, liquidator, notified an Ontario Court recently that he has successfully completed the contracts the company had on hand, and asked leave to advertise its property for sale. The required permission was given.

Prince Rupert Dry Dock and Engineering Co., Prince Rupert, B.C.—An interim injunction was granted to Newman Erb and his associates in the Prince Rupert Dry Dock and Engineering Co., placing the control of the company in their hands, subject to certain conditions. An application to dissolve the interim injunction, made on behalf of J. L. Mullen and his associates, was dismissed at the end of January, and the interim injunction continued until the trial of the action. Counsel for the Grand Trunk Pacific Ry., which is interested in the matter as owner, stated in court that he had been instructed by the Minister of Railways and Canals, to support the claim of the Erb interests. The company has contracts for building 2 steel cargo steamships for Canadian Government Merchant Marine Ltd.

St. John Dry Dock and Shipbuilding Co., St. John, N.B.—The receipt of a quantity of machinery, consisting of boilers, motors, dynamos and other electrical equipment, is announced, to be utilized in connection with the operations of the dry dock, which is one of the chief works to be carried out in Courtenay Bay, by the company.

St. Lawrence Dock and Shipbuilding Co., Levis, Que., the incorporation of which was announced in a recent issue, was formed to take over the National Shipbuilding Co.'s interests in the shipbuilding and repairing yard at Levis. The National Shipbuilding Co. will continue to operate the plant at Goderich, Ont., in the construction of marine engines, boilers and auxiliaries. The St. Lawrence Dock and Shipbuilding Co. has received an order from the George Hall Coal Co. of Canada for the reconstruction and repair of the s.s. Lehigh, which it has bought from the Lehigh Steamship Co., Cleveland, Ohio, for use in the coal trade. The work consists chiefly of the addition of steel poop and fore-castle, with steel decks and pilot house, 7 cargo hatches, steel main deck, crew's quarters in poop and fore-castle, new masts, booms and rigging. This work is well in hand, and it is anticipated that the ship will be ready for operation by the reopening of navigation.

Sorel Shipbuilding & Drydock Co., Sorel, Que.—This company's property was sold by auction in lots, Feb. 26, by order of the liquidator. It consisted of 6 schooners under construction, machinery, tools, yard equipment, general stock, and fixtures valued at \$628,129.29, apart from the partially built schooners.

Wallace Shipyards Ltd., North Vancouver, B.C.—The steamship which this company is building for the Union Steamship Co. of British Columbia, was expected, according to our advices, to be ready for launching about the end of February.

Farquhar and Co.'s s.s. Stella Maris, which was sent from Halifax to Mahone Bay, N.S., early in February, to release the s.s. Kinburn, icebound there, had her propeller stripped while turning in the ice.

Atlantic and Pacific Ocean.

Canadian Pacific Ocean Services Ltd., has announced that its first sailing on the St. Lawrence route this year, will be the s.s. Melita, on May 15.

Canadian Pacific Ocean Service Ltd. has inaugurated an additional passenger service between Canada and Great Britain, with Tilbury as the British port. The s.s. Melita opened the service, when she sailed from Tilbury, Feb. 12.

Canadian Pacific Ocean Service's s.s. Empress of Japan, which arrived at Victoria, B.C., Feb. 19, with part of her port rail carried away, together with a lifeboat, and some other damage to her structure, reported that the trip from Japan had been the roughest in the past 30 years.

Elder Dempster and Co. has arranged for the inauguration of a direct steamship service between Canada and the west coast of Africa, to commence in May. It is expected that a monthly service, at least, will be operated and calls made at the various ports along the coast from Dakar to Forcados.

Vancouver will, a press dispatch states, be the trans-shipping point for 150,000 Czecho-Slovaks and Russian refugees who are to leave Siberia and Northern China and return to Europe. Arrangements are said to have been made by the Blue Funnel Line, and the C.P.R. to transfer them from ship to train at Vancouver. The liners Tyndareus and Proteus are in the Orient, the latter to take on its first batch of refugees at Vladivostok.

The s.s. Sobo, owned formerly by Elder Dempster and Co., and for some years operated between Liverpool, Eng., and West African ports, and later chartered to Pickford and Black Ltd., Halifax, N.S., for the service between Canada and the West Indies, was offered for sale by auction in London, Eng., recently. She was built in 1899, and has accommodation for 80 first class and 40 second class passengers. She has about 4,720 d.w. tons capacity, on 22½ ft. draft, and a speed of about 11 knots an hour. She is 345 ft. long, 44 ft. broad and 14½ ft. deep.

The keel of the White Star-Dominion Line's s.s. Calgary, a triple screw 15,500 ton steamship, for service between Liverpool, Eng., and Canada, was laid at Belfast, Ireland, at the end of January. She will have accommodation for 650 cabin and 2,000 third class passengers. She is expected to be ready for service on the opening of St. Lawrence navigation in 1921. Her dimensions will be: length, 600 ft.; breadth, 67½ ft.; depth, moulded, 45½ ft. The propelling machinery will consist of a combination of turbines and reciprocating engines, for a speed of 15 knots an hour.

Maritime Provinces and Newfoundland.

The Eastern Steamship Corporation has announced the resumption of its steamship service between St. John, N. B., and Boston, Mass., about the end of April, or early in May.

The St. John's, Nfld., Board of Trade, passed a resolution at its annual meeting recently, that the present condition of transportation constitutes a serious handicap to the trade and commerce of the country, and called upon the government to appoint a commission forth-

with, to take evidence in the matter, with a view to providing adequate train and water service.

The schooner Associate, owned by J. Backman, Riverport, N.S., en route from Naples, Italy, to St. John's, Nfld., is reported to have been lost in mid-Atlantic about Feb. 15, nine of the crew having been rescued by the s.s. La Touraine and landed at Havre, France. The Associate was built at Liverpool, N.S., in 1912, her dimensions being: length, 107.6 ft.; breadth, 26 ft.; depth, 10.8 ft.; tonnage, 96 registered.

The s.s. Prospero, running between St. John, N.B., and Newfoundland ports, and which became icebound in a heavy field, northeast of Fogo, Nfld., in Dec., 1919, reached Twillingate, Nfld., with 60 passengers and 15 of a crew, Feb. 16, after having spent 8 weeks in the ice. Those on board were on short rations for 3 weeks, and such supplies as they had were taken on board on sleds hauled by men from the shore.

The three master schooner Meredith A. White, which was built by C. T. White and Son, Alma, N.B., in 1918, is being advertised for sale in England. She is classed with Bureau Veritas for 12 years, and is equipped with motor for handling cargo, sails and pumps, and is electrically lighted. Her dimensions are: length, 152 ft. 5 in.; breadth, 35 ft. 5 in.; depth, 12 ft. 9 in.; d.w. capacity 800 tons. She arrived at Bordeaux, France, recently, with coal from Canada.

Litigation in connection with the collision between the steamships, Imo and Mont Blanc, in Halifax Harbor, in December, 1917, and which resulted in the Halifax disaster, through the terrific explosion which took place, is now before the Imperial Privy Council's judicial committee. The Nova Scotia Admiralty Court found that the s.s. Mont Blanc was entirely to blame for the collision, and the Supreme Court held that the two vessels were equally responsible. It was announced, Feb. 21, that judgment had been reserved.

The Militia Department received tenders to Feb. 24, for the purchase of the motor boat Cockawee, then lying at the Engineers' wharf, Halifax, N.S. The boat's dimensions are: length, 52 ft. 2 in.; breadth, 12 ft. 3 in.; draft, 5 ft.; tonnage, 11 gross. She is built with oak frame and cypress planking with galvanized fastenings. The deck house and cabins are finished in mahogany and oak. The engine is 50 h.p. and the gasoline tanks have capacity for 165 gal. The speed is 6 knots. The equipment includes anchor, chain, compass, cushions, awning, two masts and davits for small boat and rowing boat.

The Newfoundland Government received tenders recently for the service of 4 steamships, suitable for use in ice, for the postal and freight service along the north, south and west coasts of the island. Two of these steamships are to ply north from May 1, each year to the close of navigation, leaving St. John's alternate weeks and giving a fortnightly service. The other two steamships are to ply to the south and west coasts, one leaving St. John's weekly, and running as far as Port aux Basques, calling at the principal ports only, and making the round trip in 7 days, carrying chiefly, passengers and mail and express packages, and only taking freight when it will not interfere with making schedule time. The other steamship will leave St. John's every two weeks, and the two

other vessels will pay all the year, but may be taken off for its work in February and March each year, for coal burning work when they will be paid for by others. The rates for passengers and freight are to be the same as for the Great Lakes. The weekly service on the Gulf will be maintained on the existing rates. A contract will be entered into for 10 years, and passengers and freight rates on all vessels will be subject to amendment or cancellation at the expiration of each 5 years of the contract.

Province of Quebec Marine.

The Dominion Public Works Department received tenders, Feb. 25, for general restoration and refitting of the interior of the marine store building at Kings wharf, Quebec.

The Quebec Salvage and Wrecking Co.'s steamships Gopher and Musquash are operating under charter to the British Government; the s.s. Lord Strathcona and schooner G.T.D., are in winter berths at Quebec.

Ontario and the Great Lakes.

The C.P.R. steamships Alberta, Athabasca and Manitoba, of the Great Lakes Service, are being equipped with new steam winches for mooring purposes, made by The William Kennedy and Sons, Owen Sound.

The Ottawa River Navigation Co.'s s.s. Empress was seized at the end of January, under an execution in respect of a judgment against the company for \$750 for work done, and was advertised for sale by the sheriff on Feb. 11.

During the 262 days of the 1919 navigation season on the Great Lakes from Mar. 27 to Dec. 18, an average of one ship passed Windsor, Ont., every 20½ minutes. There were 6,938 ships passing Windsor upbound and 9,447 downbound.

Four 600 ft. steamships will be launched during the next few months by the American Shipbuilding Co., at Cleveland, Ohio, for Great Lakes trade. The first is expected to be launched in March, and 2 will probably be in service by July; the remaining 2 are expected to be ready for operation towards the end of the season.

The Prescott and Ogdensburg Ferry Co.'s ferry steamship Miss Vandenberg is having her accommodation increased for better handling of automobile traffic across the river. The company is reported to have bought the ferry steamship Ferdinand, which, it is stated, will be placed in service during the forthcoming season, whenever occasion warrants.

The U.S. Lake Survey reports the stages of the Great Lakes in feet above mean sea level, for January, as follows: Superior, 602.08; Michigan and Huron, 580.08; St. Clair, 573.10; Erie, 571.38; Ontario, 245.31. Compared with the average January stages for the past 10 years: Superior was 0.03 ft. above; Michigan and Huron, 0.14 ft. above; Erie, 0.25 ft. below; Ontario, 0.07 ft. below.

N. Cauchon, Ottawa, has proposed the building of a deep water canal from Montreal to near Ottawa, and thence to the St. Lawrence River at Cardinal. It is claimed that if this plan were

adopted, it would be less expensive than the deepening of the present canal system between Cardinal and Montreal. The scheme was to be laid before the International Joint Waterways Commission during February.

Amherst Island Tps. is applying to the Ontario Legislature for an act to ratify an agreement made with the Kingston Navigation Co., providing for payment by the township to the company of \$10,000, by way of loan, in consideration of the establishment of a steamship service between Amherst Island and Kingston, the loan to be secured by mortgage upon the steamship, and to be repaid with interest in 10 annual instalments.

The s.s. Charles R. Vanhise, which was cut in two, about two years ago, for passage from the Great Lakes to the ocean, but did not go, has been rejoined and lengthened 96 ft. at Ashtabula, Ohio, and it is expected it will be ready for operation, by May 1, when it will be renamed A. R. Schneider. Attempts were made with the first section of this steamship, to take it through the Welland Canal on its side, but this was unsuccessful.

Canada Steamship Lines' s.s. Chicora, which has been operated on the Niagara River route from Toronto, for several years, and which sank at her moorings at Toronto, last year, was sold by tender, early in February for, it is said, \$4,400, after having been raised by the underwriters. In connection with this sale, F. Torno, Toronto, has entered action, asking for an injunction to restrain F. W. Callaghan, Toronto, the purchaser, from disposing or dealing with the ship, and claiming that he had engaged certain parties to purchase the ship for him for \$4,400, and made a deposit of \$1,000. His deposit was returned to him, and later, he heard that the ship had been sold.

The George Hall Coal Co. of Canada has bought the s.s. Lehigh, from the Lehigh Steamship Co., Cleveland, Ohio, and has transferred the ship to the St. Lawrence Dock and Shipbuilding Co.'s yard at Levis, Que., for reconstruction to make it suitable for the coal trade. The Lehigh was built at Wyandotte, Mich., in 1880, and rebuilt in 1913. The hull is of composite wood and iron construction of the well deck type, with 3 watertight bulkheads, and is of the following dimensions: length, 238 ft.; breadth, 36 ft.; depth, 16 ft. 4 in. She is equipped with Steeple compound engine, with cylinders 24 and 54 in. diam., by 36 in. stroke, 600 i.h.p., and supplied with steam by a single Scotch boiler, 12½ diam., by 13½ ft. long, at 150 lb.

Capt. W. J. Eber, master of the s.s. Veronica, owned by the Standard Navigation Co., Buffalo, N.Y., was plaintiff in an action against Noel Marshall and the Standard Fuel Co., Toronto, for an accounting of profits on the steamship's operation, and for \$3,500 as his share of demurrage due to the ship. The defence was that the ship was bought for \$5,000, of which Capt. Eber supplied \$1,000, receiving in return, a quarter share. She was sold in 1918 for \$35,000, and the plaintiff was paid \$8,750 as his share, and a disinterested accountant found from the books that his share of the profits was \$3,816, which amount has been offered to him. The defendants paid \$4,000 into court, and the case was dismissed, plaintiff being given that amount.

The Montreal Transportation Co. has bought the s.s. Valcartier, from the Al-

goma Central Steamship Line, Sault Ste. Marie, Ont. The Valcartier was built at Cleveland, Ohio, in 1903, and named William Henry Mack. She is built on the channel system with steel tank top, and no wood ceilings are fitted, and the hull is divided by 3 watertight and 2 non watertight bulkheads. She has a steel boiler house, steam pump well, and complete electric lighting equipment. The hatches are spaced 24 ft. centers. The hull is of steel and has the following dimensions: length, 354 ft.; breadth, 48 ft.; depth, 28 ft.; tonnage, 3,748 gross, 2,250 net, and she is equipped with triple expansion engines, having cylinders 20, 33½ and 55 in. diam., by 40 in. stroke, 1,170 i.h.p., at 85 r.p.m., supplied with steam by 2 Scotch boilers, each 12 ft. 10½ in. diam., by 13 ft. long, at 175 lb. She was owned originally by the Jenkins Steamship Co., Cleveland, Ohio, and was acquired by Lake Commerce Ltd., Toronto, in 1914, and in the following year was sold to the Algoma Central Steamship Line.

Manitoba, Saskatchewan and Alberta.

With reference to the sale of the Peace River Trading Co.'s assets to the Lamson-Hubbard Canadian Co., as mentioned in our last issue, the Peace River Development Co., of which the Peace River Trading Co. was a subsidiary, is reported to have announced that it will continue the steamboat service on the Peace River, as hitherto, with the steamboats D. A. Thomas and Lady Mackworth.

British Columbia and Pacific Coast.

The Dominion Public Works Department will receive tenders Mar. 5, for the construction of a wharf at Stewart.

The North Vancouver City Ferries showed a deficit of \$2,695.59 for January. The receipts were \$13,495.44, a decrease of \$1,799.30, compared with Dec., 1919. The number of passengers carried during January was 222,395.

A Victoria report states that, up to Dec., 1919, the associated timber exporters reported that 48,000,000 ft. of lumber, out of 70,000,000 ft. ordered by Great Britain, had been shipped.

Grant Smith and Co. and McDonnell Ltd., contractors, are plaintiffs in an action against the Dominion Government for \$306,813 for excavation work in connection with building two wharves at Victoria.

It was stated in the British Columbia Legislature, Feb. 18, that the s.s. Beaver, now employed in ferry service at Ladner, was bought from the C.P.R. for \$25,000, and since it had been repaired was valued by an insurance company at \$85,801.

The Dominion Government dredge Ajax is being overhauled by the British Columbia Marine Co., Vancouver, the contract having been obtained in competition with other local yards. It is expected that the work will be completed about the end of March, when she will do dredging at Williams Head.

It was announced in Vancouver, recently, that up to Dec. 31, 1919, 43,000,000 ft. of the British Government's order for 70,000,000 ft. of lumber had been shipped. Approximately 7,000,000 ft. was shipped during January, and 5-

000,000 was expected to be shipped during February, most of it being sent across in the wooden steamships built in British Columbia recently for the French Government.

The Grand Trunk Pacific Coast Steamship Co.'s s.s. *Prince Albert*, which grounded at Masset Bar, towards the end of January, was docked at Yarrow's Ltd., yard, Victoria, Feb. 3. It was found that several plates had to be replaced, and a few minor repairs made to her machinery. The work was completed by Feb. 10, and she resumed her sailing between Vancouver and northern ports.

Plans for the construction of a government pier on Burrard Inlet, Vancouver, were expected to be ready early in February, after which, it was anticipated that tenders would be called for. The site of the projected pier is to the west of the Great Northern Ry. property. It is stated that tenders will probably be called for in two sections, one for the dredging and filling, and the other for the actual construction.

The s.s. *Nouvelle Ecosse*, the last of the wooden steamships to be built for the French Government by the Foundation Co. of British Columbia, arrived at Fraser River Mills, early in February, to load lumber for Europe. The dispatching of the steamships from British Columbia has been handled by Edward White and Sons, Victoria, the rule being followed that they call at Queenstown, Ireland, for orders, and after unloading their cargoes at a British port, proceed to Brest, France.

The C.P.R.'s s.s. *Princess Patricia* resumed her sailings between Nanaimo and Vancouver, Feb. 9, after the completion of repairs at Victoria. The s.s. *Princess Victoria* was withdrawn from service on the Victoria-Vancouver-Seattle route, Feb. 9, for overhaul and refit. The s.s. *Princess Royal*, which had replaced the s.s. *Princess Patricia*, between Nanaimo and Vancouver, resumed her service between Victoria and Vancouver, running in conjunction with the s.s. *Princess Adelaide*.

The Coastwise Steamship and Barge Co., Vancouver, has ordered a steel steamship of approximately 2,350 tons, to be built by J. F. Duthie and Co., Seattle, Wash., for its ore carrying and towing business between British Columbia and Puget Sound ports. The steamship's dimensions will be: length, 220 ft.; beam, 40 ft.; depth, 21 ft. The engines will be placed aft, and built for a sea speed of 11 knots an hour. In addition to the usual loading machinery, a towing machine, similar to those now in use for towing the company's barges, will be installed.

The Navy League of Canada has been presented by the Dominion Government with the s.s. *Restless* for training boys for the Canadian merchant marine. It is especially provided that she is intended solely for this purpose, and must not be disposed of nor used for any other purpose without the Naval Service Department's consent. She was built at New Westminster, B.C., in 1906, and is screw driven, by engine of 16 n.h.p. Her dimensions are: length, 71 ft.; breadth, 17 ft.; depth, 7 ft.; tonnage, 76 gross, 53 registered. She was engaged for a number of years in the fisheries protection service in British Columbia, and was used later as a tender for the Royal Naval College of Canada.

Government Building of 18-Knot Passenger Steamships Opposed by Quebec Board of Trade.

J. T. Ross, President, Quebec Board of Trade, wrote Sir George E. Foster, acting Prime Minister, Jan. 30, as follows:—"At a meeting of the Quebec Board of Trade's Council, held on Jan. 26, I was instructed to write you with reference to a published statement as to the intention of the government to build in Canada a number of 15,000 ton passenger steamships, with a speed of 18 knots, for the Canadian service. The board, while congratulating the government upon its policy of having so many freight steamships built in this country, would respectfully suggest that it might be wise for the government, for the present, to continue to employ the existing shipyards in the construction of 5,000 and 10,000 ton freight steamships, such as are now being built, and defer the building of passenger ships for the present, for the following reasons:—

"The most urgent requirement of Canada at present is freight tonnage, to carry out grain and other produce to Europe, and the other markets of the world. The control of that tonnage by the United States and other nations is diverting our export grain to New York, to the great detriment of Canadian seaports, with an unfavorable influence on the rates of British exchange. A passenger steamship of 15,000 tons, running 18 knots, will probably cost twice as much as a 10,000 ton freight steamship, and will only carry 3,000 tons of cargo, or less than one-third of the deadweight carried by the freight boat. So that by continuing the policy of building freight boats only, we would probably get six times the amount of freight space for the money that would be used in building passenger boats. We would suggest that it would be wiser for the government to pay a sufficient subsidy to the C.P.R., or to some of the large English steamship lines, to induce them to put on a weekly service of two 20 knot steamships between Canada and Great Britain, such as was recommended to the Imperial Government, last year, by the Dominions Royal Commission. Possibly, in view of this recommendation, the Imperial Government might contribute towards such a subsidy.

"If Quebec were made the terminus of this line during the season of St. Lawrence navigation, and Halifax during the five winter months, the weekly service could be run with three 20 knot steamships, whereas four 18 knot boats are now used for that purpose. The distance from Liverpool being as follows—To New York, 3,100 miles; to Halifax, 2,480, and to Quebec, 2,680, the comparative time occupied in the voyage of a 20 knot (23 miles) boat would be—To New York, about 135 hours; to Halifax, about 108 hours; to Quebec, about 117 hours, as compared with the time of the 25 knot *Mauretania* to New York, which is about 5 days. So that it will be seen that a 20 knot service to Quebec and Halifax would be better for all Canadian points than making use of a 25 knot steamship to New York.

"It should not be forgotten that a steamship reaching Quebec is practically in the center of the country, being 670 miles closer to the interior of Canada than a steamship arriving at Halifax, and that, owing to the completion of the National Transcontinental Ry., which shortens the distance from Quebec to the

western provinces by 214 miles, passengers and mails from Europe, landing by a 20 knot steamship at Quebec, would reach Winnipeg about 24 hours quicker than they now do by the present route, with an 18 knot service. The time of passengers and mails from Europe to Toronto, Chicago and other western points would also be shortened as compared with New York. Nor should be overlooked the very great advantages of such a line, in attracting to Canada a class of travel that now goes only to New York, on account of faster and better accommodation, a class of travel that would be of great advantage to Canada financially and otherwise. For all these reasons we would suggest that the government should carefully consider the question before committing the country to an 18 knot service."

Sir George Foster's Reply:

Sir Geo. E. Foster replied on Feb. 4 as follows:—"No policy has as yet been adopted by the government looking to the construction of 15,000 ton passenger ships with a speed of 18 knots, or indeed any passenger ships, with any speed, in the Canadian service. The appropriations have hitherto been used for the construction of freight steamships, and I do not think it probable that for the present this policy will be altered. I note the considerations adduced by you in favor of your contention, which it is not necessary for me to enlarge upon, in view of the intimation made above."

What the Minister of Marine Said:

In connection with the foregoing it is interesting to recall what Hon. C. C. Ballantyne said at the Dominion Marine Association's annual dinner in Montreal, Jan. 9, as reported in *Canadian Railway and Marine World* for February, as follows:—"Our Canadian shipbuilders have demonstrated that they can build freight ships. I am happy to tell you that on the representations that have been made to Dr. Reid and Mr. Hanna for passenger ships of a one-class type, that is, a passenger ship of 15,000 gross tons, with speed of 18 knots, and carrying both passengers and freight, the government has under consideration the building of such a type of steel ship. The government has no intention of ordering one outside of Canada, but it is the government's intention to have these passenger ships built in this country by our Canadian workmen and to use Canadian materials."

The British Ministry of Shipping (Canada), which, during its 5½ years' existence, practically controlled Canadian overseas, clearing over 3,000 line steamships from Canadian ports and Portland, Maine, will, according to a Montreal, press report, be demobilized on Mar. 31. Between 1914 and 1919 in excess of 16,000,000 gross tons of munitions, war materials and supplies were moved inland and overseas.

British Ship Purchases During War.

—It is stated that during the war the British Government bought 13 ships in the United States at an average cost of £45 7s 10d a ton; 19 in Japan at £44 17s 8d a ton; 3 in China at £41 a ton; 11 in Hong Kong at £31 11s 9d a ton; and 44 in Canada at £33 1s 9d, or about \$190 a ton.

Government Grain Elevators for Atlantic Ports, Freight Rates, Etc., Discussed by Quebec Board of Trade's President and the Minister of Railways.

Canadian Railway and Marine World was last Saturday with copies of the following correspondence between J. E. Ross, President, Quebec Board of Trade, and the Minister of Railways, Hon. J. D. Reid. The first letter from Mr. Ross to the Minister dated Jan. 20, was as follows: "I am instructed by the Quebec Board of Trade's Council to draw your attention, and to ask you to draw the attention of the cabinet to the alarming result of the absence of proper railway terminal facilities at Canadian seaports. You will, no doubt, remember that this board has repeatedly urged the government, since 1912, by correspondence and by delegations, to complete the National Transcontinental Ry. by providing grain elevator storage for 10,000,000 bush, at each of the ports of Quebec, Halifax and St. John, N.B.,—Montreal being already fairly provided for—together with the necessary steamship berths to keep these elevators employed. This has not been done. Instead of doing so, the government has built a large elevator at Port Colborne, Ont., which is more or less tributary to New York, and the elevator storage at the head of the Great Lakes, and in the interior, has been increased to such an extent, that about 80% of the elevator storage is now situated on the Great Lakes and in the interior, and less than 20% at our seaports. The result has been, and it could not, for this reason, be otherwise—because 80 will not go into 20—that, as Senator Bennett stated recently in parliament, 80% of our western grain trade, a trade which was our great inducement for going to the enormous expenditure of building three transcontinental railways, goes to New York for export.

"At a public meeting held at St. John, N.B., on Jan. 10 instant, it was stated that on account of the failure to extend the grain conveyors to the new berths, 23 ships had been diverted from St. John, and that 11 large cargo ships are now anchored in and off St. John harbor, waiting to get berths. I am sure you must realize, and the government must realize, that this position is nothing less than a calamity for the trade of the country, which calls for immediate action by the government.

"Although you have proved by actual operation that it is profitable to carry wheat all rail from Winnipeg to Quebec by the government railway for 3c a bush, cheaper than the lake and rail rate to New York or to Montreal, we understand that not a bushel of wheat came by that road for export during the season of 1919. It has been asserted that the principal reason which has enabled New York to divert our western trade is that marine insurance underwriters discriminate against Canadian ports. This could be overcome, and, we believe, without cost to the country, by the government assuming the marine insurance of all Canadian ports, at New York rates.

"I am therefore instructed, respectfully to renew the request made to the government by this board, seven years ago, and since, that elevator storage should be provided for 10,000,000 bush, at each of the ports of Quebec, Halifax and St. John, together with the necessary steamship berths. And I would

again respectfully point out to you that the City of Quebec is strictly entitled to this, under the terms of a written contract with the government executed in 1910. We are convinced that the policy we have indicated would put a stop to this alarming diversion of our trade to New York and would bring it back to Canadian seaports."

The Minister of Railways' Reply.

Hon. J. D. Reid replied Jan. 23 as follows:—"One statement you make in your letter I must take issue with at once, which is 'that I have proved by actual operation that it is profitable to carry wheat all rail from Winnipeg to Quebec by the government railway for 3c a bush, cheaper than the lake and rail rate to New York, or to Montreal.' This statement is incorrect. Several years ago the late Mr. Cochrane did experiment by carrying grain from a point on the National Transcontinental Ry. opposite Fort William, to Quebec, for 6c a bush. At the time his officials led him to believe it could be carried for that rate, but after investigation it was proved that on every bushel that was carried a heavy loss was the result. So that now you can take it as quite sure it is an absolute impossibility to carry it from Port Arthur to Quebec at a rate less than lake and rail, or all water. The facilities at Quebec will, no doubt, be taken up by the board of management, who are, as you are aware, in charge of the operation of the Canadian National Rys., and if they feel at any time the facilities are not sufficient they will deal with the same. You evidently do not realize the enormous expenditures which have been caused by the war, and are still continuing, and also the very large loans that are necessary in order to meet conditions of this kind. The government must curtail all expenditures to the smallest point, until matters again resume normal conditions. So far as I am concerned, I have asked the management to do this in connection with the Canadian National Rys. the same as is being done by other public works. I am therefore sorry there is no possible chance of any new elevators being built in the City of Quebec during the coming season."

The Quebec Board of Trade's Rejoinder.

The Quebec Board of Trade's President wrote the Minister again on Feb. 6 as follows:—"You say that you must take issue at once with the statement in my letter of Jan. 20 that you had proved by actual operation that it is profitable to carry wheat all rail from Winnipeg to Quebec by the government railway for 3c a bush, cheaper than the lake and rail rate to New York or to Montreal. You say that this statement is incorrect, that the rate of 6c a bush, from Armstrong (a point opposite Fort William) to Quebec and Montreal resulted in a heavy loss, and that we 'can be quite sure that it is an absolute impossibility to carry it from Port Arthur to Quebec at a rate less than lake and rail, or all water.' I based my statement upon your own words in Parliament on April 25, 1916, as given in Hansard, page 3184, in which you say: 'There was a loss when the wheat was taken to Montreal, for the reason that there were three railways that had to get a portion of the 6c. We can carry

grain from Armstrong to Quebec at a profit, but we cannot do so when the grain has to be hauled over three railways,' and again on page 3187, where you say: 'I do not say that there is very much profit in the 6c rate between Armstrong and Quebec, but it pays with a train load such as I have stated.' I think I was justified by this declaration in parliament by you as Minister of Railways, in my statement that you had proved by actual operation that the rate to Quebec was profitable.

"If, as you say, the government had to divide the 6c rate to Montreal between its own line, the Grand Trunk and the Timiskaming and Northern Ontario Ry., it is not to be wondered at that you lost money on the shipments to Montreal by such a circuitous route over bad grades. It could not be otherwise. But why should this loss apply to your direct line to Quebec, where you own all the mileage and receive all the earnings? Surely it is not fair to condemn the Quebec route, because that to Montreal was not profitable. Even, if it were subsequently proved, as you now say, that the 6c rate was not profitable, it is not to be wondered at, because all this grain was hauled during the winter over a new road, having no snow fences or other provisions against snow blockades, having no terminals, docks or elevators of its own, exposed to costly charges for the use at Quebec of the terminals of its greatest rival, besides dock dues and elevating, having no rolling stock or snowplows of its own, and dependent for motive power upon broken down, or obsolete Intercolonial Ry. locomotives the use of which had doubtless to be paid for.

"Moreover, even if the 6c rate was unprofitable that does not justify the conclusion that it is impossible to compete with the lake and rail, or the all water, route. The point of comparison is not Port Arthur, but Winnipeg. To the 6c from Armstrong to Quebec we must add 48-10c from Winnipeg to Armstrong, making the through rate 10 8-10c, or say 11c, from Winnipeg to Quebec. At that time the through rate from Winnipeg, via Fort William and Buffalo, to New York, including elevating and insurance, was about 14c. Last year it was 17c or more. The cost by lake and rail to Montreal is about the same as to New York, or perhaps rather in favor of New York, and the all water route from Port William to Montreal does not seem to be used, as only 330,000 bush. of wheat went all water last year, probably owing to the necessity of transshipping into small boats at Port Colborne.

"To prove that the rate of 11c for 1,350 miles from Winnipeg to Quebec (6c from Armstrong), was not an unusual one, I would ask you to refer to the joint tariff of all the large railways, in force during the present winter, and you will see that today's rate on export wheat from Goderich to Halifax, 1,305 miles, is 10-4-10c a bush., over road having 1% grades, where little more than half the tonnage can be hauled that you haul on the National Transcontinental. Further than this, we are informed by the General Manager of one of the greatest grain carrying roads in America, that the present cost of carrying wheat over the National Transcontinental from Win-

nipeg to Quebec, would be less than 12½c a bush.

"All these facts go to show that it was quite possible to compete successfully with the lake and rail routes, and with the all water route, and that there was a legitimate margin in favor of the National Transcontinental of 3c a bush, in the special rate made in 1916. And though, doubtless, the cost of operating has increased since then, the increase will apply to both routes, and there would seem to be no reason whatever why the margin of 3c in favor of Quebec should not be maintained, thus turning the traffic to Canadian seaports, and putting a stop to the lamentable diversion of our western trade to New York, where, according to Senator Bennett's statement in parliament, four-fifths of it has gone. Senator Bennett says that our much vaunted water route by the lakes has proved a great disappointment, and that by using it we are losing our grain trade and New York is getting it.

"The last issue of the Dominion Government Bureau of Statistics contains a map showing the movement of all Canadian grain. It shows that 65,000,000 bush. of our northwestern wheat was exported at New York in 1918, and only 14,000,000 bush. at Montreal, the balance of the Montreal export being presumably made up of Quebec and Ontario grain. The result is that United States seaports are getting the benefit of the traffic created by our money; U.S. railway crews and U.S. lake craft men are getting the benefit of the cost of transportation—for it must not be forgotten that 70% of the cost of transportation is spent in the country through which the goods are transported—and that our own goods are helping to demoralize the New York exchange market, and to lower the value of the pound sterling for the Mother Country. Is not this a desperate position into which we have got, after having spent the enormous cost of three transcontinental railways, to get this very trade which is being taken away from us?

"The National Transcontinental Ry. has cost the government more than \$150,000,000. It is one of the best built roads in America. It is so straight that it shortens the distance between Winnipeg and Quebec by 214 miles. Its grades are so level that our own engineer tells us that you can haul over it nearly double the tonnage that can be hauled with the same power by any of its rivals. Although it is not yet finished, because it is not properly equipped with rolling stock and because the government has not yet built the terminals which it contracted with the City of Quebec to build, it has given ample proof, if the above statements are true, of its ability to do what it was intended to do, namely to save to the farmer of the northwest 3c a bush. on the transportation of his wheat, and to bring to Canadian seaports the trade of the northwest, which we have made such heavy sacrifices to obtain. This was promised to us in parliament in 1904, when the building of this railway was undertaken, promised to us largely by members from Ontario, who were experts in such matters. If these promises had not been made, the people of the eastern seaports would never have consented to this vast expenditure.

"Surely it cannot be the government's intention to continue to allow our trade to slip away from us in the heart-breaking manner in which it has done for the last six years. Surely you, as Min-

ister of Railways will make use of the costly instrument which has been placed in your hands for the purpose of putting a stop to this diversion of our trade and of bringing it back to Canadian seaports. We quite realize what you say as to the enormous expenditures which the country has incurred, and we continue to regret that so very great a portion of it should have been in connection with the acquisition by the government of two great railway systems, against the advice of commercial men. But even that should not paralyze your efforts for good, and we respectfully call upon you, once more, as Minister of Railways, to use the National Transcontinental Ry. for the purpose for which it was built, namely, to bring the western grain trade to Canadian seaports."

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Independent Pneumatic Tool Co., Chicago, Ill., has issued an illustrated circular describing its Thor universal assembling and repair vise for pneumatic drills.

Metal & Thermit Corporation, 120 Broadway, New York, N.Y., has issued, and will send on request, a large 1920 map calendar, showing railway time zones in the United States and Canada, with illustrations of Thermit welding jobs, including stern frames of ships, rail special work, and locomotive frame repairs.

National Steel Car Corporation Ltd.— Some information in regard to the National Steel Car Corporation's incorporation was given in Canadian Railway and Marine World for February, since which additional particulars have been received. The incorporation is under the Dominion Companies Act, the capitalization being 100,000 shares of no par value. The corporation has taken over the National Steel Car Co.'s plant, assets and business at Hamilton, Ont., and assumed its liabilities, the transfer having been made on Dec. 18, 1919. The corporation's head office is at Hamilton, with branch office at 30 Church St., New York, N.Y. The following are the directors: R. J. Magor, President, Magor Car Corporation, New York, N.Y., President; Donald Symington, President, Locke Insulator Co., Baltimore, Md., Vice President and Secretary; H. H. Pierce, Sullivan and Cromwell, New York, N.Y.; D. B. Dewar, Canadian Bank of Commerce, Hamilton. The Treasurer is L. B. Churchill, and the Assistant Secretary is H. Van Hassel. The other three directors, to make up a total of seven, have not been appointed, the positions being filled by temporary directors in the legal representatives' office in Toronto.

The Ohio Brass Co., Mansfield, Ohio, has taken into its service, W. J. Stanton, who has been identified with the electric industry for 20 years, having started with the General Electric Co., and remaining with it for 18 years, in the testing, engineering and sales departments.

Taylor & Arnold Engineering Co. Ltd., Montreal, is an amalgamation of Taylor & Arnold Ltd.; Central Engineering Co. Ltd., which was Taylor & Arnold's shop, and Canadian Detroit Lubricator Co. The new company is going to extend considerably, as manufacturers of railway marine, and mechanical brass supplies, in addition to carrying on its business as agents and jobbers.

The Mount Royal Trading Co. Ltd., has been incorporated under the Dominion Companies Act, with \$100,000 authorized capital, and office at Montreal to carry on a general manufacturing and trading business and in connection therewith to own and operate steam and other ships of every description, and carry on a general transportation business for passengers and freight. The incorporators are: L. Beauregard, J. Boyle, J. B. Johnson, N. A. Collins, and H. L. Dugan, Montreal.

CANADIAN PACIFIC RAILWAY COMPANY.

NOTICE.

The Canadian Pacific Railway Company will apply to the Parliament of Canada at its next Session for an Act authorizing it to construct the following lines of railway:

(a) From a point on the Pheasant Hills Branch at or near Cory in Twp. 36, Ranges 9 or 10, West of the 3rd M., thence in a general North Westerly direction to a point at or near Birch Lake, in Twp. 34 and 35, Ranges 13 and 14, West of the 3rd M., all in the Province of Saskatchewan.

(b) From a point on the Pheasant Hills Branch at or near Asquith, in Twp. 36, Ranges 9 or 10, West of the 3rd M., thence in a general North Westerly direction to a point on the Wilkie North Westerly Branch at or near Cloan, in Twp. 42, Range 20, West of the 3rd M., all in the Province of Saskatchewan.

(c) From a point on the Moose Jaw North Westerly Branch, at or near Rose-town, in Twp. 30, Range 15, West of the 3rd M., thence in a generally Northerly

and North Easterly direction to a point on the Pheasant Hills Branch, at or near Keppel, in Twp. 35, Ranges 12 to 13, West of the 3rd M., all in the Province of Saskatchewan.

(d) From a point at or near Redfield, on the Wilkie-Anglia Branch, in Twp. 34, Range 19, West of the 3rd M., thence in a generally Easterly direction to a point in Twp. 32 or 33, Range 14, West of the 3rd M., all in the Province of Saskatchewan.

(e) From a point on the Weyburn-Stirling Branch, at or near Amulet, in Twp. 8, Ranges 20 or 21, West of the 2nd M., thence in a Westerly and North Westerly direction to a point on the Moose Jaw South Westerly Branch, at or near Dunkirk, in Twp. 12, Range 28, West of the 2nd M., all in the Province of Saskatchewan.

(f) From a point on the Crowsnest Subdivision, at or near Kipp, in Twp. 9, Range 22, West of the 4th M., thence in an Easterly and North Easterly direction to a point on the Suffield-Blackie Branch, at or near Retlaw, in Twp. 13, Range 17, West of the 4th M., all in the Province of Alberta.

And to authorize it to issue Bonds in

respect thereof to the amount of Forty thousand dollars (\$40,000) per mile or in lieu of such Bonds to issue Consolidated Debenture Stock to the same amount.

DATED at Montreal this 28th day of January, 1920.

E. ALEXANDER,
Secretary.

Pringle, Thompson, Burgess & Cote,
Ottawa, Agents.

THE ESQUIMALT AND NANAIMO RAILWAY COMPANY.

NOTICE—The Esquimalt and Nanaimo Railway Company hereby gives notice that it will apply to the Parliament of Canada, at its next session, for an Act empowering it to construct a line of railway from its present terminus at Courtenay, thence in a general northerly and northeasterly direction to a point at or near Duncan Bay, on the east coast of Vancouver Island.

Dated at Montreal this 7th day of February, 1920.

W. F. SALSBUURY,
Secretary.

Valve Motion.

By F. Williams, Mechanical Designer, Canadian National Railways, Moncton, N.B.

The duties which a locomotive valve gear has to perform are exacting in the extreme, as it has to control the distribution of steam to the cylinders with almost perfect precision through a wide range of cut-offs in forward and reverse direction. There is no apparatus on a locomotive upon which the economical working depends so largely, and when we consider that at diameter-speed the movement of the distribution valve is reversed 672 times a minute, we can appreciate with what care the design must be undertaken.

From the point of view of economical steam distribution, valve motion design has today reached a point where it cannot be greatly improved upon, and the chief attention of the designer has for the last few years been taken up with questions of accessibility and low maintenance cost, his aim being to apply a gear which would run and keep square from shopping to shopping with the minimum of attention. Considered from the stand-point of steam distribution alone, I doubt if a well designed and properly set Stephenson gear has ever been excelled, but owing to inaccessibility, high maintenance cost and its great liability to get out of square due to the springing of parts and development of lost motion, the Stephenson gear has become a back number, and I shall only refer to it for purposes of comparison.

For several years past practically every locomotive built in this country has been equipped with an outside gear, the vast majority with Walschaert's, and to this gear I shall devote most attention. Of all locomotive valve gears made, Walschaert's is the simplest to understand, to design and to set, and when this gear has been well designed and correctly set, it will keep square for an indefinite length of time. The simplicity of the gear lies in the fact that the valve receives its motion from two sources, first from the crosshead through the combination lever, and second from the eccentric through the link, and each of these sources of motion can be dealt with separately without considering the influence of the other, both in designing and setting.

The motion derived from the combination lever is equal to the steam lap plus the lead and it attains its maximum travel when the engine is on the dead centers, it is not affected in any way by the reverse gear but remains the same in all position of the lever. The motion derived from the link is simply a symmetrical motion front and back of the center line, and is increased or decreased according to the distance of the link block from the center of the link. When the link block is exactly in the center of the link, there is, of course, no motion from this source and as the block gets by the center the motion is reversed. When the engine is on the front or back dead center the link assumes such a position that the reverse lever can be moved backward and forward through

the entire travel without imparting any motion to the valve, and the distance the valve is off center is entirely due to the position of the combination lever which is at its maximum travel at these points.

The proportioning of the length of the combination lever is a simple matter when we have decided on the steam lap and lead required. The length of the combination lever from the radius bar connection to the union link connection must bear the same proportion of its length from the radius bar connection to the valve stem crosshead connection as does half the stroke of the piston to the lap plus the lead plus $1/64$ in. The $1/64$ in. is added to the lap plus the lead to take care of lost motion. Care must be taken that the length of the combination lever adopted will bring the lower end of the lever to the correct level to connect up with the union link, especially if the union link is connected directly to the wrist pin, which is the practice generally adopted unless the Ripken Kingan main rod arm is used.

I have seen various rules as to the length of the radius bar and eccentric rod, but they are for the most part worthless, as our problem is to apply a gear to a locomotive; we are not permitted to design a valve gear and then build an engine around it. The best rule we can adopt therefore is to make both the radius bar and the eccentric rod as long as circumstances will permit and with ordinary wheel bases this will invariably give satisfactory results. The radius of the link slot center line is of course determined by the length of the radius bar, and the preferred location of the link support bearings is such that the horizontal center line is on a level with the radius bar connection to the combination lever. This location may be varied within reasonable limits, without affecting the valve events to any appreciable extent; for instance, on a locomotive with a very large cylinder the steam chest center line and the cylinder center line are of necessity quite a distance apart, and in this case the link support is sometimes lowered an inch or two, to bring the link tail nearer to the horizontal center line of the axle. The angle through which the link rocks should not exceed 45° , and if it can be kept lower so much the better.

The eccentric rod connection to the link tail should be kept within 3 in. or 4 in. of the horizontal center line of the axle, in order to keep the angularity of the eccentric rod within limits, and owing to this angularity of the rod, it will be found necessary to offset the tail connection of the link in order to give it the same angular travel on either side of the central position. I have heard men with a good deal of experience state that an approximately correct offset is all that is required, but as it is just as easy to make this offset correct as otherwise I always prefer to make it dead right. The eccentric crank must be set so that it brings the link dead on its central po-

sition when the engine is on either front or back dead center, and the throw of the eccentric pin must be such that, acting in combination with the radius of the link tail, it will give the required angular travel to the link. The reverse shaft location, length of arm, and swing link are very important considerations, and unless great care is exercised in the arrangement of these details the efficiency of the motion may be considerably reduced. The arc which the reverse shaft arm describes should be so arranged as to reduce the link block slip to a minimum in all positions of the reverse lever, special attention being paid to the running position in fore gear. It is impossible to avoid link block slip altogether, but it can be kept pretty low, and if this is not carefully looked after the effect will be seen in the valve events and also in the wear on the link and link block. The steam chest center line should be outside the cylinder center line far enough to permit of bringing the whole motion into practically a straight line, thus eliminating the necessity for rockers, and doing away with the twisting effect and lost motion which the use of rockers involves.

All road locomotives equipped with Walschaert gear should be so arranged that the link bottom is in the bottom half of the link for fore gear, the eccentric of course following the crank pin. The advantages of this arrangement are that the wear on the link support bearings is diminished and the link block slip in running position may be kept very small, as the swing link describes an arc which is very similar to the arc struck by a point in the bottom of the link, the concave side of both these arcs being uppermost. It is very important that the design of this gear should be as good as it is possible to make it, for, if it is faulty, it is impossible for the valve setter to correct its faults. With a badly designed Stephenson gear, a good valve setter could often get very fair results in running position, by sacrificing the other positions of the reverse gear, but with a Walschaert gear this is out of the question, as it is squared on the dead centers, and, if the design is good, all the valve events naturally come within very close limits of being square, but if they do not there is practically nothing the valve setter can do to correct them.

It must be borne in mind that the chief aim of the designer is to obtain as nearly as possible a perfect steam distribution, but the most important consideration with the valve setter is to get four level beats up the stack. A perfect steam distribution will of course give a perfect exhaust, but a perfect sounding exhaust does not necessarily mean a perfect steam distribution, by any means. The steaming properties of the boiler, and the fuel economy, depend very greatly on the evenness of the exhaust, and if the exhaust is ragged, the vacuum in the smokebox is unsteady and the fire is soon pulled in holes, resulting in a

great degree of lead. The constant lead between cylinders is usually a perfect example of giving as nearly as possible a perfect steam distribution, the valve action has to give an even amount of steam. The normal setting for a Walschaert gear is equal to lead setting with a constant lead in a position of the cylinder, but there is another setting which is sometimes resorted to, and that is to give no lead at all, or a very small lead in the fore gear and an increasing lead as the lever is raised.

Full gear, at a higher, the starting of the engine. Some text books also tell us that the object of lead is to cushion the piston at the end of its stroke. If we study the question closely, we will agree, I think, that both of these arguments are incorrect. Lead cannot hinder starting, unless the admission takes place considerably before the piston completes its stroke, and as a matter of fact, the pre-admission in full gear is so small that it can hardly be measured; as for lead cushioning the piston a

pre-admission is not as the lever is raised up, so that if the cushioning effect of the live steam is being required, we have this effect increasing as the lever is pulled toward mid-gear. I do not pretend to say that the pre-admission increases to the same extent as on a Stephenson gear, but I think it is generally admitted that the pre-admission is high on this gear in running position. The real object of setting the Stephenson gear with no lead, or 1/16 in. or so blind, in full gear, was, not to overcome the detrimental effect of lead in full gear, as this is non-existent, but to bring the closure point to such a position that the compression would not be excessive when running at high speeds, so that if this variable lead setting with Walschaert gear is justified, it is through its influence on the other valve events, such as cut-off, release, closure, etc., as the lead itself has no influence one way or the other in starting.

We will now take a look at the valve diagram shown in fig. 1, plotted for one of our large passenger locomotives. This engine has 24 x 28 in. cylinder, a 14 in. valve, 6 in. valve travel, 1/4 in. constant lead, 1-1/16 in. steam lap and 1/4 in. exhaust clearance. The broader ellipse in the center shows the valve travel, in relation to the piston travel, in full fore gear, and the narrow ellipse inside it shows the same thing with the lever notched up to 25% cut-off. The distance from the steam edge to the exhaust edge on the valve over the packing rings is 2 3/4 in., therefore the similar ellipses which are plotted 2 3/4 in. above and below the center ellipse, with lighter lines, must represent the movement of the exhaust edges of the valve. The three ellipses shown in dotted lines represent the movement of the valve set with no lead in full fore gear. Picking out the valve events we find that with the 1/4 in. lead setting we have the cut-off at 23 in. and 23 3/4 in., the release at 25 9/16 in. and 26 1/4 in. and the closure at 26 13/16 in. and 27 1/4 in. Set with no lead, however, we have the cut-off at 23 9/16 in. and 24 1/4 in., the release at 26 1/4 in. and 26 3/4 in., and the closure at 27 1/4 in. and 27 3/4 in., so that the net result of adopting this latter setting is to delay the cut-off from 83.7% to 86.1%, the release from 92.6% to 94.5% and the closure from 96.6% to 98%, an improvement in the starting position of 2.4, 1.9 and 1.4% of the stroke respectively.

The valve diagram shown in fig. 2 is plotted for the same locomotive in full back gear, the ellipse shown in dotted lines representing the valve movement with the variable lead setting. In this case I have two lines 1/4 in. above and below the center line, representing the amount of the exhaust clearance; these lines will determine our release and closure points in the same way that the outside edges of the steam ports did in fig. 1, and will simplify the diagram. A glance at this diagram will show us that the cut-off, release and closure points, are advanced in backgear, by just about the same amount as they were delayed in fore gear, so that whatever we have gained in the foregoing position we have done so at the expense of the back. In the short cut-offs there is so little difference in these two settings that I have only plotted one, which I mentioned before when alluding to fig. 1.

Before we can realize exactly how much or little advantage is to be gained by this variable lead setting in full force

up toward mid-gear. This variable lead is a feature which is natural to the Stephenson gear, with open rods, and this gear was commonly set with no lead in both fore and back full gear, but in notching up from either of these positions an increasing lead was obtained. It is not a natural feature with the Walschaert gear, however, and if we produce it in the fore gear we do so at the expense of the back gear.

A prevalent idea seems to be that it is detrimental to have any lead at all in

glance at a few indicator cards will show us quite plainly that compression and not lead has to take care of this. The main object of lead is to give an unrestricted supply of steam to the cylinder, when the piston begins its stroke, and with the pre-admission down to about 1/64 in. it is impossible that the steam admitted to the cylinder can exert any appreciable turning moment on the axle until the crank pin has gone over the center. Although the lead is constant, on a normally set Walschaert gear, the

gear, we shall have to analyze the situation a little further and go into the question of starting tractive effort. We all know that the worst starting position for a locomotive is when she is standing with one side just past the cut-off point. In this case the whole starting effort has to come from the other cylinder where the crank has not yet reached the point of maximum leverage. Fig. 3 shows the position of the crank pin of this locomotive at the point of cut-off, the full line indicating position with normal setting and the dotted line with the variable lead setting. It is evident that, when the locomotive is standing in this position, we shall get the minimum starting effort, as all the turning moment has to come from the other crank, which will be either at B b or C c, according to whether A represents the right hand crank or the left. The effective length of the crank, which is doing the work, is 10 in. for nominal setting and 10½ in. for the variable lead setting, or a difference in favor of the variable lead of 6¼%, so that we may say that the minimum starting effort of this locomotive is increased 6¼% by this setting. I do not wish to convey the impression that this locomotive can be improved 6¼% by this means, as the maximum tractive effort is not affected in any way, and the only advantages are that the maximum tractive effort is available through a very slightly wider range of positions, and in the very worst starting position the tractive effort is increased by 6¼%. As soon as the locomotive has turned a wheel the advantage almost entirely disappears, the slight delay in the release and closure points may result in a slight improvement during the early stages of acceleration, but on nothing up the two settings are practically identical.

Fig. 4 shows a diagram plotted for one of our mikado locomotives. This locomotive has a 27 x 30 in. cylinder, 14 in. valve, 6½ in. valve travel, ¼ in. constant lead, 1 in. steam lap and no exhaust clearance. The chief difference from the passenger locomotive settings are reduced lead, reduced steam lap, and elimination of the exhaust clearance.

We have already seen that reducing the lead will give us a later cut-off in starting position, and have decided, I think, that this is an advantage when starting the load. Reducing the steam lap has the effect of lessening the period of expansion, but by reducing the exhaust clearance the period of expansion is lengthened and thus the ill effect of cutting down the steam lap is neutralized. The reduction or total elimination of the exhaust clearance lengthens the period of expansion by delaying the release, and this in itself is a good feature, but it has also the effect of advancing the closure point and the question naturally arises as to why it should be permissible to eliminate exhaust clearance and thus advance the closure point on freight locomotives and not on passenger locomotives. The first reason is that in running position the passenger locomotive is generally notched up to a much earlier cut off than the freight locomotive—about 25% of the stroke instead of 50%—and the second the piston speed of the passenger locomotive averages much higher than that of the freight locomotive.

The passenger locomotive, under consideration, has a piston speed of 1,136 ft. a minute when making 50 miles an hour, or over 40% higher than that of

the freight locomotive at 30 miles an hour, and the higher the speed the higher the compression will be, provided that all other conditions are equal. It is a mistake to think that compression always starts from the closure point; it does at very slow speeds, but as the speed increases the compression begins earlier, owing to the fact that the piston has to sweep a considerable volume of steam through a port opening which is narrowing down for the closure, in an increasingly short space of time. By giving this locomotive exhaust clearance, we not only delay the closure point, but also give a greater exhaust port opening, thus allowing the exhaust freer access to the atmosphere, and the result is a freer running locomotive.

You may say that when the locomotive is working at a short cut off less steam is admitted to the cylinder, and, therefore, the piston has less to sweep out on the return stroke, but if we consider for a moment we shall realize that the exhaust begins with the release, and by the time the return stroke has begun there is very little difference in the amount of steam left in the cylinder, whether running on long or short cut off.

When dealing with the question of compression we have to look into the matter from several different view points. From the point of view of economy of steam consumption per unit of power developed, the higher the compression the greater the economy, provided we do not run the compression higher than boiler pressure. This is on account of the clearance volume, and we can readily understand that, the higher the compression the less steam has to be supplied from the boiler to build up the initial pressure, and if the compression reaches boiler pressure there is no steam drawn from the boiler until the piston actually starts its working stroke.

The next thing to consider is the power required, as it is no use trying to run on a very fine thread of steam if we cannot get the tractive effort necessary to keep the load moving. From this aspect of the question, compression is negative effort, and a high compression curve seriously cuts down the area of an indicator diagram and the mean effective pressure, thereby reducing the power delivered.

The third and most important consideration is machine friction, and this generally limits the compression in practice. When the compression is too high, it can generally be detected in the cab, as the locomotive will jig, and ride badly at high speeds, and the effect on the rods and other running gear will be disastrous if this condition is allowed to continue. If we compare fig. 1 and 4 we find that the closure takes place at 76% of the stroke for the passenger locomotive in running position; with the freight locomotive running at the same cut off the closure takes place at 73%, but if we eliminate the exhaust clearance on the passenger locomotive we shall advance the closure point from 76% to 68% of the stroke. This goes to show how much the closure point is affected by the amount of exhaust clearance. For my own part I do not think the actual closure point is of very much importance, but that the exhaust port opening has a great deal more influence on the compression than the actual position of the closure point. I contend that if we pay proper attention to the exhaust port opening, the closure point will take care

of itself.

There is no purely mathematical means of determining the most desirable exhaust port opening, and this, like so many other problems in locomotive work, has had to be determined by practical experiments. It is here that we find the chief difference between passenger and freight locomotive setting, and, still referring to figs. 1 and 4, we see that the maximum exhaust port opening in running position for the passenger locomotive is just over 1½ in., whereas that of the freight locomotive is just over 1 9/16 in., when running at 50% cut off, while if we notch up the freight locomotive to the same cut off as the passenger locomotive we have a maximum exhaust port opening of only 1½ in. This maximum port opening is only maintained for a few inches of the stroke, and it is easy to understand that when this port opening begins to narrow down it will form quite a choke for the exhaust, at a high piston speed, and will build up quite a little compression before the closure point is reached.

We all realize that a locomotive exhaust has to be choked to a certain extent, to obtain a high velocity jet up the stack, which will induce a proper draft through the grates, but this choking should be done by the exhaust pipe tip and not by the valve. Any choking which is effected by a correct exhaust pipe tip can build up but very little back pressure in the cylinder, whereas the throttling of the exhaust by the valve builds up considerable back pressure, and its effect on the draft is only detrimental. The area of the bore of the exhaust pipe tip on the passenger locomotive under consideration is about 23 sq. in., and on the freight locomotive 29 sq. in., and the valve displacement necessary to give a port opening equal to the area of the tip will be approximately 11/16 in. for the Pacific locomotive, and ¾ in. for the mikado. This 11/16 in. port opening you can see from the diagram is maintained for 53% of the stroke on the Pacific locomotive, but on the mikado the ¾ in. port opening is only maintained for 36% of the stroke when notched up to the same cut off as the Pacific. When the mikado is running at a 50% cut off, which is approximately her running position, the ¾ in. exhaust port opening is maintained for 58% of the stroke, which compares favorably with the Pacific. I think that this gives us the chief reason why the Pacific setting is found to be more suitable for high speeds and short cut offs, while the mikado setting is better on the slower speeds and long cut offs.

We will now sum up the chief differences between passenger and freight locomotive settings, and as far as possible the reasons for the variation. The passenger locomotive has a greater lead, which gives an unrestricted supply of steam to the cylinder at the beginning of the stroke, and reduces the wire-drawing of the steam at high piston speeds. It has also the effect of increasing the exhaust port opening, which we will at once realize when we consider that the exhaust port opening at the end of the stroke must always be equal to the sum of the steam lap, plus the lead, plus the exhaust clearance, so that the greater any of these three properties are, the greater by that amount is the exhaust port opening at the end of the stroke. The freight locomotive has a smaller lead, in order to get a slightly later cut off, which will increase the

Agreement for Acquisition of Grand Trunk Railway System by Dominion Government.

Canadian Railway and Marine World for March contained particulars of the G.T.R. shareholders' meeting in London, Eng., at which it was decided to ratify the agreement arrived at between the Dominion Government and the company's Chairman, Sir Alfred Smithers. Under the authority of an order-in-Council passed Dec. 31, 1919, the agreement was signed by the Minister of Railways, Hon. J. D. Reid, and by the Railway Department's Acting Secretary, and was sent to the Canadian High Commissioner in London for execution by the G.T.R. Co.'s Chairman and Secretary. The agreement is as follows:

Whereas, by an act of the Parliament of Canada, entitled The Grand Trunk Railway Acquisition Act, 1919, the parties hereto were authorized to enter into an agreement for the acquisition by the government, on the terms therein stated, of the entire capital stock of the Grand Trunk except the guaranteed stock amounting to £12,500,000; whereas the issued capital stock of the Grand Trunk (not including the present guaranteed stock) consists of the following:

First preference stock, 5%	£ 3,420,000
Second preference stock, 5%	2,330,000
Third preference stock, 4%	7,168,053
Ordinary or common stock	23,955,437

£37,073,492

And whereas the present outstanding debenture stocks of the Grand Trunk, consisting of—

Five per cent. G.T. debenture stocks	£ 4,270,375
Five per cent. Great Western debenture stocks	2,730,080
Four per cent. G.T. debenture stocks	24,624,455
Four per cent. Northern debenture stocks	308,215

£31,926,125

are entitled to certain voting powers at meetings of shareholders of the Grand Trunk; witnesseth: that the parties hereto have agreed as follows:

2. Statement of Control.—The Grand Trunk represents that the companies, properties and interests comprised in the G. T. R. System are correctly and fully set forth in the first schedule of this agreement, and that it has in such schedule correctly and fully shown how the various companies and their undertakings are controlled by the Grand Trunk, whether by stock ownership and to what extent, and whether by leases, agreements or otherwise, distinguishing in these respects the direct ownership and control by the Grand Trunk from the indirect ownership and control through companies included in the system.

2. Sale and Purchase of Certain Stocks.—The Grand Trunk hereby undertakes and agrees to use its best endeavors to cause the sale and delivery to the government, and the government agrees to acquire, in the manner and on the terms hereinafter set forth, the preference and common stock of the Grand Trunk now issued and outstanding to the face value mentioned in the recitals to this agreement.

3. Part Consideration—Cessation of Voting Powers.—As part of the consideration for such acquisition, the government agrees to guarantee the payment of—

(a) Dividends payable half-yearly, at 4% per annum, upon the present guaranteed stock; (b) The interest upon the present debenture stocks as and when

payable, in accordance with the terms thereof; these guarantees to take effect upon the date of the appointment of the committee of management hereinafter mentioned. The guarantees shall be in form, or substantially in the form, set forth in the second and third schedules, respectively, to this agreement, shall be signed by the Minister of Finance and Receiver General of Canada on behalf of the King in the right of the Dominion of Canada, and, forthwith after the appointment of the committee of management hereinafter referred to, shall be deposited with the High Commissioner for Canada in London, Eng., for the benefit and information of all parties concerned. Provided that concurrently with the deposit of such guarantees, the voting powers at meetings of shareholders of the Grand Trunk now vested in or exercisable by the holders of the present guaranteed stocks and the present debenture stocks, respectively, shall cease and determine absolutely.

4. Committee of Management.—Forthwith after the ratification of this agreement, as provided in the said act, a committee of management of the G. T. System shall be formed, consisting of five persons, two to be appointed by the Grand Trunk, two by the government, and the fifth by the four so appointed. The functions of the managing committee shall be to insure the operation of the G. T. System (in so far as it is possible to do so) in harmony with the Canadian National Rys., the two systems being treated, in the public interest, as nearly as possible as one system. No contract or agreement shall be made by the Grand Trunk, or by any company comprised in the G. T. System, and controlled by the Grand Trunk, other than such as are necessary for the usual and ordinary business of the system except with the concurrence of the managing committee, and the approval of the Governor in council. The managing committee may, with the consent of the Governor in council, borrow from the government on Grand Trunk notes, or other obligations or securities approved of by the Governor in council, for the carrying on of the operation or improvement of the G. T. System. The committee shall continue to act until the preference and common stocks are transferred to or vested in the Government, when it shall be discharged.

5. Examination of Books and Properties.—The books, minutes, reports, documents, and other records, and all the railways and properties of the companies comprised in the G. T. System, shall at all times be accessible and open to inspection and examination by any person or persons named by the Minister of Railways and Canals of Canada, or by the board of arbitrators hereinafter mentioned; and all proper aid and assistance shall, on request, be rendered to such person or persons by the committee of management and by the officers and employees of the Grand Trunk and its allied companies, including the making and giving of extracts, copies and statements.

6. Submission to Arbitration.—The value, if any, to the holders thereof, of the preference and common stock shall be determined by a board of three arbitrators, one to be appointed by the government, one by the Grand Trunk, and the third shall be Sir Walter Cassels, Judge

of the Exchequer Court of Canada, who shall be Chairman of the board. Should Sir Walter Cassels die or be unable to act, the said parties shall agree upon another third arbitrator who shall be either the then Judge of the Exchequer Court of Canada, or one of the judges of the Supreme Court of Canada, and who shall likewise be Chairman. Should any vacancy occur in the board of arbitrators other than the third arbitrator, the arbitrator to fill the vacancy shall be appointed in the same way as the arbitrator whose seat has become vacant was appointed.

7. Arbitration Proceedings.—The board of arbitrators shall have full power and authority in respect of the control of the arbitration and the proceedings thereof including the administration of oaths and in respect of the admission of evidence. The board shall have power to employ or procure such legal, engineering, actuarial or other assistance and such evidence as it may require. Should the arbitrators require that the evidence of any person be taken *de bene esse*, or out of Canada, the arbitrators may delegate to any person power to administer oaths, to take such evidence under oath, or otherwise, and to transmit to the arbitrators for use upon the arbitration. The evidence upon the arbitration shall be taken in shorthand and transcribed by competent stenographers appointed by the arbitrators and duly sworn.

8. Making of Award and Appeals.—The award shall be made by the arbitrators, or a majority of them, within nine months from the appointment of the arbitrators, or within such further time as the Governor in council may approve. The unanimous award of the arbitrators shall be final, but should the award not be unanimous, and should notice of appeal be given by either party to the other within 30 days after the making of the award, an appeal therefrom, upon any question of law, shall lie to the Supreme Court of Canada, and/or to the Judicial Committee of the Privy Council, if leave be granted by the said committee.

9. Clerical Errors.—The arbitrators shall have the power to correct in their award any clerical errors or mistakes, at any time within two weeks after delivery thereof.

10. Undisclosed Liabilities.—Should the government, within three months after the making of the award, claim that there existed any liabilities of the Grand Trunk, or of any company comprised in the G. T. System, which were not disclosed to the board of arbitrators prior to the making of their award, the government may, within such period of three months, apply to the board of arbitrators to amend their award, and the board may thereupon decide whether such liabilities existed and were disclosed to them, whether the amount of their award would or would not have been affected thereby, and the amount of the deduction, if any, to be made in respect thereof; and may amend their award accordingly.

11. Limit to the Amount of the Award.—The value, if any, so determined shall not be greater than an amount on which the annual dividend at 4% per annum on the aggregate face value of

In no case shall any acquired rights or vested interests in either the pension system or the Insurance and Provident Society be affected.

18. **Grand Trunk Pacific.**—The Minister of Railways and Canals, as receiver of the G.T.P. Ry. System, may entrust to the committee of management on terms to be approved by the Governor in council, the exercise of such of his powers as Receiver as the Governor in council may deem requisite, in order that the operation and management of the G. T. Pacific System may be conducted in harmony with the operation of other railways and properties under the control of the committee, and upon the transfer to or vesting in the government of the preference and common stock as herein provided for, the Governor in council may, on such terms and conditions as may be deemed necessary in the public interest, order the discharge of the receivership of the G. T. Pacific System, and the termination and withdrawal of the proceedings in the Exchequer Court of Canada relating thereto.

19. **G.T.P. Guarantee and Claims.**—

For the purpose of the valuation provided in this agreement, the obligations of the Grand Trunk as guarantors of any indebtedness of the G. T. Pacific Co., or of the G. T. Pacific Branch Lines, or otherwise, and the claims of the government against either of the above mentioned companies, or against any company forming part of the G. T. R. System, shall not be treated as extinguished or affected by anything contained in the said act.

20. If the arbitrators consider that the market prices or quotations of the stocks are to be taken into consideration in establishing their value, they shall not take into account the fluctuation, if any, in the market prices or quotations of the said preference and common stock caused by the negotiations between the parties hereto, the passing of the said act, or the execution of this agreement. This shall not be taken to mean that the market prices or quotations are relevant matter to be inquired into by the arbitrators.

21. **Costs.**—Each of the parties to this agreement shall pay its own costs of

and in connection with the arbitration subsequent to the date of this agreement, including the remuneration of the arbitrator appointed by it. The remuneration of the third arbitrator, of the secretary of the arbitration board, secretarial, clerical, reporting, travelling and other necessary expenses which may be considered as in the common interests of both parties, shall be equally borne by each party. In order to provide the necessary funds to pay its expenses and its share of the common expenses, the directors of the Grand Trunk shall be entitled to create a fund, by means of assessments on the present debenture stocks and present guaranteed stock, in such proportions as the directors in their discretion may determine, which shall be deducted from any payments on said debenture and present guaranteed stocks as may be necessary.

Should any difference arise as to what is included in the expression "common interests of both parties", as used in this clause, such difference shall be settled by the board of arbitrators on the application of either party.

Graphic Production Control Discussed.

The paper on graphic production control, by E. T. Spidy, A.M.Am.Soc.M.E., Production Engineer, Angus Shops, C. P.R., Montreal, which was published in Canadian Railway and Marine World for February, was, after its reading, discussed by the Canadian Railway Club's members, as follows:

L. C. Ord, Assistant Works Manager, Angus shops, C.P.R. After Mr. Spidy's remarks it is possible that some of the members may think, from the amount of color on the charts, that this subject is a complicated one which requires considerable staff and considerable work. It, however, requires a very small staff to operate, as in a shop of 2,500 men the total additional staff required to handle this would not be more than four or five men, and with this, 50% increase should be obtained in the output without increasing the supervision. This method of control also looks after the movement of material, and in a shop, large or small, it is a familiar sight to see the foreman, who should be watching his men, chasing over to the stores or elsewhere, looking for material which he is short of. Under this system the chasing of material is done by one man and the foreman stops moving from shop to shop. The same condition applies where are several shops handling the same material. One fellow knows that the stores has something he wants and he goes and gets it, but with the schedule man watching, the delivery of material is checked up, and he sees that it is distributed to the shop as required. Where large quantities of material are used for new equipment the tracing proposition is serious, and in the case of some items it is handled in bulk. We carry considerable stock ahead and as the supply begins to run low the check is repeated every day until it is received. This system shows the number of days the shop has been out each class of material. The party concerned is supplied with a list of the outstanding material that is short and he can act on the situation. The staff required to do this is extremely small and the men who specialized on it does more work than several foremen. In any large shop, where

any special work is required in a hurry, nothing gives a quicker answer than a schedule. This schedule is not a new method. It is equivalent to putting a lazy man on the basis of a good man. The older experienced foremen planned his next day's work the day before. He knew what he had to do and did not wait until the morning to assign his men to their different work. He wrote up the list of what was to be done and told his men to do it. Various foremen had different methods. This system writes up the list for the foreman the night before and gives it to him in time to assign men to the jobs for the following day, and the men do not work one against the other. In making a chart you have a definite and uniform method and with a large staff every man knows it in time.

In a shop where you put four or five men on a car or locomotive, and have some working on the wheels and some on the other parts, if the men could do all the work it would then be a simple matter to take the material as it came along, but the modern shop is gauged up to its maximum and each man specializes, and it becomes more difficult to see that each man gets off the job in time for the next man. The schedule puts that in the hands of each foreman, as it indicates whether any one shop is late repeatedly or whether it is ahead of time. In almost every shop where a job is started a different schedule is required. You do not start off and find out later where you are going to come out at. Before a foreman starts a job he has to make a definite plan of how he is going to do the work, and then he is checked up to see that he carries it out. His plan can be checked up in detail before he starts out and you know how closely he lives up to it. By checking the work and your layout you can see that distribution is controlled before the job starts and each schedule will bring better results later on. The last point is that it does ensure uniformity of output and a certainty of operation that cannot be obtained in any other way.

A. McAlpin, Angus Shops, C.P.R., Montreal. Production by schedule has been so clearly stated that, to shop-

men at any rate, questions seem hardly necessary. That is as far as the paper goes. But there is one thing not mentioned in the paper that at present time has a distinct bearing on the paper and in the future may have a still more direct bearing. These schedules have all been based on an output under a piecework system, or one might say on an accelerated labor basis. As the Canadian railways have accepted the McAdoo award and as one of the clauses of that award decrees that where the men rate a majority against piecework, it automatically shall cease to exist. I would like to know if Mr. Spidy can enlighten us as to how we are to keep up the labor pace to fulfil the requirements of the present schedule.

E. T. Spidy. You ask what would happen to the schedule if the piecework system fails. At Angus shops piecework is in force, which accelerates the output of the individual and this would, in a way, affect the schedule, but the schedule in itself is entirely independent. Should piecework be discontinued the check we get on individual operations by the piecework foremen would also be discontinued. We would still have, however, in every department, the check which is made by the production staff in each shop. Should piecework be discontinued, a certain number of the piecework staff would probably be absorbed into supervision, which would provide extra foremen to check up the work and see that it was done. My own opinion is that a shop without piecework requires a production schedule that is more extensive than one which has piecework, because that provides the only individual check on the work. Just how one is going to prevent a slow up in the output is a matter the supervisors will have to handle, but if you provide the supervisor with a list of work required each day, he has something definite to work to, and the management has a definite check every day, it can be readily seen when he is falling down and where. The schedule will tell you exactly how your shop is being run, which will give the necessary stimulus to get the output.

W. Blackbird, Contract Inspector, G.

No 16-Storey Hotel for Montreal.—The Montreal Administrative Commission is reported to have decided Mar. 9 to reject the application which the city council had approved for the erection of a 16-storey hotel in the city. The commission took the ground that the city, having good building bylaws, should not permit any variation therefrom. The bylaws permit the erection of 10-storey structures only. It was proposed to erect a \$5,000,000 building on St. Catherine St., between Peel and Metcalfe Streets. Lord Shaughnessy and E. W. Bently, K.C., of the C.P.K., were interested in the project.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Bellechasse and Temiscouata Counties, Que.—The Minister of Railways stated in the House of Commons, March 22, in answer to questions, that Parliament has not, within the last few years, granted a charter to build a railway between St. Camille, Bellechasse County, and Cabano, Temiscouata County. Parliament has voted subsidies in this connection, but only part of them were granted, they having lapsed.

Canadian Niagara Bridge Co.—A press report of March 8 states that M. C. Spratt, special attorney representing the New York Central Rd., Toronto, Hamilton and Buffalo Ry., and Canadian Pacific Ry. companies, which are promoting this bridge building company, had announced that the land under option on Grand Island, in Niagara River, and on the U.S. mainland necessary for the company's purposes had been purchased; that men would be put to work at once clearing up the land on Grand Island, and that work would be started on the construction of the bridge in the spring. Everything in connection with this project is being done as secretly as possible, and no official information is obtainable. (March, pg. 135).

Dauphin Industrial Railway.—Tenders were received to March 19 by J. A. Gorley, Secretary, Dauphin Rural Municipality, Man., for all or any part of the following equipment: 7 miles, 20 lb. rails, 24 in. gauge, with and without steel ties; 4 curves, 24 in. gauge, 40 ft. radius; 7 switches, 24 in. gauge; 110,000 ft. b.m. tamarac or B.C. fir, 3'x6'x16'; 1 six ton gasoline locomotive, 24 in. gauge; 1 three ton gasoline locomotive, 24 in. gauge; 4 five ton dump cars, 24 in. gauge, with or without roller bearings; 4 five ton flat cars, 24 in. gauge; 1 gasoline or steam shovel ½ to 1 cubic yard capacity.

Dominion Atlantic Ry.—The new station recently opened at Bridgetown, N.S., is a conveniently arranged structure 24 x 56 ft., with 20 ft. overhanging at each end, and has in front a walk 390 x 12 ft. The building has a cement pebbledment, the main structure being of stucco on trussed lath, finished with base-dash, with smooth finish above and below, and an asbestos shingle roof. The inside finish is of Douglas fir and birch, the ceilings and sidewalls being sand-finished and cream tinted. It contains an office 14 ft. square; ladies' waiting room, 12 x 24 ft.; men's waiting room, 20 x 24 ft., and baggage room, 20 x 10 ft. The building is heated by hot air. On the opposite side of the track a freight shed 30 x 48 ft. has been built. The contractors for these buildings were J. H. Hicks and Sons.

A press report of March 15 states recent storms and floods in Nova Scotia washed out about eight miles of the company's railway between Plympton and Digby, which will have to be rebuilt. (Dec., 1919, pg. 655).

Edmonton, Dunvegan and British Columbia Ry.—The car sheds at Edmonton, Alta., were destroyed by fire recently, along with 2 cars which were being repaired. The building was of frame, 150 x 50 ft. (Nov., 1919, pg. 602).

An Edmonton, Alta., press report of March 15, states that the Alberta Government, desiring to be in a position to make a deal with the E., D. and B.C.R.

in the event of the Dominion Government not taking it over, has prepared a bill for submission to the legislature, appropriating \$1,000,000 for improvements on the line. The expenditures proposed include \$200,000 for ties; a large sum for ballasting all along the line, and particularly between Spirit River and Grande Prairie; \$200,000 for leasing additional locomotives, and money to provide for paying interest on the bonds as it becomes due. (March, pg. 134).

Esquimalt and Nanaimo Ry.—The British Columbia Legislature has passed an act ratifying the agreement between the City of Victoria, the B.C. Government and the company, respecting the construction of a railway and general traffic bridge on Johnson St. The Lieutenant Governor on March 8, returned the bill to the legislature, recommending the substitution of an amended agreement in place of the one forming Schedule A of the original bill. The amendment desired was considered, and an amended bill was read and sent forward to the committee the same night, and the committee reported approving of the same, March 10.

A press report states that the Marine Department at Ottawa has directed an enquiry to be made to know how the proposed new bridge will affect the Dominion property on the former Songhees Indian Reserve.

A contract has been signed for the purchase of plans for the special span from Strauss Bascule Bridge Co., Chicago, Ill., and we are advised that general detail plans and specifications are being prepared for a 150 ft. single leaf combined railway and highway bridge.

Grading and other work on Lane St., in connection with the approach to the new bridge, is reported to have been started March 3, under charge of F. M. Preston, City Engineer.

There has been deposited with the Public Works Department at Ottawa, a description of the site and plans of a wharf and transfer slip proposed to be built in Nanossee Bay, Vancouver Island. (March, pg. 135).

Grand Trunk Pacific Ry.—A recent press report stated that a contract was about to be let for building another dock at Prince Rupert, B.C. It will be an extension of the company's present wharfage area, and will involve an expenditure of \$600,000. It will be 860 x 173 ft. and will be provided with a shed 820 ft. long, with a capacity of 25,000 tons. Two tracks will be laid along the dock and provision is also being made for a travelling crane and 2 elevators.

A press report states that the United Farmers of Alberta, Sedelva Branch, has been advised that owing to financial conditions, it will be impossible to proceed with building the Biggar-Calgary Branch this year. The line is in operation from Biggar to Lovern, at the Saskatchewan-Alberta boundary, 105 miles. (Jan., pg. 18).

Hudson Bay Ry.—The Lieutenant Governor's speech at the opening of the Manitoba Legislature recently in referring to the Hudson Bay Ry., said: "You will again be asked to consider resolutions requesting the completion of the Hudson Bay Ry., and the transfer of the natural resources of the province to provincial jurisdiction. This road, in operation to the seaboard, and the realization of the long cherished desire of

our people to be in possession of their own resources, would permit of the development of the extensive timber resources and rich mine deposits of the northern area, and produce an industrial activity capable of sustaining a large population." The resolutions had not been brought before the legislature at the time of writing.

Western members of the House of Commons met at Ottawa, March 18, and decided to press for the immediate completion of the line. It was stated that a delegation from the Manitoba Legislature would go to Ottawa to ask the Dominion Government to proceed with the work. (Dec., 1919, pg. 654).

Kettle Valley Ry.—The Board of Railway Commissioners has authorized the opening for freight traffic of the portion of the line from mile 13.6, near Princeton, B.C., to mile 8, south of Princeton, 5.6 miles.

The British Columbia Legislature is being asked to ratify an agreement between the B.C. Government and the K.V.R. Co. for the building of a railway from Penticton, towards the International Boundary to open up the irrigation settlement in the southern Okanagan valley. The length of the projected line is about 50 miles, exclusive of the stretch of navigation at Dog Lake. Three miles of railway will be built from Penticton to the north shore of Dog Lake, where a wharf will be built and a ferry service put on to the lower end of the lake, from which point the railway will be continued to the irrigation settlement. It is stated that this means the construction of 25 miles of railway during this year. Construction on the remaining mileage will, it is said, be carried on during 1921, the route being along the shore of Osoyoos Lake to the International Boundary at Oroville, Wash. The route is to be laid out by the government.

The Board of Railway Commissioners in Dec., 1919, approved of a route plan of the line from the south end of Dog Lake to the Indian Reserve near Okanagan Falls, about 750 ft.

The British Columbia Legislature is being asked to authorize the B.C. Government to enter into an agreement with the K.V.R. Co. for building a line from Coalmont, near Princeton to the Granite Creek Coal Mines. A press report stated that the agreement had not been completed.

Montreal, Joliette and Transcontinental Junction Ry.—The Dominion Parliament is being asked to extend the time within which the company may begin and complete the building of its projected railway from Montreal to Joliette and thence to Parent, Que., on the National Transcontinental Ry., 180 miles. The Quebec Legislature last session voted a subsidy of 4,000 acres of land a mile to the company to aid the construction of the railway, a condition being attached to the effect that if 25 miles of the line are not completed by Dec. 1, 1920, the subsidy will be cancelled.

This company was incorporated by the Dominion Parliament in 1918, with E. J. Walsh, F. T. Delaney, H. S. Short, C. W. Butler and L. J. Kelroe, Ottawa, as provisional directors. The Joliette and Lake Manuan Colonization Ry. Co., incorporated nearly 20 years ago, had power to build over practically the same route, but after some clearing and grad-

Canadian National Railway Organization. The Minister of Railways stated in the House of Commons, Mar. 15, that no action had been taken in the direction of the organization provided for by the National Railway Corporation Act. The government has been waiting until it could be decided what action could be taken in connection with the Grand Trunk Ry. System, so that in forming the organization the government could take into consideration all the railways that go to make up the Canadian National Rys. System.

Mainly About Railway People Throughout Canada.

J. R. W. Ambrose, Chief Engineer, Toronto Terminals Ry., has been elected Chairman American Railway Engineering Association's Roadway Committee, of which he has been a member since 1910, and of a subcommittee of which he was Chairman in 1915, 1916 and 1917.

George Bradshaw, who was Supervisor of Safety under the U.S. Railroad Administration at Detroit, Mich., has, on the return of the railways to their owning companies entered Pere Marquette Rd's service. He was born at Franklin, Ky., Sept. 12, 1873, and entered railway service Nov. 17, 1902, since when he has been, to May 1, 1909 Assistant Claim Agent, Chicago & North Western Ry., Chicago, Ill.; May 1, 1909, to Mar. 16, 1913, General Safety Agent, New York Central Lines, New York, N.Y.; Aug. 16, 1913, to Sept. 21, 1918, Safety Engineer, G.T.R. and Grand Trunk Pacific Ry., Montreal, Winnipeg and Toronto; Oct. 1918 to Mar. 1, 1920, Supervisor of Safety, U.S.R.S., Detroit, Mich.

Sir George McLaren Brown, European General Manager, C. P. R., London, Eng., arrived in Canada, Mar. 8, on a business trip.

Lt. Col. Botsford Busted, K.C., who died in Montreal Mar. 24, aged 63, was a brother of F. F. Busted, C.E., Vancouver, B.C.

H. C. Butler has been appointed Manager, Montreal Locomotive Works, succeeding D. W. Fraser, appointed Vice President in charge of sales, American Locomotive Co., and Montreal Locomotive Works, at New York, N.Y.

Henry J. Cambie, Special Assistant Engineer, C.P.R. and Chief Engineer, Esquimalt and Nanaimo Ry., Vancouver, B.C., who retired from active service Mar. 15, was born in County Tipperary, Ireland, Oct. 25, 1836, and on Sept. 1, 1852 entered the office of Walter Shanly, Chief Engineer, Toronto and Guelph Ry., which was absorbed by the G.T.R. in 1853. From 1853 to 1859 he held various positions with C. S. Gzowski & Co., contractors for the western portions of the G.T.R.; from 1860 to 1862 he was engaged in land surveys and explorations in Ontario, 1863 to 1866 engaged with Sandford Fleming in surveys, exploration and preliminary surveys, Intercolonial Ry.; 1867 to 1869 in charge of location and construction, Windsor and Annapolis Ry.; 1870 to 1873 Division Engineer, Intercolonial Ry., Metis, Que.; 1874 to 1875, Division Engineer, government surveys, C.P.R. in British Columbia, and during this period, with John Trutch, made explorations across the Cascade Mountains by the Similkameen and Tulameen Valleys; 1876 to 1879 in charge of government surveys, C.P.R., in British Columbia, and conducted exploration from Port Simpson by way of the Skeena River, Lakes Babine and Stewart and Peace and Pine River Passes to Lower Slave Lake, also location survey from Yellowhead Pass to Burrard Inlet, and reported on the route by the Thompson and Fraser Rivers, with reference to the comparative advantages of that route and the line to Bute Inlet; 1880 to 1883 in charge of government construction, C.P.R. in Fraser River canyons; 1884 to 1885 in charge of C.P.R. construction Savona, Shuswap and Kamloops, B.C.; 1886 to 1904 Division Engineer, in charge on main line and branches in British Columbia, C.P.R.,

Vancouver; 1905 to 1907 in charge of construction of Nicola Valley and Similkameen Ry. (C.P.R. branch) Vancouver, and from 1908 to Mar. 15, 1920, Special Assistant Engineer, C.P.R. and Chief Engineer, Esquimalt and Nanaimo Ry., Vancouver.

J. E. Dalrymple, Vice President, (Traffic) G.T.R., Montreal, and Mrs. Dalrymple, visited Algonquin Park, Ont., in March.

W. R. Davidson, who has been appointed General Superintendent, Western Lines, G. T. R., Chicago, Ill., was born at Everton, Mo., Nov. 8, 1871, and entered railway service in Jan. 1890, since when he has been, to July, 1901, operator, Missouri Pacific Ry., at various points; July, 1901, to Mar., 1904, dispatcher, same road, Wichita Kan.; Mar. to Oct., 1904, Chief Dispatcher, same road, Wichita, Kan.; Oct., 1904, to Mar., 1911, Trainmaster same road,

W. R. Davidson, General Superintendent, Western Lines, Grand Trunk Railway.

Wichita, Kan.; Mar., 1911, to Feb., 1913, Trainmaster, G. T. R., London, Ont.; Feb., 1913, to Mar., 1916, Superintendent G. T. R., London, Ont.; Mar., 1916, to Sept., 1917, Superintendent, G. T. R., Detroit, Mich.; Sept., 1917, to May 1, 1918, General Superintendent, Western Lines, G. T. R., Chicago, Ill.; May 1, 1918, to Mar. 1, 1920, General Superintendent, Eastern Lines, G. T. R., Montreal.

H. G. Dring, European Passenger Manager, C. P. R., London, Eng., arrived in Canada, Mar. 8, on a business trip.

B. J. Farr, who has been appointed Superintendent Motive Power and Car Department, Western Lines, G. T. R., Battle Creek, Mich., was born at Elenburg, N. Y., Sept. 8, 1876, and entered railway service in 1893, since when he has been, to 1898, machinist apprentice, Central Vermont Ry., St. Albans, Vt.;

1898 to 1900, Erecting Shop Foreman, same road, St. Albans, Vt.; 1900 to 1905, General Foreman, same road, St. Albans, Vt.; 1905 to 1906, General Foreman, Motive Power and Car Department, Delaware & Hudson Co., Schenectady, N. Y.; 1906 to 1908, Master Mechanic, Motive Power and Car Department, United Fruit Co., Port Limon, Costa Rica; 1908 to 1914, Engineering Department, Panama Canal, Gatun and Cristobal, Panama; 1914 to 1916, General Foreman, G. T. R., Battle Creek, Mich.; 1916 to Oct., 1918, Master Mechanic, G. T. R., Battle Creek, Mich.; Oct., 1918, to Mar. 1, 1920, Superintendent, Motive Power and Car Department, Grand Trunk Western Lines Rd., (U.S.R.A.), Detroit, Mich.

Robert H. Fish, whose appointment as General Superintendent, Eastern Lines, G.T.R., Montreal, was announced in our last issue, was born at Oakville, Ont., in 1871, and entered G.T.R. service in 1890, since when he has been, to 1900, locomotive fireman; 1900 to Oct. 1, 1908, locomotive man; Oct. 1, 1908, to Jan. 23, 1913, Road Foreman of Locomotives, London, Ont.; Jan. 23, 1913, to Nov. 14, 1916, Trainmaster, Districts 20 and 21, Ontario Lines, Brantford, Ont.; Nov. 14, 1916 to March 1, 1920, Superintendent, Stratford Division, Ontario Lines, Stratford, Ont.

T. J. Gracey, whose appointment as Assistant Auditor of Disbursements, Canadian Northern Ry. System, Toronto, was announced in our last issue, was born at Kingston, Ont., Mar. 21, 1889, and entered railway service Feb. 8, 1906, since when he has been, to June 1, 1915, stenographer and clerk, chief clerk, and superintendent's accountant, Timiskaming and Northern Ontario Ry., North Bay, Ont.; June 1, 1915, to Feb. 16, 1920, Auditor of Disbursements and accountant, same road, Toronto.

D. B. Hanna, President Canadian National Rys., addressed Ottawa Board of Trade Mar. 6, and spoke at Brockville, Ont., Mar. 8, and Kingston, Ont., Mar. 9.

Louis Kossuth Jones, I.S.O., Assistant Deputy Minister of Railways and Canals, Ottawa, retired on superannuation, Mar. 31, after 50 years government service. He was born at Cobourg, Ont., June 9, 1849, and educated at Trinity College School, Weston, Ont., and Trinity College University, Toronto. He entered government service as clerk to the Secretary of the Canal Commission, in Mar. 1870, and joined the staff of the District Engineer on the construction of the Intercolonial Ry. in the Miramichi District, Newcastle, N.B., in 1871. In 1874 he was appointed Secretary to Collingwood Schreiber on the latter's appointment as Chief Engineer, Intercolonial Ry., with headquarters at Ottawa, and remained in that position until the completion of the road, continuing with Mr. Schreiber on the latter's appointment as Chief Engineer and General Manager of Government railways, and from 1879, on Mr. Schreiber's additional appointment as Chief Engineer on construction of the C.P.R., during the building of a portion of the road by the government, he was assistant to the Chief Engineer and General Manager, Government Railways. From 1893 to 1897 he was chief clerk, Department of Railways and Canals, and from 1897 to May, 1912, was Secretary; from May, 1912 to Dec., 1914 Assistant Deputy Minister and Secretary, and

ern Ry., and from Apr. 1, 1900, also Northwest Agent, Northern Navigation Co.; Mar. 1, 1902, to May, 1911, General Eastern Agent, C.N.R., Toronto, in Nov. 1906, he was also appointed General Freight and Passenger Agent, Canadian Northern Ontario Ry., and in Apr. 1910, also acting Traffic Manager, Canadian Northern Steamships, Ltd., and in April 1911, his last position was changed to General Freight and Passenger Agent, Canadian Northern Steamships, Ltd.; May 1911, to May 1912, he was General Freight Agent Canadian Northern Ontario Ry., Central Ontario Ry., Bay of Quinte Ry., Irondale, Bancroft & Ottawa Ry., and Niagara, St. Catharines & Toronto Ry. and Navigation Cos., and also General Freight and Passenger Agent, Canadian Northern Steamships, Ltd.; May 1912, to Nov. 1914, European Traffic Manager, C.N.R., London, Eng., and from Nov. 1914, until the absorption of Canadian Northern Steamships, Ltd., by the Cunard Steamship Co., European Railway and Steamship Manager, C.N.R., and Canadian Northern Steamships, Ltd.; Nov. to Dec. 1916, Freight Traffic Manager, Eastern Lines, Canadian Northern Ry., Toronto; Jan. 1, 1917 to Mar. 1, 1920, Canadian Representative, Cunard Steamship Co., and director Robert Reford Co., Montreal. After spending some little time in Toronto consulting with the C.N.R. management in connection with his new duties, Mr. Phillips sailed from New York on the s.s. Mauretania, Mar. 23, to take over his new duties. His office will be at Orient House, London.

H. W. Ploss, whose appointment as Commercial Agent, G.T.R., Milwaukee, Wis., was announced in our last issue, entered railway service in Aug. 1889, since when he has been, to Oct. 1891 clerk, G.T.R., Chicago, Ill.; 1891 to 1893 Soliciting Freight Agent, West Shore Line and Reading Despatch, Chicago, Ill.; Nov. 1, 1900 to July 1, 1909 Contracting Freight Agent, G.T.R., Milwaukee, Wis.; also from Mar. 19, 1906, to July 1, 1909, Agent, Reading Despatch, Milwaukee, Wis., and also acting as Agent of the Milwaukee and Michigan lines Grand Trunk Despatch and Northern Express lines; July 1, 1909 to Mar. 1, 1919, Commercial Agent, G.T.R., Milwaukee, Wis.; Mar. 1, 1919 to Mar. 1, 1920, General Agent Freight Department, Grand Trunk Western Lines Rd. (U.S.R.A.) Milwaukee, Wis. He is President of the Milwaukee Traffic Club, and was also for a number of years, Chairman of the Milwaukee Freight Committee until its dissolution, when the U.S.R.A. assumed control of the railways.

Mrs. Alfred Price, wife of the General Manager, Eastern Lines, C.P.R., Montreal, died there recently after a long illness.

Bernard Joseph Quilty, whose appointment as Trainmaster, C.P.R., McAdam, N.B., was announced in our last issue, was born at St. John, N.B., Nov. 1, 1878, and entered C.P.R. service in December 1896 and has been, to Dec. 1905 Trainmaster; Dec. 1905 to Nov. 1918, conductor; Nov. 1918 to Feb. 1920, Yardmaster, Fairville, N.B.

John M. Riddell, General Agent, G.T.R., Portland, Me., died Mar. 10, at Westmount Que., on his 71st birthday, after a long illness. He was born at Port Dover, Ont., and entered railway service in 1874 with the Port Dover and Lake Huron Ry., now part of the G.T.R. He was for some time agent at Woodstock

and Stratford, Ont., and in 1882 was appointed Assistant Superintendent, Stratford Division, and later, Assistant Superintendent at Toronto, Belleville and Montreal successively. In 1896 he was appointed Freight Agent at Montreal, and in 1907 was transferred to Portland, Me., where he had charge of import and export freight, and held that appointment until his death. G. T. Riddell, of the G.T.R., and C. P. Riddell, Secretary Railway Association of Canada, are sons. He was buried at Westmount.

Hon. Walter Rollo, Ontario Minister of Labor, has been appointed Chairman of the Ontario Legislature's railways committee.

H. R. Safford, who has been appointed Assistant to President, Chicago, Burlington and Quincy Rd., Colorado and Southern Lines, etc., Chicago, Ill., was born at Madison, Ind., in 1875 and prior to graduation in civil engineering from Purdue University in 1895 was engaged with an engineering corps operating on the Pennsylvania lines immediately west of Pittsburg, Pa. In 1895 he entered Illinois Central Rd. service, remaining

William Phillips,
European Manager, Canadian National Railways
and Canadian Government Merchant
Marine, Ltd.

with it until May, 1910, and holding the following positions: 1895, rodman; 1896 to 1897, Resident Engineer; 1897 to 1900, Assistant Engineer; 1900 to 1901, Roadmaster, Amboy Division; 1901, Roadmaster, Freeport Division; 1902, Roadmaster, St. Louis Division; 1903 to 1905, Principal Assistant Engineer; 1905 to 1907, Assistant Chief Engineer; 1907 to 1910, Chief Engineer, Maintenance of Way; 1910 to Oct. 1911, not in railway service; Oct. 1911 to Sept. 1918, Chief Engineer, G.T.R., Montreal; Sept. 1918 to Mar. 1, 1920, Engineering Assistant, Central Western Region, U.S. Railroad Administration, Chicago, Ill.

W. H. Spicer, whose appointment as Assistant General Freight Agent, Western Lines, G.T.R., Detroit, Mich., was announced in our last issue, was born at Montreal, Sept. 29 1871, and entered railway service Nov. 1, 1890, since when he has been to May 1, 1896 Travelling

Car Agent, Western Lines, G.T.R., Detroit, Mich.; May 1 to July 1, 1896, Travelling Car Agent G.T.R., Montreal; July 1, 1896 to Jan. 1, 1898, Travelling Car Agent, G.T.R., Portland, Me.; Jan. 1 1898 to Mar. 1, 1910, Travelling Car Agent; G.T.R., Boston, Mass.; Mar. 1, 1901 to Apr. 1, 1902, Agent, National Despatch-Great Eastern Fast Freight Line, Battle Creek, Mich.; Apr. 1, 1902 to Mar. 2, 1905, chief clerk, General Freight Department Western Lines, G.T.R., Chicago, Ill.; Mar. 1 1905 to July 1, 1909, Agent Lackawanna-Grand Trunk Fast Freight Line, Milwaukee, Wis.; July 1, 1909 to Dec. 1, 1912, Commercial Agent, G.T.R., Detroit, Mich.; Dec. 1, 1912 to July 1 1918, Division Freight Agent, G.T.R., Detroit Mich.; July 1, 1918 to May 1, 1919, Division Freight Agent, Grand Trunk Western Lines Rd. (U.S.R.A.); May 1, 1919 to Mar. 1, 1920, Assistant General Freight Agent, G.T.W. L.R., (U.S.R.A.) Detroit, Mich.

H. E. Suckling, Treasurer, C.P.R., Montreal, while being driven to the Toronto union station, Mar. 13, in company with E. Alexander, Secretary; G. Hodge, Assistant to Vice President, Eastern Lines, and E. P. Flintoff, Assistant General Solicitor, after having attended the company's annual dinner, was slightly injured when the automobile collided with a street car.

R. D. Waugh, Chairman, Greater Winnipeg Water District Commission, which operates the Greater Winnipeg Water District Ry., has been appointed by the Council of the League of Nations, as a member of the board to investigate damage done during the war in the Saar district in France.

Barton Wheelwright, who has been appointed Engineer Maintenance of Way, Portland Division, Eastern Lines, G.T.R., Portland, Me., was born at Minneapolis, Minn., Mar. 12, 1888, and entered G.T.R. service July 1, 1911, since when he has been, to Mar. 1, 1912, draftsman on grade separation, Toronto; Mar. 1, 1912 to Dec. 1, 1914, Block Signal Inspector, Montreal; Dec. 1, 1914, to Jan. 14, 1916, Assistant Signal Engineer, Montreal; and from Jan. 14, 1916 acting Signal Engineer.

H. H. Williams, who has retired from business after 43 years work, has attended to C.P.R. real estate matters in Toronto for several years, including purchase of right of way for freight terminals, the North Toronto station site, and the renting of the office building at King and Yonge Sts.

Presentation to Wm. Phillips. On the eve of leaving for London, Eng., to take up his duties as European Manager Canadian National Rys. and Canadian Government Merchant Marine, Ltd., William Phillips was the recipient of a handsome leather travelling case fitted with silver, from a number of shipping friends in Montreal. The inscription within the case read: "Presented to Wm. Phillips, by a few of his shipping friends, as a token of esteem and respect on the occasion of his leaving Canada for England." The shipping people who subscribed to the presentation included the Hon. L. C. Webster, W. I. Gear, P. A. Curry, W. F. Forbes and Thomas Robb; J. T. Walsh, W. G. Annable, J. B. Binning, D. W. Campbell, W. A. Coates, H. W. Cowan, E. W. Foulds, A. E. Francis, Thos. Harling, A. M. Irwine, T. C. Lockwood, W. T. Marlow, E. J. McClure, J. W. Nicoll, R. B. Teakle, Leo H. Tobin.

Canadian Pacific Railway Construction, Betterments, Etc.

St. John, N. B. Bridge.—A press report of Mar. 30, stated that work on the foundations of the new railway bridge across the St. John River at the Ross and Little St. John, would be started within the next few weeks, and that it is expected to have the bridge ready for traffic in the summer of 1921. While the general location of the bridge has been decided upon, the location of the main piers has not yet been definitely settled, as the borings to establish the nature of the rock bottom are not completed. The main span will be of the cantilever type, and of approximately the same length and height as the present bridge, while the 480 ft. western approach will be of concrete construction instead of steel, as is the present approach. The boring tests of the foundations, a press report states, being made by the Foundation Co., Montreal.

Interprovincial and James Bay Ry.—In connection with the subsidy of \$1,600 a mile, and the special subsidy of \$6,400 a mile (the latter subsidy being payable in the event of the Dominion Government declining to grant any subsidy), voted by the Quebec Legislature in aid of the construction of a line from Timiskaming to Kapawa, Que., via Ville Marie to the Des Quinze River Falls, we are officially advised that the C.P.R. has already built a line from Kapawa to mile 10, Mercier Y., and has completed surveys to the crossing of the Kipawa River. A survey party in charge of W. H. Roberts, Assistant Engineer, is in the field locating a route for the line from the Kipawa River to the Des Quinze River at approximately mile 66 from Kapawa.

London to Sarnia, Ont.—A Sarnia, Ont., press report of Mar. 9, stated that it was expected that E. W. Beatty, President, and other C. P. R. officers would visit London, Sarnia and intervening points at the end of April or early in May, to look over the ground with a view to building a line from London to Sarnia.

Saskatchewan Branch Line.—A press report states that it is planned to start construction this year on an extension of the Wilkie-Cutknife Branch, from the latter place, northwesterly, and also on a line from Coronation to Empress, on the Saskatchewan-Alberta boundary.

The Board of Railway Commissioners has approved revised general location of the Leader Southeastly Branch, Sask., mile 29 to 150.1, and general location from mile 88 to 153.6.

One of the branch lines, for the building of which extensions of time and other powers are being asked from the Dominion Parliament, is projected from Asquith northwesterly to Tp. 42, Range 20 west 3rd meridian, Sask., at Cloan, mile 14 on the Wilkie-Cutknife branch. Protests are being made by Battleford residents against this line, on the ground that when power was originally obtained to build a line from Asquith northwesterly, Battleford was mentioned as the terminus, and no change was made in this regard when extensions of time were granted in 1912 and 1915.

Weyburn-Sterling Line.—Application is being made to the Dominion Parliament for an extension of time for the completion of the Weyburn-Sterling line,

which is now in operation to Mangrove, Alta., from the west, and to the Alberta-Saskatchewan boundary at Altaville from the east, leaving a gap of about 37 miles to be built. We are officially advised that tenders will be invited for the grading on this mileage very shortly, but that owing to labor conditions it is not expected to complete more than half the work this year, and to complete the balance probably in 1921.

Alberta Branch Lines.—The Board of Railway Commissioners has approved the route map for a branch line from Pashler, Alta., 15 miles east of Medicine Hat, on the main transcontinental line, northeasterly, mile 0 to 109.3.

A press report states that construction has been in progress all winter on the line from Acme, easterly via Drumheller to Empress, Alta., and that it is expected to have the Acme-Drumheller section completed this year. This section is 37 miles long, and grading was reported to be 22% completed at the end of 1919. The grading is being done by the John W. Stewart Construction Co., Vancouver, B. C.

Lethbridge Division Bridges.—The Board of Railway Commissioners has authorized the rebuilding of bridges at mile 2.3 Taber subdivision, and at mile 45.5 Crownest Subdivision, Lethbridge Division, Alberta District.

Connaught Tunnel.—A Dominion order-in-Council, was passed Mar. 5, granting the company the surface rights over the Connaught tunnel and the right of way of the approaches thereto, from mile 75.75 to 87.51, Mountain Subdivision, British Columbia District, subject to certain reservations. The C. P. R. has surrendered to the Crown the right of way on the original route of that section of the railway, which was used prior to the building of the tunnel.

Vancouver Pier.—A press report states that work was expected to be started on Mar. 8 on the dredging and filling of the site of the pier to be built between piers A. and D., Burrard Inlet, Vancouver. The Pacific Dredging Co., Vancouver, is reported to have the contract. (Mar. pg. 122.)

Intercolonial and P.E.I. Rys. Provident Fund.—The Minister of Railways stated in the House of Commons, Mar. 17, that the Railways Department contributed \$100,000 during the year ended Mar. 31, 1919, to the Intercolonial and Prince Edward Island Rys. Provident Fund. The number of employees entitled to participate in the fund in 1919 was 12,223, and the average amount contributed by the men was \$8.18.

Railway Bridge Across St. John Harbor.—At a meeting of St. John, N.B. City Council, Mar. 9, a suggestion was made that the C. P. R. instead of rebuilding its bridge at the Reversible Falls, should put the money into a bridge across the harbor. The mayor stated that the question of the building of a railway bridge across the harbor had been discussed with D. B. Hanna, President Canadian National Rys. Mr. Hanna informed him that while the C.N.R. would like to make use of the facilities on the west side at times, but it had no interest in a project which would place it under tribute to any other railway.

Freight and Passenger Traffic Notes.

The Pere Marquette Rd. district freight office at London, Ont., will, a press report states, be closed, and the staff moved to Walkerville, Ont.

Canadian passenger agents are reported to have discussed at a recent meeting the question of adding the differential on currency to prepaid charges for passenger tickets from Canadian grounds to the United States.

The C. P. R. shore line from St. John to St. Stephen, N. B., has not been operated, a press report says, since February, owing to snow and floods, until Mar. 16, when it was reopened between St. Stephen and St. George.

The Board of Railway Commissioners ordered recently that the increased rates on commutation tickets which railways proposed to put into effect Mar. 1, should not be put in operation until the conclusion of the investigation by the board.

The Minister of Railways stated in the House of Commons Mar. 17, that 14,273 passengers had been carried on the Quebec and Saguenay Rys., and that there was a deficit of \$9,048.72 on the operation of the railway of from Oct. 1, 1919, to that date.

A new switching agreement is being negotiated between the railway companies entering Winnipeg, and the manufacturers and merchants. It was reported Mar. 5 that several points had been settled and that further conferences would be held to adjust the matters not agreed upon.

The Alberta and Great Waterways Ry., which is a branch of the Edmonton, Dunvegan and British Columbia Ry., has advised shippers that railway service on the line from Lac La Biche to navigable water near McMurray, Alta., will be discontinued April 1, and until such time as weather conditions warrant a resumption.

Travel Bureau, Ltd., has been incorporated under the Ontario Companies Act, with authorized capital of \$10,000, and office in Hamilton, Ont., to buy and sell steamboat, railway and other tickets, foreign exchange, letters of credit for travellers and others, foreign money and securities, and to carry on a general brokerage business. The provisional directors are: H. A. Alwyn, J. P. Bell, M. C. Hart, M. W. Morton, and G. L. Williams, Hamilton, Ont.

A new schedule of cartage charges is reported to have been arranged for the collection and delivery of freight in Winnipeg, between the railway companies and of the Board of Trade Shippers' Bureau. The new charges were to become effective Mar. 15. Within what is known as the 'inner limits' they will be 5c per 100 lbs. on carloads and 7c on less than carloads, with a minimum of 35c. Beyond the inner limits the advanced rates will be 6c per 100 lbs. on carloads and 8c on less than carloads, with a minimum of 50c. On certain light and bulky articles the rates fixed are slightly higher.

Taxi and Auto Transportation, Ltd., has been incorporated under the Quebec Companies Acts, with \$95,000 authorized capital and office in Montreal, to carry on business as carriers of persons and things by means of automobiles, auto-taxis, autobuses, drays, omnibuses and other vehicles throughout Quebec Province.

Railway Rolling Stock Orders and Deliveries.

The Pacific Great Eastern Ry. has ordered three cabooses from Canadian Car and Foundry Co.

The Minneapolis, St. Paul and Sault Ste. Marie Ry. has ordered 500 box cars from Haskell and Barker Car Co.

Canadian Car and Foundry Co., between Feb. 15 and March 15, delivered 12 sleeping cars to Canadian National Ry., and 204 repaired box cars to the Grand Trunk Ry.

W. R. Smith, General Manager and Chief Engineer, Edmonton, Dunvegan and British Columbia Ry., is reported to have stated recently that the company was securing two more locomotives.

The C.P.R., between Feb. 13 and March 15, received 2 vans, 2 passenger locomotives, 2 freight locomotives, and 1 double track snow plough, from its Angus shops, Montreal.

Canadian National Ry., in addition to the working equipment mentioned in our last issue, has ordered 4 rail loaders, 3 15-ton coaling cranes with buckets, and 3 15-ton bridge cranes, with 35 ft. boom, from F. H. Hopkins and Co., Montreal.

The G.T.R. has ordered 10 8-wheel switching locomotives (0-8-0) from Canadian Locomotive Co., and is building 25 6-wheel switching locomotives (0-6-0) at its Montreal shops, the boilers for which will be built by Canadian Locomotive Co.

The Canadian National Ry. was stated, in Canadian Railway & Marine world for March, to have ordered two ¾ yd. Erie steam ditchers, from F. H. Hopkins & Co., Montreal. We are advised that the information furnished us in this connection was erroneous, and that the order was for two ¾ yd. Marion ditchers.

The G.T.R. has asked tenders for the supply of 1,000 flat cars, 50 baggage and express cars, 15 express refrigerator cars and 10 express horse cars, for its Canadian lines; and for 3,000 automobile cars and 25 6-wheel switching locomotives (0-6-0), similar to those being built at its Montreal shops for use on its lines in the U.S., west of Detroit and St. Clair Rivers.

The C.P.R. sleeping cars, 18 of which have been ordered from National Steel Car Corporation, Hamilton, Ont., as announced in our last issue, will be 73½ ft. long over body corner posts, and will be built complete with body, frame, steel work and trucks by the Car Corporation, and the interior work will be completed by the C.P.R. at its Angus Shops, Montreal. The trucks will be of the 6-wheel type, with American Steel Foundries cast steel frame, and Commonwealth cast steel brake, and Commonwealth cast steel frame. The bodies will be fitted with Westinghouse air brakes, and Miner friction draft gears and buffing device.

Canadian National Ry. 1,150 general purpose (coal) cars, ordered from Eastern Car Co., as announced in our last issue, will have the following general dimensions, etc.:

Length, inside	36 ft. 4½ in.
Width, inside	9 ft. 1½ in.
Truck centers	26 ft.
Wheel base	5 ft. 6 in.
Weight	44,400 lb.
Trucks	Arch bar
Journals	5½ x 10 in.
Journal boxes	McCord
Side bearings	Miner balanced
Bolsters and brakebeams	Simplex
Brakebeam support	Cresco 4 point
Door mechanism	Enterprise
Handbrake	Miner ideal
Draft gear	Cardwell friction
Couplers	Class D, 6 x 8 in.
Airbrakes	Westinghouse K.C., 10 x 12 in.

The Canadian National Ry. improved Hart convertible ballast and general service cars, 350 of which have been ordered from the Hart-Otis Car Co., as mentioned in our last issue, will be of 50 tons capacity, and will have the following dimensions,—

Length over end sills	36 ft. 8 in.
Width over side sills	8 ft. 9 in.
Length inside of hopper car	20 ft. 10 in.
Length inside as gondola car	34 ft. 8 in.
Width inside	8 ft. 8 in.
Width overall	10 ft. 3½ in.
Width at top	9 ft. 9¾ in.
Height from rail to top of floor	4 ft. 4¼ in.
Height from rail to top of car	3 ft. 4¼ in.
Height inside	3 ft. 4 ft.
Truck centers	26 ft. 8 in.
Wheel base of truck	5 ft. 6 in.
Length of hopper door opening	16 ft. 8½ in.
Width of hopper door opening	2 ft. 1 in.

The G.T.R. has ordered 25 light switching locomotive boilers from Canadian Locomotive Co. They are to be fitted with a smoke prevention device, and are to be applied to the 25 class F9 switching locomotives, which the G.T.R. is building at its Point St. Charles shops. Following are the chief details:

Type	Radial
Diarr. front	69 9/16 in.
Diarr. largest	76 in.
Firebox	96½ x 75½
Tubes, no. and diar.	178 2 in.—28 5/8 in.
Tubes, length	12 ft. 4 in.
Heating surface, firebox	168 sq. ft.
Heating surface, tubes	1,168 sq. ft.
Heating surface, flues	608.5 sq. ft.
Heating surface, arch tubes	26 sq. ft.
Heating surface, total	1,970.5 sq. ft.
Grate area	50.60 sq. ft.
Staybolts	Brown's iron

Canadian, National Ry. 500 steel frame box cars ordered from Eastern Car Co., as announced in our last issue, will have the following general dimensions, etc.:

Capacity	40 tons
Length, inside	36 ft.
Width, inside	8 ft. 6½ in.
Truck centers	26 ft. 10 in.
Wheel base	5 ft. 6 in.
Weight	41,500 lb.
Trucks	Arch bar
Journals	5 x 9 in.
Journal boxes	McCord
Side bearings	Miner balanced
Bolsters and brakebeams	Simplex
Brakebeam support	Cresco 4 point
Roof	Winslow improved, type B
Draft gear	Miner twin spring
Couplers	Class D, 6 x 8 in.
Airbrake	Westinghouse K.C., 8 x 12 in.
Door hxtures	Camel

Canadian National Ry. 6 all steel snow ploughs ordered from Eastern Car Co., as mentioned in our last issue, will have inside lining of wood, and side wings, front cutters and ice cutters will be operated by air from the cupola. Following are the chief details:

Length, inside	19 ft. 8½ in.
Width, inside	18 ft. 1 in.
Truck centers	18 ft.
Wheel base, front truck	4 ft. 2 in.
Wheel base, rear truck	5 ft. 8 in.
Weight	53,800 lb.
Front truck, type	40 ton arch bar
Rear truck, type	30 ton arch bar
Journal boxes	McCord
Bolsters and brakebeams	Simplex
Side bearings	Laughlin
Draft gear	Keyed yoke
Couplers, rear	Class D, 6 x 8 in.
Couplers, front	Pilot

The G.T.R. has ordered 10 eight-wheel switching locomotives (0-8-0) from Canadian Locomotive Co. Following are the chief details:

Weight in working order	240,000 lb.
Wheel base of engine	15 ft. 6 in.
Wheel base, engine and tender	50 ft. 6½ in.
Heating surface, firebox	285 sq. ft.
Heating surface, tubes	2,497 sq. ft.
Heating surface, total	2,782 sq. ft.
Driving wheel, diar.	56 in.
Driving wheel, centers	Cast steel
Driving journals, diar. and length	10 x 13 in.
Cylinders, diar. and stroke	26 x 30 in.

Boiler, type	Radial
Boiler, pressure	170 lb.
Tubes, no. and diar.	228 2 in. and 32 5½ in.
Tubes, length	15 ft.
Injection	Hancock non-lifting, 5,000 gal.
Safety valves	World
Brakes	Westinghouse American
Packing	King metallic
Superheater	Locomotive Superheater Co.
Weight of tender, loaded	166,360 lb.
Water capacity	9,000 U.S. gal.
Coal capacity	10 tons
Tank, type	Water bottom
Tender truck wheel	4 wheel equalized
Wheel, type	Solid rolled steel
Journals, diar. and length	6 x 11 in.
Brakebeam, type	Huntton steel

Canadian National Ry. 30 six wheel switching locomotives (0-6-0) ordered from Canadian Locomotive Co., as mentioned in our last issue, will have the following general dimensions, etc.:

Weight in working order	150,000 lb.
Wheel base, engine	12 ft.
Wheel base, engine and tender	41 ft. 1¼ in.
Heating surface, firebox	132 sq. ft.
Heating surface, tubes and arch tubes	1,449.7 sq. ft.
Heating surface, total	1,581.7 sq. ft.
Driving wheel, diar.	51 in.
Driving wheel, centers	Cast iron
Driving journals, diar. and length	8½ x 11½ in.
Cylinders, diar. and stroke	21 x 26 in.
Boiler, type	Straight top
Boiler, pressure	180 lb.
Tubes, no. and diar.	157—2 in.
Tubes, length	12 ft. 5 in.
Airbrakes	Westinghouse E.T. 6

Fire brick	Security
Valve motion	Walschaert
Cab	steel, wood lined
Headlight	10 Pyle National type K, and 15 Schroeder Electric Taylor and Arnold design
Weight of tender, loaded	96,000 lb.
Water capacity	3,800 imp. gal.
Coal capacity	6 tons
Truck type	4 wheel arch bar
Wheels, diar.	33 in.
Wheel, type	10 Davis C and 15 cast iron chilled
Journal, diar. and length	4¼ x 8 in.
Brakebeam	Simplex
Airbrake	Westinghouse K.C.D., 8 x 12 in.

The Canadian National Ry. cabooses, 80 of which have been ordered from Canadian Car and Foundry Co., and 20 from Preston Car and Coach Co., will be of center sill construction, with six 5 by 9 in. sills and two 7 in. ship channels, bolted below the two center wood sills, which will form the draft sill. They will have wooden frames, with bolster post 4 by 2½ in., intermediate post 4 by 2½ in. The outside and inside will be sheathed, and the inside of the roof will also be sheathed, to provide proper insulation; double board roof on the exterior with rubberoid paper between, and tar paper between the frame and the inside sheathing; floors double boarded, with tar paper between; cupola, full width of roof, with sliding window on side, double windows on front and back, and cars equipped with walk-over seats; trucks, Simplex with elliptic springs, and Miner twin spring draft gear; brakes, standard freight, Westinghouse K.C. 812. Following are the general dimensions:

Length over end sills	30 ft. 0 in.
Truck centers	20 ft. 4 in.
Truck wheel base	4 ft. 10 in.
Width over eaves	9 ft. 9¼ in.
Height overall	11 ft. 11 in.
Weight on drivers	256,000 lb.
Weight on truck	33,000 lb.
Weight on trailer	31,000 lb.
Weight, total	220,000 lb.
Wheel base, driving	20 ft. 6 in.
Wheel base, engine and tender	70 ft. 2½ in.
Cylinders, diar. and stroke	26 x 32 in.

The Canadian National Ry. 25 Santa Fe (2-10-2) locomotives, ordered from the Montreal Locomotive Works, as mentioned in our last issue, will have the following chief details:

fully in the United States for a year, and then to be returned to the Guaranty Trust Co. The equipment against which the new mortgage will be issued, including an amount of \$1,000,000, is to be built in Canada, thereby assuring to the guaranty and allied companies a highly substantial source of business for some months to come.

Up to Mar. 27 no official announcement had been made as to the rolling stock to be built and ordered, but it is said that the programme includes a number of locomotives, 53 sleeping cars, 12 dining cars, 15 compartment cars, 34 baggage cars, 2,500 box cars, 500 refrigerator cars, 500 automobile cars, and 67 are cars. A large portion of these orders will be built at the company's Angus shops, Montreal, but considerable will be placed outside. As stated in Canadian Railway & Marine World for March, orders have been given Canadian Car & Foundry Co. for 35 steel frames for sleeping cars, and to the National Steel Car Corporation for 18 sleeping cars, including body frames, steel work and trucks, the interiors to be completed by the C.P.R. We are also advised of orders having been given for 2,500 fifty-ton box cars, 1,500 to Canadian Car & Foundry Co., and 1,000 to Nation Steel Car Corporation, and it is said 500 have been ordered from Eastern Car Co. It is also said that the box cars will be of the United States Railroad Administration type, except that arch bar trucks will be used, instead of steel frame side type, and that the C. P. R. grain hopper will be installed.

The company has ordered five cabooses to be built at its Angus shops.

Canadian National Railways Earnings.

	1920	1919
January	\$ 7,706,362	\$ 6,787,517
February	6,416,059	6,265,562
	\$13,783,621	\$13,053,079

Approximate earnings for three weeks ended March 15, \$1,892,010, against \$1,805,035 for same period, 1919.

Canadian Pacific Railway Earnings, Expenses, Etc.

Gross earnings, working expenses, net earnings, and increases or decreases, from Jan. 1, 1920, compared with those of 1919:

	Gross	Expenses	Net	Increases or decreases
Jan.	\$13,914,569	\$13,328,628	\$585,941	\$967,571
	\$13,914,569	\$13,328,628	\$585,941	\$967,571
Dec.	\$86,241	\$1,859,512	\$967,571	

Approximate earnings for February, \$1,708,000, and for three weeks ended March 21, \$9,657,000, against \$1,082,000, and for same period for same period, 1919.

*Decrease.

Grand Trunk Railway Earnings, Expenses, Etc.

Gross earnings, working expenses, net earnings, and increases or decreases, from Jan. 1, 1920, compared with those of 1919:

	Gross	Expenses	Net	Increases or decreases
Jan.	\$ 5,054,034	\$ 5,867,445	\$ 813,411	\$ 97,406
Dec.	\$ 61,500	\$ 2,000,000	\$ 2,000,000	

*Increase.

Approximate earnings for February, \$1,604,778, and for three weeks ended March 21, \$9,755,257, against \$1,088,020, and \$3,618,738 for same period, 1919.

Grand Trunk Railway Construction, Betterments, Etc.

Ottawa Central Station. A press report states that alterations and improvements estimated to cost \$60,000 are being made to the east end of the station. The car shed is being extended to the east of the existing car shed, and a concrete platform is being built between tracks 1 and 2. It is reported that the first part of the work will be started about April 15, and that the whole work will be completed by June 15. The work is being done by the company's maintenance force, except the steel work, the contract for which has been let to the Dominion Bridge Co.

Montreal-Brockville Track. A press report states that about 140 miles of track between Montreal West, Que., and Brockville, Ont., will be relaid with 100-lb. steel rails during this year, and that the new rails will be laid on the west-bound track, except for a stretch on the east track between Morrisburg and Summerstown, Ont.

Allandale-Collingwood Bridges. The Board of Railway Commissioners has authorized the company to use for traffic bridges 291, 292 and 293 over Mad River, Batteaux Creek and Pretty River, respectively, between Allandale and Collingwood, Ont. (Mar. pg. 124.)

Telephone Dispatching Installation. A press report states that it is proposed to install a telephone dispatching system on the line from Hamilton to Sarnia, about 150 miles, at a cost of approximately \$200,000 during this year.

London Freight Shed Burned. The company's freight shed and offices on York street, between Wellington and Waterloo Sts., London, Ont., were destroyed by fire Mar. 6, involving an estimated loss of from \$125,000 to \$150,000. The buildings were considerably damaged by a fire about five years ago, and have been merely patched up since. The mayor and representatives of the Chamber of Commerce and the Board of Trade are reported to have sent a joint message to the company's headquarters at Montreal, asking that steps be taken to erect modern freight sheds and offices. A press report states that a freight shed and a 2-story office building, to cost approximately \$30,000 are to be erected at once, and that it is expected to have the work completed by June 1.

East London Reclamation Yards. A press report states that work on laying out the reclamation yards in East London, Ont., will be put in hand as soon as the necessary authority is received from Montreal.

London Division Track Relaying. The relaying of the track between London and Sarnia, Ont., with 100-lb. rails in place of the present 85-lb. rails will, it is said, be started about May 1. It is reported that 40 miles of track east of London will also be relaid with 100-lb. rails.

Railway Lands Patented. Letters patent were issued during February, respecting Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia as follows:

	Acres
Canadian Northern Ry.	156,636
Canadian Pacific Ry. graves	40
Canadian Pacific roadbed and station grounds	5,000
Johnston, Duncan and British Columbia Ry.	8,000
Grand Trunk Pacific Branch Lines Co.	182,770
Total	412,476

6 x 11 in.
Tender journals

1. Canadian National Ry. Pacific
The following is a list of the
heavy, articles from the Montreal
motive Works, as mentioned in our last
issue, will have the following chief details:

Canadian Pacific Railway Orders.

It was announced on Montreal Mar. 24 that the C.P.R. had ordered \$12,000,000 of equipment notes through the United Financial Corporation of Montreal, and the Guaranty Trust Co. of New York. The notes, which mature gradually in from one to 12 years, will be offered

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have continuous record of the Board's proceedings. No other paper has done this.

Important traffic orders made by the board are given in full on another page of this issue.

29,370. Jan. 30.—Approving Fredericton and Grand Lake Coal and Ry. Co. standard passenger tariff C.R. 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 995, 996, 997, 998, 999, 1000.

29,371. Feb. 11.—Extending to May 15, time within which Canadian National Rys. shall build station and extension of passing track at Elm, Alta.

29,372. Feb. 16.—Authorizing Grand Trunk Pacific Branch Lines Co. to build spur for Parker Creek Coal Co. at mile 85.7, Calgary Branch, Sec. 21, Tp. 28, Range 24, west 1st meridian, Alta.

29,373. Feb. 16.—Ordering C.P.R. to rearrange and rebuild waiting room at Carmichael, Sask., by June 1.

29,374. Feb. 16.—Approving revised location Canadian Northern Pacific Ry. Kamloops-Vernon-Kelowna-Lumby Branch, mile 11, east from Kamloops Jct., B.C.

29,375. Feb. 12.—Authorizing Lake Erie and Northern Ry. and Toronto, Hamilton & Buffalo Ry. to operate over crossing and interlocking plant at Brantford, Ont.

29,376. Feb. 16.—Authorizing G.T.R. to build spur for Canadian Oil Cos., near Pottersburg, Ont.

rol Wilson, Ltd., Block 7, Hudson's Bay Reserve, Edmonton, Alta.

29,431. March 3.—Authorizing G.T.R. to rebuild bridge 19 at mile 2.87, Stratford Division, Ont.

29,432. March 3.—Amending order 29,102, Feb. 24, re time for installation of automatic bell by G.T.R. at Victoria Road crossing near Guelph, Ont.

29,433. March 5.—Extending for 3 months from date, time within which distant signals may be installed where C.P.R. crosses Canadian Northern Ontario Ry., at Central Ontario Jct. (Honor-

able).

29,434. March 4.—Authorizing Bell Telephone Co. to operate its telephone lines by attaching two cables to Gouin bridge, crossing Richelieu River, between St. Johns and Iperberville, Que.

29,435. March 2.—Ordering on application of Freight Adjusting Bureau of Vancouver, B.C., that shoddy blankets are entitled to rate provided for specified articles of dry goods in item 250 of Canadian Freight Association Commodity Tariff 1-A, C.R.C. 14.

29,436. March 2.—Ordering on application of United Grain Growers, Ltd., Winnipeg, that rating of grades of grain be reduced to 1st class subject to Rule 5 of Canadian Freight Classification 16, as amended by Supplement 10.

29,437. March 9.—Approving Kettle Valley Ry. location south end of Dog Lake to Indian Reserve near Okanagan Falls townsite, about 750 ft.

29,438. March 9.—Approving Canadian National Rys., Acadia Valley Branch right of way, as located through Tps. 27 and 26, Ranges 28 and 29, west 3rd meridian, Sask., mile 0 to 11.88, and authorizing its construction across 15 highway.

29,439. March 9.—Approving agreement Feb. 16, between Bell Telephone Co. and Pleasant View Telephone Co., Grey County, Ont.

29,440. March 9.—Relieving Brantford & Hamilton Electric Ry. from providing further protection at crossing of the Stone Road, just east of Cainsville, Ont.

29,441. March 6.—Ordering British Columbia Electric Ry. to furnish certain train service between Vancouver and New Westminster, B.C.

29,442. March 8.—Authorizing C.P.R. to take certain lands owned by E. Agnew, in west half of lot 6, Con. 2, Nassagaweya Tp., Ont.

29,443. March 10.—Approving combined shipping bill, way bill and receipt form of Algoma Central & Hudson Bay Ry. for use of British America Express Co.

29,444. Mar. 10.—Authorizing town of Maple Creek, Sask., to make highway crossing over C.P.R. at Sidney St.

29,445. March 11.—Authorizing Saskatchewan Government to make crossing over C.P.R. in s.e. 1/4 Sec. 1, Tp. 12, Range 13, west 3rd meridian.

29,446. March 11.—Authorizing G.T.R. to operate over siding to be built by Toronto Harbor Commissioners for Barrett Co.

29,447. March 11.—Approving change in C.P.R. function numbers at Tillsonburg, Ont., that all electric and distant dwarf signals are to be piped connected and that all signals are to operate in the upper quadrant.

29,448. 29,449 March 12.—Authorizing C.P.R. to build bridges 2.3 Taber Subdivision, and bridge 45.5, Crownest Subdivision, Lethbridge Division, Alta.

29,450. March 12.—Authorizing Hull Electric Co. to build spur for Federal Stone and Supply Co., Hull, Que.

29,451. March 11.—Authorizing C.P.R. to build spur for Harris Abattoir Co., Toronto.

29,452. March 12.—Authorizing G.T.R. to build spur for Geo. Hall Coal Co., of Canada, Ltd., Montreal.

29,453. March 12.—Authorizing G.T.R. to use bridges 291, 292 and 293 over Mad River, Batteux, Creek, and Pretty River, respectively, between Allamand and Allamand, Ont.

29,454. March 9.—Authorizing Railways & Canals Department to connect Grand Trunk Pacific Ry. and Canadian National Rys. at Lobstick, Chip Lake, Snarling Jet., Pochontas and Henry House, Alta.

29,455 to 29,460. March 13.—Authorizing Canadian National Rys. to cross 6 highways in Alberta with its Munson to Wayne second track.

29,461. March 13.—Authorizing Grand Trunk Pacific Branch Lines Co. to build spur for M. Vitay at mile 52.1, Alberta Coal Branch, in s.e. 1/4 Sec. 19, Tp. 47, Range 19, west 6th meridian, Alta.

29,462 to 29,464. March 13, 12.—Authorizing Canadian National Rys. to cross highways at 3 points in Alberta with its Munson to Wayne second track.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canada Steamship Lines, Ltd.—W. P. O'BRIEN, Agent, Victoria pier, Montreal, was mentioned in our last issue as having been agent at Quebec, Que., prior to his present appointment. This is incorrect; M. P. Connolly is General Agent at Quebec, Que.

Canadian Government Merchant Marine, Ltd.—B. C. KEELEY has been appointed General Agent at Vancouver, B.C.

Canadian National Rys.—H. R. ARTHUR, Trainmaster, Saskatoon, Sask., has been appointed Trainmaster, Lucerne, B.C., vice H. W. Culver, resigned. J. FERGUSON has been appointed Trainmaster, Prince Albert, Sask., vice W. C. Owens, transferred to Saskatoon, Sask.

T. J. GRACEY, heretofore Auditor of Disbursements and Accountant, Timiskaming and Northern Ontario Ry., Toronto, has been appointed Assistant Auditor of Disbursements, Canadian Northern Ry. System, vice T. R. Ralph, deceased, as erroneously stated in our last issue. Office, Toronto. **R. S. GOSSETT**, is Auditor of Disbursements, Canadian Northern Ry. System.

H. R. KEMPSVILLE, heretofore conductor, Division 2, Central District, has been appointed Trainmaster Neepawa, Man., vice W. A. Kirkpatrick.

E. R. LOGIE has been appointed Division Engineer, Superior Division, Hornepayne, Ont., vice H. K. Morrison, transferred to Montreal.

H. K. MORRISON, heretofore Division Engineer, Superior Division, Hornepayne, Ont., has been appointed Division Engineer, Montreal Division, Quebec District, vice T. Kearney, transferred. Office, Montreal.

W. C. OWENS, heretofore Trainmaster, Prince Albert, Sask., has been appointed Trainmaster, Saskatoon, Sask., vice H. R. Arthur, transferred to Lucerne, B.C.

S. H. SYKES, recently Assistant to Chief Engineer, Eastern Lines, Canadian Northern Ry., Toronto, has been appointed District Engineer, Canadian National Rys., Vernon, B.C., vice Major W. G. Swan, D.S.O., resigned on his recent appointment as Chief Engineer, Vancouver Harbor Commission.

Canadian Pacific Ry.—G. ANDERSON has been appointed Roadmaster, Empress, Alta., vice J. Daem, transferred to Maple Creek, Sask.

D. BERTIE, heretofore Travelling Passenger Agent, C.P.R., and Canadian Pacific Ocean Services, Ltd., Minneapolis, Minn., has been appointed Travelling Passenger Agent, same companies, Duluth, Minn.

A. M. BIRD, heretofore Roadmaster Kingston, Ont., has been appointed Roadmaster between Megantic and Kylehead, Moosehead Subdivision, New Brunswick District. Office Brownville Jct., Me.

HENRY J. CAMBIE, who has been in the C.P.R. service since its inception, latterly as Special Assistant Engineer, at Vancouver, B.C., and Chief Engineer, Esquimalt & Nanaimo Ry., retired Mar. 15.

W. F. CAWLEY has been appointed

Travelling Passenger Agent, C.P.R. and Canadian Pacific Ocean Services, Ltd., Minneapolis, Minn., vice E. G. Rennels, transferred.

J. DAEM, heretofore Roadmaster, Empress, Alta., has been appointed Roadmaster, Maple Creek, Sask., vice J. V. McNab, whose appointment as Divisional Engineer, Saskatoon, Sask., was announced in our last issue.

C. F. A. FLUGGE, formerly Agent, at Hamburg, Germany, has been reappointed to that position on the re-opening of the agency there.

C. H. FOX, heretofore Division Engineer, Regina, Sask., has been appointed Assistant District Engineer, Manitoba District. Office Winnipeg.

E. B. FRASER, heretofore Shop Foreman, Winnipeg, has been appointed Locomotive Foreman, Wilkie, Sask., vice W. P. Crawford.

T. J. LACKEY, heretofore acting

H. E. Whittenberger,
General Manager, Western Lines, Grand Trunk
Railway.

Roadmaster on the Bruce Division, has been appointed Roadmaster, Kingston subdivision, Kingston, Ont., vice A. M. Bird, transferred.

CAPT. R. McKILLOP, heretofore acting as relieving Superintendent, has been appointed Superintendent, London Division, Ontario District, vice A. Williams, transferred.

L. C. STOCKBRIDGE has been appointed Travelling Passenger Agent, C.P.R. and Canadian Pacific Ocean Services, Ltd., Minneapolis, Minn., vice D. Bertie, transferred to Duluth, Minn.

Chicago, Burlington and Quincy Ry.—H. R. SAFFORD, formerly Chief Engineer, G.T.R., Montreal, and latterly Engineering Assistant, Central Western Region, United States Railroad Administration, Chicago, Ill., has been appointed Assistant to President C. B. & Q. R. Office, Chicago, Ill.

Chicago, Milwaukee & St. Paul Ry.—F. O. FLINN, formerly Agent, Victoria, B.C., from 1917 in the Royal Air Force, overseas, and latterly in transportation

service at Seattle, Wash., has been appointed Commercial Agent, Victoria, B.C.

G. W. HIBBARD, formerly General Passenger Agent, Western Lines, has been appointed General Agent, Vancouver, B.C.

Grand Trunk Ry.—A. BEARDSHAW has been appointed Locomotive Foreman, Turcot, Que., vice J. D. McCuaig, promoted.

G. BRADSHAW, Supervisor of Safety, Grand Trunk Western Lines Railroad, having resigned to enter another company's service, that position has been abolished. Safety First work through the safety committees is being handled by G.T.R. Western Lines.

W. R. DAVIDSON, heretofore General Superintendent, Eastern Lines, Montreal, has been appointed General Superintendent, Lines in the U.S., west of Detroit and St. Clair Rivers, J. J. Corcoran, formerly General Superintendent, Western Lines, G.T.R., and latterly General Superintendent, Grand Trunk Western Lines Rd. (U.S.R.A.), having resigned to enter another company's service. Office Chicago, Ill.

W. H. EDMONSON, heretofore Assistant to Federal Manager, Grand Trunk Western Lines Rd. (U.S.R.A.) Detroit, Mich., has been appointed Assistant to General Manager, Western Lines, G.T.R. Office Detroit, Mich.

E. J. FARR, heretofore Superintendent, Motive Power and Car Department, Grand Trunk Western Lines Rd. (U.S.R.A.) Detroit, Mich., has been appointed Superintendent of Motive Power and Car Department, Western Lines, G.T.R. Office, Battle Creek, Mich.

W. C. FOSS has been appointed Purchasing Agent, Western Lines, G.T.R. Office, Detroit, Mich.

S. HUSSARD, heretofore at Toronto, is reported to have been appointed General Yardmaster, Brockville, Ont., vice C. F. McEwen, assigned to other duties there.

T. T. IRVING, heretofore Chief Engineer, Grand Trunk Western Lines Rd. (U.S.R.A.) Detroit, Mich., has been appointed Chief Engineer, Western Lines, G.T.R. Office, Detroit, Mich.

J. S. LILLIE, formerly Assistant Land and Tax Commissioner, Western Lines, G.T.R., and latterly Land and Tax Agent, Grand Trunk Western Lines Rd. (U.S.R.A.) has been appointed Land and Tax Agent, Western Lines, G.T.R., reporting to the Assistant to General Manager. Office, Detroit, Mich.

J. D. McCUAIG, heretofore Locomotive Foreman, Turcot, Que., has been appointed General Foreman, motive power shops, Ottawa, vice F. Foster.

A. B. McNAUGHTON, heretofore Superintendent, Grand Trunk Lines, in New England, (U.S.R.A.) Portland, Me., has been appointed Superintendent Portland Division, G.T.R., with jurisdiction from Portland to west yard limit board at Island Pond, Vt. Office, Portland, Me.

J. McWOOD, heretofore Master Car Builder, Eastern Lines, Montreal, has been appointed General Foreman, in charge of Ottawa Shops and outside points on Districts 30, 31 and 32, Eastern lines, reporting to Master Car Builder, Eastern Lines. Office, Ottawa.

D. C. MESSEROLL, heretofore General Travelling Car Inspector, Montreal, has been appointed Master Car Builder, Eastern lines, vice J. McWood, transferred. Office, Montreal.

Canadian National Railways Construction, Betterments, Etc.

Budgewater Station on the Halifax and South Western Ry. was destroyed by fire Mar. 9, the loss being estimated at \$100,000. It contained the auditing department, dispatcher's and telegraph offices and passenger waiting room.

St. John, N.B. Station.—A press report states that owners of property on North St., St. John, N.B., have been notified that the properties have been acquired for the Canadian National Ry. The government is said now to own all the properties from the station along North St. to the Mission church on Paradise Row. The object of the purchase is reported to be the erection of a new station, which it is stated will cost about \$1,000,000. A. P. Barnhill, K.C., one of the C.N.R. directors, is reported to have stated that plans had been definitely settled, and that before anything was arranged there would have to be a conference with the C.P.R. as to track levels.

Rebuilding of Canadian Northern Ry. between Cap Rouge and Portneuf. This section of line, some 30 miles, which was washed out in 1918, and the operation of which had to be abandoned, has been repaired after 5 months work, and train service has been resumed. The principal portion of the work consisted of heavy rock filling, for shore protection, and took approximately 150,000 cu yd. of heavy rock, also the rebuilding and filling of approximately a mile of crib protection work. The track had to be raised for some miles, in some places as much as 10 ft., the filling being made of loose rock, and later on the track was lined up and ballasted with broken stone. On account of the high cliffs, in close proximity to the line, large culverts had to be built to carry off the heavy flow of water from the many creeks and other natural drainage. The following large equipment was used on the work: 2 steam shovels; about 50 12-20 yd. air dump cars; 5 locomotives, 2 heavy rock drilling outfits and cranes. V. T. Bartram, Toronto, was the contractor.

Gosford Branch.—The opening of the Gosford branch line for traffic is being advocated by the district board of trade. The section of the line from Valcartier to River Aux Pins, 5.25 miles, is reported to have been out of operation for some years on account of the condemnation of a bridge over the Jacques Cartier River.

St. Charles River Bridge.—We are officially advised in regard to the bridge to be erected across the St. Charles River at mile 8.7 from Quebec, Batiscan Subdivision, that the substructure will consist of a through plate girder span, 106 ft. 0 in. center to center and will be erected on the two existing masonry abutments. The contract for the bridge has been let to the Dominion Bridge Co.

Chaudiere Station.—The Minister of Railways, replying to questions in the House of Commons Mar. 17, said Chaudiere Station in Levis County, Que., is under the Dominion Government's control. The station there was burned about four years ago and was replaced by a box car, but the government is not aware that this car had been condemned by the board of health. It is proposed to build a station at Chaudiere, but on account of the old building having been destroyed, as a result of a collision for which the G.T.R. was responsible, the

question of the size and cost of the new station has been a matter of negotiations with the G.T.R., and the government intends to arrive at a definite understanding on the matter in the near future.

Acadia Valley Lines.—The Board of Railway Commissioners has approved of a right of way plan for this branch as located through Tps. 27 and 26, Ranges 28 and 29, west, 3rd meridian, Sask., mile 0 to 11.88, and has authorized construction across 15 highways there. A contract for the construction of this line, 25 miles, was let in April, 1919, to Grant Smith & Co. and MacDonnell, Ltd., Vancouver, and considerable grading has been done.

Munson to Wayne Second Track.—The Board of Railway Commissioners has authorized the building of a second track across 8 highways, between Munson and Wayne, Alta. The distance between these two points is 18 miles, and 6.75 miles of the second track work was completed in 1919.

Alberta Branch Lines.—Replying to questions in the Alberta Legislature Mar. 16, the Premier gave information relative to the construction of Canadian Northern Ry. branch lines, for the construction of which the legislature authorized a guarantee of bonds as to principal and interest. The lines to be built were: From Strathcona, via Camrose to Calgary, 230 miles, and from north of Calgary to Lethbridge, 125 miles, a total of 355 miles. The southerly 96.87 miles are yet to be built.

From the crossing of above line and Little Bow River south, via Macleod to the International boundary, 110 miles, none of which has been built.

From Camrose to Vegreville, 45 miles, which has been completed.

From near Macleod to the western boundary of Alberta, 65 miles, none of which has been built.

Bonds in respect of these four lines were sold to the extent of 88.245% of the guarantees executed, and there remains to the Provincial Treasurer's credit, \$1,201,791.85, of the proceeds, which will be paid out on further progress of the works. There was paid to the company in respect of the uncompleted sections of the lines \$188,600 for the first, \$182,325 for the second, and \$86,282.30 for the third.

Edmonton Car Shops.—A press report states that the penitentiary buildings at Edmonton, Alta., are being pulled down, and that the site will be utilized for erecting car shops for the Canadian National Ry., including the Grand Trunk Pacific Ry.

Peace River Branch.—A press report of Mar. 19, stated that the trestle over the Little Paddle River had been completed and that track laying was in progress beyond that point, and that it was expected to reach Greencourt about a week thereafter.

Canadian Northern and Grand Trunk Pacific Ry. Connections.—The Board of Railway Commissioners has authorized the Department of Railways to connect Canadian Northern Ry. tracks with Grand Trunk Pacific Ry. tracks, at Lobstick, Chip Lake, Snaring Jct., Pochantas and Henry House, Alta. These points are all in the Jasper Park coal mining areas.

W. A. DODGE, heretofore Traffic Agent, Alameda, Ont., has been appointed Traffic Agent, Hamilton, Ont., in place of **H. H. Fink**, who has been appointed Traffic Agent, St. Catharines, Ont. **H. WHELAN**, heretofore Traffic Agent, St. Catharines, Ont., has been appointed Traffic Agent, Hamilton, Ont., in place of **H. H. Fink**, who has been appointed Traffic Agent, St. Catharines, Ont.

Grand Trunk Pacific Ry.—The position of Trammaster at Melville, Sask., held formerly by **J. J. MULLIKER**, who has been appointed Traffic Agent, St. Catharines, Ont., has been filled by **J. J. MULLIKER**, who has been appointed Traffic Agent, St. Catharines, Ont.

R. A. HARLOW, heretofore instrument man, has been appointed Traffic Agent, Prince Rupert, B.C., vice **O. Carlson**, on leave of absence through illness. **Prince Rupert, B.C.**

Lehigh Valley R.R.—**J. A. HIGGEN**, heretofore Traffic Agent, Toronto, has been appointed Canadian Passenger Agent, Toronto.

E. R. THORPE, heretofore in G.T.R. service, has been appointed General Agent, L.V.R., in charge of Freight and Passenger Traffic, Toronto.

Michigan Central R.R.—**W. A. BECKER**, heretofore appointed Local Freight Agent, St. Thomas, Ont., vice **W. H. King**, retired on superannuation.

Pacific Great Eastern Ry.—**G. E. McDONALD**, General Manager, is reported to have resigned, to enter the Blackstone Coal Co.'s service at Edmonton, Alta.

Pere Marquette Ry.—**F. H. ALFRED**, heretofore Federal Manager, Pere Marquette Rd., (U.S.R.A.) has been appointed President and General Manager, Office, Detroit, Mich.

E. N. Brown, heretofore Chairman and President, has resigned the position of President, but retained that of Chairman of the Board.

J. L. CRAMER, heretofore Federal Treasurer, Pere Marquette Rd., (U.S.R.A.) has been appointed Vice President, Treasurer and Assistant Secretary, Office, Detroit, Mich.

F. M. GOODFELLOW, heretofore chief clerk, London, Ont., has been appointed Travelling Freight and Passenger Agent, London, Ont., vice **W. M. Guy**, promoted.

W. M. GUY, heretofore Travelling Freight and Passenger Agent, London, Ont., has been appointed Division Freight Agent, London, Ont., vice **R. W. Youngs**, deceased.

W. E. MARTIN, heretofore Treasurer, P.M.R. Co., has been appointed Assistant Treasurer, Office, New York.

S. L. MERRIAN, heretofore General Solicitor, Pere Marquette Rd., (U.S.R.A.) has been appointed General Counsel, Office, Detroit, Mich.

Union Pacific Ry.—**G. W. VAUX**, latterly General Manager, Ziegler Co., Ziegler, Ill., has been appointed General Agent, U.P.R., at Toronto.

Daylight Saving and Standard Time.—There will be no alteration of railway time this year under daylight saving, for Canada as a whole, according to a statement, reported to have been made by a Railway Association of Canada's official Mar. 24, but where municipalities and districts enact daylight saving bylaws provision is made so that the railways may alter their schedules of local trains to suit local conditions if thought desirable.

Kamloops - Vernon - Kelowna - Lumby Line.—The Board of Railway Commissioners has approved revised location plans of this line, mile 41 east from Kamloops Jct., B.C.

Vancouver Island Lines.—A press report states that the Victoria City Council has granted permission for the erection of a temporary frame station building and freight shed north of Point El-

lice Bridge, near Esquimalt Road, reserving the right to cancel the permit by giving six months notice. The permanent station will be, it is said, erected near Johnson St. (Mar., pg. 123.)

Traffic Orders by Board of Railway Commissioners.

Track Scale Allowances and Tolerance.

General order 283, Feb. 24.—Re track scale allowances and tolerance; Upon hearing the matter at Ottawa, Mar. 18, 1913; Vancouver, May 19, 1913; Calgary, May 26, 1913; Edmonton, May 27, 1913; Regina, May 29, 1913; Winnipeg, May 30 1913, and Fort William, June 4, 1913; the Canadian Pacific, Grand Trunk, Grand Trunk Pacific, Canadian Northern, Canadian Northern Quebec, and Ottawa & New York Railways, Canadian Freight Association, Canadian Manufacturers' Association, Canadian Lumbermen's Association, the Montreal, Toronto, Edmonton, Winnipeg and Regina boards of trade, British Columbia Lumber & Shingle Manufacturers, and Massey-Harris Company, being represented at the hearings, and what was alleged; and upon reading the further written submissions filed, it is ordered, with respect to freight traffic referred to herein, carried between points in Canada, that railway companies publish and file tariffs to provide for the following allowances per car from the ascertained gross weights of loaded cars; subject to the condition that the said allowances shall not operate to reduce the net weights of the loadings of the cars below the minimum carload weights provided for in the tariffs applicable thereto:

1. For temporary or permanent racks, on flat or gondola cars, loaded with bark, provided the weight of the racks is not included in the stencilled tare of the car is 1,000 lb.

2. For temporary protectives as follows:

(a) Blockage, dunnage or temporary racks, in connection with carload shipments of agricultural implements, machinery, stoves, acid in carboys, and vehicles of all descriptions Actual weight, but not more than 650 lb.; the shipper to certify to the weight of the said protectives on the shipping order and bill of lading

(b) Temporary racks, stakes, standards, strips, braces, or supports, in connection with carload shipments of commodities, other than those specified above, requiring such provision for safe transportation when loaded on flat or gondola cars Actual weight when ascertainable, but not more than 500 lb.; the shipper to certify to his ascertained weight of the said protectives on the shipping order and bill of lading.

3. For lumber used by shippers in lining box (not refrigerator) or stock cars for shipments of perishable freight. Actual weight, but not more than 800 ft. at 2½ lb. a foot; the shipper to certify to the measurement of the lumber so used on the shipping order and bill of lading. Also, a further allowance of the actual weight, but not exceeding 500 lb. of the stove and fuel, if furnished by the shipper.

4. For foreign matter not part of the lading, such as snow, ice, manure, or refuse, in or on cars at the time of weighing An estimated allowance adequate to the actual conditions in each case.

And it is also ordered that, irrespec-

tive of the aforesaid allowances, the tariffs of the said railway companies include the following definition and directions, viz.:

For tolerance, i.e., variations in weights disclosed in check-weighing or reweighing passed without alteration of the billed weight:

(a) On ashes, brick, cinders, clay, drain tile (soft), dolomite, ganister, gravel, mill-scale, ore, sand, slag, stone (all kinds except "cut") and other similar bulk freight, loaded on flat or open top cars 1% of the weight of the lading, but not less than 1,000 lb. a car.

(b) On all other freight (including coal and coke) the weight of which is not subject to change from its inherent nature 1% of the weight of the lading, but not less than 500 lb. a car.

Charges for Heated Refrigerator Cars.

General order 284, Mar. 8.—Re application of Canadian Freight Association, on behalf of railway companies for an order rescinding general order 173, Oct. 26, 1916, and authorizing the said railway companies to publish and file charges for the use of heated refrigerator cars on the basis of 1½ c a car per mile, with a minimum charge of \$2 a car, in addition to the regular freight charges. Upon hearing the matter at Toronto, April 13, 1917; Ottawa, April 17, 1917; Regina, June 21, 1917; Vancouver, Nov. 21, 1919; Calgary Nov. 27, 1919; Edmonton, Nov. 28, 1919; Saskatoon, Nov. 29, 1919; Regina, Dec. 1, 1919; Winnipeg, Dec. 2, 1919; Fort William, Dec. 3, 1919; and Ottawa, Jan. 7, 1920, in the presence of representatives of Canadian Freight Association, Canadian Manufacturers' Association, the Toronto, Montreal, Winnipeg, Regina and Calgary boards of trade, Ontario Fruit Growers' Association, Nova Scotia Fruit Growers' Association, British Columbia Credit & Traffic Association, Nova Scotia Shipping Association, Western Canada Fruit Jobbers' Association, Ontario Vegetable Growers' Association, Niagara Peninsula Fruit Growers' Association, Quebec Department of Agriculture, Canadian Pacific and Grand Trunk Railways, Canadian National Rys., and Michigan Central Rd., and what was alleged; and upon reading the further written submissions filed it is ordered that the general order 173, Oct. 26, 1916, be amended to permit increases in existing charges for heating refrigerator cars by the carriers, in addition to the freight rates pertaining to the loadings thereof, and also in addition to the charges, if any, for the use of the said cars, as follows:

(a) Between points west of and including Port Arthur, Ont.; also between points east of and including Westfort, Ont., from 1c a car per mile, subject to a minimum total charge of \$2 a car, to not more than 1½ c a car per mile, subject to a minimum total charge of not more than \$2 a car.

(b) From points east of Port Arthur to points west of Westfort, and from points west of Westfort to points east of Port Arthur, the maximum charges authorized by the general order 173, when increased not more than 50% to apply.

And it is also ordered that the tariffs to give effect to this order may be published and filed not less than seven days previously to the date, or dates, on which they are intended to come into force.

Average Demurrage Plan Refused.

General order 285, Mar. 2.—Re application of Canadian Manufacturers' Association for an order directing the extension of the Canadian Car Demurrage Rules, so as to provide for what is known as the average demurrage plan. Upon hearing the matter at Toronto, April 25, 1911; Vancouver, May 19, 1913; Calgary, May 26, 1913; Edmonton, May 27, 1913; Regina, May 29, 1913; Winnipeg, May 30, 1913; Fort William June 4, 1913, and Ottawa, June 16 and 17, 1913, in the presence of representatives of Canadian Manufacturers' Association, Canadian Retail Coal Dealers' Association, Canadian Lumbermen's Association, Canadian Car Service Bureau, Montreal Lumber Association, Montreal Grain Exchange, Toronto, Vancouver, Calgary, Edmonton, Regina, Winnipeg and Montreal boards of trade, Canadian National Rys., Canadian Pacific, Grand Trunk and Grand Trunk Pacific Railways, Michigan Central and Pere Marquette Rds., Winnipeg shippers, Great West Saddlery Co., Winnipeg Sandstone Brick Co., D. Ackland & Sons, Manitoba Bridge & Iron Works, Dominion Bridge Co., the Beaver Soap Co., Vulcan Iron Works, J. D. Clark Billiard Co., Winnipeg Cabinet Factory, Parker Whyte, Ltd., Alaska Bedding Co., Canadian H. W. Johns-Manville Co., Manitoba Linseed Oil Mills, Martin-Senour Co., Canada Cement Co., Alsip Brick Tile & Lumber Co., Canadian Carbon Co., Winnipeg Steel Granary & Culvert Co., Gurney North-west Foundry Co., Winnipeg Paint & Glass Co., Manitoba Gypsum Co., Perfection Concrete Co., George Gale & Sons and Anthes Foundry, and what was alleged; and upon reading the further written submission filed it is ordered that the application be refused.

Transportation of Dangerous Articles Other Than Explosives.

General order 287, March 22.—Re general order 203, Aug. 11, 1917, approving the regulations for transportation by freight of dangerous articles other than explosives, as amended by general orders 206, 207 and 260, Sept. 7, Oct. 26, 1917, and March 17, 1919 and re application of People's Gas Supply Co. for order repealing or amending second paragraph of rule 1861 (j) of the regulations aforesaid. Upon hearing the matter at Ottawa, June 10, 1919, the People's Gas Supply Co., Canadian Railway War Board, Bureau of Explosives, Compressed Gas Manufacturers' Association, L'Air Liquide Society, and Commercial Acetylene Supply Company, being represented and what was alleged, it is ordered that the general order 260, March 17, 1919, be amended by striking out the second paragraph of clause (j) of rule 1861, and substituting therefore the following, namely:

"Cylinders containing acetylene gas must not be shipped unless they were charged by a person, firm, or company,

Shortage on Flour.

29,424. March 3.—Re application of T. H. Taylor Co., complaining that a carload of flour loaded and sealed by them at Chatham, Ont., out-turned a shortage at Sydney, N.S., and that its claim therefore has been refused by the carrier, on the ground that the car reached its destination with the applicant company's seals intact, and applying for a ruling that the checking out of the lading was an obligation on the carrier. Upon reading what is alleged in support thereof and on behalf of the Canadian Manufacturers' Association, it is ordered that the complaint be dismissed.

Freight Rate on Shoddy Blankets.

29,411. March 2. Re application of the Freight Association, Montreal, Vancouver, B.C., for a ruling of the board that shoddy blankets are entitled to the rate provided for specified articles of dry goods in item 250 of Canadian Freight Association's Commodity Tariff 1-A, C.R.C. 14. Upon hearing the application at Vancouver, Nov. 21, 1919, the applicant and Canadian Freight Association being represented and what was alleged, and upon reading the board's Chief Traffic Officer's report, and its appearing that item 250 of the said tariff must be read in connection with item 265, it is ordered and declared that shoddy blankets shipped since July 31, 1918, were and are entitled, by the language of the tariff, to the rate of \$2.65, provided for in item 250 of the said tariff.

Classification of Road Graders.

29,436. March 2.—Re application of United Grain Growers of Winnipeg, for a reduction in Canadian freight classification rating of road graders, set-up, from double first class to first class, subject, when loaded on flat cars, to a minimum weight of 5,000 lb. Upon hearing the matter at Winnipeg, Nov. 15, 1919, the applicants and Canadian Freight Association being represented, and upon reading the further written submissions filed, and the report of the board's Chief Traffic Officer's report, it is ordered that the application for the first class rating be dismissed, and it is also ordered that the rating of road graders, set up, be reduced to 1½ first class, subject to rule 6 of Canadian Freight Classification 16, as amended by Supplement 10 thereto;

The same charges to be included in the forthcoming Supplement 11 to the said Classification, and to come into force on the effective date thereof.

Disallowance of Milk Tariffs.

29,473. March 9.—Re application on behalf of National Dairy Council for an order suspending C.P.R. Tariff C.R.C. no. E-25, to take effect June 1, 1919; increasing rates on milk, for passenger or express passenger and freight, train service; the application of the Toronto Board of Trade for an order suspending G.T.R. Tariff 693, C.R.C. no. E-2756, effective June 1, 1919, and other similar tariffs, increasing rates for the transportation of milk in baggage cars; and order 28,355, May 28, 1919, suspending certain increased tariffs. Upon hearing the matter at Ottawa, June 10, 1919, the National Dairy Council, Toronto Board of Trade, Farmers' Dairy Co., Toronto; Ottawa Dairy Co., High Cost of Living Commission, Montreal Dairy Co., Border Chamber of Commerce, Windsor, and C.P.R. and G.T.R., being represented, and upon reading the further written submissions filed, it is ordered that the following tariffs, viz.:

Canadian Pacific Ry. C.R.C. no. E-25; Grand Trunk Ry. C.R.C. no. E-2756; Canadian National Ry. C.R.C. no. E-29; New York Central Rd. C.R.C. no. 249; Quebec, Montreal & Southern Ry. C.R.C. no. 271; Naperville Jet. Ry. C.R.C. no. 113; Montreal & Southern Counties Ry., Supplement 2 to C.R.C. 22;

be, and they are hereby, disallowed.

Railway Finance, Meetings, Etc.

Algoma Central and Hudson Bay Ry. —Philadelphia, Pa., press dispatch, Mar. 13, President Cunningham, of the Lake Superior Corporation, has announced that negotiations have been completed for the re-financing of the Algoma Central and Hudson Bay Ry. The terms are: The present outstanding issues of \$10,080,000, and H. B. R. 1st mortgage 8½ bonds, fully guaranteed by the Lake Superior Corporation as to principal and interest, to be converted into an issue of \$10,080,000 3½ bonds, guaranteed by the Lake Superior Corporation as to the first 10% of the principal, and as to the first 1% of the annual interest.

International Railway of New Brunswick.—The Lieutenant Governor in his speech at the opening of the N.B. Legislature Mar. 11, announced that during the recess bonds guaranteed by the N. B. Government in connection with the construction of the International Ry. of N. B. to the amount of \$896,000 had been paid off by the company and canceled.

Canadian Northern Pacific Ry. Construction Suit.—S. D. Hogan, of Innisfree, Alta., is suing the National Construction Co., Mackenzie, Mann & Co., Ltd., the Canadian Northern Pacific Ry., and the Canadian National Ry., in the Alberta Supreme Court, to recover \$115,898.29 for alleged breach of contract. The claim states that plaintiff in Mar., 1912, contracted to build a section of the Canadian Northern Pacific Ry., between mile 34.8 and 48.18, west of the Yellowhead Pass Summit, the work to be completed by Aug. 1914. The contract was completed within the time specified and involved an expenditure of \$1,075,057.77 at contract prices, and \$21,112.86 for additional work. Plaintiff states that there was paid on account \$98,027.34, and he is now suing for the balance with interest from 1914.

Removal of Grain by Rail from Fort William and
Port Arthur Elevators.

In the House of Commons on Mar. 19, J. A. Robb, M.P. for Chateaugay-Huntingdon, Que., called the Minister of Railway's attention to a letter from a Winnipeg grain shipping firm, dated Mar. 13, stating that there had been no coarse grain shipped out of Fort William, for domestic purposes, since Mar. 1. The Minister of Railways in reply read a letter from Chief Commissioner F. B. Carvell, of the Board of Railway Commissioners to the Deputy Minister of Railways, dated Mar. 19, as follows: "In reply to yours of yesterday re the shipment of oats from the head of the lakes, I beg to state that the whole story of what the board has done since the close of navigation would be a rather lengthy one. Early in the season we attempted to regulate loadings out of elevators in an equitable manner to all parties concerned, and on Dec. 6 we received a telegram from Chairman Stewart, of the Wheat Board, as follows: "The C.P.R. through Grant Hall has assured us an all rail movement of grain from Fort William east of a minimum of 125 cars a day. We would like this apportioned as follows: 20 cars for coarse grains domestic and export, 40 cars for domestic wheat, 65 cars for export wheat to Atlantic seaboard ports including Portland and St. John. Canadian National Rys. through C. A. Hayes have assured us of minimum movements of 50 cars a day which we would like apportioned as follows: 15 cars for coarse grains domestic and export, 10 cars for domestic wheat, 25 cars for export wheat to Atlantic seaboard ports, including Portland and Halifax. Undoubtedly roads can improve this movement and haul more domestic wheat and export and domestic coarse grains than the total of 85 cars a day and until further advised we would like these interests to benefit to the full extent of the increased movement, but the 65 cars on C.P.R. and 55 cars on Canadian National for export wheat are irreducible daily average minimums and should take precedence over other grains. Will you be kind enough to confirm this to the railway companies accordingly?" "Some discussion took place with the railways and with Mr. Stewart about issuing an order, but all parties agreed that, in so far as it was possible, 175 cars a day would be shipped out. The Wheat Board asked for a priority order for the 85 cars a day for export wheat. This we declined to grant, until satisfactory evidence was furnished as to dates of sailings, tonnage, etc., and, as this data has never been furnished the board, we have, therefore, refused to give a priority order; but there was a general understanding, as we understood it, between the railways, the Wheat Board, the Lake Shippers' Association, and ourselves that the percentage of different grains, both export and domestic, as set forth in Mr. Stewart's telegram would be adhered to as closely as possible. Unfortunately, the weather conditions during January and February made it impossible for the railways to furnish 175 cars a day for this particular movement, and it very soon became apparent that some interests would not be able to receive the amount of grain required. In the course of a few weeks, this board became convinced that coarse

grains were not receiving their due percentage of shipments, and, therefore, in order to see that our intentions were carried into effect, on Jan. 30 this board issued an order the operating portion of which is as follows: "That on Monday, Feb. 2, and on each succeeding Monday until otherwise ordered by the board, the C.P.R. provide at least 125 cars and the Canadian Northern Rys. at least 50 cars at the elevators at Fort William and Port Arthur, for the receipt, handling and carriage of grain, other than wheat, also flaxseed, for domestic use in Canada; the said cars to be allocated in proportion to the cars ordered for which the necessary documents have been surrendered." "During the next three Mondays, including Feb. 16, 545 cars of domestic coarse grains, mostly oats, were shipped out, and, on account of severe weather conditions, we then concluded that coarse grains, mostly oats, were shipped their fair percentage, the result being that, on Feb. 17, this order was suspended. Since that date up to Mar. 13, 211 cars of domestic coarse grains have been shipped, more than 90% of which would be oats. In addition to the above statement, according to information furnished us by the Lake Shippers' Association on Mar. 16, for the fortnight ended Mar. 13, 420 cars of coarse grain have been shipped from western points direct to the east. During the same period, the Lake Shippers' Association inform us that a total of 153 cars of domestic grains of all kinds have been furnished the local mills and 819 cars of export wheat. This board receives daily from the Lake Shippers' Association, the C. P.R. and the Canadian National statements of the number of cars loaded and handled, and at present we are subdividing the coarse grains under different headings, so that we are in a position to know exactly how much of each kind of grain is moving out daily, and, early in this present week, we came to the conclusion that coarse grains were not receiving their fair proportion. Telegraphic correspondence was entered into with the Lake Shippers' Association on Mar. 15, and, after the exchange of a number of telegrams, on Mar. 18 the following order was issued by wire: "Your telegram yesterday received re coarse grain movement from head of lakes. This board requires that beginning tomorrow and until further orders 20% of all cars loaded from all elevators at head of lakes be assigned to coarse grains for domestic consumption which is practically the percentage set forth in Mr. Stewart's telegram to me of Dec. 26, 1919. Please confirm." Yesterday afternoon confirmation was received as follows: "If the daily returns require a change in these directions, the board will not hesitate to take whatever action may be necessary. I think, however, I shall point out the very serious conditions under which grain has been handled during the past two months, and I am satisfied that the railway companies have handled every car which it was humanly possible to get over their roads. Their first great difficulty has been weather conditions not only around the head of the lakes, but at the ter-

which, when mounted on a low boggy frame, is used to break up the ice, snow, and other material in the tracks, and to remove the same to the sides of the tracks. The machine is used in the winter months, and is especially valuable in the removal of ice and snow from the tracks, and in the removal of other material which may be in the tracks.

have been the most abundant source of trouble from the operating standpoint, but probably were stopped with some difficulty, but have the advantage of being also very largely in the fact that there are about 20,000 more Canadian cars in United States lines than there are U.S. cars in Canadian lines.

and without care it is impossible to handle freight. I again wish to emphasize the splendid manner in which the railway companies have worked with this board, in order to produce the maximum result and have ever been ready to carry out any wish which we have expressed.

Attachment for Ballast Spreader.

The attachment to a ballast spreader, illustrations of which, from photographs taken on a ballast spreader, as a member of the Railway Labor P.M., are given herewith. It consists of a steel channel

operation, and Fig. 3 shows the results obtained in one operation, the track freed and cleaned out well below top of rails, the depth varying according to desire, as the cutters are adjustable, and cut can

use if it was applied to a car.

The device was tried on the C.P.R. in 1918-1919, and proved so successful that this winter there are some 20 attachments in service on the Eastern

Figure 1

Figure 2

frame, designed to fit snugly over the front of the spreader plow, over all, without the removal of anything on the spreader. The channel contains a set of cutters, and is fastened to the front of the spreader plow by special bolts, which are adjustable. Each of the cutting chisels is held in frame independently; the chisels are interchangeable, and can be quickly and individually removed for redressing. They are also adjustable in the frame to regulate the cut desired below the top of rail. In this way they can be reground several times, or until the cutting portion is entirely used up and worn out, thereby extending the life of the cutters. A pair of flanged shoes is fastened under the frame, and spreader plow front which rides the rails, similar to that of a snow plow, and actuates the device to the center line of the track. Its construction is simple, durable and inexpensive, combined with special features which render it absolutely effective, for freeing railway tracks, for safe and economical operation, of any ice, frozen cinders and other elements encountered in winter accumulation, which is especially found in yard terminals, where the climate reaches a very low temperature, and material which could not be removed by any other known means, other than hand picking, which involves manual labor. This renders the ice cutting attachment an enormous labor saver.

Fig. 1 shows the condition of the tracks previous to running of the ice cutter, accumulation of ice, cinders and other sediments being well above the top of the rails and frozen very hard. It also shows the arrangement of the cutting chisels in general on the attachment, Fig. 2 shows the machine and device in

Figure 3

be regulated to the depth required.

This attachment can be applied conveniently to any car or spreader, but it is best to attach it to a spreader, and also the more economical, as the spreader is in winter used freely for the removal of snow, and this avoids the tying up of other equipment which would be the

lines. One man operates the spreader, easily raising and lowering it for obstructions, and it will do the work of hundreds of men, and besides the saving in this respect, it gives quick use of yard tracks, as it only takes a few minutes to remove the cars, run the ice cutter through, and put the cars back.

The Canadian Pacific Railway Officials' Annual Dinner at Toronto.

The C. P. R. officials' fourth annual dinner, the holding of which was suspended during the war, but was revived at Montreal in Mar. 1919, was held at the King Edward Hotel, Toronto, on Mar. 13, being attended by some 600 officials, from all the principal points on the system, from the Atlantic to the Pacific, and from Great Britain and United States. Special trains were run from Montreal and Winnipeg to Toronto, for those attending from those districts. Those at the head table were Sir Geo. McLaren Brown, European General Manager, who presided; His Honor L. H. Clarke, Lieutenant-Governor of Ontario; Hon. Henry Mills, Ontario Minister of Mines; the Mayor of Toronto; W. G. Chester, Chairman, C. P. R. Employees Co-operative Board, and the following company officials: E. W. Beatty, K.C., President; Grant Hall, Vice President; W. R. MacInnes, Vice President, Traffic; A. D. MacTier, Vice President, Eastern Lines; W. N. Tilley, K.C., Consulting Counsel; C. Murphy, General Manager, Western Lines; F. L. Wanklyn, General Executive Assistant; Col. J. S. Dennis, Chief Commissioner of Colonization and Development; J. Leslie, Comptroller; C. E. E. Ussher, Passenger Traffic Manager; E. Alexander, Secretary; H. E. Suckling, Treasurer; H. A. Beatty, M.D., Chief Medical Officer; J. H. Walsh, General Manager, Quebec Central Ry.

During the service of the dinner, and before the toasts, a musical entertainment was given, and a number of moving pictures were shown, illustrating the C. P. R. from the Atlantic to the Pacific. Letters of regret at inability to attend were read from the Ontario Premier, from Lord Shaughnessy, Sir Edmund Osler, and Sir John Eaton of the company's directorate; I. G. Ogden, Vice President, Finance, and D. C. Coleman, Vice President, Western Lines, Lord Shaughnessy expressed the earnest hope that the occasion would be as interesting, inspiring, and enjoyable as it had been in the past. I. G. Ogden said: "I regret that it will not be possible for me to join you at the dinner, where I am sure the best of feeling will prevail, and at which some of the addresses to be given will be as good to be well digested as the best things at the dinner can be. My feelings to the officers and employes of the company have only changed since my letter of a year ago to be stronger, and to look more on all connected with the company as my best friends. The more we see and know of other constructions and systems the brighter becomes the C. P. R. star as the brilliant sign of all that is good and best for this our country. It will long remain the great strength on which the people of Canada may well depend. I wish you all an enjoyable and beneficial meeting, which should be looked forward to for renewal each year."

Sir George McLaren Brown in proposing the health of the guests, said: "In some situations, it is almost impossible to keep one's emotions within bounds. My present position, presiding over this gathering of C.P.R. men and their friends in the capital city of my native province, and your more than kindly reception have opened wide the gates for my emotions, and, as it were, have set my mind travelling swiftly backward over my 34 years service with our great Canadian institution, the C.P.R., that standing monument to Canadian intelli-

gent foresight, courage and enterprise—that great organization of which all Canadians must indeed be proud—that great company which has placed Canada on the map. As I look about this gathering, and recognize so many friends of my old C.P.R. days in Canada, I indeed admit it tugs at my heart strings and words fail me; yet I would like to be able to tell you how much this moment means to me. I was delighted when I found that in the ordinary course of my duties I would be able this year to be present at this gathering, but I admit that I was startled, and have not yet recovered from it, when in Montreal a few days ago I was told that I was to preside this evening. I realize my inability to fill the position properly, yet I want you to know how deeply I feel the honor you have done me, and how much I appreciate your extreme kindness. What I have said is, however, not to the toast which it is my privilege to propose, and though I have gone off on a tangent I feel that both our guests, and you, my friends and associates, will under the circumstances forgive my momentary departure from the programme. It is my privilege to propose the toast to our guests whom we so delight to welcome and who so greatly honor us by their presence. Although I am conscious of my inability to do justice to the occasion, I rest easy in mind in the certainty of the enthusiasm of the reception of the toast; the certainty of the sincerity of the welcome of our guests. I couple with the toast the names of four distinguished fellow countrymen who in their respective spheres have made their niche in the community, the Lieut. Governor of Ontario, Mr. Lionel Clark, Hon. Henry Mills, Minister of Mines for Ontario; the Mayor of Toronto, Mr. T. L. Church, and Mr. W. G. Chester, Chairman of the C.P.R. Employees Co-Operative Board. The Lieutenant Governor in his distinguished career has won not only title to great personal honor and success, but to what is of greater importance; he has established the most enviable record in public service which those who know him best will tell you is of far greater satisfaction to him than any personal honors he has gained. In Henry Mills, I think I recognize someone whom I first met years ago when we were both younger in years in the service of our great company. We can both look back on many years of strenuous work, and if he will permit it from an old C.P.R. employe, I would like to tender him personal congratulations on his success, and in saying this I am sure I but echo the congratulations of every member of the old brigade, and as for a quarter of a century or more he merited the confidence reposed in him by the C.P.R. so now onward as a Minister of the Crown, he will, by the exercise of his sound and sterling qualities, merit the confidence of the people of Ontario, and if I might be permitted to indulge in a little prophecy I would predict that before long he will find that his sphere will be extended so as to embrace the greater interests of the whole Dominion. I consider, and you no doubt do too, that we are indeed fortunate in having with us the Mayor of Toronto, Mr. Church, whose name and that of the Queen City of the Dominion are synonymous. His record needs no statement. You find it in this beautiful Canadian city for which

he has done so much. I am particularly delighted to be able to pay my tribute to Toronto, for though for a time in my early youth I only saw Toronto from the famous mountain top which characterizes the city of my birth (Hamilton), I had many happy hours in Toronto as a school boy, and despite the prejudices of some of my friends, have constantly to look upon Mr. Church's city as the premier city of Canada. Of course I do not always express myself so emphatically, for the very obvious reason that I have no desire to lose any of my Montreal friends. We welcome Mr. Chester in a dual capacity, as our guest, as chairman of the Employees Co-Operative Board, and as a fellow employe, known and esteemed for many, many years by most of us tonight. I am at a loss to know how to address him; whether as a guest or as a fellow worker. As a guest, he represents interests of a vast section of the personnel of the organization, and his presence here indicates to me that happy association of all concerned which is so essential to the proper maintenance and advance of the C.P.R., which is a responsibility for us all. So long as mutual friendly understanding, tolerance and confidence is maintained between us employes and the company's executive, none of us who pride ourselves in the association with this great enterprise need have any fear for the future of the company, because it is only in this way that we are enabled to see things in their proper perspective, and thereby guide our course in the best interests of all concerned. If I might be permitted at this moment to make a few observations, which possibly to some may seem irrelevant, which to my mind are quite pertinent, I would like to speak of the phase of my experiences during the past five years. Prior to the war, in working in the ordinary course of my duties I made the acquaintance of several of the men prominent in the labor world in the old country, but it was not until the war came that I was privileged to come into intimate association with them. During those years I met many men prominent in the labor world of England on very intimate terms, and I would pay my tribute to them with but few and immaterial exceptions. I found them of sound judgment, of strong character and unselfishly working to the betterment of humanity, and I have not the slightest doubt that you have such men in similar positions in Canada. In England these men urged some very necessary social reforms, which undoubtedly they have definitely brought about, and there are no people in the community more keenly alive to the necessity for observance of law and order, their advocated methods are constitutional and not bolshevistic, and without doubt their counsels in the affairs of state can do only good and not harm."

The Lieutenant-Governor of Ontario responded and proposed the toast of the company, warmly eulogizing its management. Hon. Henry Mills, Ontario Minister of Mines, who, until assuming his present office a short time ago, was a C. P. R. locomotive man, running out of Fort William, responded and proposed the toast of the company's vice-presidents and officers. T. L. Church, Mayor of Toronto, who also responded for the guests, proposed the toast of the company's employes.

President Beatty's Speech.

I, W. Beatty, K.C., in responding to the toast of the company, said: "One of the duties which the company's bylaws, if my preference were consulted, should enforce, would be that the chairman of the company, or some other officer, was obligated to make public speeches. It was unfortunately failed to my lot to be compelled to speak on several occasions in Canada since Oct. 1918, and I sincerely believe it is one of the most arduous and least interesting of any of the phases of activity pertaining to the office."

When I was at college in this city, and afterwards when I practiced law in Montreal, I professed myself upon the fact that never on any occasion, outside of a court or a commission, did I indulge in speech-making, either platform, or after dinner. In my ignorance I considered that that was a creditable record, especially for one who had actively practiced law for upwards of 17 years. It came to pass, however, that my nemesis overtook me, and I was compelled in January, 1919, to make what was my first public appearance in that capacity in Montreal. It was a Sunday night gathering of the Fifth Sunday Association, composed largely of railway men, and wishing to make myself at home with the audience, or rather induce them to be at home with me, and in an amateur effort to secure their sympathy, I told them it was my first appearance as a speaker, and I also told them the following story, which was a true story, and designed also to secure a friendly reception. Some years ago I gave my first and only indication of wealthy instincts by contracting appendicitis. In due course an eminent surgeon spent 13½ minutes of his valuable time in removing the cause of the trouble, and when convalescing I said to the assisting surgeon that I would like to have the fee fixed for this eminent gentleman's exhibition of digital dexterity. He was in due course approached, and the first question he asked was: 'What does Mr. Beatty do?' The answer that he got was: 'He is only a poor lawyer; in fact I understand a very poor lawyer indeed.' The result was that the minimum fee was fixed in my case.

"Now, as I say, I told that story, and after the meeting was over a G.T.R. employe met a C.P.R. employe on the street, and the C.P.R. man said to the G.T.R. man: 'What did you think of the old man's speech?' (The old man being me). 'Well,' drawled the G.T. man, 'He first said that he was a damned poor speaker, and then he told us that he was a damned poor lawyer. On the whole I thought it was a damned poor speech.' So you see there are important personal reasons why I should welcome a change in the functions of the office, which would permit someone else to do the public speaking."

"If ever I do make a speech, however, I can say with perfect honesty that I would rather speak to the C.P.R. officers and employes than to any other audience, and particularly am I glad on this occasion to say a few words because this dinner is taking place in my former home city, a city of great commercial and transportation importance, under somewhat different auspices than former dinners in that we have been honored by several distinguished men, including the Lieutenant-Governor, the presence of all of whom I wish to assure them is very welcome and deeply appreciated. If I might further particularize, without invidiousness, I would like to mention the

participation of Mr. M. J. Millie, Minister of Mines, and Mr. W. G. Chester, representing the company's employes. Mr. Millie stepped off one of our locomotives to take his present portfolio, and there is one minor substance with the use of which he is very familiar. I refer to coal. If there is anything in the way of defects in the quality of coal that he has not discovered, and mentioned, during the last few years, I do not know what it is. With that branch of his duties he comes to his new office extraordinarily well equipped, and I have no doubt will administer the important functions of that office with the same efficiency as he showed in this company's service. Mr. Chester represents the backbone of this enterprise, and he typifies in himself that loyalty to the interests he represents, combined with co-operation and fairness, which has made his association with the company's officers one of great advantage to both.

"I notice, too, among the invited guests, my friend, the Mayor of Toronto, whose insistence upon the rights of his city in all matters of controversy has been remarkable. We have not been able to agree always with the city's contentions, but we have been sensible of the pertinacity with which their views have been presented and the underlying sincerity of their appreciation of the interests of their municipality, which has characterized their presentation. I do not wish you to understand that in all the controversies between the city and the railways, the railways have been right. I know of several cases in which a more generous appreciation of the needs of the municipality, and a general financial support to them by the companies, would have avoided controversies, both bitter and expensive, and of far reaching consequences. In this city and its prosperity this company has a tremendous stake. It is the chief commercial center of Ontario, an enormous shipper and receiver of goods, served by three railways; I think well served by them, but certainly served to the advantage of the traffic on their respective lines. It was my home for many years, and in spite of that its progress continued. I left it 19 years ago, and in spite of that it grew. The city has always been represented by two directors from Toronto, who were among the oldest of those associated with the C.P.R. enterprise. Sir Edmund Osler and the late Mr. W. D. Matthews have been connected with the company for many years. The former for 35 years, and the latter for 31 years prior to his death. From their association on the board, we have received the counsel and assistance which was so essential to the company's success, and to them we, who have succeeded to the responsibilities of executive and other offices, owe a great and lasting debt of obligation. There has recently been added to the board, in succession to the late Mr. Matthews, Sir John Eaton, who, by reason of his widespread interests as a citizen of Canada, is a very outstanding and important member of this community. The members of the board look forward to his association with them with the greatest pleasure."

"In common with all of you I regret the absence of the company's Chairman, but I realize that it would be asking a good deal of him, especially when his proper ambition is to be relieved of as many duties as possible, in order that

he may consider his time entirely his own, in the period of respite which he has earned, by his long, distinguished and notable services to this company."

"On the occasion of our last dinner the railway situation was somewhat different than it is today. It has now advanced another step, in what some regard as being the logical consequences of the first step, and we are met with the rather unique situation of the existence of two strong railway systems in Canada, both backed by adequate credit and both desirous of fulfilling, to the best of their ability, their share in supplying the transportation requirements of the country."

"Some people have regarded the railway situation as highly controversial, and it was, to the extent that the adherents of the two systems of administration, privately owned and publicly owned, have been insistent on the correctness of their respective views, and expressly apprehensive of the results of any other system than that which they advocated. To my mind, to regard it as controversial is now unnecessary and unwise, and the chief consideration of all of us is, as to what will be the result to the country as a whole, in the matter of railway service, and to ourselves in particular, as one of those engaged in supplying a large part of that service. The C.P.R. has been built up, over a long period of years, into an organization of which we may all be conceivably and properly proud, and an organization, the usefulness of which, in public service, is probably now more important than at any other period of its history. It is a company which can only continue to succeed, by being administered with strict integrity, and in accordance with the highest business ethics. Upon its success in service, depends its rewards."

"There has always been competition, and there always will be competition, and the character of business competition does not alter in any of its essential details as the years pass on. Our competitor is and will be a very extensive system, which will probably increase in magnitude. We all hope it will be a success, and we do not need to be altruists in order to harbor that hope. I think I can say to you with perfect candor that no man in Canada has more reason to hope for its success than I have; for two reasons, first, because its success as a railway undertaking means a gradual release of the burden on the taxpayer, and the C.P.R. is a fairly heavy taxpayer, and secondly, because the factors which contribute to its success will ensure the further and continued success of the C.P.R. If the traffic development of the country is such as to support the Canadian National Rys. system, it will undoubtedly be sufficient to add to the support of the C.P.R. You will, therefore, appreciate that on national and selfish grounds the success of the Canadian National Rys. is something that every C.P.R. official should desire. It involves competition, of course, keen competition. Competition, which is both keen and honest, cannot help but redound to the advantage of the competitors, to the improvement in the character of the service they render, and to the resultant advantage of the people and communities served. Personally, I have no fear of the competition adversely affecting this company or its interests, and the reason why I think I have a right to that confidence is to be found in the organization itself, and the char-

acter of the officers and men who comprise it, officers and men who I think can be relied on to play the game of transportation competition as it was meant to be played, adroitly, persistently, aggressively and fairly. In years gone by it was considered an act of proper aggressiveness for one competitor to decry the methods and wares of his rival. This is not the case today. It is foolish to depreciate your competitors outwardly or otherwise, foolish for two reasons; first, because they probably do not deserve your depreciation of them, and secondly, because it is bad business.

"Now in this competition, or in any transportation situation, which exists or is likely to exist in Canada, we have the advantage of the traditions of the company, and the ideals and standards which have been set for us by the men who formerly guided its destinies. It is difficult for me to refer to the former President, and present Chairman, in language other than that of affection and admiration. I have known him so well, so intimately, personally, officially and professionally, for so long a time, that I have a deep appreciation of the influence of his character, and his standards upon the practical commercial prosperity of this company, and the imprint which those personal qualities have upon his associates and subordinates. It would not do for any officer to now forget the debt which he owes in the way of the opportunity of service which has been afforded him by the work of these men who preceded him. It would equally not do for him to overlook the fact that the high characters of these men contributed largely to their success, and that the standards of personal integrity, official courtesy, and commercial efficiency, which they followed, are just as effective and just as necessary today as ever before. It is not necessary for me to mention to you any of the outstanding factors in connection with the company, which render your association with it so important to you and to it. In the railway alone there has been invested, in cash, in excess of \$830,000,000. In its subsidiary enterprises there are many millions, so I am safe, I think, in saying that it is the largest privately owned and operated transportation agency in the world. It has been conservatively financed, supported by the people, and the government, in its inception, in a way which was then considered as only substantial enough to keep it alive for a short time, and in later years, when it made these properties valuable, largely by its own efforts, and by the same efforts increased the value of all lands in the west, the same support has been considered by some critics as overgenerous. For myself I am prepared to leave to the judgment of the people as a whole, as to whether or not the company has fulfilled the onerous obligations imposed upon it, both to the advantage of itself and the country, and I would draw your attention to the finding of the Royal Commission appointed to enquire into railways, that the people of Canada received full value for the support given to the C.P.R. under the agreement of incorporation made in 1881, a conclusion I venture to suggest which was reached by all Canadians before the finding was made.

"I only wish to add one word, a word of the highest possible commendation of the loyalty and efficiency of the officers and men who comprise this corporation and whose efforts have made, and are

making it, what it is. Do not imagine that those of us whose principal duties lie in the Windsor Street Station are unmindful of the work which you are doing in other places throughout the vast system of this company. Do not imagine that your troubles are not ours, but believe that whatever can be done in the way of advice, and support, and direction, will be given, not reluctantly or half-heartedly, but with all the ability and sagacity that we possess, because of the unified interest existing in this corporation, which has made the C.P.R. spirit a household word throughout the transportation world."

Grant Hall, Vice President, responded for the vice presidents and officers. W. G. Chester, Chairman, C. P. R. Employees Co-operative Board, responded for the employees. A. D. MacTier, Vice President, Eastern Lines, proposed "Our allied interests."

Col. J. S. Dennis, C.M.G., Chief Commissioner of Colonization and Development, in responding for "Our Allied Interests," said: "I understand the interests I am honored by being called upon to speak for include the Minneapolis, St. Paul and Sault Ste. Marie, the Duluth South Shore & Atlantic, and the Spokane International lines in the United States; those lines in Canada, like the Dominion Atlantic, Kettle Valley and Esquimalt & Nanaimo, operated under these names as part of the system; the Canadian Pacific Ocean Services, the Dominion Express Co., the C.P.R. Telegraph, the Hotel Department and the Departments of Natural Resources and Colonization and Development. This is surely a pretty big order for one speaker, and to deal with the subject fully, I decided, after careful consideration of the diversified activities of these many interests, to endeavor to limit my speech to an hour and a half. However, I have just been warned that any speaker, at this late hour, who speaks more than 10 minutes is to be summarily executed and denied a decent burial, or, worse still, excluded from visiting any of the "dry" sittingrooms after the dinner, and I am therefore constrained to try and return the thanks of all these vast interests for the way in which you have received the toast, in a very few brief remarks. In the first place, I think a better name than the 'Allied interests' might have been obtained for this toast, especially in view of the doubts now existing in many people's minds as to whether this term conveys a correct understanding of the close relationship existing between the interests included in the toast, and the parent company, and it is certain that if we are applying the Wilsonian interpretation of 'allied,' as judged by what that meant in the late war, the term is not applicable in this instance.

"What is it that makes the C.P.R. differ from any other transportation company? The answer, in my opinion, is this toast, and explanation may be illustrated by a brief summary of a day's work by our President. In the morning he has to consider many of the daily problems referred for ruling by the Operating Department. Then, for a change, he has problems connected with the operation and equipment of lines in the United States. Then come numerous questions of steamships, and routes on the Atlantic, Pacific and Great Lakes, including matters of officers and staff all over the world. Then a rapid change to questions affecting the staff all over the world. Then a rapid change to ques-

tions affecting hotels, express companies and telegraph departments. Then, for another change, matters affecting smelting, metalliferous mines, coal mines, and water powers. Then, to the other extreme of sawmills and timber and ties, and finally, questions of land settlement, land prices, experimental farms and livestock, and then, just to make sure that his day shall be varied, I come along with schemes for moving pictures, publicity, propaganda and all the various questions relative to our efforts to colonize and develop Canadian natural resources, including statistical statements like the following:

"Agricultural traffic from existing railway mines in the three prairie provinces during 1916, \$163,516,318.

"Total number of farmers in the three prairie provinces that year, 219,105.

"Average traffic value of a farmer, \$746.33; capitalized at 5%, \$13,569.

"Number of farmers located by C.P.R. on their own lands since 1882, 48,147, which, of course, does not include the vast number who were brought to the west and located on other lands.

"C.P.R. traffic from farmers located 1882-1919, \$157,363,573 net.

"Finally, just when he feels like going home and calling it a day, along comes some intricate problem of finance, connected with all this world wide activity of the greatest transportation and development organization, and on behalf of the associated interests for which I am attempting to respond, I can only say, that they should, and I know do, feel proud to be considered part of the organization, if only as allied interests."

C.P.R. Passenger Officials' Tour and Conferences.

On Mar. 14, the day after the officials' dinner, a number of the company's passenger department officials, headed by C. E. E. Ussher, Passenger Traffic Manager, left Toronto by special train, consisting of compartment observation car, compartment car, two standard sleeping cars, dining car, tourist sleeping car, and baggage car, for a trip to Seattle, Wash., where they disbanded. The route followed from Toronto was via Sudbury, and the main transcontinental line to Vancouver, with stops at Port Arthur, Fort William, Winnipeg, Brandon, Moose Jaw, Regina, Saskatoon, Edmonton, Calgary Banff, Lake Louise, Field, Revelstoke, Sicamous and Vancouver. At Port Arthur the party had luncheon at the Prince Arthur Hotel. Committee meetings were held at Fort William, Winnipeg and Saskatoon, and general sessions at Regina, Edmonton, Calgary, Sicamous and Vancouver. From Vancouver the party went by steamship to Nanaimo, and had an automobile trip to Alberni, Sproat Lake and Great Central Lake, returning to Alberni, and thence over the Esquimalt and Nanaimo to Duncan, motoring from there over the Malahat Drive to Victoria. From Victoria they went to Vancouver by the s.s. Empress of Russia and from Vancouver to Seattle on a B. C. Coast Steamship Service ship.

During the trip 10 of the compartments and 2 of the drawing rooms were used, during the day, by 12 committees of 5 each, in preparing recommendations for discussion at the general sessions. Each committee considered and discussed all phases of subjects assigned it, and set forth the conclusions reached, in the form of resolutions for submission at the general sessions, where the proposed resolutions formed the basis of discussion. The committees met a sufficient time ahead, so that a copy of the proposed resolution on each subject could

be considered all conference members at least 24 hours before the subject was brought up at the general session. Some giving every member an opportunity to bring forward the committee's proposals and be in a position to readily set out some of the arguments each resolution or other amendment.

Light Railways for Northern Ontario.

The Ontario Legislature is being asked to incorporate the Northern Light Railways Co., to build and operate light narrow gauge railways to be operated by steam, electricity or other motive power. The railways proposed to be built consist of a main line with two branch lines, and a loop line, the routes of which are specifically set out, and other branch lines or extensions, and power is asked to connect with the Timiskaming and Northern Ontario Ry. and any other railways that may be built. Following are the routes stated: From at or near the T. & N. O. Ry., Elk Lake branch, adjoining the Smythe lawn plot, southwesterly through Roadhouse and Lawson Tps., then northwesterly through Nicol Tps. to Gowganda town plot. A branch from Nicol Tps. northerly through Nicol, Haultain, Morel and Yarrow Tps., connecting with the established gold mines in Powell Tps., known as the Fort Matabechan gold mines also in Nicol Tps., but running westerly through Nicol, Mulver, Tyrrell and McMurrich Tps., and connecting with the mines in the West Shining Tree gold mining area; and a loop line from Swastika Station, on the T. & N. O. Ry., running northeasterly through Teck Tps., the Kirkland Lake Mining area and Lebel and Gauthier Tps., thence southeasterly to Larder Lake, thence southerly through Skead Tps., and northwesterly through Catherine and Boston Tps. to Boston Creek Station on the T. & N. O. Ry.

The lines mentioned above are those outlined in the Light Railways Construction Co.'s programme, and referred to in Canadian Railway and Marine World for February, pg. 76.

Atlantic, Quebec and Western Ry. and Quebec Oriental Ry. Operation.

The Minister of Railways replied to a number of questions in the House of Commons, Mar. 15, and 17, with respect to the Quebec Oriental Ry., and the Atlantic, Quebec and Western Ry., which are operated under one management, and give connection between Matapedia, on the Intercolonial Ry., and Gaspe, Que. Answering three sets of questions asked by C. Marcell, M.P. for Bonaventure, the Minister stated that the Board of Railway Commissioners had received complaints during the last twelve months from C. Marcell, J. H. Kelly and others with respect to the service given on the railways mentioned. These complaints had been taken up by the board with the company, and the financial conditions disclosed do not warrant any additional service during the winter. The time table for the winter service was filed by the company in the usual manner and notice was given to the public of the change of service. The present service is a tri-weekly passenger train, Matapedia to Gaspe; a mixed train service, Matapedia to New Carlisle, and an accommodation train weekly from New

Carlisle to Gaspe. Mail is carried daily between Matapedia and New Carlisle. The reason assigned by the company for curtailing the service is on account of its financial condition. The Board of Railway Commissioners has satisfied itself that the line is sufficiently equipped with motive power, also sufficient passenger cars; the company depends upon other lines for freight cars, the bulk of its traffic being through traffic with other roads.

In answer to other questions, the minister stated that the government did not contemplate taking over these railways and linking them up with the Canadian National Ry. System. The C.N.R. management had not given any consideration to the acquisition of these railways as part of the C.N.R. System, in view of the rapid development of business in Bonaventure and Gaspe Counties. If the matter of investigating the desirability of such acquisition is submitted to the management it will be duly considered.

As a result of the work of an association for the improvement of the railway situation on the Gaspe coast, founded recently and which has taken up the whole matter with the Board of Railway Commissioners, a special sitting of the board is to be held at New Carlisle, where the management of the two lines is centered and which is about equidistant from Matapedia and Gaspe.

Railway Association of Canada.

J. H. Sinclair, M.P. for Antigonish and Guysborough, N. S., asked the following questions in the House of Commons, Mar. 17: "Who compose the Canadian Railway War Board? What are their respective salaries? What was the total expense connected with this board during the calendar year 1919? Is it the intention of the government to dispend with the services of this board? If so, when?"

The Minister of Railways replied as follows: "The Canadian Railway War Board (known at its inception and for several months thereafter as the Canadian Railway Association for National Defence) was formed at a convention of executives of railways in Montreal on Oct. 23, 1917. The establishment of this organization was suggested by the Minister of Railways and had for its object the co-ordination of activities of the several railways, to the end that the greatest degree of efficiency in the handling of troops, war supplies, etc., would be accomplished. When peace was declared, it was found that this organization was so beneficial that the railways decided to continue it under the name of the Railway Association of Canada. The expenses are borne by the different railways belonging to the organization, and the government is under no expense in the matter."

Grain Inspected at Western Points.

The following figures, compiled by the Dominion Bureau of Statistics, show the number of cars of grain inspected at Winnipeg and other points on the western division during February, and during 6 months ended Feb. 1920 and Feb. 1919.

	Feb. 1920	6 months to Feb. 1920	6 months to Feb. 1919
C. N. R.	4,800	31,674	36,142
C. P. R.	1,967	83,400	81,729
G. T. P. R.	1,482	15,810	12,294
G. N. R. (Duluth)	3	428	232
Total	8,252	131,312	130,397

House of Commons Committee on Railways, Canals and Telegraph Lines.

The House of Commons committee on railways, canals and telegraph lines, for the current session, is composed as follows: J. E. Armstrong, M.P. for Lambton East, Ont., chairman, the other members being Messrs Allan, Anderson, Andrews, Archambault, Argue, Armstrong (Lambton), Arthurs, Ballantyne, Beland, Blair, Bolton, Bonnell, Boyer, Boys, Bristol Buchanan, Bureau, Cahill, Calder, Campbell, Cannon, Casgrain, Chabot, Charlton, Chisholm, Clark (Red Deer), Clements, Cockshutt, Cooper, Copp, Crerar, Crowe, Cruise, Currie, d'Anjou, Davidson, Davis, DeChêne, Delisle, Devlin, Doherty, Douglas (Cape Breton), Douglas (Strathcona), Edwards, Elkin, Ethier, Euler, Fafard, Fielding, Fontaine, Fournier, Fraser, Frapp, Gauvreau Guthrie, Harold, Harrison, Hay, Henders, Hepburn, Hocken, Hughes (Sir Sam), Keefer, Knox, Lalor, Lantôt, Lapointe, Lavigne, Leduc, Lemieux, Lesage, Long, Mackie (Edmonton), Mackie (Renfrew), Maclean (York), MacNutt, McCoig, McCrear, McCurdy, McGregor, McLean (Royal), McLeod, McQuarrie, Maharg, Manion, Marcille (Bagot), Martin, Merner, Mewburn, Middlebro, Molloy, Morphy, Mowat, Murphy, Myers, Nesbitt, Nicholson (Algoma), Nicholson (Queens), Pardee, Parent, Pelletier, Porter, Power, Reid (Grenville), Reid (MacKenzie), Richardson, Savard, Séguin, Shaw, Sheard, Simpson, Smith, Stevens, Stewart (Hamilton), Stewart (Lanark), Sutherland, Thompson (Weyburn), Thompson (Qu'Appelle), Trahan, Tudhope Vieu, Wallace, Wigmore, Wilson (Saskatoon), Wilson (Wentworth), and Wright. There are 126 members of the committee, and the quorum is 25.

Steel Rail Production in Canada.

A report on iron and steel production in Canada, during 1918, prepared by the Dominion Mines Department's Mineral Resources and Statistics Division, contains the following: The production of steel rails in Canada during 1918 was 162,747 short tons, against 46,645 short tons in 1917, and 90,123 short tons in 1916. The annual production from 1905 to 1915 varied between 200,000 and 560,000 tons per annum.

The exports of steel rails during 1918 were 12,952 tons, valued at \$575,062, an average of \$44.40 a ton, against exports during the nine months ended Dec. 1917 of 26,402 tons, valued at \$1,605,742, an average value of \$60.82 a ton. The imports of steel rails as per Canadian Customs records were 7,787 tons valued at \$404,417, an average of \$51.95 a ton, against imports in 1917 of 18,160 tons valued at \$689,197, an average of \$37.95 a ton. United States trade records show exports of steel rails to Canada during 1918 of 74,545 tons valued at \$3,163,201, an average of \$42.43 a ton and during 1917 exports to Canada of 54,083 tons valued at \$1,815,768, an average of \$33.57 a ton.

The annual import of steel rails from 1895 to 1905 ranged between 50,000 and 212,000 tons, averaging about 125,900 tons. From 1906 to date, however, or since the establishment of the rail mills at Sydney and Sault Ste. Marie, the imports have fallen to an annual average of about 60,000 tons, the variation being between a minimum of 10,420 tons in 1915 and a maximum of 177,041 tons in 1913.

Canadian National Railways Terminals in British Columbia.

The British Columbia Railways Department's report for the calendar year 1919 gives the following information as to the progress of construction on the C.N.R. in the province. Construction of the C.N.R. terminals was proceeded with during the year at Vancouver, Port Mann, New Westminster and Victoria, and estimates have been approved by the department for payment in accordance with the provisions of the Canadian Northern Ry. Terminals Act, 1913, Dec. 7, from Jan. to Nov, inclusive, amounting to \$340,740.66. The Vancouver terminals were opened for business Nov. 1, 1919. The construction of the terminals at Victoria was commenced, the operations being confined to a small area north of the Point Ellice bridge. The construction programme now under way on this area consists of grading yard tracks and building a 5-stall locomotive house, machine shop, coaling station, turntable and a temporary station and freight shed. The following table shows the estimated cost of the terminals at each place stipulated for construction, the amount of money available out of the guaranteed securities for their erection, the amount earned to Nov. 30, 1919, and the percentage retained by the government:

	Estimated cost.	Cash available.	Earned.	Returned.
Vancouver	\$4,308,455.10	\$4,262,458.21	\$3,313,979.46	\$24,167.86
New Westminster	2,202,601.50	2,179,113.97	1,822,458.41	83,507.69
Port Mann	1,218,424.62	1,200,570.16	1,175,129.92	
Steveston	353,985.89	349,896.73	286,892.54	
Patricia Bay	209,308.29	208,008.39	204,804.65	
Victoria	853,125.00	843,790.66	34,089.14	2,855.44
Total	\$9,141,503.40	\$9,043,843.12	\$6,837,354.15	\$110,539.90

An act passed in 1913 authorized the government to guarantee an issue of bonds not to exceed \$10,000,000 at 4½%, the principal repayable April 2, 1950, to aid in the laying out of terminals and the construction of buildings in connection therewith at Port Mann, New Westminster, Vancouver, Steveston, Union Bay on Vancouver Island, and at Victoria. The proceeds of the issue of bonds have been deposited to the credit of a special fund, and payments are made to the company upon certificate as the work proceeds.

Suggested Electrical Operation of G.T.R. in Montreal.

The Minister of Railways stated in reply to questions in the House of Commons, Mar. 15, that when the government gets entire control of the G.T.R. system the whole question of Montreal terminals will be considered. The questions asked were whether it is the government's intention to substitute electric locomotives on the G.T.R. from the western city limits to Bonaventure Station; to reduce the speed of trains to 6 miles an hour in Montreal, west of Bonaventure Station, and if it is the government's intention to establish an elevated railway on the G.T.R. to give additional protection to the public.

The question of the substitution of electric locomotives for steam locomotives for hauling trains on the G.T.R. from the western limits of the city to Bonaventure Station is under consideration by the Montreal City Council, a motion requesting the administrative commission to apply to the Board of Railway Commissioners for an order to that effect having been given notice of.

Telegraph, Telephone and Cable Matters.

The Great North Western Telegraph Co. has opened offices at Baker Brook, N.B., Paspebiac, Que.; Beardmore, Cronyn, Madoc and Ogahalla, Ont.; and Clair, Sask., and has closed its offices at Hibbard, Que.; Alexandria, Dorset, Gilford, Mattice and Lannin, Ont.

The Postal Telegraph Cable Co. has entered an action in the District Court, New York, against the C.P.R. Telegraphs, claiming that it has paid out in United States money to U.S. cable companies on behalf of the C.P.T. Co., \$65,058 for cable messages to South America, Asia, etc., and that while the disbursements are admitted, the C.P.T. Co. wishes to reimburse the company in Canadian money, thus placing on the Postal Telegraph Cable Co., a loss in exchange of about 10%.

W. Marconi, G.C.V.O., is reported to have made an offer to the British Government, to build a chain of wireless telegraph station at different points throughout the British Empire, and turn them over to the government at the end of 30 years, if so desired. The offer is said to provide that his companies shall carry out the construction, organization and operation of such stations, without

renment of a share of the profits, in return for protection and exclusive rights. It is proposed at the end of 30 years, it be decided to nationalize the system, the government should pay the original cost plus a tenth of the gross receipts during the 30 years of operation.

Among the Express Companies.

The Canadian National Ex. Co. has opened an office at Clair, Sask.

L. E. Cochrane has been appointed attorney, American Railway Ex. Co., at Vancouver, B.C., in place of J. E. Archer.

James Andrews, heretofore cashier, has been appointed agent, Canadian Ex. Co., London, Ont., vice James Overend, deceased. He is also acting for the American Ex. Co.

The Board of Railway Commissioners passed order 29,443, Mar. 10, granting Algoma Central and Hudson Bay Ry. Co.'s application for approval of combined shipping bill, way bill and receipts form for British-America Ex. Co.'s use.

The American Ex. Co. has opened a travel department at its Montreal offices and will handle steamship and railway tickets, and conduct and supervise travel generally throughout the world.

The American Railway Ex. Co. early in March placed an embargo on all express shipments from Chicago, Ill., except newspapers and funeral equipment, on account of a strike of express employees who asked for a wage increase of \$35 a month.

B. S. Murray, route agent Canadian Ex. Co., with headquarters at London, Ont., who received severe injuries to-

wards the end of February, when a train on which he was travelling was derailed, has been confined to his home in London for several weeks. He is making satisfactory progress and expects to resume his duties about April 1.

James Overend, who died in London, Ont., recently from pneumonia, was for 19 years agent Canadian and American Ex. Cos. there. He was born at Marchmont, near Orillia, Ont., May 28, 1864, was educated at Orillia public school and collegiate institute, and entered the Canadian Ex. Co.'s service at Orillia in 1879. Two years later, as train messenger, he had various runs on the Midland Division. In 1884 he was appointed train messenger on the Montreal-Toronto route, and travelled between those cities in that capacity until 1891, when he was transferred to the Toronto-Detroit route. In 1892 he was appointed joint agent of the Canadian and American Ex. Cos. at St. Thomas, Ont., where he remained until 1901, when he was appointed joint agent of the same companies at London, which position he held until his death.

The Canadian Ex. Co. has added a second story to its station warehouse at the corner of York-Station Sts., Toronto, necessary to provide this additional space the growth of business having made it to properly house the increased staff. On the second floor offices have been fitted up for the Superintendent, W. E. Norman, and Assistant Superintendent, P. H. Jones, and their staffs, also the clerical staff of the Station Agent, J. Ellison. Certain of the staff from the overcrowded city office on Yonge St. have been transferred to the station in order to handle valuables more conveniently to and from the trains. Large rooms have been provided to accommodate parcels on hand, awaiting delivery, and over without mark shipments, held until the owner can be found. There are also luncheon rooms for the station staff and sleeping rooms for train messengers who arrive during the night. The interior of the city offices at 55-57 Yonge St. is being overhauled and rooms fitted up for different departments dealing with the public under the General Agent, R. A. Mitchell.

The American Railway Ex. Co. issued the following circular to agents Mar. 15: All business destined to points in Canada must be prepaid, effective April 15. Tariff rates from offices in the U.S. to those in Canada and now, and always have been, based upon U.S. money, there being, under normal conditions, but a slight discount on Canadian currency. During the war the exchange rate began to increase and has been steadily rising, until now it is approximately 1½% with the result that on every dollar we collect in Canada we realize but 8c. With constantly increasing costs in operation we are in no position to absorb the loss in money value. The only way we can get 100c for each dollar tariff rate is to collect the amount in U.S. money. This is possible only through requiring prepayment of charges on everything forwarded through our service into Canada. Effective April 15, agents will require prepayment of charges on traffic forwarded as above. We are placing the effective date far enough forward to give shippers an opportunity to make any necessary arrangements with their customers in Canada to permit of prepayment for their account. Immediate advice of this regulation should be given to shippers who are sending frequent shipments to Canada.

Electric Railway Department

Electric Railway Fare Increases in the United States.

Increased fares in some form or another are a collective in all but 56 of the 47 cities in the United States having a population of 25,000 or more. The cash fare in 196 of them is more than 5c, in 118 of them more than 6c, in 64 of them more than 7c, and in 44 of them more than 8c.

In all but 15 of the 60 cities with more than 100,000 population, the cash rate is more than 5c, in 40 of the 62 cities between 50,000 and 100,000, it is more than 5c, and in 103 of the 142 cities having less than 50,000 it is more than 5c.

In Colorado, Connecticut, Delaware, the District of Columbia, Illinois, Maine, Maryland, Massachusetts, Missouri, New Hampshire, New Jersey, North Carolina, Oregon, South Carolina, Rhode Island and Virginia, the fares in every city of more than 25,000 have been increased. In Michigan and Pennsylvania, the fares in all but one city have been increased, while of New York's 22 cities having more than 25,000, but two remain without some form of increase.

Increases of 1919.—The trend towards higher fares is better illustrated, however, by a comparison of the statistics given herewith, with those covering the same cities as of April, 1919. These indicate that the process of readjusting street railway revenue to the situation caused by the depreciated dollar is proceeding all over the country, and that the 6c car fare is fast following into oblivion the 5c fare as insufficient to meet the still rising costs of operation.

In April, 1919, the cash fare in 156 cities was more than 5c. Today it is more than 5 cents in 196 cities. In 53 cities it was more than 6c, today it is more than 6c in 118 cities. In 24 cities it was more than 7c, today it is more than 7c in 64 cities. In 13 cities it was more than 8c, today it is more than 8c in 34 cities. In 73 of the 156 cities in which in April, 1919, cash fares higher than 5c were effective, further increases have been made, while in 15 other cities applications for higher fares are now pending.

A study of these statistics very plainly indicates the process by which is being restored the balance between the cost and the price of electric railway transportation. That costs have increased some 100% as between 1914 and the present time is now universally admitted. A part of this increase has been absorbed by the cutting down of expenses, but much the greater bulk of it can only be met by rate increases. In states where properly equipped regulatory commissions have jurisdiction over electric railway rates, there has been a consistent movement towards keeping these rates in proper relation to costs. This is notably true in Massachusetts, Pennsylvania, Missouri, and to a certain extent, in the up-state district of New York, in all of which cost has been the controlling factor in rate regulation.

Different Rates.—That a standard street car fare, in the sense of a fare common to all cities, is not to be expected, is evident from the fact that in the 273 cities covered by the statistics, there are no less than 75 different rates of fare, ranging from the top limit of 10c cash and ticket, effective in 12 cities, in-

cluding Boston, to 5c cash ticket, effective in Columbus, where, however, the city council has voted, subject to referendum, a 6c base fare. The cost of the service undoubtedly varies greatly in the different cities. In Boston, the fare under service at cost operation is 10c; in Cleveland under service at cost operation it is 5c, six tickets for 25c, 1c transfer. The fare in Boston has been increased 100% since 1914; in Cleveland the top limit of increase was 66%, and today is more than 40%, exact percentage being impossible to calculate because of the use of reduced rate tickets. Those who are familiar with operating conditions in the two cities have no difficulty in accounting for this difference. Cleveland, operating under a service at cost plan, Chicago and

mission, which believed that riding would be stimulated by a lower fare, reduced its fare from 6c to 5c for July, 1919. The result was a decrease of about \$20,000, or about one-seventh of the former total revenue.

Experiments Being Tried.—That the present period is a period of experimentation with different fare systems and varying rates of fare, is evident from the great variety of fare systems in effect. The zone system of fares seems to be growing in popularity. In April, 1919, ten companies were operating under some form of a zone system. At present, 27 companies are so operating. Between April, 1919 and the present time, the New Jersey zone experiment was made and failed, but to offset this failure, a zone system has been put in effect in Connecticut and has met with success.

One of the most interesting experiments now under way is that which is being tried by the public trustees operating the Eastern Massachusetts St. Ry. Co. Here, one of the largest operating companies in the country has partitioned its territory into fare districts, each with an important municipality as its center. The fare in each of these districts is regulated (on a service at cost basis), in accordance with the cost of operation in that particular district. The trustees have insisted that jitneys be regulated, so as not to interfere with the company's revenue, and in two cases where the communities failed to provide such regulation, have actually abandoned service for a time. In the 12 districts into which this territory has been divided, there are now four different rates of fare, indicating how costs of operation vary in various communities.

In Service at Cost Cities.—Twenty-one cities are now operating under service at cost agreements. In 10 the fare is 10c, cash and ticket; in one it is 10c cash, 8 1/3, ticket (good to traffic center only); in 6 it is 10c cash, 6 1/4, ticket (good to traffic center only); in one it is 10c cash, 6 cents ticket (monthly tickets); in one it is 8c cash, 7 1/7c ticket, 1c transfer; in one it is 7c cash and ticket, and in one it is 5c cash, 4 1/6c ticket, 1c transfer.

In two of the cities included in the statistics—San Francisco and Seattle—the street railway lines are municipally owned and operated. The fare on each is 5c and in each case the road is being operated at a loss. In San Francisco this loss now amounts to about \$11,000 a month, which is being withdrawn from the depreciation reserve. In Seattle, the system has been relieved of the payment of taxes and the city council has gone on record as favoring the assumption of the deficit in other ways than through the payment of taxes.

How Increases Were Granted.—In 150 of the 217 cities in which fares have been increased, the increase has been the result of the action of state commissions, in 44 of municipal authorities, in 2 of courts, and in 21 of automatic regulation under service at cost plans.

In Minneapolis and Denver, ordinances embracing service at cost principles have been defeated by the electorate. In Rochester, St. Paul, Toledo, Oakland, Syracuse, Norfolk, Berkeley and Ala-

Canadian Electric Railway Association.

Honorary President, Lieut.-Col. J. E. Hutchison, General Manager, Montreal Tramways Co.

Honorary Vice President, Acton Burrows, Proprietor and Editor, Canadian Railway and Marine World.

President, A. Gaboury, Superintendent, Montreal Tramways Co.

Vice President, C. Gordon Gale, Vice President and General Manager, Hull Electric Co.

Honorary Secretary-Treasurer, pro tem, A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Railway Co.

Executive Committee. The President, Vice President, and F. D. Burpee, Superintendent, Ottawa Electric Railway Co.; C. C. Curtis, Manager, Cape Breton Electric Co.; A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Railway Co.; Geo. Kidd, General Manager, British Columbia Electric Railway Co.; M. W. Kirkwood, General Manager, Grand River Railway Co. and Lake Erie & Northern Railway Co.; A. W. McLimont, Vice President and General Manager, Winnipeg Electric Railway Co.; R. M. Rendle, Superintendent, Quebec Railway, Light & Power Co.; Lt.-Col. G. C. Royce, General Manager, Toronto Suburban Railway Co.; C. L. Wilson, Assistant Manager, Toronto & York Radial Railway Co.

Official Organ—Canadian Railway and Marine World, Toronto.

Galveston operating under what are practically service at cost plans, are the only cities in which fares have been reduced from the top limit put in effect during the war.

It is impossible to forecast any point at which street railway fares will finally come to a rest in a state of equilibrium with costs. It has been frequently asserted that high fares result in an actual decrease in revenue, because of their tendency to discourage riding. Three instances in actual practice seem to disprove this contention. Under a 5, 7 and 8c fare, the Boston Elevated Ry. Co. accumulated progressive deficits; under a 10c fare it is not only earning the full cost of the service, but a surplus as well. In Worcester, where a zone system is in effect, the company, at the order of the Massachusetts Public Service Commission reduced its unit fare from 6c to 5c, during the month of Dec., 1919, as an experiment. The result was such a substantial decrease in revenue that the 6c rate was restored at the earliest possible moment. In Grand Rapids, Mich., the company, at the request of the city com-

meda, service at cost plans have been proposed. In Detroit and Duluth, public ownership proposals have been defeated by the electorate. In Detroit the building of a competing line has been proposed, and in Toledo, a proposition to purchase the existing system will be submitted to a vote.

In connection with the rates of fare now prevailing in U.S. cities, it must be remembered that all of these roads are operating upon a starvation basis. The cost of the service as reflected in fares now in effect, and the application for increases which are pending, represent in many cases service and facilities reduced to the minimum. New capital is not available and improvements and extensions are awaiting the restored credit of the companies. In a recent interview President J. J. Stanley, of the Cleveland Railway Co., stated that the reduction in fares in that city was made possible because of the greatly increased traffic, which is being carried with but little if any increase in track or equipment. Improvements to the amount of \$25,000,000 were urgently needed in Cleveland, he stated, and added that the addition of this sum to the company's capitalization, when made, would undoubtedly have an appreciable effect upon the rates of fare. The Detroit United Ry. withdrew its application for a 1c transfer charge because it was impossible under existing conditions to obtain the \$14,000,000 needed for improvements and extensions, so that the company was carrying a much larger number of passengers, with but few additions to its equipment. One of the reasons for the high rate of fare in Boston is that a large sum has been spent in rehabilitation.

This question of rehabilitation has a marked bearing upon the entire fare situation. Deferred maintenance is piling up on most of these properties. The longer it is delayed, the greater the cost when it is finally undertaken, and the higher the cost of operation during the period in which track, equipment and overhead are neglected. A small increase of fare made immediately at the time that it is needed is worth more than a large increase that comes after a long delay.—Harlow C. Clark, in Aera.

Dominion Power and Transmission Co.'s Annual Report and Meeting.

Following are extracts from the report for the calendar year 1919 of this company, which controls and operates the following properties: Hamilton Cataract Power, Light and Traction Co., Hamilton Electric Light and Power Co., Hamilton St. Ry. Co., Hamilton and Dundas St. Ry. Co., Hamilton Radial Electric Ry. Co., Hamilton, Grimsby and Beamsville Electric Ry. Co., Brantford and Hamilton Electric Ry. Co., Hamilton Terminal Co., Dundas Electric Co., Lincoln Electric Light and Power Co., Welland Electrical Co., Western Counties Electric Co.

In a comparison of the results shown by the report for 1919 with those of the previous years, attention is naturally called to the increase in both gross earnings and operating expense. Enlargements of earnings have been made possible, and produced by continued good service rendered by the company. The plants and equipments have been thoroughly well maintained, and operate very

satisfactorily. Increases in operating cost, have, as is well known, resulted from abnormal increases in the cost of labor and materials. The total of the company's reserves and profit and loss accounts have increased by \$164,354.25, bringing this total up to \$3,302,166.19. No new securities have been issued, and during the year outstanding bonds amounting to \$145,000 were retired.

The Hamilton Radial Electrical Ry. Co., after much contention, succeeded in obtaining an increase of the unreasonably low rates of fare formerly in force, but it is too early to determine how far effective relief will be afforded thereby. Conditions surrounding the present operation of all electric railways are such as to call for relief by way of a reasonable increase in fares. The public and the companies alike are interested and will be mutually benefitted by a fair and equitable basis of operation being acceded to and maintained.

Earnings and Expenditures.	
Gross earnings	\$3,477,386.38
Operating expenses	2,287,704.00
	\$1,189,682.38
Transferred to maintenance and renewal fund	35,116.09
	\$1,154,566.29
Bond interest and interest	\$ 543,815.86
	\$ 700,750.43
Profit and Loss.	
Balance from 1918	\$ 853,033.12
Surplus earnings, 1919	700,750.43
Bad debts, etc., written off	12,251.07
Dividends	533,413.00
Balance	1,008,119.48
	\$1,553,783.55 \$1,553,783.55

President J. R. Moodie, in speaking at the annual meeting, said: "The receipts were the highest in the company's history. Higher wages, increased cost of material and supplies, and the adverse exchange rate have increased operating expenses in greater proportion. The steam plant has proved a most valuable part of our system, as is evidenced by the service given under adverse conditions. In all likelihood we will find it advisable to add another generating unit, thereby increasing our capacity by 11,000 k.w., or 15,000 h.p. This means the installation of machinery only, as the present buildings are planned for such additions. With this installation, the first half of the plant as originally designed will be complete. The ultimate capacity of the steam plant when finished will be 60,000 k.w., or 80,000 h.p. With our water power development we will have a total of 130,000 to 135,000. Against much opposition we were successful in our application for increased rates on the radial railway. The low fares formerly prevailing were quite inadequate to meet the abnormal conditions through which we are passing. The change has not been long enough effective to show tangible results, but the board feels that in time it will prove beneficial. Inadequacy of fares of the street railway and some of the other electric railways of our system call for revision, in order not only to yield reasonable returns, but to admit of desirable extensions and improvements."

The directors and officers were selected as follows: President, Lieut.-Col. J. R. Moodie; Vice-President, Cyrus A. Birge; Treasurer, Jas. Dixon; Managing Director and Secretary, W. C. Hawkins; other directors, Lloyd Harris, C. E. Neill, W. E. Phin, Robt. Hobson and Jno. Dickenson. E. P. Coleman is General Manager.

Grand River Railway and Lake Erie and Northern Railway Betterments, Etc.

A press report states that the Grand River Ry. and the Lake Erie and Northern Ry., which give an electric railway route from Port Dover, on Lake Erie through Simcoe, Brantford and Galt to Preston, Kitchener and Hespeler, Ont., propose to spend \$1,500,000 on general betterments, etc. this year. In addition to additional rolling stock, for which \$671,000 is said to have been appropriated to buy 2 locomotives, 10 passenger cars, and an express car, it is said that the betterments will include new overhead wire on the Grand River Ry. lines, similar to that on the L.E. & N. Ry., a \$16,000 car barn at Preston, and a station to cost \$42,000, at Galt, in which the two companies' general offices will be located. For track betterments the larger proportion of the total appropriation will be spent on the G.T.R. A second track will be built from Preston to Hagey's Crossing, new rails will be laid, and at Kitchener \$60,000 is to be expended upon a revision of the location.

The new construction undertaken recently at Hespeler is reported to be nearly completed, and it is said that when the proposed betterments are completed, cars will be run through between Kitchener and Port Dover.

Motor Busses for London, Ont.—London City Council is asking the Ontario Legislature in an omnibus bill for power to issue debentures for \$30,000, without obtaining the ratepayers' assent to buy motor busses. The reason set out is "to provide transport in the city, which is urgent and necessary." Power is also asked to enable the City Council to operate motor busses.

Ottawa Electric Ry. representatives, supported by the Ottawa Board of Control, waited on the acting Premier, recently, and urged the adoption of a plan for fixing different times for opening and closing the various Dominion departments so as to decrease the congestion on the railway in the morning and evening. Consideration was promised, and a later report stated that the departmental officials were investigating the matter.

The London and Port Stanley Ry. is reported to have entered into a contract with the London, Ont., Gas Co. for hauling its coal cars from the railway to the gas company's yard. A contract is also reported to have been made for hauling coal for the G. T. R. in London from Port Stanley, as soon as the necessary additional locomotive power can be acquired. For some time past the G. T. R. has handled its coal from Grien, Ont., to London.

The Calgary, Alta., Municipal Ry. is reported to have received two of the second-hand cars bought recently in the United States, which will be put into service as soon as they have been overhauled in the railway shop. New steel wheels ordered six months ago for the repair of cars, are expected to be delivered shortly.

The Regina, Sask., City Council is reported as intending to submit a by-law to the ratepayers at an early date to provide for the operation of one-man cars on the Regina Municipal Ry. It is hoped to have them in operation by June 1.

Levis County Railway Gear Drive Snow Sweeper.

The Levis County Ry. Co., Levis, Que., has had a gear drive snow sweeper built by the Ottawa Car Manufacturing Co., which is the builders' standard truck type. Its dimensions are: Overall, 29 ft.; body, 27 ft.; width, 7 ft.; rail to top of body, 11 ft. 11 in. The body is of 4 half-ton steel and has members of 10 in. channel. The roof is of the built-up type, supported on steel cut lines. The interior of the body is of steel, natural finish. The truck is the builders' standard design, which is extra heavy; wheels are of rolled steel type, 30 in. The body is painted green.

motor shaft. The power is transmitted through the longitudinal shaft to a vertical shaft, by a bevel gear, which meshes with a similar gear, on the vertical shaft, located at the end of the cab on the underside of the bottom frame. This vertical shaft, carries the power down to the broom shaft, to which it is transmitted by another set of bevel gears, which are enclosed in a case which can be filled with oil. The upper gears are also enclosed in a sheet metal box which contains grease. The brooms are raised and lowered by hand. Two wheels are located in the cab, one for each broom

key. The distance from center to center of the outside broom shaft guides is 4 ft. 10 in. The brooms may be raised 10 in. from the track.

There is hung a scraper wing, made reversible, which is lowered and raised by lever arrangement inside of cab, being arranged so that it may swing out from the side of the car by means of chains. The wing is a $\frac{1}{2}$ in. plate, 2 ft. wide by 6 ft. long. The radial motion is controlled by a hand wheel, and vertical shaft, connected with ratchet and pawl, so the wing can be set at any angle. It is said that this sweeper is the first of its kind to be built in Canada.

Electric Railway Notes.

The Windsor, Essex & Lake Shore Rapid Ry. has bought 3 second-hand passenger cars.

The Nova Scotia Tramways and Power Co. has received 100 of its new one-man P.A.Y.E. cars, which will at first be operated on the belt line.

The Regina, Sask., Municipal Ry. is equipping all its cars with signs at the rear, so that the destination can be learned from the rear as well as from the front.

The Birmingham, Eng., City Council is reported to have decided to buy 3,000 tons of steel rails for its municipal tramways service, in the U. S., at £24 10s a ton, shipment to commence about the end of April, and be completed in June.

To enable the London Railway Commission to provide an additional electric locomotive and passenger cars for increased business, the London, Ont., City Council is applying to the Ontario Legislature, in an omnibus bill, for power to issue \$105,000 of debentures without obtaining the ratepayers' assent.

The Cape Breton Electric Co.'s car barn at Sydney, N. S., was damaged by fire, Mar. 6, and two cars, with a quantity of other equipment, were destroyed. The loss is estimated at \$50,000, which is said to be covered by insurance. As there was other rolling stock in reserve there was no interruption of the car service.

T. H. McCauley, while on his way from Calgary, Alta., to St. John, N. B., to enter on his duties as General Manager, New Brunswick Power Co., stopped off at Regina, Sask., and explained the operation of one-man cars to the city council. A. A. Dion, Superintendent Moose Jaw Electric Ry., also attended the meeting.

The British Columbia Electric Ry. mechanical department organized a social club recently at Vancouver, with the following officers: Hon. President, G. A. Dickie, master mechanic; President, C. Spooner; Treasurer, C. Donald; Secretary, W. Watt; committee: J. Davison, J. Morgan, J. Dew, W. Ford, and W. Stiles.

The Quebec Superior Court at Montreal ordered the Montreal Tramways Co. to pay the Compagnie d'Immeubles de Montreal \$2,000 as compensation for its right of way over the plaintiff's land on Queen Mary road, Cote des Neiges. The right of way was granted to the Montreal Park and Island Ry. by the original owner of the land in 1895 subject to certain conditions. These conditions had not been fulfilled, and as the provisions of articles 776 and 791 of the Civil Code, which apply to gifts of right of way had not been carried out the railway company has to pay for the right of way \$2,000 and costs.

Levis County Railway Gear Drive Snow Sweeper (without the brooms).

with gold numbers; the truck is painted black.

A new departure in this sweeper is the gear drive, for the broom shaft. This method of driving the brooms is claimed to be a bigger step in the development of the sweeper than any of the other improvements. The accompanying illustration shows the broom shaft without the brooms and shows the gear box at center of shaft. The motor, which drives the brooms, is of the Westinghouse type, and is mounted at the center of the underframe inside the cab. The power from it may be taken towards either end of the car, by a longitudinal shaft, fitted with a pinion on each end of the

at opposite ends. A vertical shaft with a 21 in. hand wheel, with pinion on the opposite end, in mesh with a large gear on another vertical shaft, furnishes power to raise and lower the broom shaft by arrangement of chains attached at the end of the broom shaft, connected to the large gear shaft. The brooms are braced at each end and center by heavy bracket guides, with angle braces, through which a cylindrical rod is passed, thus allowing the broom movement in a vertical direction, which is controlled by the hoisting apparatus. At the center guide, provision for raising and lowering the broom is made by allowing the power shaft to slide up and down on its

The Montreal Tramways Commission is reported to have arranged a new system of stops for the Montreal Tramways Co.'s cars, to be put in operation May 1. The plan is to have stops at no shorter distances than 400 to 500 ft. from each other. The new plan is reported to have been tried with satisfactory results on Notre Dame St. East, the time of making the trip from the Place St. Annes to the Canadian Vickers plant having been cut down from 40 or 45 minutes to 20 or 25 minutes, or about one-half.

The Ontario Railway and Municipal Board is reported to have advised the St. Thomas, Ont., City Council that one-man cars could be operated successfully on the municipal railway, and would probably assist in cutting down the present loss in the operation of the line. In view,

however, of the fact that the electric railway crosses four steam railways not under Provincial control, it would be necessary to obtain the Board of Railway Commissioners' consent before one-man cars could be operated.

The Quebec Superior Court gave judgment at Montreal recently for \$277 and costs against the Montreal Tramways Co., as damages for injuries sustained by Mrs. L. Colbie, Feb. 12, 1917. The plaintiff was stepping aboard one of the company's cars, when it started and she was thrown to the ground and injured. The company claimed that the signal to start the car was given by boys standing on the rear end, but the court decided that it was the conductor's place to have watched the boys' actions, and that his failing to do so made the company liable.

The Westmount, Que., Police Magistrate, Mar. 16, fined George Houde, a Montreal Tramways Co.'s conductor, \$5 and costs recently for assaulting a passenger, Mr. H. Hayes. The facts were admitted, the only difference being whether or not the conductor was within his rights in ejecting Hayes from the car. Hayes transferred from a Mount Royal Ave. car, to a Windsor St. car, of which Houde was conductor, telling the latter he wished to keep his transfer, as he wanted to take a car going up Claremont ave. The conductor argued that Hayes could not use the transfer on his car, an altercation ensued and Hayes was forcibly ejected by Houde. The magistrate held that a passenger is entitled to use his transfer on whichever route he wishes where there are two or three routes.

Electric Railway Employees' Wages, Working Conditions, Etc.

Hamilton St. Ry.—Employees are reported to have decided, Mar. 6, to ask for a new agreement of the wage schedule, in which is as follows: Per hour, first six months, 50c; second six months, 55c; second year, 60c; third year and after, 65c. Men operating snow plows to be paid 5c an hour extra, and to be provided with free overalls. The men also decided to ask for one week holiday a year with full pay.

London and Port Stanley Ry.—Conductors and motormen, who now get a maximum of 48c an hour are reported to have asked for an increase to a maximum of 60c.

London St. Ry.—Conductors and motormen, whose agreement expires May 1, under which they are paid 39c an hour for the first year, 42c for second year, and 44c for third year and afterwards, have applied for an all round increase of 21c an hour, an 8-hour day, time and a half for overtime on week days, and for all time on Sundays and holidays. The men's representatives had a conference with the company's officials Mar. 11, and a press report states that the officials declined to open up the question before May 1, when the present agreement expires. J. Colbert, president of the local union, is reported to have said that the meeting had been arranged to see if the company would take up the question on April 1, and on its refusal to do so the question of wages was not discussed. It is reported that the men have threatened to go on strike May 1 if the increases asked for are not granted. The mayor and an alderman are reported to have had an interview in Toronto, Mar. 20, with Sir Adam Beck, and that together they informally discussed the matter with the Ontario Railway and Municipal Board, the chairman of which pointed out that an increase of fares could only be granted with the ratepayers' consent. The board could, under certain conditions, take possession of the line and operate it, and a London press report states that the city council will ask the board to do so if a strike occurs.

Montreal Tramways Co.'s employees are reported to have under consideration a proposal for a reduction of hours, and a meeting was expected to be called about the end of March to reach a definite decision. At present the day's work runs to 12 hours, for 7 days in the week, for the old hands, with from 3 to 5 hours work a day for spare hands. The suggestion is that an 8-hour day be given at the present maximum rate of wages of

48c an hour. A press report says that the men at a meeting on Mar. 23, decided to ask for an 8-hour day and a continuance of the present average weekly earnings, which the report says would mean a rate of about 75c an hour.

Nova Scotia Tramways & Power Co.—Negotiations between the company and its employees for a new wages scale are in progress.

Niagara, St. Catharines and Toronto Ry.—Canadian Railway and Marine World of March gave full particulars of the Board of Conciliation's unanimous award, which the employees, though their representative on the board signed the report, refused to adhere to. As a result negotiations with the management, the employees finally agreed to accept the board's report for the period from Aug. 31, 1919, to Feb. 29, 1920 as amended to correct clerical errors with the proviso that it would not reduce the wage of any employee during that period. A new agreement was entered into to date from Mar. 1, and extends to Oct. 31, 1920, and thereafter provided that either party may after Sept. 30, 1920, give 30 days notice of its desire to open the agreement for revision. The following table shows the rates of wages paid prior to the Conciliation Board's award, the rates decided on by the board, and the rates now in force under the new agreement:

	Old rate	Conciliation	New rate
Passenger conductors and motormen—			
First year	39c	36-39c	40c
Second year	41c	41c	44c
Third year	43c	43c	46c
Fourth year	45c	45c	48c
Fifth year	47c	47c	50c
Tenth year	47c	47c	50c
Freight conductors and locomotives—			
First year	47c	47c	50c
Second year	47c	47c	50c
Third year	47c	47c	50c
Fourth year	48c	48c	52c
Fifth year	50c	50c	52c
Tenth year	50c	50c	52c
Freight brakemen and policemen—			
First year	50-41c	41c	41c
Second year	43c	43c	43c
Third year	43c	43c	45c
Fourth year	43c	43c	45c
Fifth year	43c	43c	46c
Tenth year	43c	43c	46c
Armature winders—			
First year	37-48c	42-53c	42-53c
Blacksmiths	37-48c	42-53c	42-53c
Car pit repairmen	37-44½c	39-48c	39-48c
Truck repairmen	35-14½c	40-47c	40-47c
Painters	37-44½c	42-48c	42-48c
Carpenters	39-11½c	42-48c	42-48c
Bridge carpenters	37-44½c	40-47c	40-47c
Car cleaners	34-41c	34-41c	34-41c
Watchmen	\$60-\$90	\$70 up	\$70 up

Substation operators	\$100	\$105	\$105
Linemen	37½-44c	45-50c	45-50c
Groundmen	37-41½c	37-42½c	37-42½c
Section foremen	\$100	\$100	\$100
Section men	35c	to \$110	to \$110
Towermen	35c	35-40c	35-40c
		\$80-\$90	\$80-\$90

Nine hours are to constitute a day's work for all passenger trainmen. Overtime to be paid at rate of 15c an hour additional for the first hour over 9 hours, and at the rate of time and a half for all time over 10 hours. Conductors and motormen to receive 25c extra a day, or part thereof, for training students. Company to pay half cost of uniform, cost not to exceed \$40, for each trainman of only one year service, and thereafter, if required, to pay half cost of one uniform a year. Freight trainmen shall have a minimum of 10 hours a day for week days for each day used. On Sundays or holidays, if required, they will be paid a half day for 5 hours service, or less, or a full day for service beyond 5 hours. Freight trainmen will be paid 15c an hour extra for the first hour or part thereof after 10 hours service, and time and a half after 11 hours service. Crews of all freight motors, without cars, shall consist of at least two trainmen. Crews of freight trains of one or more cars shall consist of not less than 3 men, and a fourth man shall be supplied where the freight is heavy enough to require it. Minimum wages for baggagemen shall be \$90 a month; shedmen \$75, and watchmen \$70.

Ottawa Electric Ry. employees are said to be considering the details of a new wage schedule, etc., which they propose to ask the company to adopt, and that it will call for a maximum rate of 65c an hour.

St. Thomas Municipal Ry.—The St. Thomas, Ont., City Council's Street Railway Committee has under consideration an application of G. F. Doherty, Manager of the municipal railway for an increase of salary from \$120 to \$140 a month, and an application from the conductors and motormen for an increase of 10c an hour.

Winnipeg Electric Ry.—A Winnipeg press dispatch, of Mar. 17, states that the company's conductors and motormen, whose agreement will expire April 30, are asking increases to bring their wages up to from 60c to 80c an hour, against 46c to 55c now paid on city lines, and 51c to 60c now paid on interurban lines on week days.

A Serious Street Car Problem in Winnipeg.

The Winnipeg Electric Ry. has jumped the traffic which are experienced on this route in the early morning problem, continuing street car operation in Winnipeg, and explains why the company is continually appealing to shoppers to start their journey early in the day. From records which show that by far the greatest bulk of travel is confined to about four hours of the day, from 7.30 to 9.30 a.m., and from 4.30 to 6.30 p.m. These records also show that many of the cars the company must have in order to take care of these hours of heavy traffic are lying idle for the greater part of the day, and that apart from the rush hours, traffic is very considerably less than that between 7 and 9 a.m. Every available car and

down to seven in the morning over a period of 2½ hours, their ranks heavily reinforced with shoppers, all make tracks for home, and in consequence there arises a peak demand for transportation. Such a demand if applied to the post office, telephones, banks, theatres, stores office elevators, etc., would undoubtedly swamp their normal facilities and inevitably require many people to wait their turn. Serving them all at once would be out of the question. But in spite of one of the most difficult operating winters ever experienced in Winnipeg the company has been able to cope with this peak demand and give a satisfactory service. This chart only indicates the conditions obtaining on Port-

land problem, are taking facilities which rightfully belong to the workers of a great city, and are making travel uncomfortable for themselves and others.

The Moncton Tramways, Electricity & Gas Co., which operates in Moncton, N.B., and has its office at Pittsburgh, Pa., held its annual meeting at Moncton recently. The directors and officers for this year are: President and General Manager, E. B. Reeser; Vice President, E. O. Bartlett; Assistant Secretary and Assistant Treasurer, E. A. Cummings; other directors, Robt. Law, Jr., F. H. Minard, J. A. L. Henderson and T. O. Sullivan; Treasurer, J. T. Furlong; Secretary, J. A. Dunn. The Moncton City Council is applying to the New Brunswick Legislature for an act providing for a plebiscite on the question of taking over the Company's electric lighting plant and street railway, and to provide for making arrangements for taking the same over. (Mar., pg. 145)

Montreal Tramways Co.—A dividend of \$2.50 for the quarter ended Sept. 30, 1918, was declared recently to be paid Mar. 30. This is the second dividend paid on account of arrears. A press report states that 12½% of dividends are now in arrears.

The Edmonton Radial Ry. is reported to be selling by tender approximately 25 tons of old rolled steel car wheels.

Z. A. Thibodeau, formerly secretary and chief clerk of the Montreal Tramways Employees Mutual Benefit Association, was committed for trial in the Montreal Enquete Court, Mar. 16, on charges of embezzling \$19,688.89 of the association's funds, and forgery.

The Quebec Superior Court gave judgment recently for \$330 damages and costs against the Montreal Tramways Co. in an action brought in the name of Joseph Parent, by his mother. The boy, who is 12 years of age, was a passenger on a Papineau ave. car, July 25, 1918, when the conductor tickled him in the ribs, causing him to lose his hold of the rail and to fall off. His head struck the pavement, causing injuries. The conductor claimed that the boy was trying to get off the car when it was in motion, and he tapped him on the hand with a pad of tickets to warn him, but notwithstanding this the boy jumped off the car before it came to a halt and fell on the street. Justice Tallier held that it was the conductor's fault that the boy lost his hold on the hand rail and fell from the car, and that the company was liable for the fault of its servant.

CHART SHOWING NUMBER OF PASSENGERS CARRIED (IN HALF HOURLY PERIODS) BY CARS PASSING COLONY & PORTAGE EASTBOUND

CHART SHOWING NUMBER OF PASSENGERS CARRIED (IN HALF HOURLY PERIODS) BY CARS PASSING COLONY & PORTAGE WESTBOUND

was in the service of required to handle the traffic during the rush hours.

The "sea" of street car traffic, with its regular ebb and flow, is graphically shown by these charts. On the east-bound chart—people coming into the city on Portage Ave.—that high water mark is reached by this tide between 8 and 9 a.m., while from 1 to 3 p.m. there is a rise consequent upon the office people returning from lunch, and the "invasion" of the shoppers. The only other rise is between 7.30 and 8.30 p.m. when the people are going to the theatres.

On the westbound chart the first substantial rise is recorded at the noon hour, while at 5 p.m. the record high water mark is reached with a suddenness almost overwhelming. Between 5 and 6.15 p.m. tradesmen and employees who came

age Ave., a similar condition prevails on practically all routes in the city.

The problem the company is up against in properly taking care of the extreme situations indicated on the charts, and adjusting service to meet this ebb and flow in traffic, must be apparent to all. With the abnormal weather conditions in Winnipeg in winter, the company's difficulties are accentuated. Little wonder then, that its officials are continually appealing to shoppers to start their homeward journey before 4.30 p.m., and so leave the company free to provide service for the workers and those who must use cars between 5 and 6.30. The company's hands are full in attending to the requirements of the latter, and shoppers who linger down town until 5 and 5.30 p.m. are adding to an already diffi-

Mainly About Electric Railway People.

R. A. Brown, heretofore City Electrical Engineer and Superintendent of the Electric Light Department, Calgary, Alta., has been appointed Superintendent of the Calgary Municipal Ry., and will retain his duties as Electrical Engineer for the city. He has been in the city's service for the past 10 years.

Geo. Cameron, one of the first motorman employed by British Columbia Electric Ry., and latterly in charge of the company's mail service, died in Vancouver, Mar. 11.

T. Clarke, heretofore Inspector, Niagara, St. Catharines & Toronto Ry., has been appointed Assistant Superintendent, succeeding A. F. McGill, resigned to enter the Hydro Electric Power Commission of Ontario's service.

G. Combra, heretofore general foreman, Calgary Municipal Ry., has been appointed Assistant Superintendent.

H. Francis, heretofore conductor Niagara, St. Catharines & Toronto Ry., has been appointed dispatcher, succeeding H. Brooker, resigned to enter the Hydro Electric Power Commission of Ontario's service.

Ernest P. Fredericks, who was appointed Publicity Director of the Association of Holders of Public Utilities Securities, at Toronto, in 1919, and who subsequently opened an office in Ottawa as advisor of public utilities, operating and rate investigation, and for making reports, surveys, appraisals, etc., has been appointed Secretary of the Board of Trade, Belleville, Ont.

A. G. Graves, one of the Calgary, Alta. city commissioners, who, among other things, has charge of Calgary Municipal Ry., has had his salary advanced to \$4,250.

W. C. Hawkins, Managing Director & Secretary, Dominion Power & Transmission Co., Hamilton, Ont., who has not been very well for some time, left there Mar. 15, to spend some time in the south, but became worse on reaching Washington, D.C., and had to return to Philadelphia for treatment.

J. A. House, of St. Catharines, Ont., has been appointed Manager, Guelph Radial Ry., at a salary of \$2,400 a year from Mar. 1. He was nominated by the Hydro Electric Power Commission of Ontario, and will operate the line for it after it takes control on July 1.

L. M. Jones, heretofore City Engineer, Port Arthur, Ont., and formerly on the Winnipeg Electric Ry.'s engineering staff, is reported to have been appointed Chief Engineer of a paving construction company.

William Oscar LeBar, who has been appointed Superintendent, Montreal and Southern Counties Ry., St. Lambert, Que., was born at Ste. Ursule Falls, Que., April 26, 1879, and entered railway service April 5, 1897, since when he has been to May 1, 1899, conductor, Montreal Terminal Ry., Pointe aux Trembles, Que.; May 1, 1899 to Feb. 3, 1902, depot clerk, same road, Maisonneuve, Que.; Feb. 15, 1902, to May 15, 1903 motorman, Union Rd., Providence, R.I.; May 20, 1903 to Aug. 1, 1904, agent, Montreal Terminal Ry., Montreal; Aug. 1, 1904 to June 1, 1906, Assistant Superintendent, same road, Montreal; June 1, 1906 to Dec. 15, 1907, Superintendent and Accountant, same road, Montreal; Sept.

15, 1907 to Feb. 1, 1913 in freight department, Montreal Tramways Co., Montreal; Mar. 17, 1913 to Jan. 19, 1920, Chief Dispatcher, Montreal and Southern Counties Ry., St. Lambert, Que.

H. R. Mallison, formerly Managing Director & Secretary Treasurer, Nova Scotia Tramways & Power Co., has been appointed Purchasing Agent, and Secretary to President, Montreal Tramways Co.

T. H. McCauley, whose appointment as General Manager, New Brunswick Power Co., St. John, N.B., was announced in our last issue, was born in Peel County, Ont., in 1872 and moved to Prince Arthur's Landing, now Port Arthur, Ont., in 1880. He entered Bell Telephone Co.'s service at Port Arthur in 1889, and served as lineman, and from 1891 to 1902 as local manager, for Port Arthur and

T. H. McCauley.
General Manager, New Brunswick Power Co.

Port William, and from 1894 to 1902 was also Superintendent, Port Arthur St. Ry. and Electric Light Co., the first named position being relinquished in 1902. In 1902 he installed the Port Arthur municipal telephone system and continued to 1909 as superintendent of the street railway light, power and telephone systems there. In 1909 he was appointed General Superintendent of Construction, Calgary Municipal Ry., Calgary, Alta., and on completion of the line he was appointed Superintendent, which position he occupied to the date of his resignation, Feb. 20, 1920. In 1914 he began the operation of what are known as the McCauley type one-man safety cars, and by 1917 all of 75 municipal railway cars, varying from 32 to 46 ft. long, were converted to that system. He was also the founder of the Bowness Amusement Park at Calgary, which, apart from making a profit on its operation, contributed considerable extra revenue to the municipal railway. On leaving Calgary, he was presented, on behalf of the city council

and the street railway commissioners, with an address, a cheque for \$2,500 for extra services rendered, and an engraved silver tray, and on behalf of the street railway employes with a canteen of silver. Mrs. McCauley was presented with a silver vanity case by the regent and members of the Col. Macleod Chapter, I. O. D. E.

W. E. Massie, heretofore General Superintendent, Sudbury-Copper Cliff Suburban Electric Ry., and formerly in the Toronto Ry. and Toronto and York Radial Ry. mechanical departments has been appointed Master Mechanic, Niagara, St. Catharines and Toronto Ry., St. Catharines, Ont.

Alexander Montgomery has been appointed acting superintendent, Nipissing Central Ry., Cobalt, Ont., vice Kenneth McDonald, resigned.

Donald Stuart Robertson, purchasing agent and secretary to the President, Montreal Tramways Co., died at Westmount, Que., Feb. 27, aged 69, from pneumonia. He was born in Glasgow, Scotland, and came to Montreal when 24 years old. He was in the G.T.R. service at Point St. Charles, Montreal, for 25 years, and then went to the Montreal St. Ry. A daughter died of influenza a fortnight before he died. Another daughter is the wife of F. M. McRobie, General Manager, Canadian Transfer Co., and a son, Maxwell, is in the C.T.C. real estate department.

J. Weller, heretofore motorman, Niagara, St. Catharines & Toronto Ry., has been appointed Inspector, succeeding T. Clarke, promoted to Assistant Superintendent.

Hydro Electric Railway Construction Plans.

With the return of Sir Adam Beck, Chairman of the Hydro Electric Power Commission of Ontario, from England, it is expected that the plans for the building of electric railways in the province will be pushed forward, and a definite construction programme laid out. Sir Adam landed in New York Mar. 13, and came direct to Canada, and went on to London, Ont. A Toronto paper Mar. 15 published an article purporting to give his plans for the immediate construction of electric railways, under the bylaws passed by the various municipalities in regard to which he is reported to have said in London: "It is the Hydro-Electric Power Commission's wish to work in friendly co-operation with the Dominion Government and to avoid unnecessary duplication by acquiring lines which Dominion cabinet ministers have said will be made available to the Hydro through amicable negotiations."

Sir Adam subsequently went to Toronto, where he was the chief guest at a luncheon given by the city council. He is reported to have said that the Hydro Electric enterprise is so deep-rooted in the hearts of the people that there could be no fear for its success. He regarded the vote of 15 to 1 for the Toronto Eastern Ry. as a clear indication of this. All that is asked for the people is their moral support.

There is no need for worry by the government as to the financing of hydro-radial railways. That is the duty and province of the commission, through

cost \$10,000,000 has been reported in the press, and which is backed by the government. It is also reported that the government will not be going to assist the Toronto and York Radial Ry.

since 1918 for the acquisition of the Metropolitan corridor, and stated that the commission is of the opinion that the best plan to improve the whole of the Toronto and York Radial lines, and that the matter

would be taken up during the following week. The Premier of Ontario in the course of an address, promised the government's support in the developing of water power.

Electric Railway Projects, Construction, Betterments, Etc.

Brantford Municipal Ry.—A press report states that it is proposed to build an extension of the Hastings Line in Brantford, Ont. (Dec. 1919, pg. 670.)

British Columbia Electric Ry.—We are officially advised that the extension on Granville St. south, Vancouver, to connect with Kerrisdale, will be a single track, one mile long, laid with 60 lb. A.S.C.E., on gravel ballast, with fir ties. Granville St. is paved over this route, and the new track will be laid on the south side of the paving. It is expected that this line will be in operation by April 1st. A press report states that track laying was started Mar. 16.

The double tracking of Hastings St. East, from Renfrew St. to Boundary Road, will be one mile long, laid with 60 lb. A.S.C.E. rail, on gravel ballast with fir ties. This street is not paved.

On the Fraser River Valley Line the company is spending about \$100,000 upon betterments. Those wooden trestles, which have been in use since the line was built, are being filled. We are advised that nothing has been decided with regard to the electrical equipment of this line. In 1913, the cars operated on the line were equipped for 1,200 volt operation, but the change was not completed. A recent press report stated that it was proposed to extend this line to White Rock, B.C., and Blaine, Wash., involving the use of about 8 miles of the Great Northern Ry.'s abandoned tracks. We are advised that in response to the petition asking for the time the company had a survey made, with a view of ascertaining the cost and probability of making the extension, and that this is as far as the matter has gone.

We are further advised that complete plans for the expenditure of the \$1,000,000, which, according to a recent interview with Geo. Kidd, General Manager, is appropriated for the year, are too indefinite at present to say anything about. (Mar. pg. 145.)

Calgary Municipal Ry.—Tenders will be received to April 15 for the construction of manganese points and crossings for the Calgary Municipal Ry. (Mar. pg. 145.)

Calgary Municipal Ry.—A press report states that R. A. Brown, the new superintendent, has been going over the lines to settle on the repair work that will have to be done during the summer. Another press report states new rails are about to be bought for the extensions on the North Hill, and also for some further extensions on Centre St., near the heart of the city. (Mar. pg. 145.)

Edmonton Radial Ry.—A press report, states it is generally admitted that the Radial Railway tracks and the rolling stock are in bad condition, and that a large expenditure is necessary to improve them.

Edmonton Radial Ry.—A press report states that tenders are under consideration for the supply of 7,000 jack pine or spruce ties. (Mar. pg. 145.)

Fort William Municipal Ry.—We are officially advised that tenders are about to be invited for rebuilding car barns on

the old site recently destroyed by fire. The new buildings will be practically of the same dimensions as the old, with the exception that a stores building will be built as an addition to the barn. The plans and specifications for the new buildings call for fireproof construction throughout; no steel will be used, all roof trusses, columns, window frames, etc., will be of re-inforced concrete, and the roof will be of sheet corrugated asbestos. A. L. Farquharson, Fort William, Ont., is manager. (Dec., 1919, pg. 690.)

Hull Electric Co.—We are officially advised that the company is remodeling its power substation at Hull, Que. The plant to be installed consists of two 1,200-k.v.a., 3-phase, on installed water cooled transformers, primary voltage 11,000, secondary voltage 2,200. These transformers, together with high tension and low tension switchboards, are being manufactured by the Canadian General Electric Co. It is expected that the apparatus will be installed and in operation early in May. (Mar., pg. 145.)

London and Port Stanley Ry.—Sir Adam Beck attended a meeting of the London, Ont., City Council, Mar. 15, and referred to projected expenses for the improvement of the railway. He is reported to have said: "We must have \$5,700 to rebuild an overhead bridge at St. Thomas. Then for laying 80 lb. rails to replace some lighter ones on some of our switches an expenditure of at least \$14,000 will be necessary, and \$4,000 is needed for some other track repairs in connection with the switches. The double tracking which we must do in some congested portions of our line will entail an outlay of \$15,000. New scales will cost us \$8,500; the repairs to the ferry slip dock at Port Stanley will cost \$8,500, and a new locomotive will necessitate an outlay of \$75,000."

P. Pocock, Vice Chairman London Railway Commission, is reported to have stated Mar. 16 that the building of a second track through St. Thomas and laying 80 lb. rails in those parts where there are now 55 lb. rails, will be gone on with as soon as the necessary material can be obtained. The line in St. Thomas will be provided with a second track as far as Pinafore Park, and it is proposed eventually to carry it as far as White's Station. The work will be done by the company's own forces. (Mar., pg. 145.)

London St. Ry.—The London, Ont. City Council is applying to the Ontario Legislature in an omnibus bill, for authority to enter into an agreement with the company to change its present track on Central Ave., between Richmond St. and Wellington St., to the centre line of Central Ave. (Mar., pg. 145.)

Montreal Tramways Co.—A press report states that the company will start construction this spring on an extension of a line on Park Ave. This report is somewhat premature as the proposed extension is part of a plan for a line to serve Mount Royal in place of the old incline railway. The project was before the Montreal Tramways Commission in

February, when it was left over for further consideration, and the preparation of plans and estimates for an alternative project. The Montreal Administrative Commission was reported Mar. 5 to have had before it plans for a new incline railway of 370 ft., with an approach from Park Ave., and a projected line of the Montreal Tramways Co., from Park Ave. is reported to have been considered on Mar. 8. It was stated on the latter occasion that owing to the winter conditions on Mount Royal it was impossible for surveys to be made, but that they would be made as early as possible in the spring, after which the commission would be in a position to decide what to do.

A delegation from St. Michel de Laval waited on the Montreal Tramways Commission Mar. 11, to urge the building of an extension of the line on Iberville St., for about a mile. The commission is reported to have advised the delegation that before any such undertaking could be assured by the Montreal Tramways Co. there would have to be a guarantee that any loss would be made good. Article 36 of the company's contract is as follows: "Outside of the uniform-tariff territory, the cost of construction of any new line or of the extension of any existing line, or of their operation, shall not be a burden on the revenues of the company, in the sense that the revenues of such new lines must be sufficient so as not to affect unjustly the passenger and freight tariff on the other parts of the company's system." (Mar., pg. 145.)

A press report states that a contract has been let to F. A. Grothe for building a sub-power station near the car sheds on Cote St., Montreal, at an estimated cost of \$60,000. It is reported that on the completion of this substation the Williams St. steam plant will be done away with, thereby affecting an annual saving of about \$70,000.

Quebec Ry., Light and Power Co.—We are officially advised that negotiations are in progress in connection with the following extensions, but that no decision has yet been reached. An extension from the present line on Lamontague Ave., Jacques Cartier Ward, Quebec, on Charlesbourg Rd. as far as the city limits, 0.87 mile, and for the continuance of the line from the city limits to Charlesbourg church, 1.74 miles. It is suggested that the line, at a later date should be continued to Loretteville, Que. (Mar., pg. 81, see also Quebec Country, Mar. pg. 87.)

Nipissing Central Ry.—We are officially advised that the projected extension from Liskeard, Ont., to the Quinze River, Que., if built, will be an extension of the Nipissing Central Ry., and not of the Timiskaming and Northern Ontario Ry., as recent press reports stated. Another press report states that the Ontario government, which owns both lines, has decided to make the extension as soon as the owners of the pulpwood limits are prepared to develop the water power and establish a paper mill. (Mar., pg. 145.)

Port Arthur Civic Ry. work shops portion of the car barn at Port Arthur,

Ont., was destroyed by fire Mar. 9, together with three single end, double truck cars, and a single truck, one man car. We are officially advised that no definite plans have been made as to rebuilding the portion of the barn destroyed, and that no additional cars will be purchased for the present, as there is sufficient rolling stock on hand to meet existing requirements. A press report states that a consultation will be held with the Fort William authorities as to the building of joint barn facilities. The Fort William Municipal Ry. car barn was burned a few months ago. (Feb., pg. 81.)

St. Thomas Municipal Ry.—A press report states that the St. Thomas, Ont., City Council proposes to extend the municipal railway built in the city.

Toronto Civic Ry.—After having been before the Toronto City Council on several occasions recently, the question of the construction of the proposed Mount Pleasant car line was again held up on Mar. 22. The Council decided by a vote of 15 to 10 to build the line at an estimated cost of \$1,060,000, thus reversing its decision of Mar. 8. Application is being made to the Ontario Legislature for authority to issue debentures to pro-

vide funds for building the line.

Transcona and Winnipeg.—The Manitoba Legislature has under consideration a bill authorizing the town of Transcona to build a street railway, or establish a motorbus service to Winnipeg. The building of an electric railway between Transcona and Winnipeg has been under discussion for some years, and one or two contracts were entered into for construction, but nothing further was done. A press report states that at a public meeting held Mar. 12, it was decided to arrange for building an electric railway at a cost of about \$300,000. It is proposed to ask the Manitoba Government for a subsidy in aid of construction. The Winnipeg Electric Ry. will, it is stated, provide the cars, and will operate the line, but the town of Transcona will pay half the deficit, if the net earnings do not meet the expenses. The projected line would be about six miles long, and would enter Winnipeg over the Provencher Bridge.

A press report of Mar. 20 states the Canadian National Railways is overhauling a gasoline electric car, which, it is stated, it will run between Transcona and Winnipeg.

The Waterloo-Wellington Ry. Co. is asking the Ontario Legislature to pass a bill to authorize the building of a line from the existing line near Bridgeport to Guelph, Ont., and to give the company power to issue bonds for \$40,000 a mile of its railway constructed, or under construction. We are advised that the cities of Kitchener and Guelph and the intervening municipalities of Bridgeport, Bloomingdale, New Germany, Waterloo Tp. and Guelph Tp. are favorable to the building of the line. The tributary population is about 52,000 and the receipts should, it is claimed, make it a paying proposition in a short time. Grades would be easy all along, hardly exceeding 2% anywhere. There would, however, be a bridge required across the Grand River at Bloomingdale. Otherwise the line with 85 lb. rail and good construction throughout, would present no difficulties nor great cost. From Bloomingdale to New Germany, about five miles, the grading to subgrade was done some years ago by the People's Ry.

Windsor, Essex and Lake Shore Rapid Ry.—We are officially advised that the company expects to order in the near future one car of 80 lb. steel rails.

Increases in Canadian Electric Railway Passenger Fares.

London St. Ry.—At London, Ont., City Council recommended that the council in its omnibus bill before the Ontario Legislature, should ask for power to grant an increase of fares to the London St. Ry., subject to the ratepayers approval. This recommendation was on Mar. 15, referred back to the committee by the council for further consideration.

Montreal and Southern Counties Ry.—The Board of Railway Commissioners heard at Montreal, Mar. 9, the company's application for an increase of 20% in its passenger fares. St. Lambert and other municipalities opposed the application and judgment was reserved.

The Board of Railway Commissioners concluded on Mar. 17 its hearing of the company's application for authority to file tariffs providing for an increase of 20% on its passenger fares. The application was opposed by residents of St. Lambert, Greenfield Park, Longueuil, Chambly and other points on the line. Judgment was reserved.

Ottawa Electric Ry.—The Supreme Court of Canada gave judgment Mar. 8, granting the company's appeal re the proposed increase of fares on its Britannia Line. Objection was taken to the proposed increase by the municipalities interested, and after a hearing the Board of Railway Commissioners refused to sanction the proposed new schedule of fares. An appeal was taken to the Supreme Court and arguments were heard at the end of 1919. Subsequently the court submitted three questions to the parties interested, upon which it desired to hear further arguments. These arguments were concluded Feb. 5, and judgment was given Mar. 5 by Justice Duff and concurred in by Justice Anglin, Mignault and Brodeur; Chief Justice Sir Louis Davies and Justice Iddington dissented. The questions submitted and the answers to each as given in the judgment, are as follows:

"1. Whether upon the proper construction of the agreements with the City of Ottawa and the Village of Hintonburg, the statutes relating to the Ottawa Electric Ry. Co. and the relevant provisions

of the railway acts, the board was right in disallowing the tariff of the company filed, providing for payment of additional fare for carriage upon the extension from Holland Ave., notwithstanding that the board has found as a fact that the company did not require additional revenue." Judgment: "This question is not answered since it involves questions of fact within the exclusive competence of the Board of Railway Commissioners. So far as it involves a question of law it is covered by the answer given to the first part of the third question."

"2. Also, whether upon the proper construction of the said agreements and statutes, for the purpose of computing the toll to be charged to passengers upon the said extension the point of commencement of the said extension should be considered to be at Holland Ave., or at the former westerly limit of the Village of Hintonburg, now the City of Ottawa. Judgment: "At Holland Ave."

"3. Has the board the right to treat the company's operations as a whole and continue the existing tariff?" Judgment: "No."

"Or must the board permit the filing of tariffs on a mileage basis covering services on the Britannia line without reference to the larger part of the system covered by municipal agreements?" Judgment: "Yes; though not necessarily on a mileage basis."

Mr. Justice Duff added: "My reasons for these conclusions can be stated briefly. They are based upon two propositions which appear to me clearly established. First, I concur fully with the opinion of the Chief Railway Commissioner as to the effect of the statute of 1894. By force of that statute and the scheduled agreements, the rights and obligations of the Ottawa Electric Ry. Co. in relation to the fares chargeable in respect of the services provided for or contemplated by the agreement between the street railway companies and the city—services which may with sufficient accuracy be referred to as city services—were to be governed by the agreement itself, and consequently the Ottawa Elec-

tric Ry. Co. did not on the passing of the Railway Act of 1903 (see sec. 3) become in respect of such fares subject to the Board of Railway Commissioners jurisdiction touching the matter of the regulation of rates.

"Second. As regards the Britannia extension, on the other hand, authorized by the act of 1899, I can find nothing in that statute excluding this line from this jurisdiction of the board and I think that on the passing of the Railway Act of 1903, the provision of that enactment on the subject of the regulation of rates became applicable to it. The first of these propositions seem to involve this consequence: The fares exigible under the statute and agreement of 1894 must be taken to be a just remuneration, neither too much, nor too little, for the city services; and it seems to follow that in determining what is a just and reasonable remuneration for the services performed on the Britannia lines the proceeds derived from the city services must be left out of account. That is to say that in determining what is just and reasonable in respect of the Britannia lines, you must start with the hypothesis that everything paid in respect of city services has been fully earned by the performance of those services. The point may be illustrated by a reference to one example of the manner in which the existing tariff operates. Under the tariff the company is entitled to charge a maximum fare of 5c for transport from the corner of Laurier Ave., and Charlotte St. to Britannia, a charge which the company, by the act and agreement of 1894, is nevertheless entitled to make for that part of the service which is performed within the city. In other words, under existing conditions, so long as the Britannia line is kept in operation and this service is maintained, the company is obliged to give, for a fare of 5c the city service (for which by law it is entitled to receive a fare of 5c) plus the service from Holland Ave. to Britannia; and that appears to be the necessary consequence of treating the operations of the company as a whole

and maintaining the existing tariff. I think it is not profitable to do this, because thereby the effect is desired to be made to the effect of the statute and the effect of 1894. I must not say that in answering these questions we are not bound by the law as it stood before the enactment of the Railway Act of 1919.

The company's superintendent, I. D. Burpee, in announcing on Mar. 9 that the railway would file with the Board of R.R. and Commissioners a tariff for its lines outside of the boundaries fixed by its agreement with the city, is reported to have said: "The new tariff will probably compare with that approved by the Board of Railway Commissioners for the Hull Electric Co.'s lines, but our company may decide in actual practice to make a somewhat lower rate than the Hull company. The latter's rate from Ottawa or Hull to the Royal Ottawa Golf Club is 10c. The rate to Riverbend is 15c straight, or 2 tickets for 25c. The rate from Ottawa or Hull to Aylmer is 20c or 2 tickets for 30c. In all of these cases Ottawa residents pay in addition to the above rates the regular fares on the Ottawa cars to the points where they board the Hull cars."

The Board of Railway Commissioners passed order 29467 Mar. 17 as follows: The application of Ottawa Electric Ry. under section 334 of the Railway Act, 1919, for approval of Supplement 1 to its Standard Passenger Tariff C.R.C. 1. Upon its appearing that the territorial description in the company's Standard Passenger Tariff C.R.C. 1, approved by order 4418, Mar. 8, 1908, differs from that given in the Supreme Court of Canada's decision delivered Mar. 8, 1920, in the appeal from the board's order, holding, in effect, that the operation of the different portions of the company's system should be treated as one line, and the company having now filed an amending supplement to its Standard Passenger Tariff C.R.C. 1, for the purpose of making such territorial description agree with the Supreme Court's decision. It is ordered that the said supplement 1, filled to become effective April 5, be approved, provided that the supplement, together with reference to this order, be published in at least two consecutive weekly issues of The Canada Gazette, prior to the effective date.

On Mar. 18 the company gave notice in the Canada Gazette that its supplement 1 to Standard Passenger Tariff C.R.C. 1, effective April 5, had been approved by the Board of Railway Commissioners. It is as follows: Co. Standard Passenger Tariff C.R.C. 1 shall conform to the judgment of the Supreme Court of Canada of Mar. 8, 1920, the following words "the area defined by Holland avenue, in the west, the City of Hull in the north, Cloverdale road in the east, and Grove street in the south, and between points Aylmer and the Experimental Farm and intermediate points."

The company then filed with the board a Special Passenger Tariff effective April 5, C.R.C. 6, cancelling C.R.C. 4 as follows:

Between points within the area defined by Holland Ave. in the west, the City of Hull in the north, Cloverdale Road in the east and Grove street in the south, and between points Aylmer and the Experimental Farm and intermediate points.

Between 11 a.m. and 12 a.m. 10 cents for 1st class tickets for the round trip. For 2nd class 8 cents. For 3rd class 6 cents.

Between 12 a.m. and 12 p.m. 10 cents for 1st class tickets for the round trip. For 2nd class 8 cents. For 3rd class 6 cents.

Between 12 p.m. and 12 a.m. 10 cents for 1st class tickets for the round trip. For 2nd class 8 cents. For 3rd class 6 cents.

Between 12 a.m. and 12 p.m. 10 cents for 1st class tickets for the round trip. For 2nd class 8 cents. For 3rd class 6 cents.

Between 12 p.m. and 12 a.m. 10 cents for 1st class tickets for the round trip. For 2nd class 8 cents. For 3rd class 6 cents.

Between 12 a.m. and 12 p.m. 10 cents for 1st class tickets for the round trip. For 2nd class 8 cents. For 3rd class 6 cents.

Nepean Tp. Council decided Mar. 18 to appeal to the Supreme Court for leave to appeal against its decision to the Imperial Privy Council. The Ottawa City Council, on the same day voted 8 to 8 on a motion to join in the appeal which was therefore lost. An application in respect to the matter comes before Justice Mignault, of the Supreme Court in Chambers, Mar. 22, Nepean Tp. asking of a stay of proceedings until Mar. 29. The judge suggested that the company should give coupons or refund checks to passengers on the Britannia line, so that in the event of the Privy Council reversing the judgment, the township could collect from the company the extra fares paid. The company was given time to decide what it would do in that connection.

St. Thomas Municipal Ry.—The St. Thomas, Ont. City Council's Street Railway Committee considered at a recent meeting the question of increasing fares on the St. Thomas Municipal Ry., and left it over for further discussion.

Legislation for Taking Over Ottawa Electric Railway.

Ottawa City Council is applying to the Ontario Legislature for an act to authorize it to pass a bylaw to establish the Ottawa City Transportation Commission to consist of three members who shall be resident electors of the city, shall hold office for three years, and be paid salaries to be determined by the council. The members of the commission to be nominated by the board of control and appointed by the council, but that no member of the council be appointed a member of the commission. Upon the city council acquiring the Ottawa Electric Ry. and the company's real and personal property used in connection with the working of the railway, it shall be vested in the commission, which shall have its control and management. The property to be acquired is described in the statutes of 1895. Power is asked to take over any lines outside the city, but within the province, by agreement with the company, but subject to the Ontario Railway and Municipal Board's approval. The commission is to have full power to make, complete, alter, extend, maintain and operate a railway, tramway and other means or system of local transportation worked by any power except steam, in Ottawa, the County of Carleton, Ont., and in the City of Hull, Que., to acquire rolling stock and equipment for it to carry passengers and freight and to fix tolls to be charged; to provide and maintain a pension fund, and to procure advances not exceeding \$200,000 at any one time to meet operating and maintenance expenses. To carry

out these objects the commission shall regulate tolls and fares so that they shall produce in each year a sufficient sum for operating expenses, the cost of maintenance, renewals and replacements, and for the principal and interest of all fixed and floating charges it shall prepare a yearly statement of its affairs and a report upon its operations for the preceding year, together with an estimate of expenditures and revenue for the then current year for presentation to the council; shall pay to the council such monies as may be required to meet interest and sinking fund of debentures; shall submit its books for audit by auditors appointed by the council; shall furnish the council with estimates of expenditures it desires to be authorized to make out of debentures to be issued, and shall keep a banking account.

Power is also asked to authorize the council to provide by bylaws to be passed without obtaining the ratepayers' assent, for borrowing upon debentures the money required for the purchase of the existing railway in Ottawa, and the lines within the province outside the city. In order to meet any expenditure of the commission the council may, on a two-thirds vote, pass a bylaw to raise the same by debentures without obtaining the ratepayers' assent, but in the event of such a vote not being obtained a bylaw may be submitted to the ratepayers, and, if approved by them, shall be passed by the council. Provision is made for fixing the value of the railway by arbitration under the terms of the agreement of 1893, and for other matters connected with the taking over of the line.

French tramways and bus fares have been advanced 75%.

Motor Omnibus, Toronto.—The Toronto Board of Control is reported to have asked the Works Commissioner to prepare a report on the establishment of a motor omnibus transportation service in parts of the city where they could be used to advantage.

Extra Cars for Toronto Ry.—The Ontario Railway and Municipal Board on Mar. 16 heard the City of Toronto's application in reference to the proceedings to compel the Toronto Ry. to provide 200 additional cars. After some discussion the further hearing of evidence and arguments was adjourned to April 9.

Montreal Pole Tax.—The Quebec Legislature passed an act last session amending the City of Montreal's charter one of the provisions of which authorizes the city to levy a surtax on poles and materials of public utility companies on the street, the Montreal Tramways Co., and the Montreal Water and Power Co., being excepted. Before the bill was passed it was decided that the levy of this special tax should not be made after 1921.

The Ottawa, Ont., Board of Control is reported to have approved of the skip stop plan for improving the Ottawa Electric Ry. service. The Ontario Hunt and Motor Club asked that the stops be made on the near, instead of the far side of the street crossings, but F. D. Burpee, Superintendent Ottawa Electric Ry., stated that the company is absolutely against this system, on the ground that the railway is being operated for the benefit of the thousands, and that under the near side stop system it would take eight cars to do the work that six do under the far stop plan.

Marine Department

Canadian Government Merchant Marine, Ltd., Shipbuilding, Operation, Etc.

Orders for Steamships.—The following questions were asked in the House of Commons, Mar. 10, by J. Archambault, M.P. Chambly-Vercheres, and answered by the Minister of Marine.

How many contracts for shipbuilding were given by the government since Jan. 1, 1918? Answer: Fifty-six.

To what firms were the contracts given and what were the respective amounts? Answer: Canadian Vickers, Ltd., Montreal, 12; Collingwood Shipbuilding Co., Collingwood, Ont., 7; Wallace Shipyards, Vancouver, B.C., 4; Tide-water Shipbuilders, Three Rivers, Que., 4; Davie Shipbuilding and Repairing Co., Lauzon, Que., 3; Port Arthur Shipbuilding Co., Port Arthur, Ont., 7; Halifax Shipyards, Halifax, N.S., 4; Victoria Machinery Depot Co., Victoria, B.C., 2; J. Coughlan & Sons, Vancouver, B.C., 4; Nova Scotia Steel & Coal Co., New Glasgow, N.S., 2; Prince Rupert Dry Dock & Engineering Co., Prince Rupert, B.C., 2; British American Shipbuilding Co., Ltd., Welland, Ont., 2; Dominion Shipbuilding Co., Toronto, Ont., 2; Midland Shipbuilding Co., Midland, Ont., 1.

Were all of the contracts given after proper tender? Answer: Contracts were placed after offers had been received from the several yards and prices and other details agreed upon.

If so, were they given to the lowest tenders? If not, why? Answer: Answered by answer to previous question.

Editor's note:—The statement quoted above, that contracts for 56 ships have been awarded, evidently refers to the number of contracts actually signed up to Mar. 10. Canadian Railway & Marine World's information, as given in the table on page 207 of this issue, is that contracts for 63 ships have been arranged.

A Montreal press dispatch of Mar. 21 credits the Minister of Marine with having stated that day, in a speech before the Canadian Workers' Federation of Returned Soldiers and Sailors, that with the completion of 62 cargo steamships that part of the government's shipbuilding programme would be at an end, and that a final conclusion had not been reached in regard to building passenger steamships.

Deliveries of Steamships.—In addition to the steamships mentioned in Canadian Railway & Marine World previously, the following delivery has been made:

Mar. 6, s.s. Canadian Exporter; Marine Department contract 35; builder's yard no. 12; approximately 8,390 d.w. tons; J. Coughlan & Sons, Vancouver, B.C.; delivered to Marine Department, transferred to Canadian Government Merchant Marine, Ltd., and loaded with general cargo for Sydney and Melbourne, Australia; and Auckland and Wellington, New Zealand.

The s.s. Canadian Inventor; Marine Department contract 36, builder's yard no. 13; approximately 8,390 d.w. tons; built by J. Coughlan & Sons, Vancouver, B.C.; was expected to be delivered to the Marine Department about the end of March.

The s.s. Canadian Prospector; Marine Department contract 37; builder's yard no. 14; approximately 8,390 d.w. tons; being built by J. Coughlan & Sons, Vancouver; will probably be delivered early in April.

Steamships in Operation.—The Minister of Railways stated in the House of Commons, Mar. 11, in answer to questions by G. Parent, M.P. for Quebec West, that the Canadian National Ry. had at that time 25 steamships plying on various routes, the same being operated

Appointments.—B. C. Keeley has been appointed General Agent, C.G.M.M., Ltd., at Vancouver, B. C.

Steamship Canadian Recruit. The following questions were asked in the House of Commons, Mar. 10, by W. Duff, M.P., for Lunenburg, the answers being given by the Minister of Railways:

Does the Government own a ship named the Canadian Recruit? Answer: Yes.

If so, what is her gross, net, and deadweight tonnage? Answer: Gross, 2,409; net, 1,451; deadweight 3,964.

What did she cost ready for sea? Answer: \$813,252.

Where is the said ship at the present time? Answer: Stranded on Vache reef, in the St. Lawrence, at the mouth of the Saguenay.

What amount of insurance is carried on the ship's hull? Answer: Insurance on hull, \$578,571; other insurance, \$231,429; total insurance on ship, \$810,000.

What is the ship's valuation as appears in her hull policies? Answer: \$578,571.

What insurance is carried on the ship's freight? Answer: Freight charges are prepaid and not insured. Cargo is at shipper's risk, and each cargo owner carries at discretion his own insurance.

While the ship is in her present position and condition are the government's interests being properly protected? If so, how? Answer: Yes. Notice of abandonment has been tendered to the underwriters. Necessary steps to prevent further damage have been taken by underwriters' representatives.

Editor's note: As stated above, the d.w. tonnage of this ship is 3,964 tons, which at the contract price of \$205 a ton, comes to \$812,620. The difference of \$632 between this and the price paid was, we are officially advised, for minor extras.

British-American Shipbuilding Co. Welland, Ont., advised us Mar. 16, that it expected to launch the s.s. Canadian Otter; Marine Department contract 44; builder's yard no. 4; approximately 4,575 d.w. tons, for Canadian Government Merchant Marine, Ltd., during the week beginning Mar. 22. The s.s. Canadian Squatter; Marine Department contract 45; builder's yard no. 5; approximately 4,575 d.w. tons, is scheduled to be launched in April. We have since been advised that the afterpart of the s.s. Canadian Otter, which is being built in two sections, was launched Mar. 25, and that it was expected to launch the forepart a few days thereafter.

J. Coughlan & Sons, Vancouver, B.C. The s.s. Canadian Exporter; Marine Department contract 35; builder's yard no. 12; approximately 8,390 d.w. tons; built by this company, made her trial trip on Mar. 5, was delivered to the Marine Department, and transferred to Canadian Government Merchant Marine Ltd., on Mar. 6. She was loaded with general cargo for Sydney and Melbourne, Australia, and Auckland and Wellington, New Zealand.

This company advised us recently that it expected to deliver the s.s. Canadian Inventor; Marine Department contract

Dominion Marine Association.

President, A. E. Mathews, Managing Director, Mathews Steamship Co., Toronto.

First Vice President, H. W. Cowan, Director of Operation, Canada Steamship Lines, Montreal.

Second Vice President, A. A. Larocque, President, Sincennes-McNaughton Line, Montreal.

Executive Committee, E. H. Beazley, Union Steamship Co. of British Columbia, Vancouver; W. E. Burke, Canada Steamship Lines, Montreal; T. R. Enderby, Montreal Transportation Co., Montreal; L. Henderson, Montreal Transportation Co., Montreal; W. J. McCormack, Algoma Central Steamship Line, Sault Ste. Marie, Ont.; G. J. Madden, George Hall Coal Co. of Canada, Montreal; E. W. Oliver, Niagara, St. Catharines & Toronto Navigation Co., Toronto; W. H. Smith, Ontario Car Ferry Co., Montreal; J. F. Sowards, Sowards Coal Co., Kingston, Ont.; J. F. M. Stewart, Point Anne Quarries Ltd., Toronto; Jno. Waller, Keystone Transportation Co., Montreal; Lorne C. Webster, Webster Steamship Co., Montreal; J. A. Wright, honorary member, Toronto; A. General Counsel, Francis King, M.A., Kingston, Ont.

Official Organ, Canadian Railway and Marine World, Toronto.

under order-in-Council of June 2, 1919, the names of the ships, their approximate deadweight tonnage, their routes, and their ownership being as follows:

Name	Approx. d.w. tons	Trade Route.
Canadian	8,390	St. John-London.
Voyageur	4,575	Halifax-S. America.
Pioneer	4,408	St. John-West Indies.
Warrior	3,985	St. John-Liverpool.
Adventurer	3,382	St. John-Liverpool.
Recruit	3,964	Stranded account ice St. Lawrence.
Volunteer	4,485	Laid up at Quebec.
Trader	4,575	Halifax-West Indies.
Sailor	3,357	Halifax-West Indies.
Seigneur	8,391	Halifax-London.
Signaller	3,990	Halifax-West Indies.
Miller	8,390	Halifax-Liverpool.
Adventurer	3,408	Halifax-West Indies.
Gunner	3,990	Halifax-West Indies.
Aviator	5,100	Halifax-West Indies.
Sower	3,400	St. John-West Indies.
Navigator	4,575	St. John-London.
Settler	5,100	Halifax-Glasgow.
Spinner	8,393	Halifax-S. America.
Raider	5,100	Vancouver-Australia, N.Z.
Importer	8,390	Vancouver-Australia, N.Z.
Exporter	8,390	Vancouver-Australia, N.Z.

The above are owned by the King, represented by the Minister of Marine.

T. J. Drummond, 3,000 St. John-West Indies.
Sheba, 3,500 Halifax-West Indies.
J. A. McKee, 3,800 St. John-West Indies.

The last three mentioned above are owned by the King, represented by the Minister of Railways.

The builder's yard is to approximately show the time to the Marine Department about the end of March.

The company expects to deliver to the Marine Department early in April the *s.s. Canadiana*. Presumably, Marine Department contract 371 builder's yard no. 14, approximately 2,200 d.w. tons.

Midland Shipbuilding Co., Midland, Ont. As stated in Canadian Railway & Marine World for Dec., 1919, this company was given an order by the Marine Department for a steel cargo steamship for Canadian Government Merchant Marine Ltd., approximately 2,950 d.w. tons, at \$180 a long ton, aggregating \$718,200. The contract was signed Feb. 26, its number being 64, and the builder's yard no. 10. It is quite problematical when the keel will be laid, steel deliveries being so uncertain.

Nova Scotia Steel and Coal Co., New Glasgow, N.S. The steel cargo steamship Canadian Miner; Marine Department contract 41; builder's yard no. 6; approximately 2,800 d.w. tons; which this company is building for Canadian Government Merchant Marine, Ltd., will probably be launched early in April and delivered in May.

The keel for the third steel cargo steamship, of approximately 2,800 d.w. tons; builder's yard no. 8; which this company has under contract from the Marine Department, for Canadian Government Merchant Marine, Ltd., will probably be laid some time in April, or as soon as the bottom shell plates are received.

Port Arthur Shipbuilding Co., Port Arthur, Ont. which received an additional contract from the Marine Department recently, for a steel cargo steamship of approximately 3,890 d.w. tons, builder's yard no. 45, advises us that the date for laying the keel has not been decided on, and that it will depend largely upon steel deliveries.

The Lord Strathcona Steamship Co., Ltd., the incorporation of which, with \$1,500,000 capital, and office at Montreal, was announced in our last issue was formed to acquire and operate the *s.s. Lord Strathcona*, formerly owned and operated by the Century Shipping Co., London, Eng. The ship, which has been transferred to the Canadian register, was built of steel, at Sunderland, Eng., in 1915 her dimensions being, length 455ft., breadth 58ft. depth 31ft.; tonnage, 7,335 gross, 4,184 registered. She is screw driven by engine of 613 h.p.

Kingston Harbor Improvements.—J. Archambault, M.P., for Chambly-Verchères, said in the House of Commons, Mar. 16: "I would draw the attention of the government to a dispatch from Kingston appearing in the Montreal Standard of Mar. 13, which states that the Canadian Government has given the City of Kingston the assurance that \$2,500,000 will be spent on harbor improvements there. I would ask the Minister of Finance, who is also representative of Kingston in this house, if the report is true, and if so, whether these improvements are to be made in fulfillment of an election promise." Sir Henry Drayton, Minister of Finance, replied as follows: "The report is absolutely incorrect. That also answers my hon. friend's second question, but in order to make it a little more emphatic, I might say that there was no election promise."

Compulsory Equipment of Ships with Radiotelegraph Apparatus.

The Defence of the Realm Regulation 35A, passed by Dominion order-in-Council, Jan. 15, 1918, calling for the compulsory equipment, with radio apparatus of all Canadian steamships of 1,600 tons and over, when plying to Europe, was automatically cancelled as from Jan. 1, 1920. The only Canadian legislation now in effect calling for the compulsory equipment of certain ships, with radio apparatus, is that prescribed in the Radiotelegraph Act, Dominion Statutes, 1913, chap. 43, sec. 4, which provides that after Jan. 1, 1914, no passenger steamship, whether registered in Canada or not, (a) licensed to carry 50 or more persons, including passengers and crew, and going on any voyage, which is, or which includes a voyage of more than 200 nautical miles, from one port or place, to another port or place, or (b) licensed to carry 250 or more persons, including passengers and crew, and going on any voyage which is, or which includes a voyage of more than 90 nautical miles, from one port or place, to another port or place, or (c) licensed to carry 500 or more persons, including passengers and crew, and going on any voyage which is, or which includes a voyage of more than 20 nautical miles, from one port or place, to another port or place, shall leave any Canadian port, unless it is equipped with an efficient radiotelegraph apparatus, in good working order, capable of transmitting and receiving messages over a distance of at least 100 nautical miles, by night and by day, and in charge of a person fully qualified to take charge of and operate the apparatus. Any person in charge of any passenger steamship which leaves any Canadian port, contrary to the provisions of this section, shall be liable to a fine not exceeding \$1,000 and cosst, which shall be a lien upon the steamship. This section does not apply to passenger steamships plying on Canadian rivers, including the River St. Lawrence as far seaward as a line drawn from Father Point to Point Orient, or on Northumberland Straits, or on Georgian Bay, or on Canadian lakes other than Ontario, Huron and Superior, and the provisions of paragraph (c) above, does not apply to steamships making voyages on Lakes Ontario, Erie, Huron, and Superior, the regular route for which is not at any point more than seven miles from the shore. This section does not apply to steamships calling at Canadian ports,

solely for the purpose of obtaining bunker coal, or provisions, for the use of such steamship, or through stress of weather, or for repairs.

We are advised, in regard to British legislation that an act to make further provisions with regard to wireless telegraphy in ships has become law, but we are not informed as to whether these provisions have been put in effect or not. This is dependant on the date the Defence of the Realm Regulation (British 37B) is cancelled.

The Victoria Dock Case Decided.

Ottawa press dispatch, Mar. 25.—Sir Walter Cassels has rendered judgment in the Exchequer Court for the Dominion Government in the petition of right of Grant Smith & Co. and MacDonnell, Ltd., against the King, for sums totalling \$333,812, in connection with excavation work performed by the suppliants in Victoria, B. C., and popularly known as the Victoria dock case. The contractors claimed \$292,110 for rock excavation, \$14,703 for earth excavation, and \$27,000 for filling under their contract with the Public Works Department. There was no conflict of opinion as to the totals of excavation, the disagreement between the two parties being wholly as to the classification, the government claiming that rock prices were charged for material which should come under a lower classification. The entire claim was thrown out, Sir Walter Cassels finding that the resident engineer was in collusion with the contractors, and that anything he certified should be set aside and that an attempted fraud was intended by him and those representing the contractors. Sir Walter also found that the estimate of the work as prepared by the Public Works Department was correct.

Senate Committee on Railways, Telephones and Harbors.—The Senate on Mar. 3, appointed the following committee: Barnard, Eubaen, Béique, Belcourt, Blain, Bostock, Bourque, Bradbury, Casgrain, Crosby, Dandurand, David, Daniel, De Veber, Domville, Donnelly, Douglas, Edwards, Farrell, Foster, Fowler, Girroir, Godbout, Gordon, King, Laid, Laverne, Loughheed, Lynch-Staunton Macdonnell, McCall, McHugh, Michener Milne, Mitchell, Murphy, O'Brien, Poirier, Pope, Power, Robertson Ross (Middleton), Ross (Moosejaw), Sharpe, Tessier, Thompson, Watson, Webster (Stadacona) and White (Inkerman).—49.

Orders for Steel Cargo Steamships for Canadian Government Merchant Marine Ltd.

The following is a complete list of steel cargo steamships which the Dominion Marine Department has been authorized, by order in council, to place orders for, and which orders are to be carried out. The agreement given to the shipbuilders is that the shipbuilders shall provide, by an asterisk (*), show the total draughtweight capacities as determined after the ships have been completed. The other figures show the draughtweight capacities as determined before the ships have been completed, and as may be ascertained after the ships are completed, and of course, the total prices will vary accordingly.

The following contracts are used in the column giving the type of the vessels to be built: s.d., single deck; 2.d., two deck; 3.d., three deck; l.p., lake type; p., poop; b., bridge; f.c.e., forecastle.

Contract	Contract date	Name	Builder	Yard no.	Long tons d.w.	Price per ton d.w.	Total price	Type	Classification	Speed knots	Keel laid	Launched	Delivered.

The Australian Navigation Act.

It was stated recently that certain sections of the Australian Navigation Act, which was passed in 1914, and held in abeyance during the war, would be proclaimed and go into operation at an early date, and that the proclamation put into effect sections of the act relating to vessels that engage in the Australian coastal trade. These will require that all foreign, British, or Australian ships, which carry passengers or cargo between Australian ports, shall be manned, according to the scale set out in the act, shall pay Australian rates of wages and shall provide for the crew the accommodation that is laid down in the act. Under the act the provisions which govern the coastal trade will be operative also in regard to trade between Australian ports and the territories which come under the Commonwealth's peace conference mandate. Therefore, foreign ships carrying cargo, say, from any Commonwealth port to Rabaul or any other of the ex-German possessions would be affected. The sections in question further set out that ships drawing a subsidy from any government, other than a British or Dominion Government, shall not in any circumstances engage in the coastal trade. It was said that regulations relating to the act were being drafted by the Commonwealth authorities in readiness to be put into operation as soon as the sections of the act come into force.

Since the above was put in type the Commonwealth's Commissioner in New York has announced that he has received the following cablegram from the Australian Government: "Government have decided on account of unsettled conditions of shipping generally to postpone commencement of proclaimed portions Navigation Act from Mar. 2, as originally proposed to some later date, not yet definitely fixed, but not earlier than July 1 next."

Canadian Notices to Mariners.

British Columbia—Chatham Sound, entrance to Prince Rupert Harbor.—Error in position of light on east Kiihian Island; correct position, on north-east extreme of east Kiihian Island, lat. N. 54° 12' 45" Long. W. 130° 23' 45".

British Columbia, Victoria Harbor.—On or about April 15, the red sector showing over an arc of 15° from 347° (N. 38° 30' W. mag.) through N. to 2° (N. 23° 30' W. mag.) placed at the west side of the entrance to Victoria harbor, will be removed. Beren island light, in line with the light on the outer end of Ogden point breakwater, clears the western extremity of Brothie ledge.

United States Shipping and Shipbuilding Notes.

The U.S. Shipping Board announces that its tanker fleet consists of 48 ships of 438,445 d.w. tons.

The U.S. Shipping Board on Mar. 4, withdrew all freight tariffs published thereafter, and left rates in the hands of individual operators of Shipping Board vessels.

The U.S. Shipping Board's Chairman told the Senate Merchant Marine Committee, on Mar. 10, that government operations in shipping business resulted in a net profit of \$166,493,990, up to June 30, 1919.

The U.S. Shipping Board's s.s. Guilford, en route from Norfolk, Va., to Boston, Mass., was reported disabled, 15 miles off Nantucket, Mar. 7, was later abandoned and reported as a menace to navigation. The officers and crew were taken off by the s.s. Pocahontas, transferred by the U.S. Destroyer Dale and taken to Newport, R.I.

The U.S. Shipping Board has, it was announced in Washington, Mar. 4, under consideration the appointment of a Board of Survey to pass upon all questions of repairing cargo ships belonging to the government. Under the proposed plan, operators and managers of shipping board vessels would submit repair jobs for study and expert advice by a board of competent men.

More activity in shipbuilding for private enterprise is claimed for U.S. shipyards. Entirely exclusive of tonnage building for the shipping board, there are 263 ships, aggregating 1,256,573 gross tons in hand for private business interests. The government will complete its programme within the next few months, and the shipbuilding plants expect to remain in a position to meet whatever calls may be made upon them. The present building figure attained in the United States is slightly under the British production of 1918 and about 75% of the output of British yards in 1919. The tonnage of freight being built is given at 620,000 gross, comparing with 588,000 tons of tankers. The U.S. Shipping Board is in possession of about 13,000,000 d.w. tons of ships, the bulk of which is composed of cargo-carriers, the sale of which at low terms is being urged in congress. The increase in private orders for freighters may be taken to indicate that the industrial and trading enterprises prefer to have ships built to their own designs rather than wait to select from a comparatively few types of ready made ships.

Lighthouse Board of Canada.—Thos. Robb, Manager and Secretary, Shipping Federation of Canada, has been appointed a member of this board to represent the Atlantic division and take the place of the President of the Shipping Federation. The other members of the board are: A. Johnston, Deputy Minister of Marine, Chairman; B. H. Fraser, Chief Engineer, Marine Department; J. G. Macphail, Commissioner of Lights, Marine Department; V. F. W. Forneret, Superintending Engineer, River St. Lawrence Ship Channel, Marine Department; A. E. Mathews, President, Dominion Marine Association, representing the inland division; J. W. Troup, Manager British Columbia Coast Steamships, C.P.R., representing the Pacific division.

Proposed Navigation and Power Development on St. Lawrence River.

The question of the development of navigation on the St. Lawrence River, by the provision of a deep waterway between Montreal and Lake Ontario, and the incidental development of electric power, which has been discussed in various quarters for several years, and which has been referred to the International Joint Waterways Commission for enquiry and report, came before it at a meeting at Buffalo, N.Y., early in March. The proposals involve the canalization of the river at certain points, and the dredging of a deep channel at others, to enable ocean going vessels to navigate with safety through to Lake Ontario, and, on the completion of the Welland Ship Canal, through to the head of the lakes, without breaking bulk, and also considerable electric power development. The scheme has strong backing, both in Canada and the United States, chiefly from the west, while many interests in the east are either opposed to the plans, or are non-committal.

At different times, for a number of years, various U.S. companies have sought powers to enable them to build dams in the St. Lawrence River to develop electric power, but all such proposals have been strenuously opposed by the marine interests, backed by the Dominion Government, on the ground that they would interfere with the free and safe navigation of the river, and that navigation interests are paramount. In 1918, one of the proposals was renewed, and strongly supported by the U.S. Government, on the ground that the power was required for war time emergencies, and by agreement, it was arranged that such construction should be allowed, purely as a war measure, but nothing of any moment was done, as the war was concluded before any large construction could be carried out. The experience gained during the war, as to the restrictions, and the possibilities of lake to ocean navigation, no doubt caused some action on the part of both governments, and in 1919 they co-operated in the study of the St. Lawrence River, above Montreal, W. J. Stewart, Hydrographer, Naval Service Department, representing Canada, and Col. C. Keller, of the Corps of Engineers, representing the United States. As a result of their work the two governments wrote the International Joint Commission early this year to the following effect:

The Canadian and United States governments, under the provisions of the treaty of Jan. 11, 1909, between the British and U.S. Governments, Article 9, herewith refer certain questions, as set forth below, involving the beneficial use of the waters of the St. Lawrence River, between Montreal and Lake Ontario, in the interests of both countries, and in general, the rights, obligations, or interests of either in relation to the other, or to the inhabitants of the other along their common frontier. It is desired that the said questions be made the basis on an investigation to be carried out by the International Joint Commission, to the end that the commission may submit a report to the two countries, covering the subject matter of this reference, together with such conclusions and recommendations as may be considered pertinent in the premises. The questions follow:

What further improvement in the St. Lawrence River, between Montreal and Lake Ontario, is necessary to make it

navigable for deep draft vessels of either the lake or ocean-going type; what draft of water is recommended; and what is the estimated cost?

In answering this question the commission is requested to consider: (a) Navigation interests alone, whether by the construction of locks and dams in the river; by side canals with the necessary locks; or by a combination of the two. (b) The combination of navigation and power interests to obtain the greatest beneficial use of the waters of the river.

Which of the schemes submitted to the government or other engineers is preferred and why?

Under what general method of procedure and in what general order shall the various physical and administrative features of the improvement be carried out?

Upon what basis shall the capital cost of the completed improvement be apportioned to each country?

Upon what basis shall the costs of operation and maintenance be apportioned to each country?

What method of control is recommended for the operation of the improved waterway to secure its most beneficial use?

Will regulating Lake Ontario increase the low water flow in the St. Lawrence Ship Channel below Montreal, and if so, to what extent and at what additional cost?

To what extent will the improvement develop the resources, commerce and industry of each country?

What traffic, both coming and outgoing, in kind and quantity, is likely to be carried upon the proposed route both at its inception and in the future? Consideration to be given not only to present conditions, but to probable changes therein resulting from the development of industrial activities due to availability of large quantities of hydraulic power?

Pending the receipt of plans, estimates and other engineering data necessary for the final consideration of this reference, the commission is requested to hold such public hearings as may be considered necessary or advisable in order to obtain all information bearing, directly or indirectly, on the physical, commercial and economic feasibility of the project as a whole.

To facilitate the preparation of the desired report each government will from its official engineering personnel, appoint an engineer with full authority to confer with a similar officer of the other government for the purpose, first, of acquiring, each in his own country, such data as may be found necessary to supplement the existing engineering data and surveys, and, second, of preparing complete outline plans for and estimates of the cost of the proposed improvement, including the value of all property, easements, damages and rights connected therewith. These plans and estimates are to be submitted to the commission as soon as practicable, but not later than one year from the date of appointment, and the commission is requested to forward to the two governments its final report, with recommendations, not later than three months thereafter.

The proposal, upon which joint action is desired, is divided into two parts, the improvement of navigation, and the development of electric power. From the

navigation point of view, there is no doubt whatever that the development of the route from the head of the lakes to Montreal, so that vessels might carry grain direct to ocean going ships without breaking bulk, would be a distinct advantage; also, the power development, which might be carried on, incidentally, would be a considerable asset, and so long as this can be achieved without in any way endangering the safe navigation of the St. Lawrence, there is little fear of any great opposition. The international boundary runs from the commencement of the St. Lawrence at Lake Ontario, between Wolfe Island, Ont., and Cape Vincent, N.Y., to Lake St. Francis, opposite River Beaudette, Que., and is under the International Joint Waterways Commission's jurisdiction. Any opposition which has developed in Canada has been aimed solely at the construction of obstructions in the river, which might have a tendency to obstruct navigation, or to cause any decrease in the water levels, which, at certain periods, for many years past, has caused difficulty. Opposition to the proposals, emanating from the U.S., are of an entirely different complexion, and appears to be mainly due to the geographical fact that the Lower St. Lawrence, the only outlet to the ocean, is within Canadian territory, and that, if carried out, the project would to quote an U.S. objection "take the control of the waterway out of the hands of the U.S., and would aid Canada far more than it would benefit any section of the U.S., for it might divert from our own metropolis the commerce which has long been the bulwark of our growth and prosperity."

The chief opposition, so far as the U.S. is concerned, comes from New York State, it being claimed that the Erie barge canal can effectively handle the traffic and provides an efficient and economical means of dealing with the freight situation, between the Great Lakes and the Atlantic, at New York. The New York State Legislature, early in March, passed a resolution condemning the proposals, as being inimical to the state's interests, as well as to those of the U.S. generally, and urging that every possible influence be used with Congress to vote against the project. The western states, as a whole, are heartily in accord with the scheme, and are making strong representations as to the desirability of pushing forward with all possible speed, so that the west may be provided with cheaper transportation between the lakes and the seaboard.

The Canadian members of the Commission, C. A. Magrath, Vice Chairman, H. A. Powell, and Sir William Hearst, took considerable part in the general discussion at the Buffalo hearing, and asked numerous questions. Among Canadian interests represented at the hearing, were the Hydro Electric Power Commission of Ontario, Canadian Deep Waterway and Power Association, Toronto Harbor Commission, Dominion Marine Association, Canada Steamship Lines, Toronto and Hamilton Boards of Trade, and delegates from a number of Ontario municipalities.

The scheme provides for four dams as power concentration centers, located near Morrisburg, Cornwall, at the foot of Lake St. Francis, and below the Lachine Rapids. The two first named would be international, as between Ontario and

New York, and the latter two would pertain to Quebec. Associated with this power development scheme, is the canalization, the dams making the necessary deep water channel, and requiring locks of equal size to those being built in the new Welland Ship Canal, and in addition, a new canal system near Montreal. The cost of the canals is proposed to be apportioned between Canada and the U.S., the question as to whether the latter would be financially responsible for only those parts of the scheme within international waters, or for its portion of the whole, being left over. The expense of the scheme is variously estimated at from \$100,000,000 to \$300,000,000.

The commission intends holding sittings at other points, commencing May 1, to discuss the proposals from various standpoints, and to hear evidence from different localities affected.

In connection with this scheme, the following extracts from the address of the then President of the Canadian Society of Civil Engineers, M. J. Butler, C.M.G., at that society's annual meeting early in 1915, is of interest. "We have as a nation undertaken the task of forcing our outlets against the line of least resistance. The Atlantic seaboard is the outlet for the products of the prairies situated some 1,500 miles inland. Our efforts in building railways with easy curves and grades, the enlargement of our canal system and the improvement of rivers, and particularly of the St. Lawrence route, have but one object of putting a few more cents a bushel into the pockets of the farmers. The enlargement of the Welland Canal will allow the larger type of vessel of 300,000 bush. capacity to pass down Lake Ontario and the St. Lawrence River to within 120 miles of Montreal. Storage elevators will be erected at or near Prescott, and 1,000 ton barges will be towed through the present canal system to Montreal. Ultimately the larger lake vessel will come through to Montreal, as it is quite practicable and within the resources of the country to convert the St. Lawrence into slack water navigation by the building of eight dams with duplicate locks, and, as an incident, develop the greatest water power in the world, aggregating over 4,000,000 h.p., eliminate the ice jams, and make practicable the navigation of the river in winter by the aid of powerful icebreakers. It is a duty which our government may well undertake at the earliest possible moment, to secure a hydrographic and topographic survey of the St. Lawrence, so that accurate estimates of cost may be made and proper regulations may be drawn up, so to regulate proposed power developments owned by private corporations that each may be brought into a component part of the completed whole."

Rescue of Lighthouse Crews.—Senator Boyer enquired in the Senate, Mar. 12, what was the cost of sending a sealing ship from Newfoundland to Labrador, to rescue the crews of the different lighthouses in Belle Isle Strait. Sir Jas. Lougheed replied: "Arrangements were made for this work by the acting Minister of Shipping, St. John's, Nfld., at the request of the Dominion Deputy Minister of Marine. Accounts in connection therewith have not yet come to hand. I have no doubt that at a later date we shall have them." The question was therefore allowed to stand.

Ice Conditions on the Great Lakes.

The second ice report of the season, compiled by the regular and display stations of the U.S. Department of Agriculture's Weather Bureau, and the Canadian Meteorological Service, issued at Detroit, Mar. 16, states that an ice field extends from Duluth to Two Harbors in Lake Superior, and beyond this open water is reported along the north shore to beyond Grand Marais. Ice fields are reported from Apostle Island eastward to Whitefish Bay. There had been some movement in the fields during the week.

The ice conditions in St. Marys River are about the same as the previous week. The ice is very heavy, and covered with snow. In Green Bay the ice fields are unchanged. In Lake Michigan the winds have moved the fields from the west shore and open water is reported from Keweenaw south to Chicago, while on the east shore the fields extend beyond vision from Michigan City to the Straits of Mackinaw.

In Lake Huron, open water is reported off Detour, with ice fields stretching beyond vision from Cheboygan, south to below Thunder Bay Island, and open water from there to below Harbor Beach, and extensive fields over the southern portion.

St. Clair River is open to between Marysville and St. Clair. There is about five miles of open water at the lower end of Lake St. Clair, and Detroit River is open to Lake Erie.

Considerable open water is reported over the western portion of Lake Erie to just west of Cleveland, and from there east to Buffalo fields are extensive, but moving with the winds. In Lake Ontario the fields are apparently confined to the eastern portion.

In comparison with last season there is more ice in all of the lakes. In comparison the with 12-year normal, it is 3 in. below average at Duluth, 4 in. above at Sault Ste. Marie, 8 in. at the Straits, and 11 in. at Escanaba.

Port Arthur, Ont., press dispatch, Mar. 21.—Ice conditions here indicate a late opening of navigation. Tugs, which were stationed 18 miles out, have commenced breaking a channel to Port Arthur, and should reach here by April 1.

House of Commons Committee on Marine and Fisheries.

The House of Commons committee on marine and fisheries for the current session, is comprised as follows: E. K. Spinnery, M.P. for Yarmouth, N.S., chairman, the other members being Messrs Ballantyne, Butts, Caldwell, Cardin, Chisholm, Clark (Bruce), Clements, Duff, Fielding, Gauvreau, Gladu, Hart, Hay, Lang, Léger, Loggie, Manion, Martin, Munson, McIntosh, McKenzie, McQuarrie, Nicholson (Queens), Papineau, Pelletier, Rowell, Sinclair (Antigonish), Sinclair (Queens, P.E.I.), Stevens, Trahan, Truax, Tudhope, Turgeon and Wigmore. There are 55 members of the committee and the quorum is 10.

Contracts for Marine Public Works. The Dominion Public Works Department has let the following contracts,—renewal of superstructure of part of the eastern breakwater at Collingwood, Ont., York Construction Co. Feb. 27; construction of grain conveyor, St. John, N.B., Grant and Horne, St. John, N.B.; overhauling and repairing of dredge Ajax, British Columbia Marine, Ltd.

The Vancouver Drydock.

As announced in Canadian Railway and Marine World for March, the Dominion Government is entering into a contract with J. Coughlan & Sons, Ltd., under the Drydock Subsidies Act, granting aid in the construction of a drydock and appurtenant works at Vancouver. The company announces that, in addition to the construction of a graving dock on Burrard Inlet, it intends to build large marine repair shops, and a marine railway with all necessary repair units. The entire plant will not be completed for nearly three years, but it is expected that the marine railway and repair shops will be ready for operation about 15 months from the commencement of construction, which was expected to start during March.

The drydock plans, which have been passed by the government, show a dock 750 ft. long overall, and large enough to accommodate any ship that passes through the Panama Canal. It is so designed regarding width, that it can be extended longitudinally when occasion requires, sufficient to provide a length of 1,200 ft. According to specifications, the length of the dock from caisson stop to dead wall will be 725 ft., with an inside length from back sill to dead wall of 700 ft. The clear width at the entrance will be 106 ft. 2½ in. and 100 ft. at the bottom. The width at proper cope level will be 119 ft. with 100 ft. clear from altar at sill level. In preparing foundations for the dock, there will be an excavation of approximately 114,000 cu. yd. of material, of which over 80,000 cu. yd. will be solid rock.

The marine railway will parallel the graving dock and will have a lifting capacity of 3,500 tons, sufficient to handle a ship of 8,800 d.w. tons. The basin of the slipway cradle will be excavated from sandstone, with a length of 750 ft. and a width of 72 ft. The clear depth for the cradle at the lower end will be 18 ft., and the cradle will operate on 4 roller paths. The plant equipment will include a 10 ton locomotive jib crane, a number of smaller hoists, and a 12 ton cylinder yard locomotive of 50 tons capacity.

C. G. S. Simcoe.—The Minister of Marine gave the following information in the House of Commons, Mar. 15, in answer to questions by A. T. Leger, M.P., for Kent, N. B. The C. G. S. Simcoe was built at Newcastle-on-Tyne, Eng., in 1909, her tonnage being gross 913.38, net 437.63. She last underwent overhauling and repairs in Oct., 1917, was a fit ship for ocean navigation, was a seaworthy ship for the purpose which she was put to, and was lost Dec. 7, 1917, southwest of Magdalen Islands, Gulf of St. Lawrence.

Freight Rates to England.—It was announced in New York, Mar. 12, that freight rates on foodstuffs shipped to England on British vessels had been increased 30c per 100 lb., from 45 to 75c. As the British Minister of Food has 300,000,000 lb. of pig in warehouses in America, the increase means that the English public will be obliged to pay \$90,000,000 more for them under the new shipping rates.

St. Lawrence River Pilotage.—Both the Dominion Marine Association and the Shipping Federation of Canada are urging the Marine Department to abolish compulsory payment of pilotage dues on the St. Lawrence, but no decision has been announced.

General Shipbuilding Matters Throughout Canada.

The Alma Shipbuilding Co., Ltd., has incorporated under the New Brunswick Companies Act with a capital of \$100,000, and is located at Alma, N. B. The directors are: J. P. White & Sons, Ltd., Alma, N. B., together with other interested parties. The company is to build, own, navigate and deal in steam and other ships, and to operate as a common carrier. The incorporators are: M. O. White, H. H. Reid, S. J. S. N. B.; J. A. Cleveland, Alma, N. B.

The Collingwood Shipbuilding Co. held its annual meeting at Collingwood, Ont., Mar. 12. The directors for the year are as follows: H. B. Smith, Owen Sound, Ont., President; J. W. Norcross and R. M. Wolvin, Montreal, Vice Presidents; J. S. Leitch, Collingwood, Managing Director; S. Dymont, Barrie, Ont.; H. W. Cowan and F. S. Izard, Montreal. Alex McDougall, Duluth, Minn., was not a candidate for re-election, his place on the board being taken by J. S. Leitch, formerly General Manager.

J. Coughlan and Sons, Vancouver, B. C., which organized its shipbuilding department in 1917, have built 120,400 d.w. tons of steel ships, each of 8,800 d.w. tons. Ten of these were for the British Government, ordered through the Imperial Munitions Board. The firm has also built four steel steamships of 8,100 d.w. tons each for Canadian Government Merchant Marine, Ltd., and is still active on additional orders, which will keep the yards busy for some time. The first ship built was the s.s. Alaska, which was under construction for Norwegian interests at the outbreak of war, and which was eventually taken over on behalf of the British Government and delivered to owner in June, 1918. The business has recently been re-organized as a joint stock company under the title J. Coughlan and Sons, Ltd.

Foundation Co. of British Columbia, Victoria.—Reports as to the future of this company's shipbuilding yards at Victoria are conflicting. It was stated originally that the negotiations which has been proceeding for some time between a representative of French interests and the company for the leasing of the yards to undertake the building of a large number of wooden steamships for French registry, have been broken off, and that the company had given instructions for the dismantling of the plant, which was stated to be proceeding. A Victoria press dispatch of March 11, states that Capt. E. V. Argon, who is conducting negotiations for the French interests, had stated that he was going ahead with the programme and expected to make a definite announcement shortly as to the close of the negotiations, and that he was awaiting the arrival of a French official, when he expected the negotiations would be successfully concluded. It is stated that the French programme covers the building of 40 wooden steamships of a similar type to those built for the British Government under orders from the Imperial Munitions Board, and that this would necessitate the employment of about 2,500 men. It is said that the lease would be arranged for two years, with the option of renewal, and that should the negotiations be successful, the Dominion Government is willing to lease accommodation at Ogden Point for outfitting the ships.

The B. C. Minister of Fisheries reported to have stated at Victoria, Mar. 12, that a written application was made for a lease of the portion of the Songhees Indian reserve occupied by the Foundation Co.'s yard, by Capt. E. V. Argon, acting for French interests, and he was informed that the Foundation Co.'s lease had not expired, and had not been terminated, but that upon receipt by the government of satisfactory assurance when he was in a position to carry out his shipbuilding programme, the government would take up the question of terminating the Foundation Co.'s lease and entering into a new lease with him. The Minister also stated that there were two other applications under the government's consideration for portions of the same area.

National Shipbuilding Corporation. Three Rivers Shipyards, Ltd., Division, Three Rivers, Que., as reported in our Feb. issue is building 10 freight steamships for French interests. Two of these, of approximately 300 ft. long, are said to have been ordered by La Societe Maritime Francaise, and four, of 310 ft. long, by La Societe de Gerance et d'Armenant.

Nova Scotia Shipbuilding and Transportation Co., Liverpool, N.S., launched the schooner Manuata March 6, for fishing service. Her dimensions are, length 138 ft., breadth 26 ft., depth of hold 11½ ft. The company is building two other similar vessels for summer delivery.

The Nova Scotia Steel & Coal Co. has received an order for a steel exploring yacht, builder's yard No. 9, for The Baron Bliss, Bahamas, B. W. I. It will be 137 ft. between perpendiculars, 28½ ft. moulded depth, and will be driven by two 250 h.p. Vickers-Petters semi-Diesel oil engines. All the auxiliaries will be electrically driven, including anchor windlass, and capstan.

The company is building a ship, builder's yard No. 10, for its own account, to be delivered in the early spring of 1921. It will be exactly the same as the s.s. Canadian Sealer, already built for Canadian Government Merchant Marine, Ltd., approximately 2,800 d.w. tons, and the two others under contract from the Marine Department, viz: Canadian Miner, now being built, and another one not yet named.

Tidewater Shipbuilders, Ltd., Three Rivers, Que. D. C. McKean, heretofore General Superintendent, National Shipbuilding Corporation, Three Rivers, has been appointed Manager, Tidewater Shipbuilders, Ltd., vice Robt. Duguid.

Victoria (B.C.) Shipowners, Ltd., which was incorporated recently under the British Columbia Companies Act, with \$500,000 authorized capital and office at Victoria, has for its main object the building and operating of four wooden auxiliary powered schooners which are being built at the Cholberg Ship Co.'s yard, at Victoria, under special aid granted by the Dominion Government details of which have been outlined in previous issues. The directors are: J. W. Spencer, C. Hoard, J. O. Cameron, W. Meed, F. B. Pemberton, Capt. H. C. Hansen and Capt. M. D. Harbord.

Wallace Shipyards, Ltd., North Vancouver, B. C., has received from the Dominion Public Works Department a contract for overhauling and repairing the dredge Fruhling (P.W.D. No. 303) at schedule of prices.

British Ministry of Shipping (Canada) Winds up Business.

The British Ministry of Shipping (Canada) ceased its control of Canadian export shipping Mar. 31, and all correspondence relating to its affairs is now addressed to E. M. Raeburn, Director General, British Ministry of Shipping, 165 Broadway, New York. During its existence the ministry practically controlled the export trade of Canada, both inland and overseas, and this was carried on with practically no friction between shippers and carriers, and with a minimum of disturbance of the general business of the country. The following figures show the number of ships cleared from Canadian ports and Portland, Me., between Aug. 25, 1914, and Dec. 31, 1919, during the ministry's control:

Year	Ships cleared from Canadian ports and Portland, Me.
1914	1,014
1915	1,014
1916	1,014
1917	1,014
1918	1,014
1919	1,014

During that period the tonnage exported from Canada exceeded 16,000,000 tons of munitions, war material and supplies covering shipments inland as well as overseas.

A report of the British Government's select committee on national expenditure in a white paper issued Jan. 5, pays tribute to the effective and economical administration of the affairs of the Ministry of Shipping, not only in the United Kingdom but in the various outports to which the shipping control was extended. At the outbreak of war, it was considered desirable that the overseas transport should be placed in the hands of a competent organization under control of the Dominion Government, working in conjunction with the Imperial Government, and for this purpose the C.P.R. loaned A. H. Harris, its Special Traffic Representative to the government, and he was appointed Director of Overseas Transport. This continued until Sept. 5, 1918, when a change was made, and the staff hitherto under the Dominion Government, was transferred to the Imperial Government, the organization being known as the British Ministry of Shipping (Canada) with headquarters at Montreal, and consisting of the following: Director General, Sir Arthur Harris; Deputy Director General, W. T. Marlow; Accountant, G. Wood; Ships' Movements and Bunkers, Capt. D. Green-shields; Technical Department, F. Sidgwick; Ocean Transports and Timber, W. A. Wainwright; Ocean Liner Department, G. D. Robinson; Superintendent Inland Transportation, D. O. Wood; Assistant Superintendent Inland Transportation, J. A. Glassford; all of whom were then in C.P.R. service and loaned to the government.

Although the world's tonnage of ocean passenger steamships is now greater than at the outbreak of war in 1914, and is increasing more rapidly than at any former period in maritime history, the losses of trans-oceanic passenger ships have not yet been made good by new construction.

Comeau Navigation Co. Ltd., has been incorporated under the Dominion Companies Act, with \$20,000 authorized capital and office at Montreal, to own and operate steam and other ships, aeroplanes, etc., for the carriage of passengers, mail and general merchandise. The incorporators are: S. H. R. Bush, B. Robinson, C. F. McCaffrey, G. R. Leblanc and T. C. Travers, Montreal.

Mainly About Marine People.

Capt. R. C. Brown, master of the Anchor-Donaldson Line s.s. *Cassandra*, has been appointed by the Montreal Board of Trade as port warden for Montreal, vice, D. Stewart, deceased. He has been in the Anchor-Donaldson Line's Canadian service for the past 22 years, 15 of which have been spent as master of the s.s. *Cassandra*.

Duncan D'Eyncourt Cooper, whose appointment as General Agent, Import and Export, Canada Steamship Lines, Ltd., Toronto, was announced in our last issue, was born at Buffalo, N. Y., July 6, 1862, and entered transportation service in Sept., 1881, since when he has been, to 1882, freight clerk, G.T.R., Montreal; 1882 to 1884, freight clerk, G.T.R., Toronto; 1884 to 1885, chief clerk to District Freight Agent, G.T.R., Toronto; 1885 to 1889, City Freight Agent, G.T.R., Montreal, 1889, to the closing of U.S. railway offices in Canada by the U.S. Railroad Administration in 1917, Canadian Freight Agent, Lehigh Valley R.R., Toronto; July 1919 to March 1, 1920, Agent, Export and Import Traffic, Canada Steamship Lines, Ltd., Toronto.

Capt. S. J. Corson, a well known Great Lakes mariner, and during 1919 master of the Great Lakes Transportation Co.'s s.s. *Major*, died at Toronto, Mar. 8, as a result of injuries through falling on a slippery sidewalk there. He was buried at Collingwood, Ont.

E. L. Cousins, General Manager and Chief Engineer, Toronto Harbor Commission, is expected to return, about the end of April, from Europe, where he is investigating harbor facilities at many of the principal ports.

D. W. Crow, who died at Chatham, Ont., March 8, aged 90, claimed to have built the first steamboat, the *Owen*, on the River Thames there, in 1833. This boat was used to lay the first telephone cable between the mainland and Pelee Island.

Mrs. Davie, wife of G. T. Davie, of the Davie Shipbuilding and Repairing Co., Lewis, Que., died at Quebec, Que., recently.

Alfred R. Dean, whose appointment as Travelling Passenger Agent, Canadian Pacific Ocean Services, Ltd., Chicago, Ill., was announced in our last issue, was born at Springfield, Utah, Mar. 2, 1895, and entered transportation service June 16, 1914, since when he has been, to Feb. 13, 1916, stenographer and ticket stock clerk, Pennsylvania R.R.; Feb. 14, 1916, to April 9, 1917, ticket agent Central Pacific R.R.; April 10, 1917, to Jan. 1, 1918, stenographer and rate clerk, Minneapolis, St. Paul and Sault Ste. Marie R.R.; Jan. 2 to June 10, 1918, rate clerk, Chicago and Northwestern R.R., all at Chicago, Ill.; June 13 to Dec. 15, 1918, in U. S. Navy; Dec. 10, 1918, to March 31, 1919, rate clerk, Chicago, and Northwestern R.R., Chicago, Ill.; April 1, 1919, to Feb. 27, 1920, clerk and chief clerk, Canadian Pacific Ocean Services, Ltd., Chicago.

W. A. Duff, who died at Montreal recently, aged 46, was a brother of M. McD. Duff, Manager, Great Lakes Steamships Service, C. P. R., Montreal.

Sir E. Mackay Edgar, who is taking an active part in the revival of commercial shipbuilding in Great Britain, through the recent amalgamation of several of the larger shipbuilding companies there, under the title of the North-

umberland Shipbuilding Co., with a capital of £7,000,000, was born at Montreal in 1876 and educated there, and was, for some time, engaged in the office of Senator Robt. Mackay. He removed to London, Eng., in 1908, and entered the firm of Spierling & Co., bankers, etc.

B. C. Keeley has been appointed General Agent, Canadian Government Merchant Marine, Ltd., at Vancouver, B. C.

Herbert P. Heywood, who has been appointed Engineer of Sewers and Drainage, Toronto Harbor Commission, was born in Lincoln, Eng., in 1889, and educated there. He came to Canada in 1911, and was engaged as engineer in charge of construction of divisional buildings at Regina, Sask., for Canadian Northern R.R., and on the completion of that work, was Assistant Engineer Maintenance of Way; and draftsman on masonry structures, Bridge Engineer's office, C. N. R., Winnipeg, to 1913, and from 1913 to 1916, he was engaged on road and bridge work for the Manitoba

N. Y., with the world's patent rights and good will, and which has established a plant in Toronto.

Wm. Phillips, heretofore Representative, Cunard Line Steamships, and a director of the Robt. Reford Co., Montreal, has been appointed European Manager, Canadian National Rys. and Canadian Government Merchant Marine Ltd., with office at Orient House, London, Eng. He left Canada Mar. 19 and sailed from New York on the s.s. *Mauretania* Mar. 20, to take over his new duties. Biographical information about him is given under "Mainly About Railway People" on another page of this issue.

John Franklin Pierce, whose appointment as Passenger Traffic Manager, Canada Steamship Lines, Ltd., Montreal, was announced in our last issue, was born at Chatham, Ont., Sept. 6, 1877, and entered transportation service, Oct. 14, 1896, since when he has been, to Oct. 1904, clerk, Richelieu and Ontario Navigation Co., Montreal; Oct. 1904 to Oct. 1910, chief clerk, same company, Montreal; 1910 to 1912, Travelling Passenger Agent, same company, Boston, Mass.; 1912 to 1913, District Passenger Agent, same company, Boston, Mass.; 1913 to Dec. 1, 1914, Assistant General Passenger Agent, and General Baggage Agent, Canada Steamship Lines, Ltd., Montreal; Dec. 1, 1914 to April 1916, General Passenger Agent and General Baggage Agent, same company, Montreal; April 1916 to April 23, 1917, Assistant Passenger Traffic Manager, same company, Montreal; April 23, 1917, to Mar. 1, 1920, Assistant Traffic Manager, Prescott and east, same company, Montreal.

Thomas Robb, Manager, Shipping Federation of Canada, has been appointed a member of the Lighthouse Board of Canada, representing the shipping interests in the Atlantic division.

Major William George Swan, D.S.O., B.A.Sc., C.E. who was appointed Chief Engineer, Vancouver Harbor Commission, Vancouver, B. C., recently, was born at Kincardine, Ont., Sept. 27, 1884, and was educated at the public and high schools there and Toronto University. He entered transportation service in 1904 with the Canadian Northern R.R. and acted consecutively as transit man, Resident Engineer, Bridge Engineer, Division Engineer, Terminal Engineer, and District Engineer. He was for three terms an instructor in Toronto University Engineering Faculty. He served in France during the war for 27 months as Major, 2nd Battalion, Canadian Railway Troops, and later as Light Railways and Tramways Engineer for the 2nd British Army. He was mentioned in dispatches twice and has received the Distinguished Service Order and the French Croix de Guerre.

Cost of Ship Coal in the United Kingdom—London, Eng., press dispatch, Mar. 8.—Freight rates on ocean shipping from England would be increased at least 50% by a movement now in progress in order to meet the high cost of bunker coal here. Coal in the port of London this week will cost 155 shillings a ton, compared with 15 to 18 shillings before the war. This coal can be secured by industrial plants in the United Kingdom for 40 shillings a ton. So heavy is the cost of coal that some owners assert they may have to seriously consider the question of laying up their ships.

Major W. G. Swan, D.S.O., B.A.Sc., C.E.
Chief Engineer, Vancouver Harbor Commission.

Government, and as concrete inspector for the Greater Winnipeg Water District. He enlisted in 1916, and went overseas July 4, as sergeant in the 3d Canadian Railway Troops, and until Mar. 28, 1919, was in France, engaged in building light and standard gauge railways.

C. H. Nicholson, Manager, Grand Trunk Pacific Coast Steamship Co., Vancouver, B. C., has been elected President Vancouver Golf and Country Club.

J. W. Norcross, President and Managing Director, Canada Steamship Lines; President, Halifax Shipyards; and a Director of Canadian Vickers; and **R. M. Wolvin**, President, Montreal Transportation Co., and Vice President, Halifax Shipyards, are directors of Chase Tractor Corporation, Ltd., organized recently to take over the tractor business end of the Chase Motor Truck Co., Syracuse,

Halifax Graving Dock Expropriation.

The Minister of Marine and Fisheries, Ottawa, has received for approval the bill for the expropriation of the property at Halifax of the Halifax Graving Dock Co., the transfer of same to Halifax Shipyards, Ltd., for all survey, reports, etc., in connection with order in council, of Jan. 16, 1918, and of 1291, of Mar. 1, 1918.

Senator Duffin has given notice that April 6, he will introduce the government bill.

The bill, as introduced, takes possession of the property of the Halifax Graving Dock Co., Ltd.

If so, what date, and was it by lease, tender, purchase, expropriation, or by order in council under the War Measures Act?

Has any sum been paid for or on account of the property, and if so how much and on what date or dates?

Is the Halifax graving dock and adjunct ship repairing plant being operated by any department of the government? If so, for how long has it been so operated?

If not now operated as a public work by the government, has it been rented,

sold, leased, or given to a private company?

If so (a) on what date, (b) on what terms and conditions, and (c) for what period?

The name of the private company to which the Halifax graving dock property has been transferred, the capitalization, and the names of the directors.

How much, if anything, has been paid to Mar. 1, 1920, by said private company on account of the rental, or purchase, or for the use of said graving dock property?

The amount paid by the government to the Halifax Graving Dock Co. for its property at Halifax, taken possession of by the government, and if nothing, the reason for withholding payment; and has any effort been made, and if so, what, to effect an amicable settlement with the Halifax Graving Dock Co.?

The number of square feet of land and land covered with water taken by the government from the Halifax Graving Dock Co. on (or in connection with) which the dock and plant was located.

Was any land, and land covered with water, additional to that taken from the Halifax Graving Dock Co., sold, leased, or given to Halifax Shipyards, Ltd.? If so, (a) how many square feet, (b) was it acquired by purchase or expropriation, (c) what was the cost thereof to the government, and (d) if sold or leased to Halifax Shipyards, at what price?

Has the government expended any money upon the property taken from the

Halifax Graving Dock Co., or upon any land or other property acquired in connection therewith, since its acquisition? If so, state the amount so expended and the nature of the work done.

Has the government been asked to make any further expenditures in this connection? If so, how much, and does it propose to do so?

Is the government to be fully reimbursed for all its expenditures for the Halifax graving dock property and in connection therewith by Halifax Shipyards, Ltd., and if not all, what proportion and upon what conditions; and whether or not any deferred payments carry interest charges?

Sure Proof of the Aberdeen Boat.

Donald and Sandy were standing on the seashore watching the steamboats passing to and fro, when Sandy remarked: "There goes the Aberdeen boat, Donald."

"It's no the Aberdeen boat," replied Donald.

"It is," asserted Sandy.

"I suppose you think because it's painted grey and going north it must be the Aberdeen boat? vouchsafed Donald.

"I know it's the Aberdeen boat," said Sandy.

Then Donald sarcastically queried: "And how do you know?"

"Because there's no gulls followin' it," quoth Sandy.

Vessels Registered in Canada During December, 1919.

In compiling the following lists of vessels registered, steamboats and motor boats, operated by engines of less than 10 h.p., are eliminated, as also are engine vessels of less than 100 tons register.

Atlantic and Pacific Ocean.

The New Zealand Shipping Co.'s s.s. Durham, which was to have sailed from West St. John, N. B., for Australasian ports, was withdrawn and replaced by the s.s. Somerset, which sailed Mar. 20.

The British s.s. Tewkesbury, bound from Hampton Roads to England, ran ashore about 4 miles northwest of Cape Pine, Nfld., and was reported to have broken up shortly after striking. The crew took to the boats and were saved.

The French s.s. Mont Cervin, which arrived at Vancouver, B. C., with 5,000 tons of sugar from Cuba, returned with a cargo of 2,000,000 ft. of spruce, said to be the first cargo of lumber sent from British Columbia to Cuba for a number of years.

The U. S. Shipping Board's s.s. Ellithorpe reported disabled and drifting towards the rocks at Sable Island, Mar. 7, eventually weathered the storm and cleared the reef. She was later picked up by the s.s. Maplemore, when she reported she had lost her propeller.

A Liverpool, Eng., dispatch states that a further surcharge of 13 1/3% in passenger fares has been decided on by North Atlantic steamship companies, making the increase in the cost of a voyage between Great Britain and North America, 33 1/3% since July 1919.

The Portuguese s.s. Albatross, which sailed from Halifax, N. S., Mar. 8, for Portugal, was reported ashore, Mar. 9, near Egg Island, 28 miles east of Halifax, where she is reported as a total loss. In abandoning the ship, two of the crew lost their lives, the remaining eight suffering severely from exposure.

The Gulf of St. Lawrence Shipping and Trading Co. is making arrangements for operating 2 steamships on the route between Montreal and St. John's, Nfld., and another steamship between Montreal and Prince Edward Island, during the forthcoming St. Lawrence navigation season.

The Nippon Yusen Kaisha is reported to be arranging to build 60 freight steamships within the next few years for its trans-Pacific and European services, and it is stated that 7 passenger steamships, of approximately 20,000 tons each and a speed of 20 knots an hour, will be built for the service between Japan, China, Victoria, B. C., and Seattle, Wash.

Canadian Pacific Ocean Services, Ltd., has transferred the s.s. Virginian from the British register to the Canadian register. She was built at Glasgow, Scotland, in 1905, and is screw driven by turbines of 12,000 i.h.p. Her dimensions are: Length 520.4 ft.; breadth 60.3 ft.; depth 30 ft.; tonnage 10,757 gross, 6,827 registered. It is probable that some of the company's other vessels will be similarly transferred.

The Donald Steamship Co., Ltd., of Montreal, is reported to have ordered 2 steel steamships of about 8,000 tons capacity each for fruit and passenger trade between New York and the West Indies, with the Todd Shipyard Corporation, Brooklyn, N.Y. The keel of the first ship was reported to have been laid Mar. 10, and it is stated, that both ships will be oil burners, with a speed of 14 knots an hour. C. I. de Sola and W. R. Eakins, Montreal, are directors of the Donald Steamship Co., and McLean Kennedy & Co., Montreal, are agents.

The Isthmian Steamship Lines is op-

erating a freight service between New York, Vancouver, B. C., and United Kingdom ports, via the Panama Canal. The first sailing was with the s.s. Steelmaker, from New York, Feb. 3, and after discharging cargo at Vancouver, she sailed for the United Kingdom about the middle of March, on a tramp voyage, the ports of call depending on the cargo offering. The s.s. Steel Voyager sailed from New York, Feb. 23, for Vancouver, with the intention of returning to New York, thus maintaining one service between New York and Vancouver, and another service between New York, Vancouver and United Kingdom ports.

Maritime Provinces and Newfoundland.

The Dominion Public Works Department received tenders Mar. 23, for an extension to the wharf at Sober Island, Halifax county, N. S.

The s.s. Bessie M. Dugan, owned in Boston, Mass., is reported to have been sold to Newfoundland parties for service in that Dominion. It is stated that she is to be completely rebuilt, and refitted, and that she will be ready for service in the spring.

Eastern Steamship Lines, Ltd., announces the resumption of its service between St. John, N. B., and Maine and Boston ports, April 1. The service was suspended early in January, so that the ships engaged might be converted into oil burners.

The Dominion Government s.s. Montcalm, which had a lot of heavy ice navigation in the Gulf of St. Lawrence, during the winter, in breaking the way for the Canadian Government Merchant Marine's s.s. Canadian Spinner, and in taking supplies to the Magdalen Islands, was ordered, during March, to cruise along the Nova Scotia coast, break up ice at the entrances to small harbors, and visit the buoys in the Bay of Fundy.

The Dominion Coal Co.'s s.s. Cape Breton was wrecked in the ice at Scatar Island, Mar. 7. She sailed from Halifax, Mar. 5, encountered heavy ice and was blown ashore, after being completely disabled. The crew landed without difficulty and proceeded to Louisburg. She was built at Hylton, Eng., in 1890, and was screw driven by engine of 160 n.h.p. Her dimensions were: length 258 ft.; breadth 37 ft.; depth 16.8 ft.; tonnage 1,764 gross, 1,109 registered.

Province of Quebec.

The Lachine Canal was emptied Mar. 25, for the usual overhaul and repairs. It is expected that it will be reopened for traffic about April 15.

The Dominion Public Works Department will receive tenders to Apr. 7, for a license to operate a ferry across the Ottawa River between Sand Point, Ont., and Norway Bay, Que.

Capt. Donaldson, Quebec, is reported to have ordered from Davie Shipbuilding and Repairing Co., Lauzon, a steel steamboat 90 ft. long overall, for service on Lake St. John, between Peribonka and Roberval.

The Gulf of St. Lawrence Shipping and Trading Co.'s s.s. Labrador arrived at Quebec, from Murray Bay, Mar. 10, and sailed again on Mar. 17, for Seven Islands. She is reported to have had some difficulty in navigating, on account of ice, the section between Murray Bay

and Quebec being considered the worst part of the river during winter.

The Central Railway of Canada's s.s. Empress was offered for sale by tender Mar. 31, under an order of the Exchequer Court of Canada in the matter of the City Safe Deposit and Agency Co. vs. Central Ry. Co. of Canada. The s.s. Empress was built at Ottawa in 1873, originally named Peerless, and was rebuilt at Montreal in 1886. Her dimensions are: length 185.3 ft., breadth 27.6 ft., depth 8.1 ft., tonnage 678 gross, 372 registered. She has an iron hull, and is paddle wheel driven by engine of 152 h.p. She was owned formerly by the Ottawa River Navigation Co., and last year was operated by the Central Ry. of Canada, between Montreal and Carillon. She has capacity for about 800 passengers, is said to be in good condition, and is lying in the basin near the first lock of the Lachine canal.

Ontario and the Great Lakes.

The Western Navigation Co., Fort William, Ont., advises us that it does not intend operating any steamships on the Great Lakes this year.

The Keystone Transportation Co. will operate its steamships Keybell, Keynor, Keyport and Keywest in the lake trade during the forthcoming season. Its s.s. Keyvise is at present engaged in the West Indies trade.

Passenger fares on the ferry boats between Windsor and Detroit were raised Mar. 1, round trip tickets being now 10c, and strip tickets 7 for 25c. Rates on motor cars, trucks, etc., are arranged on a sliding scale.

The American Transit Co., Sarnia, Ont., which operated the s.s. Frank B. Stevens in 1919, in connection with the Cleveland-Sarnia Sawmills Co., Ltd., of which it is a subsidiary, does not propose to operate the ship this year, and is offering it for sale.

The Dominion Transportation Co., Sault Ste. Marie, Ont., purposes operating its steamships, Caribou and Manitou this year, between Sault Ste. Marie and Owen Sound, and Sault Ste. Marie and Michipicoten. J. J. Noble is Superintendent at Sault Ste. Marie, and G. D. Stewart is agent at Owen Sound.

The U.S. Lake Survey reports the stages of the Great Lakes in feet above mean sea level for February as follows: Superior 601.91; Michigan and Huron 579.95; St. Clair 573.41; Erie 570.80; Ontario 245.01. Compared with the average stages for the past 10 years, Superior was 0.09 ft. above; Michigan and Huron 0.01 ft. above; Erie 0.80 ft. below; Ontario 0.47 ft. below.

The oil tank steamship G. R. Crowe, owned by the Montezuma Transportation Co., Toronto, and operating between New York and Tampico, was reported disabled in the Gulf of Mexico, Mar. 21, and was towed into Mobile, Ala., for repairs. She was owned formerly by the St. Lawrence and Chicago Steam Navigation Co., Toronto.

The Collingwood Steamship Co.'s s.s. City of Meaford has been dismantled, and her register closed. She was rebuilt at Meaford, Ont., in 1906, was originally named Seaman, and was owned by Pearks Bros., Meaford, when she was acquired by her later owners, in 1917, for service between Collingwood and Sault Ste. Marie. Her hull is of oak, and she has the following dimensions, length

1919. On April 30, 1920, the company reported a net profit of \$2,000 less than the expenses, but permission to operate for the following season.

The Toronto Ferry Co. has applied to Toronto City Council for permission to increase its fares from 10c to 15c. It is the intention that residents on the island and children travel at the old fare, and that combination tickets, including admission to baseball games be issued at the old price of 50c plus war tax. A similar application was made in 1919 and was refused. It is said that increased cost of fuel and labor have added \$18,000 a year to the operating cost, and that there has been a considerable expenditure for new equipment and repairs. The company is reported to have stated that if the increase is refused, it will be compelled to reduce its service to the lowest limit permitted by the city's by-law.

An order in council has been passed making regulations for the ferry service across the St. Clair River, between Sombra, Ont., and Marine City, Mich., providing that boats to be used for passengers must not be less than 24 ft. long, 6 ft. beam, for automobiles 34 ft. long, 11 ft. beam, and that during the season when ice is in the river, 2 rowboats, registered and inspected by the Dominion Inspector of Steamboats are to be used. The fares are fixed for adults in summer at 15c one way and return the same day, and 25c in winter; children 10c return, tickets, 8 trips for \$1, automobiles \$1 a trip, trucks \$1.50 light, \$2.50 loaded. A license will be granted for 10 years on an annual payment of \$1.

Canada Steamship Lines' s.s. H. M. Pellatt has been sold to Belgian parties. She was built at Glasgow, Scotland in 1903, of steel, her dimensions being, length 239ft., breadth 37ft., depth 24ft.; tonnage, 1,591 gross, 1,038 registered. She is equipped with triple expansion engines, with cylinders 21, 35 and 57 in. diam., by 36in. stroke, 1,250 i.h.p. at 83 r.p.m., supplied with steam by 2 Scotch boilers, each 13½ ft. diam. by 10½ ft. long at 180 lb. She was built originally for the Canadian Lake & Ocean Navigation Co., and eventually passed to the Merchants Mutual Line, Ltd., Toronto, and thence to Canada Steamship Lines, Ltd.

The Toronto Ferry Co. has applied to Toronto City Council for permission to increase its fares from 10c to 15c. It is the intention that residents on the island and children travel at the old fare, and that combination tickets, including admission to baseball games be issued at the old price of 50c plus war tax. A similar application was made in 1919 and was refused. It is said that increased cost of fuel and labor have added \$18,000 a year to the operating cost, and that there has been a considerable expenditure for new equipment and repairs. The company is reported to have stated that if the increase is refused, it will be compelled to reduce its service to the lowest limit permitted by the city's by-law.

A license will be granted for 10 years on an annual payment of \$1.

Canadian Maritime Co.'s s.s. J. H. Plummer, registered at Montreal, has

been sold to Belgian parties. She was built at Newcastle upon Tyne, Eng., in 1904, of steel, her dimensions being, length 246ft., breadth 37ft., depth 24ft.; tonnage, 1,581 gross, 1,032 registered. She is equipped with triple expansion engines with cylinders 20½, 33 and 54 in. diam. by 36in. stroke, 1,250 i.h.p. at 81 r.p.m., and supplied with steam by 2 Scotch boilers each 13½ ft. diam. by 10½ ft. long at 180 lb. She was built originally for Canadian Lake and Ocean Navigation Co., Toronto, and later passed to the Merchants Mutual Line, Ltd., under the management of Canada Steamship Lines, Ltd.

Lake Ports Navigation Co., Ltd., Sarnia, has bought the s.s. Conestoga from the Crosby Transportation Co., of Milwaukee, Wis., and has transferred her to the Canadian register. She was built at Cleveland, Ohio, in 1878, of oak, her dimensions being, length 252 ft., breadth 36ft., depth 26ft. 3in.; tonnage, 1,726 gross, 1,562 registered. She was originally named Susquehanna, and is of the awning or hurricane deck type of ship, with steel arches, steam pump wells, the hull divided by a single watertight bulkhead, and equipped with electric lighting. The propelling machinery consists of a Steeple compound engine with cylinders 17 and 34in. diam. by 32in. stroke, supplied with steam by a firebox boiler 9ft. diam. by 16 ft. long at 90 lb.

The Webster Steamship Co.'s s.s. Marian W. was practically destroyed by fire at the Louise Basin, Quebec, Mar. 6. Her estimated value was \$60,000, which is partly covered by insurance. She was built at Mount Clemens, Mich., in 1890, and was originally named Byron Whitaker. Her hull was of oak, and she was built with diagonal strapping on frame, steel boiler house, steam pump wells and bow sheathed for navigation ice. Her dimensions were,—length b.p., 220 ft., breadth moulded 38 ft., depth moulded 21 ft., tonnage 1,539 gross, 959 net. She was equipped with fore and aft compound engine, with cylinders 24 and 46 in. diam., by 40 in. stroke, 750 h.p., at 90 r.p.m., and supplied with steam by a Scotch boiler 12 x 12 ft. at 130 lb. She was owned formerly in Chicago, Ill., and was bought a few years ago by F. E. Hall & Co., Montreal, and subsequently sold to L. C. Webster, President, Webster Steamship Co.

Manitoba, Saskatchewan and Alberta.

The Hudson's Bay Co.'s paddle wheel steamboat Athabasca River, which was built at Athabasca Landing, Alta., in 1912, has been dismantled and re-registered as a scow. Her dimensions are, length 136ft., breadth 28ft., depth 3.6 ft.; tonnage, 341 registered.

The Manitoba Gypsum Co.'s steamboat Marvyl, registered at Winnipeg has been dismantled, re-registered as a barge and sold to Northern Fish Co., Selkirk, Man. She was built at The Landing, Man., in 1905, and was screw driven by engine of 27 h.p. Her dimensions are: length 120 ft., breadth 26 ft., depth 8 ft.; tonnage 225, registered.

The Lamson and Hubbard Canadian Co., which operates in northern waters, and which purchased the assets of the Peace River Trading Co. recently, has made a number of amendments to its by-law, respecting directors, etc., providing that the business shall be managed by 11

directors who must be shareholders, and be elected at least once a year, for one year, meetings to be held at the place to be determined by the directors, and directors as such are not to be paid any stated fees for their services. The board also is at Boston, Mass., S. St. J. Morgan being President, and J. C. Bassett, Secretary.

British Columbia and Pacific Coast.

Preparations are being made at Victoria, B.C., for the opening of the whaling season about the middle of April. It is anticipated that 8 ships will open the season, 3 operating from Kyuquot, 3 from Rose Harbor, and 2 from Naden Harbor.

The C. P. R. is, we are officially advised, looking into the question of building an additional steamship for its British Columbia coast service, somewhat larger than its s.s. Princess Alice, and with a dead weight cargo capacity of about 1,000 tons.

The Grand Trunk Pacific Ry. has completed plans for considerable wharf extension at Prince Rupert. The new dock will be 860 ft. long, 173 ft. wide, with travelling cranes and 2 elevators. A two-story freight shed, 820 ft. long, with 25,000 tons storage capacity, will also be built.

A Vancouver press dispatch states that word has been received there from St. Paul, Minn., that the negotiations between the Vancouver Harbor Commission and the Great Northern Ry., for the purchase of water frontage on Burrard Inlet for the site of the projected Dominion Government pier, have been concluded.

It was stated in Canadian Railway & Marine World for March, that the s.s. Nouvelle Ecosse, the last of the wooden steamships to be built for the French Government, by the Foundation Co. of British Columbia, arrived at Fraser River mills early in February, to load lumber for Europe, and that the dispatching of the steamships from British Columbia had been handled by Edward White & Sons, Victoria, the rule to be followed that they called at Queenstown, Ireland, for orders, and after unloading at a British port, proceed to Brest, France. C. Gardner Johnson & Co., ship brokers and general agents, Vancouver, write us the following correction, "Our firm, with agents at Victoria, E. White & Co., appointed by us, were the sole agents for the French High Commission, and handled the 40 steamships built by them in British Columbia, of which the Nouvelle Ecosse was one and the last to sail. We really handled 41 for them, for the s.s. General Pau, though built on the U. S. side, returned from sea on her first voyage with boiler trouble, and had new boilers built in Vancouver, to replace the ones taken out."

Port Colborne Elevator.—The Dominion Marine Association, a deputation from which waited on the Railways & Canals Department, Ottawa, recently, is much disappointed to learn that the Dominion Government grain elevator at Port Colborne, Ont., is not likely to have its trans-shipping facilities restored and in operation before June 1 at the earliest. It was hoped, some little time ago, that trans-shipment would be possible at the opening of navigation and a good deal of storage available.

Shipping Federation of Canada's Annual Report.

Canadian Railway and Marine World for March contained some particulars of the Shipping Federation of Canada's annual meeting, since which we have been supplied with a copy of the President's report, which was signed by Jno. Torrance, who was unable to be present owing to illness. Following are extracts from it:

Navigation opened up much earlier than usual in 1919, the first arrival from the sea being the s.s. War Redcap, on April 22, while the last seagoing vessel to depart was the Elder Dempster liner Bassa, for South African ports, on December 10. The total number of seagoing ships to arrive at the port was 786, with a tonnage of 2,179,280, compared with 674 ships of 1,933,482 for 1918. The trans-Atlantic trade showed a good increase, numbering 702 ships against 644 for 1918, while the coasting trade also showed some recovery, but is still far below the standard of pre-war days. Strikes in the United Kingdom at times greatly interfered with the sailing of ships from this side.

Shipping conditions at the port may be described as good all through the season; there was a plentiful supply of freight offering, and also a good supply of labor available. Passenger traffic, although restricted through the shortage of passenger ships, was very brisk, both on the east and westbound trades. The value of exports from the port was approximately \$700,000,000, which gives Montreal the honor of being the second largest port on the North American continent, being exceeded only by New York. This reflects credit on the port, when one takes into consideration that we are only favored with a seven months season, while our U. S. competitors have an all-year-round service.

Speaking of shipping conditions for the future, I regret to say they do not look anyway too bright, and we may fully expect to see a year or two of depression. At present, freight rates are on the downward grade, while operating expenses still continue to go the opposite way. New tonnage is fast coming on the market, which makes competition very keen for the freight offering, but it is to be hoped with increased trade this surplus will be quickly absorbed.

Cold Storage.—For a modern port such as Montreal there has been one facility she has lacked for years, and that is proper cold storage accommodation to care for perishable export produce. In conjunction with the commercial interests, we had occasion to bring this matter before the Harbor Commissioners in the early part of the year, and also took the subject up with the government, and I am pleased to report that the government has advanced the commissioners sufficient funds to commence the erection of a modern plant.

Berthing Accommodation. For years past, we, who have berths in the upper section of the harbor, have suffered considerable inconvenience in loading and discharging our larger size ships through the piers not being long enough to berth two large ships without one overlapping the other. In order to overcome this handicap, we suggested to the commissioners that the piers should be lengthened approximately 250 ft. each, which they concurred in. Construction was commenced during the season and should be completed by the middle of next season.

Wharfage Tariff.—The commissioners passed a new wharfage tariff, considerably increasing the rates on import and export commodities. The shipping and commercial interests took exception to this tariff being put in force, as it would seriously affect the trade of the port, which is in direct competition with the ports to the south of us, where every inducement is offered to attract trade. The commissioners, I am pleased to say, have so far withheld putting the new tariff into force, and I trust that with an increased import and export trade, sufficient revenue will be derived to meet the expenses of operating the harbor, without increasing the tariffs further.

Labor.—Once again, I am pleased to report that our port was absolutely free from labor disturbances of any kind during the season; the longshoremen, shipliners and checkers carried out the agreements which they entered into at the opening of the season to the letter. It is very gratifying for me to report that, since 1911, our port has been very fortunate to escape the labor disturbances which have visited nearly all the principal ports of the world, and it reflects great credit on the port workers, who have time and again shown themselves to be a levelheaded and non Bolshevik class of people. I trust that the good feeling which now exists between employers and employees will continue for years to come. At St. John, N. B., agreements were entered into with the longshoremen, shipliners and coal handlers' associations, covering wages and labor conditions up to Dec. 1, 1920, which I hope will be faithfully carried out.

Pilotage.—I regret to report that pilotage conditions on the St. Lawrence were very unsatisfactory during the year, especially in the Montreal district. For years past, the shipping interests have been vainly trying to have the pooling of earnings abolished in the Quebec district, on the grounds that it destroys the incentive of the pilots and encourages slothfulness. The Montreal pilots (a body of men who for years have enjoyed the confidence of the shipping interests) submitted a similar scheme for our approval, which, needless to say, was refused. Not being satisfied with a negative answer, the pilots formed themselves into an association known as the United Montreal Pilots, and commenced pooling their earnings. Matters then went from bad to worse, and finally ended by the shipping interests petitioning the government to throw open the pilotage districts of Montreal and Quebec by abolishing the compulsory payment of pilotage dues, which would give us permission to employ men in whom we would have absolute confidence. Owing to the shortness of the last session of parliament, no action was taken, but it is our intention to take this matter up further during the coming year, and see if some improvement can be made.

St. Lawrence Ship Channel.—Dredging operations were again greatly curtailed during the season. Considerable work, however, was accomplished at Cap-a-la-Roche, where the widening on the north side of the channel was completed. Some dredging and deepening was also done at the Longueuil curve, where it is proposed to widen the curve to 850 ft. and deepen it to 35 feet at E.L.W. When this work is completed, it will be a great improvement in this part of the channel. The usual sweeping of the channel was

done thoroughly during the season, and no serious obstructions were found. Some sand bars were found to have formed in the Champlain channel, but these were immediately removed by dredges.

Conclusion.—I would like to take the opportunity, now that I am leaving active business life, and severing my official connection with the federation, of saying how much its success and efforts are due to the loyal co-operation and friendly spirit of its different members and of hoping that this co-operation may continue in the future, as I am satisfied that this federation has been, and will continue to be, a great force for the good of the shipping interests, not only of the port of Montreal, but of Canada at large. During the time of my connection with the federation, all important Canadian shipping questions have been considered by its council and by its members, including legislation, rules, pilotage, navigation of the river, and other matters which directly affect the shipping interests. In all these questions the federation has made its influence felt. Its committee have taken cognizance of all the legislation which has affected the interests of the board, and have studied and influenced and in many cases taken the initiative where they thought it was in the interest of shipping that they should do so. I desire to take the opportunity of expressing my appreciation (which I think will be felt by all the members of the federation) for the work which has been done by your Secretary, Thos. Robb. He has been most devoted to the interests of the association and of the members of it, and has been indefatigable always in his efforts to please and assist us, and his complete knowledge of the affairs of the association render him, in my opinion, practically indispensable to us.

Questions are now under consideration which affect the interests of the board and all shipowners, which require your attention and which I trust will be solved at an early date in a manner entirely satisfactory to us all. There never was a time when there was greater need for the loyal co-operation of all the different shipping interests in this country. In this connection, it is a subject of congratulation that for the first time, I think, since Confederation, Canada has as Minister of Marine, a Montreal merchant, and one, too, who is thoroughly familiar with the requirements of the port. Our relations with the various government departments have been most cordial, and I wish to extend our thanks to Hon. C. C. Ballantyne, Minister of Marine, A. Johnston, Deputy Minister of Marine, and G. J. Desbarats, C.M.G., Deputy Minister of the Naval Service, for their courteous attention given to the many matters which we have had occasion to bring to their attention. Our thanks are also due to the officers of the Militia Department, especially to Major-General J. Lyons Biggar, C.M.G., Quartermaster-General, who has now retired, after long and faithful service, and to Col. E. E. Clarke, Director of Supply and Transport.

The Canadian registered tonnage entered with the federation in 1919 was 108,000 tons, an increase of 30 tons over 1918.

Sea Going Safety.—Only one passenger in each 1,600,582 loses life at sea.

may be granted a certificate providing they have the qualifications that I have referred to."

The debate was continued on Mar. 18 by D. D. McKenzie, who again protested against its passage, the Minister of Marine replying. On Mar. 19 W. Duff,

M.P. for Lunenburg, N.S., and C. A. Fournier, M.P. for Bellechasse, Que., and R. H. Butts, M.P. for Cape Breton South, and Richmond, N.S., spoke in support of the resolution, which was adopted, and a bill founded on it was introduced and read a first time.

Loss of the Leyland Line s. s. Bohemian.

An enquiry into the loss of the Leyland Line s.s. Bohemian, on the Sambro Ledges, near Halifax, N.S., on Mar. 1, when six of the crew were drowned, was held at Halifax, Mar. 5, before Capt. J. B. Henry, commissioner, assisted by Capt. N. Hall and C. O. Allan as nautical assessors. The evidence showed that the Bohemian left Boston, Mass., Feb. 28, with 65 passengers and 115 of a crew for Liverpool, Eng., via Halifax. At 5.10 p.m. Feb. 29, Brazil rock was passed, a mile distant, on a course n. 55 e. true, and at 8 p.m. Little Hope Island was 6½ miles off by a 4 point bearing. The ship continued on the same course until 1.30 a.m., Mar. 1, when the master was called according to his instructions, and at 1.58, the direction finding station at Chebucto Head was asked for a radiotelegraph bearing, which was given at 2.5, as Chebucto Head approximate bearing from 207 deg. east of true north. After consulting the chart, the master considered the radio bearing incorrect, and without verifying his position by soundings, continued on his dead reckoning, as he considered he had a visibility of 5 or 6 miles. At 2 a.m., the speed was reduced to slow, approximately 4 to 5 knots, the master intending to continue for 2 or 3 miles before hauling up for pilot station, but at 2.40 a.m. the course was altered to n. 10 e. true, without any soundings being taken, or the ship's position otherwise verified, and as the course was being altered, Sambro light was sighted at a presumed distance of 5 to 6 miles. The explosive signal at Sambro was heard about the same time, followed a little later by the Chebucto fog horn. Still no soundings were taken though the Sambro light vessel was not sighted, as it might be expected to have been from a ship in the position the Bohemian was presumed by her master to be, with the assumed visibility. The ship struck on Broad Breaker at 2.50 a.m., and though efforts were made by engine movements to float her, they were unsuccessful and she broke in two about 3 a.m., Mar. 2. Assistance arrived from Halifax, and all passengers were landed on the morning of the stranding, and during that day some of the crew were engaged to work for the salvage company, but this work was completed the same evening. It was the unanimous opinion of the master, surveyors and salvage experts, that the ship was quite safe for two or three days, but unexpected circumstances developed. There were about 100 men on board, including master, officers, crew and salvage men, and the transfer of these was made by rope ladders and lines from the Bohemian to the tug Roebing, which was alongside. During the transfer in the early hours of a very cold morning, six lives were lost, the victims apparently not being able to maintain their hold of the ice coated lines, either through frost bite, or burning through sliding down the ropes. Five of those lost were from the steward's department, none being firemen, who might have

been more affected through the cold weather than the deck staff.

In commenting on the evidence, the court stated that the master, without taking the necessary steps to obtain an accurate estimate of the distance off Sambro light, which is surrounded by such dangerous outlying ledges, either thoughtlessly, or for some unexplained reason, except over confidence, as expressed by him, continued to haul the ship on her northerly course and into danger. He had plenty of time to have another bearing from the direction finding station before assuming his northerly course. The court expressed its appreciation of the difficulties experienced by navigators during the war, through mine and submarine zones, and other enemy dangers, and could not but consider the excellent war services of the master, Capt. E. C. Hiscoe, who, from the evidence, was successful in evading disaster to his vessel from submarines, though attacked on three occasions. Taking into consideration the facts as presented, the court found that he should have taken soundings when he received his radio bearing, before rejecting it as incorrect, again before he altered his course, and still again immediately he saw Sambro light, and also should have availed himself of further bearings from the radio station. He might easily have hauled away from the light, which was the proper thing to do under the circumstances. Therefore, the court, while finding him at fault for the casualty, crediting him with his war record and past career as a master, took a lenient view of the case and suspended his certificate, 00551, for three months from Mar. 8. The court also found that the second officer, S. Blackmore, master's certificate 039-432, in whom the master, apparently had implicit confidence, was lacking in his sense of responsibility and duty, and censured him for not suggesting the necessity for verifying the ship's position by soundings and further radio bearings. The court considered that the deplorable loss of life was not in any way due to the neglect of any individual or individuals, but was caused during the transfer to the tug in the dark hours of a very cold morning, owing to the condition of the rope ladders and ice coated davits, etc. The court impressed upon navigators the desirability of more extensive use of the direction finding stations, which are undoubtedly a distinct advantage to mariners as a further means of checking their positions. The court also stated that it might have looked askance upon the disappearance of the log books and other papers, had it not been for the master's sworn statement that he also lost his certificate at the same time.

The Pullman Co. is reported to have applied to the Interstate Commerce Commission for permission to increase its fares about 20% with a minimum of 50c for seats and \$2 for lower berths.

St. Lawrence River Ice Conditions.

J. Archambault, M.P. for Chambly-Verchères, said in the House of Commons Mar. 9—"I wish to call the attention of the government to a most important and urgent matter. I am informed from reliable sources that the ice jam on the St. Lawrence is much deeper this year than ever before. At Cap Rouge, above Quebec, there is a gorge, and I am informed the ice has frozen 40 ft. deep, and that the water behind has risen 6 ft. higher in some places. There is an ice barrage. If this barrage is not broken up immediately there will be serious floods from that point up to Montreal. We had ice breakers that were built for that purpose. I understand that the steamships Earl Grey, Minto and John D. Hazen were sent to Russia in 1915-1916 and 1917. The Montcalm is at Halifax and I understand the Lady Grey is not powerful enough to break the ice there. I am informed that unless dynamite is used to break the ice very serious floods will occur with resulting damage. I wish to know if the Minister of Marine and Fisheries is aware of the facts, and what steps he intends to take."

Hon. C. C. Ballantyne, Minister of Marine and Fisheries, said: "I am afraid that the information that has reached the member is not accurate, and I shall be very glad indeed to give the information that he asks for. The first part of the winter was not very cold, and no ice bridge formed on the St. Lawrence up to Nicolet Traverse, 90 miles above Quebec, until the last week in January. The ice jammed several times during the winter at Cap Rouge, the Quebec Bridge site, which is considered the key of the ice situation, but was successfully broken up by the ice breaker Lady Grey. With no ice bridge formed at this point, there is no fear of disastrous floods occurring above. The channel is now clear if ice up to near Portneuf, 35 miles above Quebec, where the Lady Grey is working today, and is making good progress. The conditions this year are not much different from those of former years. The Lady Grey hopes to reach Cap Charles, 50 miles above Quebec, very shortly. The Montcalm first of all had to go to Belle Isle to take the place of the Arranmore that was wrecked, and to relieve the lighthouse people there. She afterwards had to go to the assistance of the Canadian Government s.s. Spinner, that was stuck in the ice below Father Point. After releasing that ship she proceeded to the Magdalen Islands, carrying provisions for the distressed people there. Owing to the severity of the weather and the thickness of the ice, she was delayed a month in making that voyage. She returned to Halifax requiring repairs, especially propeller blades, but owing to the wreck of the s.s. Bohemian she had to go to her assistance. The Montcalm is now in Halifax and will go on the drydock as soon as possible. I do not anticipate any serious results from floods this spring—no one can accurately tell—but I am pleased to say that the Lady Grey is working well and that the ice bridge is broken."

Great Lakes Mariners Votes.—A deputation of masters and mates in the Great Lakes trade has asked the Dominion Minister of Labor that the same consideration be granted to them at elections as is given to railway men, so that they may vote in a similar way.

Superintendent of Pilots for Montreal-Quebec Pilotage District.

The Civil Service Commission, which issued recently the applications for appointment as Superintendent of Pilots for the Marine Department of Marine for the Montreal-Quebec Pilotage District, at an initial salary of \$3,060 a year, which will be increased on necessary promotion for efficient service at the rate of \$180 a year until a maximum of \$4,200 has been reached.

Under direction, to supervise the pilotage service in a pilotage district of the Marine Department, to call and assign pilots to ships, receive pilotage dues, and make the required reports and returns to the department; to conduct investigations, when required, into wrecks, collisions, and straits; to make recommendations and handle correspondence in connection with such work; and to perform other related work as required. Qualifications: A master's certificate of competency; must have been actually master of a seagoing ship, or a passenger ship in the coasting trade, for at least one year; must be thoroughly familiar with all shipping matters, especially those of the Gulf and River St. Lawrence and have a knowledge of the English and French languages. While no definite age limit has been fixed, age may be a determining factor when making a selection. Examination.—Subjects and weights as follows:—Education and experience, 100; oral interview, if necessary in the opinion of the commissioners, 100.

Ice Breakers in the St. Lawrence.

The following questions were asked in the House of Commons, Mar. 10, by M. S. Delisle, M.P. for Portneuf, Que., the answers being given by the Minister of Marine.

Is the government aware that there is an insufficient number of ice breakers operating in the St. Lawrence? Answer: The only ice breaker operating in the St. Lawrence River at present is the C.G.S. Lady Grey.

If so, does the government propose to order the construction of new ice breakers, how many and of what type? Answer: Under consideration.

If the government has not been made aware of such a condition, is it the intention to order the construction of one or several of such ice breakers? Answer: Under consideration.

British Shipbuilding in 1919.

The most notable British vessels launched during 1919: The Arundel Castle, 22,150 tons; the Cameronia, 16,000 tons; the Oropesa, 14,000 tons and the San Fernando, 13,056 tons. Of that remainder, 127 were between 5,000 and 6,000 tons; 47 between 6,000 and 8,000 tons, and 11 between 8,000 and 10,000 tons. It is a remarkable fact that not a single sailing ship was launched in Great Britain during the year, and only 17, with a total tonnage of 148,188, are fitted with turbine machinery. The four largest vessels, above mentioned, are all propelled by geared turbines, and five ships making 32,926 tons together, are provided with Diesel engines; the largest motor ship is a vessel of 6,980 tons.

The Clyde, including Glasgow and Greenock, accounts for 525,747 tons, which is over 32% of the whole British

production. Glasgow gave away an increased production of nearly 50% compared with 1918. Next in order of magnitude of production comes Sunderland, with 274,283 tons, which is a slight improvement on 1918, while Newcastle follows with 239,836 tons, or rather less than 1918. At Belfast and Londonderry, which take fourth place in the list the tonnage launched was 213,720, an increase of over 42% from 1918. The only other district with more than 100,000 tons to its credit is Middlesbrough, Stockton and Whitby, for which the figure is 119,943, nearly 10% more than in 1918.

Proposed Control of Inland Navigation Rules Etc.

The Dominion Parliament has given a first reading to a bill introduced by J. E. Armstrong to amend the Railway Act, 1919, by adding sections to give the Board of Railway Commissioners jurisdiction over ships trading on inland waters, and in coasting business. In explaining the bill Mr. Armstrong said it is similar to the one he brought before the House in 1919, and is intended to bring such ships under the Board of Railway Commissioner's control as to rates, tolls, tariff agreements and arrangements, time of call, duration of stay and so forth. The last section of the bill seeks to amend Sec. 358 of the Railway Act in order that it may harmonize with the principles of this bill. The Winnipeg Board of Trade is reported to have passed a resolution Mar. 13, opposing the bill and it was further stated that other boards of trade in the west would be asked to also oppose it.

Steamship Service to Gaspé Points.—Sir George Foster, acting Prime Minister, gave the following information in the House of Commons, Mar. 11, in answer to questions by C. Marcell, M.P., for Bonaventure. The government does not intend to offer a subsidy this year for a steamship service between Campbellton, N.B., and Gaspé, Que., which was discontinued at the close of navigation in 1917. No requests have been received for the revival of the service this year. The Gulf of St. Lawrence Shipping & Trading Co., Quebec, has a contract for a steamship service this year between Montreal and Quebec and Gaspé, or Paspébiac, Que. The same company ran fortnightly trips last year between Montreal, Quebec, Gaspé and Paspébiac. There was no service to Campbellton.

The Eastern Canada Stevedoring and General Contracting Co. Ltd. has been incorporated under the Quebec Companies Act with \$100,000 authorized capital, and office at Quebec, Que., to take over the business carried on formerly by L. Couture, to conduct a general contracting and stevedoring business, and to own and operate steam and other ships of every description. The incorporators are: L. Couture, M.L., M.J.S., V.K., and W. B. W. Mahon, Quebec, Que.

Motor Transport, Ltd. has been incorporated under the Dominion Companies Act, with \$25,000 authorized capital, and office at Montreal, to carry on the transportation of merchandise and passengers upon land and water, towing, wrecking and salvaging, in all its branches, on navigable waters in Canada to or from any foreign port. The incorporators are: F. W. Tofield, B. S. Crombie, A. M. Murray, F. H. Robertson and E. Paul, Montreal.

Canadian Government Steamboat Champlain.

The following questions by P. F. Casgrain, M.P. for Charlevoix-Montmorency, were asked in the House of Commons Mar. 10, and answered by the Minister of Marine:

Has the government disposed of the steamboat Champlain? Answer: No, but intends doing so.

If so, why? Answer: No further use for her.

What price was realized by the sale? Answer: \$61,050.

Is it the Government's intention to buy or build another steamboat to replace the Champlain? Answer: No.

If not, why? Answer: No necessity for replacing her.

Is there any steamboat at present replacing the Champlain, along the route Murray Bay-Tadoussac? Answer: The Champlain is still at Murray Bay.

The answers given to the questions, as reproduced from the official report of the House of Commons debates, do not agree, one answer stating that the government had not disposed of the ship, but intended doing so, while another stated that \$61,050 was realized by the sale.

Canadian Government Steamship Stanley.

The following questions were asked in the House of Commons Mar. 10, by D. W. Duff, M.P., for Lunenburg, N.S., and answered by the Minister of Marine:

Does the government own a steamer named the Stanley? Answer: Yes.

If so, when did she last undergo overhauling and repairs? Answer: At present under repair.

Have said repairs been completed, and what was their nature? Answer: No, general overhaul of the hull, boilers and machinery, including removal and refitting of certain shell plating, renewal of defective double bottom tank tops under boilers. General overhaul of the main and auxiliary machinery and boilers, overhaul of underwater fittings, also overhaul of the electric light installation including the rewiring of the ship.

What did said repairs cost? Answer: Amounts of contracts let, \$23,507.85.

How long was the ship out of commission, giving dates? Answer: Dec. 12, still under repair.

Gaspe Steamship Service. Sir George Foster stated in the House of Commons, Mar. 22, that the government had not given any thought to putting on some of its steamships on the Montreal-Quebec-Gaspé route, in lieu of the steamships subsidized formerly, and that the government had no special information as to residents of Matane, Gaspé and Bonaventure counties having to rely on sailing craft to transact their business, as in the old days, but that there might be some cases of the kind. In answer to another question: "Owing to the government's refusal to grant a subsidy for a steamship service between Campbellton, N.B., and Gaspé, Que., is the government prepared to offer a subsidy of \$3,000 for a steamship service between Dalhousie, N.B., St. Homer and Carleton, Que.?" Sir George Foster replied: "The answer is in the negative."

Tide Tables for Nelson, Hudson Bay and tidal data for Hudson's Strait and James Bay, for 1920 season, July to October both inclusive, have been issued by the Naval Service Department.

Canada Steamship Lines, Limited, Annual Meeting.

Canada Steamship Lines Ltd. annual report for the calendar year 1919 was published in Canadian Railway and Marine World for March. The annual meeting was held in Montreal, Mar. 2. The President, J. W. Norcross, in moving the report's adoption, said:

"The report and financial statements have a special interest this year, as they afford an opportunity of gauging the possibilities of the enlarged system of the company's operations under peace conditions. During the past few years so many important developments have occurred that it might be of interest to shareholders to know how the various undertakings have gradually been rounded out into one complete unit of operation. At the time the consolidation was effected, the operations of the company were confined largely to freight and passenger business on the St. Lawrence and Canadian and inland waters. The various classes of tonnage owned by the companies at the time made it difficult to operate them to advantage under one central management. Today, as the result of carefully mapped out plans, the company operates a complete international trans-Atlantic and all-Canadian service. Its Atlantic, West Indies and South American lines are closely related to the inland services, and it has been clearly proved that the earnings of each department have benefitted by the new ones that have been established. The results obtained from the trans-Atlantic services have more than justified the important plans carried out in this field. While substantial revenue producers, these ocean services have been established at comparatively small capital outlay, and it has been possible to use in connection with them the company's regular traffic departments. At the same time their operation has necessitated only small additions to the general organization. Of equal importance has been the improvement in the class of tonnage owned and operated. The marked increase in tonnage values enabled your directors to dispose of, at very favorable prices, a large number of the steamships turned over at the time of the consolidation. They have in every instance been replaced by ships of the highest class. As a result, the company today has a fleet of steamers particularly adapted for the services in which they are employed. Notwithstanding the large increase in tonnage values, the entire fleet is carried on the books at a lower per ton rate than before the war. It might also be worthy of mention that while our trust deed only calls for a depreciation allowance of 2½% the board's policy has been to make a more liberal appropriation. The important affiliations made by the company in connection with its trans-Atlantic services are likely to lead to the establishment of other ocean routes. In addition, plans are being considered which may result in a working arrangement between your company and another very large undertaking. Both of these possible extensions should have a direct bearing on the growth of the import and export trade of the Dominion—a development which is so strongly urged, owing to its important bearing on the adjustment of the trade balance of the country. While we are passing through a period when it is somewhat difficult to see very far ahead, we feel that the results achieved

under peace conditions justify confidence in the future. The broadening out of the organization makes the company less dependent on any one class of traffic and tends to stabilize, as a whole, the operations of the entire year. The company's various departments are co-related in a manner that permits of all your undertakings supplementing one another to advantage. With the inland and trans-Atlantic services, your agents can take delivery of freight at any port on the Great Lakes in Canada and the United States and issue to the shipper a through bill of lading to European ports. This is a particularly strong position to be in. Advantage was also taken of the special conditions that prevailed during the war period and as a result your company made a number of favorable long-term contracts which will greatly strengthen its position during the next few years. Your directors feel that gradually, but steadily, an efficient and complete system of transportation has been built up, which enables it to pre-eminently meet the demands of the growth of Canada's export and import trade. On this account your company is in a position to render a great service to the Dominion. This should be a matter of pride to every Canadian, as it will undoubtedly be to every shareholder."

M. J. Haney, of Toronto, Vice President, in seconding the adoption of the report, said: "The results reflect an achievement that is altogether exceptional for a Canadian corporation. Mr. Norcross, in his address, has been kind enough to give to the board of directors a considerable portion of the merit for the policy that has brought these eminently satisfactory results to the shareholders. Speaking on behalf of the board, I think it is only fair to point out that while we have given the management every co-operation at all times, the credit for the great organization built up and the satisfactory returns that are being obtained from the different departments must of necessity go to the management and the strong organization that has been rounded out. It must be a matter of considerable pride to the shareholders to note that their undertaking, by careful management, has been gradually rounded out from an inland undertaking, operating barely six months in the year, to a trans-Atlantic transportation system that operates in every month of the year, and covers such a multitude of services that any reduction in one department is likely in time to be offset by the increased revenues from others. It is surprising that the management has been able to do this without any increase in capital and with very small additions to the company's general organization. It only goes to show what a good organization the company has. Where before, the various agents were securing cargoes for the inland routes, they are now out in the different fields, filling up the ocean vessels in the various services of the company. Canada is every day becoming more of a factor in export trade to different parts of the world and with its substantial fleet of steamers, Canada Steamship Lines can assure to the Canadian shipper that his goods can be delivered in Canadian ships to the leading ports of Europe."

The following are the officers and directors for this year: Commander Sir

Trevor Dawson, R.N., Honorary President; J. W. Norcross, President and Managing Director; M. J. Haney, Vice President; C. A. Barnard, K.C., Vice President. Other directors: E. Bristol, K.C., M.P.; W. E. Burke, Hon. Frank Carrel, Hon. J. P. B. Casgrain, H. W. Cowan, J. E. Dalrymple, D. B. Hanna, F. S. Isard, Sir Henry M. Pellatt, H. B. Smith, Geo. H. Smithers, J. P. Steedman.

London Advisory Committee: Commander Sir Trevor Dawson, Chairman; Sir Vincent Caillard, W. Grant Morden, M.P.; C. G. Bryan, Sir Francis Barker, Sir Frederick Orr-Lewis.

Steamship J. A. McKee. The Minister of Railways gave the following information in the House of Commons, Mar. 22. The s.s. McKee, approximately 1,373 net tons, and 3,000 d.w. tons, was bought by the government, from Algoma Steel Corporation, April 18, 1917, for \$500,000, and \$342,660 has since been expended on repairs and refitting. She is engaged in the St. John, N.B.-West Indies trade. There was a deficit of \$269,354 on her operation to Dec. 31, 1919, on account of serious damage sustained through the Halifax explosion, and also on account of her running aground at New York. As she was uninsured at that time, repairs were charged largely to operating expenses.

British Docks.—A large number of important improvement schemes are being carried out by dock and harbor authorities in Great Britain. At the London port a new dock of 43 acres and with a water depth of 38 ft. is nearing completion. The scheme includes a graving dock to accommodate vessels of the largest class. A 2 story river jetty, with a frontage of 1,000 ft. and a low water depth of 30 ft. is also being built. At Liverpool the works in progress will cost \$10,000,000, and include a large half tide dock and an extensive series of storage tanks for oil. On the Clyde new berthing basins large enough for the biggest vessels are being laid out, and important extensions are also being made at Leith and Dundee. Bristol Channel ports are increasing their equipment for handling coal, and at Plymouth, Dover, Grimsby, Sunderland, the Tyne, and the Tees, many improvements are being carried out.

Tribute to C. Gardner Johnson.—The Vancouver Pilot Board, just prior to quitting office recently, sent the following letter to the Secretary, C. Gardner Johnson: "We the undersigned members of the Vancouver Pilot Board now retiring (owing to the Dominion Government changing the head office to Ottawa), take the present opportunity to convey to you, by letter, our heartfelt thanks in appreciation of the excellent service you have given to the pilot commissioners at all times, in performing their respective duties for a period of over 30 years, in the capacity of Secretary of the Pilot Board, for the benefit of the shipping interest and pilot service of the Port of Vancouver. We also thank you for the courteous manner in which we have been treated by you during our business meetings, and we have pleasure in wishing you long life and prosperity in the future years to come. Yours sincerely, C. G. Major, Chairman; Frank Burnett, H. G. Ross, W. Harvey Copp."

Durability of Piles in Intertidal Space.

How far above low water are untreated wood piles protected by saturation? This question has been asked a number of times by the Forest Products Laboratory at Madison, Wis. In tidal waters, the portion of piles above mean low tide, although completely immersed only part of the time, may be practically saturated all the time. Wood constantly saturated with water is not subject to decay, and this fact makes the height to which saturation extends above low tide a question of considerable interest to the designing engineer. The opinion of most of the engineers asked is that untreated piling in water not infested with marine wood borers will remain sound indefinitely if cut off at half-tide. This height ranges in various ports from 2.3 to 4.5 ft. above low water. At certain places on the Atlantic coast, piles cut off at the height of half-tide are still sound after from 50 to 100 years of service. Untreated piling is destroyed by marine borers more rapidly than by decay, and the information given would, of course, have no practical use where these organisms are active.

A Ship Repairing Case in the Supreme Court.

An Ottawa press dispatch of Mar. 3 states that the appeal of Montreal Dry Docks vs. Halifax Shipyards, Ltd., was argued that day before the Supreme Court. The respondent was making repairs to the ship *Westerian* in Halifax, N.S., when it was put under arrest by appellants, who claimed liens for supply of materials. After the arrest the repairs were proceeded with at a cost of \$15,000. The ship was sold under a court order, producing a sum slightly in excess of appellants' combined claim, and the latter took action in the Admiralty Court, claiming priority over respondent's claim for the cost of repairs after the arrest. The local judge at Halifax held that appellants had priority. His judgment was reversed by the Exchequer Court, on the grounds that the repairs had increased the selling value of the ship, and it would be inequitable to refuse full payment for the same; that the arrest had no effect on the lien of the shipwrights, whose possession was not interrupted thereby, and that respondent was in the same position as if permission of the court to continue the repairs had been obtained.

Shipments of Goods to Roumania Through U.S. Ports.

W. Duff, M.P., for Lunenburg, N.S., asked the following questions in the House of Commons, Mar. 11: "Are Canadian goods, purchased by Roumanians on the credit of the \$25,000,000, established by the government, and destined for Roumania, still being shipped through a U. S. port? If so, why does not the government insist that such goods, destined for Roumania, be forwarded through a Canadian port? Will the government give this important matter its most serious consideration?"

Sir George Foster, acting Prime Minister, replied: "Shipments to Roumania are being forwarded from Canadian ports. The total quantity shipped via Canadian ports has been 32,881 cubic

tons, and via New York 2,550 tons. The traffic from Canadian ports has been handled in full ship loads. At the close of navigation last autumn it was necessary to relieve the various manufacturers of their accumulation of goods packed ready for shipment, although this quantity was not nearly sufficient to make up a cargo. About 75% of the material consisted of roofing, a comparatively low-priced commodity, which made the cost of storage, insurance and other charges prohibitive. There is no regular steamship service from Canadian ports to the Black Sea, but the Furness-Withy Co. has a regular sailing from New York. In order to relieve the accumulation of goods in the manufacturers' stores, it was necessary to forward these goods through New York, where they could be shipped without storage or insurance charges being incurred. Meanwhile, the remainder of the goods to be shipped are being accumulated at Sydney, N. S., and St. John, N. B., and as soon as there is a sufficient quantity to warrant chartering a ship the remainder of the shipments will be made from these ports."

Harbor Tunnel for Victoria, B.C.—

There has been some press discussion recently in regard to the building of a tunnel in connection with the railway and harbor development works in progress in Victoria, B.C. Apparently at the request of the Minister of Agriculture, a Public Works Department engineer has made some investigations in the matter, the result of which has, a press report states, been communicated to the Victoria Board of Trade. The plan accompanying the letter shows a tunnel under the inner harbor of 5,600 ft. long, and 2,310 ft. of open cut, necessary to link up the ocean docks with the Canadian National Rys. terminals, the estimated cost of which is \$2,000,000.

Victoria Wharf Contract Suit—Grant Smith and Co. and McDonnell Limited, have been given permission to enter suit against the Dominion Government for approximately \$300,000 for work done in connection with the building of two wharves. The contractors' claim for the excavation of 28,276 cubic yards of earth and 32,100 cubic yards of rock at contract prices. There is a dispute as to what percentage of the excavation was rock and what earth. Earth excavation was paid for at 52c a cubic yard, and rock excavation at \$9.10 a yard.

The MacMillan River Exploration Co. Ltd. has been incorporated under the Dominion Companies Act, with \$30,000 authorized capital, and office at Ottawa, to carry on a general exploration and development business, and to own and operate steam and other ships, wharves, docks, elevators and other navigation facilities, and to act as common carriers. The incorporators are—A. Haydon, D. R. Kennedy, E. R. Jackson, L. H. Doherty, E. Valois, E. O. Malloy and L. Brennan, all of Ottawa.

Sorel Shipyard Superintendency.—The Minister of Marine stated in the House of Commons, Mar. 11, in answer to questions by T. Gervais, M.P., for Berthier, Que., that no permanent appointment of a Superintendent of the Sorel, Que., shipyard had been made. To replace W. S. Jackson, Louis Lacouture is acting officer in charge, at a salary of \$2,100, plus bonus of \$228 a year. He has a practical knowledge of the English and French languages.

Too Late for Classification.

The *Proton* from Western Superintending Engineer and other assets at Toronto are reported for individual sale, tenders to be in by May 1.

Major-General Sir David Watson, proprietor of the *Quebec Chronicle*, is reported to have been appointed Chairman Quebec Harbor Commission, Vice Hon. D. O. L'Esperance, resigned owing to ill health.

A Vancouver, B.C., press dispatch states that negotiations between the Vancouver Harbor Board, on behalf of the Dominion Government, and the Great Northern Ry., for the purchase of water frontage on Burrard Inlet, for the site of a new government pier, have been completed.

Roy M. Wolvin, who has been elected President Dominion Steel Corporation, was born at St. Clair, Mich., Jan. 21, 1880. He was in the Western Transit Co.'s service at Duluth in 1896 and 1897. He then became General Manager, Great Lakes & St. Lawrence Transportation Co. and Standard Steamship Co., occupying those position till 1910. He next became President of the Standard Shipping Co., Winnipeg, the Duluth Shipping Co., and the Central Shipping Co., Chicago. He later became President Montreal Transportation Co., Montreal; Vice President and Managing Director Halifax Shipyards; Vice President Collingwood Shipbuilding; President Reid Towing & Wrecking Co., as well as occupying several other responsible positions. He has worked in close contact with J. W. Norcross, President Canada Steamship Lines. He was elected a director of the Dominion Steel Corporation in New York.

Sales of British Government Ships—

The steamships War Company and War Storm, steel steamships built by J. Coughlan & Sons, Vancouver, B.C., and Wallace Shipyards, North Vancouver, B.C., respectively, for the British Government, under orders from the Imperial Munitions Board, are reported to have been sold to Italian interests. The s.s. War Company sailed from Vancouver some time ago from England, with a cargo of lumber, and reached Hull in 45 days, having met exceptionally bad weather, during which she is reported to have behaved remarkably well. The name of the s.s. War Storm has been changed to *Laura*. The wooden s.s. War Haida, built for the British Shipyards, Ltd., Cameron-Genoa Mills Shipyards, Ltd., Victoria, B.C., is also reported to have been sold to Italian interests, and to have been renamed *Rodosto*.

Whiting Foundry Equipment Co. Harvey, Ill., has issued its crane catalogue 151, describing and illustrating electric, travelling, bucket, handling, gantry, transfer, hand, power, gib pillar and bracket cranes also bulletin 152, giving a list of users of the Whiting cupola.

Canadian Railway and Marine World

May, 1920

The Minister of Railways' Annual Statement on Canadian National Railways Etc.

Hon. J. D. Reid, in speaking in the House of Commons, Mar. 30, said: In presenting the Railways and Canals Department estimate for the forthcoming fiscal year, I desire to place before the house a statement dealing with the operation of the Canadian National Rys for the calendar year 1919. The Canadian Northern was merged with the government railways in Dec., 1918, so that we are now in a position to review one completed year of operation under non-political and purely business auspices. The national system, with which we are now dealing, comprises the following lines:

Canadian Northern system	9,479 miles
Intercolonial	1,592 "
Prince Edward Island	278 "
National Transcontinental	2,002 "
Branch lines	376 "
Total	13,727 "

Operating Results—It is unfortunate that abnormal economic conditions, the disturbing effects of which are worldwide, and beyond the control of any railway management, whether a public or private, should have prevented a better showing for the first year of large scale national operation, but the result when closely analysed, is not without hope for the future of government ownership and operation.

Briefly stated, the national system, comprising the Canadian Northern, the Intercolonial, and the Transcontinental, earned \$94,000,000 during the year, or almost \$12,000,000 more than during 1918. But even with the \$12,000,000 increased earnings, the operating loss is \$14,000,000, made up as follows: Canadian Northern, \$6,500,000; Intercolonial and Transcontinental, \$7,500,000.

The explanation of this is that during the year the operating expenses advanced from \$84,000,000 to practically \$108,000,000, an adverse increase of nearly \$24,000,000. For the most part, this was due to advances in wages under the McAdoo award and supplements thereto, which were not offset by corresponding increases in rates. There was no rate increase during 1919. Given the same operating costs as 1918, the earnings for 1919 would have taken care of them and provided in addition \$9,000,000 towards meeting fixed charges. These interest obligations in themselves amount to \$19,000,000, and, singularly enough, a comparison of the payroll of the national system for the two years shows an increase of practically \$19,000,000 in wages alone during 1919.

The operating loss of \$14,000,000, and the consequent failure to provide for fixed charges, is really a reflection of conditions which obtain all over the world as a result of the war. Comparisons are seldom conclusive, but sometimes they are illuminating, and, in passing, I am reminded that in the United States, where economic conditions so closely approximate our own, the lines taken over by the government for operation during the war are reported to

have failed in two years by over \$700,000,000 to earn the net revenue which the government guaranteed them when taken over by the U.S. Railroad Administration.

Passenger and Freight Traffic.—Although the freight earnings of the National system show an increase in excess of \$2,500,000 for the year, there was a falling off in freight handled amounting to 3,000,000 tons. This was due in part to the stoppage of munition shipments on cessation of hostilities, and four-fifths of the decreased tonnage was on the old Canadian Government system, which formerly handled so much war business. There was a noticeable falling off also in westbound business, due to unsettled conditions in the period of transition from war to peace. That there was an increase in freight earnings at all is attributable to the increased rates put into effect during 1918. Had the volume of freight handled during the preceding year been maintained, the increased freight earnings would have amounted to \$7,500,000 instead of \$2,500,000. Thus the return of the world to a peace basis may be said to have cost the national system \$5,000,000 in freight revenue during the year 1919. But no one will say it was not worth while.

The national system carried 11,500,000 passengers during the year, an increase of about 1,750,000. Additional services and the return troop movement helped to swell these figures. Total passenger earnings increased from \$14,000,000 to a little less than \$22,000,000. About \$1,500,000 of this increased revenue is attributable to the 10% increase in passenger rates granted during 1918, and in effect for the first time for the full year. The coupling up of the Canadian Northern and the Canadian Government railways has resulted in an increase in better paying long-haul business, and the management has every expectation that this business will be maintained, notwithstanding the completion of troop movements.

Operating Costs.—I shall try not to weary the House with an endless procession of figures, but as briefly as possible call attention to their significance, and then append to this verbal statement detailed statistical information, which could appear as appendices to these remarks, and thus receive the leisurely scrutiny which their importance warrants. The tables to which I refer differentiate between Canadian National and former Canadian Government lines, and, as well, give the totals for the entire system, with which I have been dealing. They do not, however, include the Grand Trunk Pacific, which, pending the taking over of the Grand Trunk system, has been operated as a separate entity. As receiver for the Grand Trunk Pacific, I intend in due course to present a detailed report of the operation of that line for 1919, though I shall refer briefly to the results

of that operation at a later stage of my present remarks.

The operating revenue of the national system was more than \$93,000,000. The wage bill for the year exceeded \$73,000,000, having, owing largely to the McAdoo series of advances, jumped from \$54,000,000 in 1918. In other words, out of every dollar of revenue earned, 78c passed directly, by way of wages, to the employees.

Labor Conditions.—The cessation of hostilities appreciably relieved the labor situation and enabled a start to be made on overtaking considerable maintenance of way and equipment work which had been deferred under war conditions. An extra large number of tie renewals were made, which at the higher price and higher cost of labor, made a large item; also relaying of rails which could not be gone on with during the war, added to operating expenses. Special locomotive, car, and work equipment repairs were undertaken with a view to keeping in service as much equipment as possible, so as to avoid purchase of new units at the extraordinary high prices to which I shall refer later.

It is to be remembered then, in dealing with the operating expenses for the year under review, that such deferred maintenance work as has been done, amounting to over \$5,000,000, is included in the year's operating expenses, and to that extent has increased the deficit. There is still a large amount of deferred work to do, which will add to the operating costs for 1920, but it is satisfactory to know that all the work which is being done is increasing the physical value of the property, as well as making for higher efficiency and economical operation.

The position of the 55,000 employees of the national system was materially improved during the year. They worked on the average a shorter day, and capital expenditures for the year included large items for the improvement of their housing and working conditions. In 1914 the average wage per year of railway employees of Canada was \$700; in 1919 on the national system it was \$1,447. The relations between the management and the employees have been very satisfactory. Since Canadian Railway Board of Adjustment No. 1 was established in Sept., 1918, Canadian railways have been remarkably free from serious labor troubles, and although the national system then comprised 35% of the mileage in Canada, the grievances arising therefrom amounted to only about 16% of the cases before the board. It is hoped that this board, which is comprised of six representatives of the large railway labor brotherhoods and six railway officers, will be maintained, so that differences of opinion may continue to be settled by round table conference rather than by more expensive uneconomic and inconvenient methods.

Betterments.—Important progress was made during the year in improving the

Additional and improvements to locomotive houses, machine shops and other mechanical facilities accounted for \$125,000. General improvements included considerable ditching, widening

The programme in respect to rail re-

Rolling Stock Orders.—During 1949 the following rolling stock was ordered for Canadian Government railways: 25 Pacific type locomotives, 25 switching locomotives, 13 compartment observation cars, 18 standard sleeping cars, 9 dining cars, 30 baggage cars, 13 colonial cars, 20 tourist cars, 20 mail cars, 550 general service or coal cars, 500 flat cars,

750 box cars, 250 ballast cars, 800 stock cars, 150 refrigerator cars, 25 cabooses.

This equipment has been delivered, except 7 of the standard sleepers, the observation cars, diners, first-class cars and mail cars, all of which it is expected will be in service at an early date.

Passenger earnings have shown such a good increase that 30 additional heavy passenger locomotives are required, and 50 additional passenger train cars.

On account of the very high unit prices of rolling stock, the requirements have been kept down to the lowest point consistent with traffic conditions. This is very necessary, in view of the fact that locomotives suitable for our purpose which could be purchased for \$24,000 in 1914 cost \$62,000 now; first-class cars have increased from \$16,000 to \$38,000; dining cars from \$28,000 to \$46,000. The increase in price of freight cars ranges from 144% for refrigerators to 170% for steel frame box cars.

The equipment to be ordered is as follows: Locomotives—20 Pacific type, medium weight; 10 Pacific type, heavy weight; 25 heavy freight, 20 switching. Freight cars—3,000 40-ton box, 500 refrigerator, 650 50-ton coal or general purpose, 350 50-ton ballast, 100 cabooses, 6 snow ploughs, 150 stock cars. Passenger cars—20 baggage, 18 standard sleepers, 12 standard diners.

Freight and Passenger Rates.—The question of rates is one which will bear careful examination. No system can indefinitely stand the relationship at present existing between earnings and operating expenses of the national, but before proceeding to a consideration of future rates, it may be well to review what has taken place in recent years in that connection. Members will recall the agitation, extending over a period of years, for a reduction of rates in Western Canada, by many urged because it was felt one railway at least could well afford a reduction. Just a few months before the outbreak of war, this western rate case was finally decided. The judgment involved a comprehensive reduction in rates in territory west of the Great Lakes, and very seriously affected the newer lines. Then came the war, and with it undreamed of problems of transportation, and the railways began to feel the effects of war conditions. In 1916 what is known as the eastern rates case provided for a 5% increase in tariffs of eastern roads, both Canadian and U.S., but it did not apply to the west. In 1918, there were two rate increases, the March order, commonly called the 15% increase, and the August increase of 25% (so-called) which accompanied the first of the McAdoo series of wage increases. There was this difference, however, between the rate increases and the wage increases; the latter were retroactive, but the rates could not be retroactive; and, in addition, it was found that the rate increases, when finally applied, did not produce anything like the increase in revenue hoped for. The first mentioned (15%) netted only 7% on the national railway system's passenger revenue and 10% on the system's freight revenue, or on the gross. The second increase was on freight only, and was less in the west than in the east, owing to the equalization of eastern and western rates involved. For instance, in Western Canada the 25% increases wiped out the previous 15% increment. Taken together, these two rate increases are estimated therefore to have been approximately only 30% instead of considerably

more than 40% as they would have had they been imposed upon the other.

There are only two ways by which a railway's revenue may be increased. One is by increased rates and the other is by increased business. The Canadian National Rys., should, in view of the resumption of trade and immigration, in view of the strengthening of weak spots by the inclusion of Grand Trunk lines, and especially in view of the traffic possibilities of the 60 steamships, the freight of which will come to national railways, commence to show a steady increase in business, but the management has, in the course of public utterances, called attention to the necessity for increased rates if operating expenses are to be met out of earnings. There are and will be various opinions as to this, but it behooves us to give careful consideration to the management's viewpoint. They point out that Canadian roads are closely bound up with U.S. roads, in proof of which witness the application of the McAdoo awards to Canada. Not only do we pay the same wage schedules and apply the same working conditions, but, generally speaking, freight rates are the same on both sides of the line. In the U.S. the roads are being handed back to their owners in groups and the legislation provides that they be allowed to earn 5½% on their investments, with an additional ½% construction betterments. During the war the U.S. roads were guaranteed a certain return which was made up from the public treasury. Now that this guarantee no longer applies, either an increase in rates will be necessary or the U.S. Government must continue to implement the earnings of the weaker roads. It is estimated that a rate increase of 26% would be required to put the U.S. roads on a paying basis. An increase to that extent, if applied to the earnings of 1919 on the national system, would have produced a revenue of a little more than \$110,000,000, which would have left a surplus of net earnings of over \$2,000,000. That, of course, does not take the fixed charges into account. The management, therefore, feel that, both because we have the same expenditures to meet and must compete with each other all along the line, whatever freight increase is permitted in the U.S. ought also to be applied to Canadian roads. As Minister of Railways and having asked the management to operate on a business basis, I am bound to present the management's viewpoint for the consideration of Parliament.

I have, however, a larger responsibility as Minister of Railways, having, as such, to do with all Canadian roads, and answerable, in the final analysis, to the people who at present find the cost of commodities sufficiently high. The railway situation in Canada has undergone a marked change, the entire mileage being now controlled in two great groups or systems, the Canadian National and the Canadian Pacific. In Canada the mileage of the latter road is 14,824, but there are 4,948 miles of owned or controlled lines in the United States, so that the system mileage aggregates 19,772. Including the Grand Trunk lines, the Canadian National system will comprise 22,356 miles, of which 2,093 miles are located in the U.S. These two systems are, from the mileage standpoint, at any rate, fairly evenly balanced and it is unnecessary to point out that any increase in rates granted the Canadian National Rys. would equally apply to Canadian Pacific lines. The annual

statement of that immense corporation showed that, notwithstanding the disadvantage of increased operating costs and charges common to all roads, the C.P.R. had been able to pay a dividend of 7% on its railway operation, and 3% on its outside operations, or in all its usual 10% dividend on last year's operation.

The argument has been advanced that it would be possible to tax out of the C.P.R. any increase in earnings which might be permitted it in common with the Canadian National Rys. I have my own opinion as to the fairness of such a proposition, but, in any event, I personally feel that such a proposal, even if fair from the standpoint of competition, would not be practicable, for the simple reason that you could not prevent the C.P.R. from spending its revenue legitimately on the improvement of its property, and if, at the end of a year, we found that the increased earnings had gone into betterments, how could we tax it out?

My own feeling is that the C.P.R. is entitled to a rate sufficient to earn 7% on its railway investment, and this they appear to be able to do, notwithstanding present abnormal conditions. The question resolves itself, therefore, into the following proposition: Shall Canadian freight rates be increased generally for the particular purpose of enabling the Canadian National Rys. to meet their operating expenses and fixed charges, or would it be better to go on with the present rates, giving dealers no additional excuse for increasing the cost of living, and trusting to increase in business, the economics it should be possible to effect by co-ordination, and the return of normal conditions to gradually reduce these deficits until the day (which I personally feel is not far off) when the revenue will prove sufficient to pay for operation, and, later also to take care of fixed charges. Should this latter suggestion prevail, it would require to be thoroughly understood that the Minister of Railways, no matter who he may be, must come down next year with a deficit, and the next year with a deficit, and so on for a few years until we shall have turned the corner.

The earnings of the Canadian railways last year were \$350,000,000, made up as follows: C.P.R., \$177,000,000; Canadian National, \$94,000,000; G.T.R., \$68,000,000; G.T.P.R., \$11,000,000.

A 25% increase on these earnings would approximate \$88,000,000, the greater part of which would be earned in Canada. Whether we shall take \$88,000,000 in increased freight rates out of the people of the country next year in order to show a surplus for the national system is a question as to which I myself am not prepared to take the responsibility of deciding either one way or the other at present. I leave it to the consideration of the house, and of the people of Canada as a whole, and shall be glad to elicit representative public opinion in the matter, so that the government may be in a position to give this important question the best consideration.

Bringing in the Grand Trunk.—The current year will witness the rounding out of the Canadian National Rys. system by the acquisition of the Grand Trunk and its subsidiary lines. With these added, it is estimated that over 50% of the domestic freight traffic of the Dominion will be found to originate along government railways. The con-

Statement excludes income and equipment items and branch line rentals.

Standard Conditions and Specifications for Wire Crossings.

The Board of Railway Commissioners passed general order 288, Mar. 23, as follows:—Re sec. 372 of the Railway Act, 1919, for carrying of wires and cables along or across railway tracks and the Canadian National Rys. application for an order amending the Standard Conditions and Specifications for Wire Crossings, approved by general order 231, May 6, 1918, as amended by general order 267, June 27, 1919: Upon reading what is filed in support of the application, the Canadian Pacific and Grand Trunk Railways concurring therein, it is ordered that the Standard Conditions and Specifications for Wire Crossings, as approved by general order 231, be amended by striking out paragraph 4 of part 1 and substituting therefor the following, viz.:

"4. The applicant, before any work is begun, shall give the railway company owning, operating, or using the said railway at least 72 hours prior notice thereof in writing, and the said railway com-

pany shall be entitled to appoint an inspector, under whose supervision such work shall be done, and whose wages, at a rate not to exceed \$11 a day, shall be paid by the applicant; such payment to cover both wages and expenses. When the applicant is a municipality, and the work is on a highway under its jurisdiction, the wages of the inspector shall be paid by the railway company."

General order 267 is rescinded.

London to Calcutta by Rail.

The Bagdad Railway begins at Konia, in the heart of Asia Minor, where, by means of the Anatolian Railway it connects with Constantinople. From Constantinople to Aleppo, is some 850 miles. From Aleppo the line proceeds to Jerablus, on the Euphrates, and thence by Nisibin to the important center of Mosul on the Tigris; thence southward to Bagdad and to Basra. From Aleppo to Bagdad is about 650 miles. Carry the imagination further, and we may reasonably picture, under the new

political arrangements between Great Britain and Persia, the extension of the Bagdad Railway to Teheran, and thence to Quetta and India. That done—and the conception has its grandeur—travel overland between London and Calcutta should be a matter of less than a fortnight. Lindsay Bathford in Edinburgh Review.

Alberta's Guarantees of Railway Bonds.

The Province of Alberta is reported to have made a statement in the Legislature recently, in reply to questions as to the position of the province in regard to its guarantees of bonds for railway construction. His reply covered the guarantee of bonds for lines forming part of the Canadian Northern Ry., and for branch lines of the Grand Trunk Pacific Ry., both of which railways are now under the Dominion Government's control, the first forming part of the Canadian National Rys., and the second being under a Dominion Government Receivership, and will shortly pass, with the G.T.R. under government ownership.

In reference to the Canadian Northern Ry. the Premier said the Alberta Government had guaranteed bonds for the lines from Strathcona to Calgary, 230 miles; from north of Calgary to Lethbridge, 125 miles; from Camrose to Vegreville, 45 miles; from near MacLeod to the western boundary of the province, 65 miles, and from the crossing of the Lethbridge-Calgary line over the Little Bow River, via MacLeod to the international boundary, 110 miles. Bonds have been sold in respect of these lines to the extent of 88.35% of the guarantee, the

amount of money standing to the credit of the province from the proceeds of the sales of such bonds being \$1,201,791.85. The completed lines of the branches guaranteed are those from Camrose to Vegreville; Strathcona to Calgary, and a portion of the Lethbridge-Calgary line, there being still 96.87 miles to build. Monies paid over to the C.N.R. for work done amount to \$188,600 on the Calgary-Lethbridge line; \$182,325 on the Little Bow-Boundary line and \$86,282.30 on the MacLeod-B.C. boundary branch.

In reference to the Grand Trunk Pacific branch lines the Premier said the provincial guarantee was for the lines from Tofteld to Calgary, 201.5 miles, the bonds for which had been sold and the entire proceeds paid to the company. This line is completed and has been in operation for some years.

Van Horne Estate. The transferring of 122½ square miles of crown lands, owned by the late Sir William Van Horne's estate in Northumberland County, N.B., to the International Paper Co., New York, has been completed.

Following is the summary report for the year ended Dec. 31, 1935. The amounts shown are the following:

1,202,608.42

And a fourth quarterly dividend on ordinary stock of 1 1/2% payable Apr. 1, 1904.

In addition to the above on ordinary stock 3% was paid from special income

Special Income For Year Ended Dec. 31, 1919.

Bal. Dec. 31, 1918	\$16,114,502.37
Less dividend paid	
April 1, 1919	1,950,000.00

Less: payments to shareholders in dividends in 1948	2,500,000.0
	<u>\$17,363,844.2</u>

The working expenses for the year were 8.13% of the gross earnings, and the net earnings 18.61% compared with 78.10% and 21.90% respectively in 1911.

Your directors cannot hold out any hope of substantial relief, for some time to come, from these high costs, which are reflected so strongly in the operating expenses, but every effort is being made to offset the effect on your revenues by economy in operation and the extension of the company's freight and passenger business. It is not to be expected, however, that any normal increase in business can possibly equal the extraordinary increase in wage and other costs which all railway companies have experienced during the past two years.

The late granting of the necessary statutory authority, combined with difficulty in securing labor and the early setting in of winter in the west, prevented extensive construction during the year of branch line mileage which you authorized at the last annual meeting. Your directors are of the opinion that reasonable additional construction should be gone on with as conditions warrant, and your authority will be asked for proceeding with the construction of the following lines and for the issue and sale of a sufficient amount of 4% consolidated debenture stock to meet the expenditure

struction of the above lines can only be proceeded with gradually, in view of the

The lease of the Nakusp and Slocan Ry., extending from Nakusp to Three Forks, with branches to Sandon and White Water, having an aggregate mileage of 48.47 miles, which was executed in 1895, and under which this railway was leased to your company for 25 years from July, 1895, will expire in July next. Your directors will therefore submit for your approval a new lease of the railway to this company for 99 years on the usual terms.

stantial direct interest, through its holdings of bonds and stocks and upon the success of whose undertaking the prosperity of Southern British Columbia, and the consequent traffic for your railway, depend to a marked degree, will require during this year additional sums for needed extensions and additions to its plant. In anticipation of your consent your directors have decided to advance such amounts as may be required, pending the making of capital issues or other permanent financial arrangements by the Consolidated Company.

The undermentioned directors will retire from office at the approaching annual meeting. They are eligible for re-election: Sir John C. Eaton, Grant Hall; Sir Vincent Meredith, Sir Augustus M. Nanton.

French Railway Rates Increased. The French Official Journal states that an act has been passed authorizing further temporary increases in French railway rates. The new increases, which will be in force for 1920, are as follows: third class tickets, 45%; second class tickets 50%; first class tickets 55%; transport of merchandise, 115%. The present increases will be added to the increase of 25% provided by the law of Mar. 31, 1918, but the new percentage of increase will not apply to or be calculated upon this previous increase of 25% itself.

Canadian National Rys. Shop Employees.—The Minister of Railways, replying to questions in the House of Commons recently, said that 93 employees of the Riviere du Loup, Que., shops had been transferred to the St. Malo shops at Quebec City, of whom 33 are single and 60 married; there are dependent on the married men 227 women and children and 29 other dependents. The total population thus removed from Riviere du Loup was 349.

Esquimalt & Nanaimo Ry. Land Grants. The British Columbia Legislature appointed a committee recently to enquire into and determine certain matters respecting coal licenses granted on lands ceded to the Esquimalt & Nanaimo Ry. under the settlement agreement of 1910, and to report what, if any, measure of relief should be granted to the license holders.

E. A. Campbell, agent, C.P.R., Sussex St., Ottawa, in remitting his annual subscription, writes: "I enjoy Canadian Railway and Marine World very much."

Rules for Inspection of Locomotives and Tenders.

The House of Railways Committee has passed resolutions on May 24 an act to amend the regulations of inspection of locomotives and tenders. It is provided that the rules relative to the inspection of locomotives and tenders, as set forth in the House of Railways Act, 1910, Sec. 287, and of all other rules passed by it in that behalf, and upon reading the submission filed by the Railway Association of Canada and the Canadian Pacific and Grand Trunk Railways, and the report and recommendation of the Honorable Chief Operating Officer, it is ordered that railway companies adopt and put into force, not later than June 1, 1920, the rules relative to the inspection of locomotives and tenders, hereto attached marked "A".

"A" Rules relative to inspection of locomotives and tenders.

Every locomotive and tender shall be inspected after each trip, or day's work. The employee making the inspection shall report all defects found, in report book. Defects reported, which are not repaired before the locomotive is returned to service, shall be filed in the office where the inspection is made.

Air Brakes. It must be known before each trip that the brakes on locomotive and tender are in safe and suitable condition for service; that the air compressor or compressors are in condition to provide an ample supply of air for the service in which the locomotive is used; and that all other devices for controlling or regulating the pressure are properly maintained.

Testing Main Reservoirs. Every main reservoir, before being put into service, and at least each 12 months thereafter, shall be subjected to hydrostatic pressure, not less than 25% above the maximum allowed air pressure. The entire surface of the reservoir shall be hammer-tested each time the locomotive is shopped for general repairs, but not less frequently than once each 18 months.

The draw gear between the locomotive and tender, together with the pins and fastenings, shall be maintained in safe and suitable condition for service. The pins and drawbar shall be removed and carefully examined for defects not less frequently than once each 3 months. Suitable means for securing the drawbar pins in place shall be provided. Inverted drawbar pins shall be held in place by plate or stirrup. (b) Two or more safety bars or safety chains of ample strength shall be provided between locomotive and tender (except when double drawbars are used), maintained in safe and suitable condition for service, and inspected at the same time draw gear is inspected. (c) Safety chains or safety bars shall be of the minimum length consistent with the curvature of the railway on which the locomotive is operated. (d) Lost motion between locomotives and tenders not equipped with spring buffer, shall be kept to a minimum and shall not exceed $\frac{1}{4}$ in. (e) When spring buffers are used between locomotives and tenders, the spring shall be applied with not less than $\frac{1}{2}$ in. compression, and shall at all times be under sufficient compression to keep the chafing faces in contact.

Chafing irons of such radius as will permit proper curving shall be securely attached to locomotive and tender, and shall be maintained in condition to per-

mit free movement laterally and vertically.

Drift gear and attachments on locomotives and tenders shall be correctly fitted and maintained in safe and suitable condition for service.

Cab Lights. Each locomotive, used between sunset and sunrise, shall have cab lamps, which will provide sufficient illumination for the steam, air, and water gauges, to enable the enginemen to make necessary and accurate readings from their usual and proper positions in the cab. These lights shall be so located and constructed that the light will shine only on those parts requiring illumination. Locomotives used in road service shall have an additional lamp, conveniently located, to enable the persons operating the locomotive to easily and accurately read train orders and time tables, and so constructed that it may be readily darkened or extinguished.

The total lateral motion, or play, between the hubs of the wheels and the boxes on any pair of wheels shall not exceed the following limits:

For engine truck wheels (trucks with engine centers).....	1 in.
For engine truck wheels (trucks with rigid centers).....	1 1/2 in.
For trailing truck wheels.....	1 in.
For driving wheels (more than 1 pair) not more than.....	3/4 in.

These limits may be increased on locomotives operating on track where the curvature exceeds 20 degrees, when it can be shown that conditions require additional lateral motion.

Pilots shall be securely attached, properly braced, and maintained in a safe and suitable condition for service. The minimum height from the rail 3 in. and the maximum 6 in.

Brazilian Railway Electrification.—A Rio Janeiro press dispatch says that the Paulista Ry. has given the General Electric Co., Schenectady, N.Y., a contract for the electrification of its lines, at a cost of over \$2,000,000, which will include the electrification of 44 kilometers of double track, between Jundiaba and Campinas, the building of a 4,500 k.w. sub station at Louviers, and the supply of 12 electric locomotives.

Canadian National Railway's Official Cars — Replying to questions in the House of Commons recently, the Minister of Railways said that official cars are used by the management and superintendents in connections with operation over the entire system of 14,000 miles, the expenses of which are charged to operating expenses under the headings of administration and superintendence.

Temiscouata Ry.'s Future.—The Minister of Railways stated in reply to a question in the House of Commons recently that it is not the government's intention to acquire the Temiscouata Ry., running from Riviere du Loup, Que., to Edmundston, N.B., in order to make it a Canadian National Ry. branch.

The Railway Maintenance of Way Men through their brotherhood organization, will according to a press report, establish co-operative stores at several Canadian railway centers for the benefit of members. Arrangements are said to be in progress for a store in Windsor, Ont.

The Point St. Charles Railway Y.M.C.A. building at Montreal is reported to have been sold to the G.T.R. for conversion into an office building. A new building for Y.M.C.A. purposes will, it is said, be built on Wellington St., during this year.

Birthdays of Transportation Men in May.

Many happy returns of the day to:

J. F. Aitchison, Auditor of Disbursements, G.T.R. and Grand Trunk Pacific Ry., Montreal, born at Edinburgh, Scotland, May 28, 1880.

Jas. Bain, Superintendent, Halifax & South Western Ry. (Canadian National Ry.), Bridgewater, N.S., born at Pictou, N.S., May 24, 1860.

B. A. Bourgeois, Assistant to Comptroller and Treasurer, Canadian Government Railways, Moncton, N.B., born there May 24, 1869.

B. T. Chappell, General Superintendent, Prairie District, Western Lines, Canadian National Ry., Saskatoon, Sask., born at Charlottetown, P.E.I., May 1, 1878.

N. R. DesBrisay, District Passenger Agent, C.P.R., St. John, N.B., born at Minneapolis, Minn., May 18 1888.

A. E. Duff, ex-District Passenger Agent, G.T.R., Toronto, now of Winnipeg, born at Sherbrooke, Que., May 1, 1872.

G. C. Dunn, Division Engineer, Grand Trunk Pacific Ry., Winnipeg, born at Quebec, May 13, 1862.

C. S. Gzowski, Jr., Special Engineer to Vice President, Operation, Etc., Canadian National Ry., Toronto, born there, May 1, 1876.

G. H. Hedge, Works Manager, Canadian National Ry., Winnipeg, born at Neath, Wales, May 26, 1865.

G. A. Hoag, Superintendent, Nipissing Division, Ontario District, Canadian National Ry., Capreol, Ont., born at Walters Falls, May 31, 1866.

J. Irwin, Superintendent, Division 4, Western District, Canadian National Ry., Calgary, Alta., born at Clinton, Ont., May 28, 1866.

J. N. Murphy, Roadmaster, C.P.R., Brandon, Man., born at Mooretown, Ont., May 10, 1879.

Sir Augustus M. Nanton, President, Winnipeg Electric Ry., and director, C.P.R., Winnipeg, born at Toronto, May 7, 1860.

A. V. Redmond, District Engineer, Central District, Canadian National Ry., Winnipeg, born at Kingston, Ont., May 16, 1879.

A. C. Shaw, Passenger Department C.P.R., Montreal, born at Detroit, Mich., May 12, 1865.

W. H. Snell, General Passenger Agent, C.P.R., Montreal, born at Palmyra, Neb., May 23, 1872.

W. Stapleton, District Passenger Agent, Canadian National Ry., Saskatoon, Sask., born at Bristol, Eng., May 20, 1884.

R. B. Teakle, Manager, Canadian Government Merchant Marine, Ltd., Montreal, born at Quebec, Que., May 19, 1877.

J. H. Walsh, General Manager, Quebec Central Ry., Sherbrooke, Que., born at Quebec, May 12, 1860.

H. K. Wicksteed, B.A.Sc., C.E., Consulting Engineer, Canadian National Ry., Toronto, born at Quebec, May 25, 1865.

C. L. Wilson, Assistant Manager, Toronto & York Radial Ry., Toronto, born at Boston, Mass., May 23, 1871.

A. O. Wolff, Resident Engineer, Brownville Division, New Brunswick District, C.P.R., Brownville Jct., Me., born at Copenhagen, Denmark, May 14, 1887.

Freight Car Roofs.

By H. R. Naylor, Assistant Works Manager, Canadian Pacific Ry., Montreal.

Car roofs, or the upper covering of what are classed as house cars, are a most interesting study. In point of importance they may be considered almost as essential as the wheels of a car, for although the wheels are the principal factor in moving a car from one location to another, the roof provides the necessary protection for the merchandise, which otherwise would be damaged or totally destroyed. The essential features of a car roof are to act as a watershed, enclosing the car, thereby providing security for the contents, and also to effectively tie and brace the car superstructure. A car roof consists of a suitable framing, securely attached to the top of the side and end framing of the car, providing the necessary support for the roof boards, metal sheets, or other materials which form the outer covering. In Europe, where the roof type of car has not been adopted to the same extent as in America, large quantities of freight are transported in open top cars, over which tarpaulins are spread and fastened, to protect the lading from the weather. This system, however, is gradually being abandoned as new equipment is built, and the house class of car adopted.

It is interesting to note the progress made on this continent in car roof construction from the time when the outer covering consisted only of a single layer of boards having tongue and groove joints. In many instances, I believe it was customary to use a wood shingle roof, similar to that commonly used in house construction. Another method adopted, presumably to overcome the leakage, was to apply the roof boards lengthwise of the car, overlapping each other, similar to clapboarding on present day wooden buildings, but it can be readily understood that this method of construction proved unsatisfactory, and gave way to the double board roof which can be seen on a large number of cars even today. This was a decided improvement over the earlier types of roof, especially when at a later date a layer of waterproof paper was applied between the first and second course of boards, and became known as the "plastic roof." This roof undoubtedly protected the lading for some time, but it eventually became waterlogged, and a method was then sought to prevent the water leaking between the joints of the top course of boards, which rapidly destroyed the paper and bottom boards. This was overcome, to a great extent, by grooving the face of the top boards, the grooves acting as drains, carrying off the water, and protecting the joints from possible leakage. In fact, this is the most common type of roof to be found on stock and refrigerator cars at the present time. The plastic roof, however, proved unsatisfactory for box cars, as the top course of boards soon warped, shrunk, and split, due to the constant drenching and sun baking received, allowing the under courses of paper and boards to become waterlogged, setting up rapid decay and ending in numerous damage claims.

Metal Sub Roof.—So far it should be noted that only wood, paper, and, in some instances, canvas, were being used in roof construction, which in themselves are very poor weather-resisters, creating a demand for further improvements,

which brought metal into use for the first time. The next step was a distinctly new departure, and brought into existence the metal sub roof, over which a wood roof was applied, for protection only. The roof framing consisted of a ridgepole, carlines and purlins, to which an addition was made in the form of cross rafters. The galvanized metal sheets were formed with corrugations, and fitted into suitable grooves in the ridgepole and rafters, providing altogether a fairly effective watershed. This was undoubtedly a distinct advance in roof design, and was the forerunner of the sub-metal roof on thousands of box cars at present, but it was not long before the usual complaints were being made about this new metal roof, owing to the grooved edges of the wooden rafters breaking away, allowing the metal sheets to sag and leak. This defect was eventually overcome by flanging the roof sheets, and applying a metal capping over the rafters, which enclosed the flanges of the roof sheets, making a continuous metal watershed for the full length of the car. With a few later modifications this was the final attempt along the lines of a metal sub-roof. Some of the principal objections to the metal sub-roof are that the roof sheets, in time, buckle up at the eaves, and work out of the grooves in the ridgepole. With the constant twisting and straining of the car superstructure, the metal sheets and caps are soon displaced and bent, and in making repairs to the outer wood roof, the metal sheets are frequently punctured by nails, carelessly driven, all of which result in damage to the lading. The outer wood roof also requires frequent renewal, on account of constant exposure, which is a rather expensive item, when added to the cost of maintaining the metal sub-roof.

Before passing to the consideration of more modern roofs, it should be observed that the metal sub-roof proved a distinct advance over the types previously used, and was, with a few exceptions, the standard design on box cars for upwards of 20 years, but the steady increase in car capacity, and length of train, threw an ever increasing load on the car superstructure, including the roof framing, this demanding in turn improved roof construction. This demand was met by adopting a roof framing made of steel, as in other parts of the car, for instance, the wooden carlines which were bolted to the sideplates, and a source of constant trouble, gave way to the steel carlines of various shapes, rivetted to the sideplates, in order to give greater rigidity and strength. Other parts of the roof framing were improved, and reinforced, in a similar manner, providing greater stability, which is most essential if the outer roof is to be protected from the racking and straining of the car superstructure. This demand for greater stability was largely responsible for an entirely new departure in roof design, for instead of placing the wood roof boards on the outside, as in the case of the metal sub-roof, the plan was reversed, the roof boards being applied direct to the roof framing, and the metal roof sheets used as an outer protection for the boards, in addition to acting as a watershed. The roof boards in this case, being applied direct to the roof framing, had the ef-

fect of bracing the roof against cornering and bulging, and brought into extensive use the outside metal roof.

The outside metal roof usually consists of one course of 13/16 tongue and groove boards, securely fastened to the roof framing, the outer metal roof being formed of galvanized iron sheets, generally of no. 22 gauge. At the junctions of the main sheets, weather-proof protection is provided by metal caps, formed in various ways to interlock with the flanged edges of the main sheets. The method of securing the outside metal sheets at the eaves is very different to that on the metal sub-roof. The roof sheets on the latter type are prevented from lifting, by the capping and outer wood roof, the fascia boards securing the sheets laterally on the car, making nailing unnecessary at the eaves. On the outside metal roof, the main roof sheets, or eave flashings, are flanged at the eaves, and secured to the outside of the fascia boards. This difference in the method of attachment on the early types of outside metal roofs, which were not designed to allow freedom of movement at the roof sheet intersections, resulted in cracked sheets and a considerable number of defective roofs, but eventually this was entirely overcome, by providing ample splay at the main sheet capping, and applying eave flashings, giving the roof the necessary flexibility to withstand the cornering, weaving and bulging of the superstructure. In the development of roof construction wood is being gradually eliminated, or restricted in its use, for instance, the wood framing is being abandoned in favor of steel, and as a roofing it is used only to protect or support the metal roof sheets, all of which is in keeping with the steady advance in car construction.

All Steel Roofs.—Progressing still further along these lines we find roofs today built entirely of steel, and in consequence known as all-steel roofs. In comparison with the composite roofs already described, the all-steel roofs presents an entirely new departure in design, both in regard to framing and roofing. The roof sheets are usually of 1/16 in. galvanized steel, but in some instances the sheets are 3/32 in. thick, and span the full width of the car, providing in themselves the necessary protection against puncture or other hard usage. Additional reinforcement can be obtained by corrugating the roof sheets at suitable intervals. The carlines in most cases are designed to provide ready means of connecting the roof sheets, in addition to supporting the roof, and bracing the superstructure of the car. With the adoption of the all-steel roof, the question of flexibility becomes a very live subject, some types provide for free movement of the roof sheets, in a similar manner to the flexible outside metal roof, while in others the roof sheets are flanged, capped and rivetted together, forming in themselves an absolutely rigid roof. It is claimed for the first type that the roof should be sufficiently flexible to take care of the constant straining of the car body, while in the rigid type the roof is made strong enough to resist the straining of the body, and act as bracing for the superstructure. The all-steel roof lends itself readily to the use of outside carlines, this arrangement giving the car a considerable advantage in loading space.

Other advantages are the restriction of the core and fuel, combined by the fact that the fuel itself, as a primary substance, cannot undergo a chemical reaction with the core or cladding elements, which means no corrosion and cracking as is greater with ordinary fuel. This type of fuel is particularly consistent with more general principles.

[illegible]

Double Board Roof.—A previously mentioned, the double board roof is the most common type on refrigerator and stock cars today, and while it meets the requirements for stock cars, it is rather surprising that a better roof has not been previously adopted for refrigerator cars. In order to protect the insulation more effectively. In making repairs to this class of car, it is often necessary to renew the whole roof insulation, and ceiling, which have become waterlogged and decayed, owing to the poor protection offered by the double board roof. The entire side and end framing, with their insulation, are often affected in a similar manner, due to the water working down through the defective roof. These conditions are becoming better recognized, and as a result we find the outside metal roof now being adopted for refrigerator cars. Owing to the metal roof being a greater conductor of heat, it might be necessary to increase the roof insulation, but the added cost would be more than offset by the saving in maintenance.

Having briefly sketched the development of the car roof from the old time shingle to the modern metal type, it may be well to summarize a few of the more essential features entering into roof design, and conclude with a reference to maintenance. In comparison with the roof of a stationary building, which, outside of providing the necessary shelter, has only to contend with wind pressures, the car roof has to withstand considerably more abuse, due to the fact that the car is constantly in motion, from the day it is built to the last day of its existence. Consider for a moment what happens to a car, especially a loaded car, when in a switching movement it is shot at a speed varying anywhere up to 10 miles an hour, on to a train of cars at rest. Many of us have seen this happen frequently, and still more have heard the report and marvelled that the cars withstood the racket. The underframe of the car in motion is immediately arrested on impact with the other car, but the car superstructure, with its contents, is not arrested so quickly, with the result that it is strained from end to end, including

Yielded together. The one roof must take care of a bulging load, when one of the materials is carried in bulk. The steel, concrete, tile, shingle, aluminum, asbestos, or slate are all different strains, which must be considered and provided for in car roof construction, in order to keep clear of future trouble. It is these conditions that persuade many car builders to adopt a roof sufficiently flexible to accommodate the strains in order to ensure it being water tight. On the other hand, the advocates of the rigid roof believe in making the roof sufficiently strong to withstand the strain, and tie the superstructure together.

In conclusion, I may point to the importance of roof maintenance. A car roof should be so constructed that repairs can be made quickly, and at a minimum cost. The position of the roof, in relation to other parts of the car, does not lend itself to proper maintenance. Trucks, airbrakes and draft gear are constantly being inspected for indications of possible failure, but unfortunately, and all too often, the only warning received of roof failure is when the damage has actually occurred to the lading. Car roofs should therefore be as far as possible self-maintain-

Corrosion will be an important factor in modern roof maintenance, and calls for a systematic method of painting, for it cannot be expected that the galvanizing will protect the roof sheets indefin-

Timber Bridge Problems on the Alaska Railway.

Timber truss spans used extensively on the Alaskan Government Railway consist mainly of 121-ft. Howe-truss through and deck spans of standard designs, with 56-ft. pony truss spans for small openings. Bridging Alaskan riv-

cases where material for the trusses is delayed.

Douglas fir is used exclusively, except that Alaska spruce has been employed to a limited extent for temporary structures and a few small spans. Working

sticks 8 x 14 in. and 8 x 16 in., respectively, with cast-iron angle blocks for the truss members and transverse steel channels as bearing for the washers of the vertical tension rods. Splices in the chord timbers are made with clamp bars

Standard design of 121-ft. timber truss through span, Alaska Railway.

ers involves careful consideration of flood, drift and heavy ice, especially in streams fed by glaciers, and these factors have to be reckoned with in regard to erection of falsework as well as pier construction. As delivery of material is likely to be uncertain at points located far from a base of supply, arrangements have been devised for carrying a temporary deck on the falsework bents in

wrought iron of 50,000-lb. tensile strength, or of soft bessemer or open-hearth steel conforming to the American Society for Testing Materials structural steel specifications. All truss spans are designed for Cooper's E-50 loading.

The general design and details of the 121-ft. through truss span are shown in the accompanying drawings. The top and bottom chords are composed of four

A camber of 0.126 ft. is framed into the truss by means of blocking under the panel points of the bottom chords on the falsework during the erection of the bridge, the final adjustment being made by the tension rods.

The piers have four rows of piles with diagonal bracing and have an outside sheathing of horizontal planks to prevent the lodging of ice and drift. In tidal

usually between the current and the ice. The ice is broken up into small pieces, and the water is then allowed to flow over the bridge. The ice is broken up into small pieces, and the water is then allowed to flow over the bridge. The ice is broken up into small pieces, and the water is then allowed to flow over the bridge.

Typical 121 ft. timber truss span with pile pier and falsework. Knik River bridge.

which are spaced 12 ft. on center for the first 40 ft. and 20 ft. for the water piers.

Carrying the load on such a temporary arrangement made in order to provide for handling traffic when material for

permanent construction is not available. The bridge is built on a pile pier which is driven into the river bed. The bridge is built on a pile pier which is driven into the river bed. The bridge is built on a pile pier which is driven into the river bed. The bridge is built on a pile pier which is driven into the river bed.

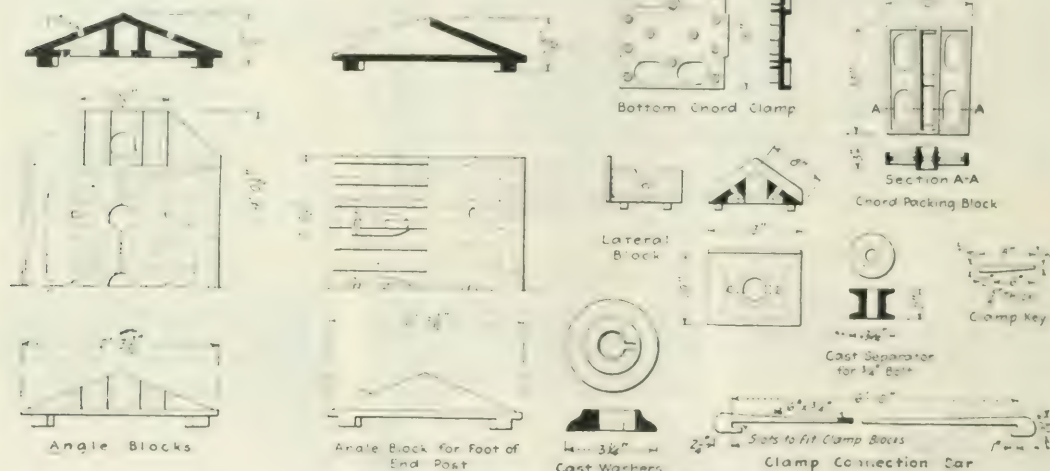

The largest bridge on the railway system will be that over the Tanana River at Nenana, where the width is over 800 ft. and soundings have shown fine sand down to a depth of 90 ft. This is to be a steel bridge, on concrete piers with ice breakers, and probably a liftspan will be provided on account of the river naviga-

tion. What does the Sir William Mackenzie hold in connection with the National Railway Construction Association? The Sir William Mackenzie holds a share of the stock, and has no connection with any of the members of the association. The President of the Canadian Northern Railway, he is allowed the transportation that all railways extend to ex-presidents of railways and which is in accordance with the Railway Act.

Does he retain from the Government running rights with said car for himself, his lobbyists and solicitors at the present time? Answer. First part of question answer by no. 2. No special privileges are granted to any one.

Tool for Extracting Cotter Pins

The removing of cotter pins is often a difficult job to the shopman, particularly when these are so located as not

Details of ironwork of timber truss used on Alaska Railway.

the trusses is not at once available. Two lines of stringers, composed of two and three sticks with ends overlapping are laid on the falsework caps, with a transverse timber across them at each bent. Upon these timbers is a second and similar course of stringers carrying the track ties. The ties, stringers and cross timbers are secured by loose bolts termed 'drop bolts,' which resemble drift bolts, but are fitted to holes bored to 1/2-in. larger diameter. This construction enables the temporary deck to be dismantled readily and without injury to the timbers.

Two of the larger bridges of this type, across the Knik and Matanuska Rivers, have six and five 210-ft. through truss spans, respectively. In these cases special provision had to be made for ice and floods, as both rivers originate from larger glaciers and carry immense quantities of floating ice and drift at certain seasons.

The Matanuska River (or Chatonka, meaning 'swift river') carries a large volume of water and quantities of driftwood. The Knik River (or Shikuk,

As this structure cannot be built for some time, it is proposed to establish a ferry to carry cars during the summer, while in winter a track can be laid on the ice.

All of this railway work has been under the direction of William C. Edes, until recently chairman and chief engineer of the Alaska Engineering Commission. W. J. H. Fogelstrom is Bridge Engineer, and the construction is done by railway forces under his supervision.—Engineering News Record.

Sir William Mackenzie's Private Car.

The following questions were asked in the House of Commons recently, by P. F. Casgrain, M.P. for Charlevoix-Montmorency, the answers being given by the Minister of Railways:—

1. Was Sir William Mackenzie's private car included in the rolling stock of the Canadian Northern Railway taken over by the Government? Answer. No.

to be readily accessible. The tools most used for removing cotter pins are hammer and cold chisel, but there are many locations where a hammer cannot be used and the use of the cold chisel frequently damages the cotter pin to such an extent that it is worthless.

The accompanying illustration shows a

tool for removing cotter pins which is of the same size as an ordinary pair of pliers. One tong of the pliers engages the pin, while the other uses all of the leverage exerted against the member through which the pin is inserted. As this leverage is four times as great as the actual force used the pin comes out quickly and easily.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Alaska.—The United States Congress is being asked to grant \$8,000,000 on account of construction work on the Alaskan railway for this current year. It is estimated that this will complete the railway through from Seward to Nenana on the Tanana River. Supplies are reported to have been assembled during the winter so as to permit the earliest possible start on the work. On the completion of this work there will remain to be complete the bridge across the Tanana River at Nenana, the standardization of the Tanana-Fairbanks line and some minor cleaning up work. It is estimated that this will absorb the \$3,000,000 which will remain of the original vote of \$52,000,000 after the \$8,000,000 asked for this year has been granted. (Mar., pg. 135.)

Alberta-Hudson Bay Ry.—The Alberta Legislature has passed an act extending for five years the time within which this projected railway may be built. The lines proposed to be built would run from Calgary through the Southern Alberta coal fields to the International Boundary, and from Calgary easterly to the Alberta-Saskatchewan boundary. When the bill was before the Legislature it was stated that the company had acquired the High River & Hudson Bay Ry.'s rights, that the company had entered into an agreement with the Grain Belt Construction & Development Co., of which F. Crandall was Manager; that arrangements for financing the construction of the line had been completed; and that an understanding had been arrived at with P. Burns, who controls the Calgary & South Western Ry., and that in the event of the A.H.B. Ry. building its line into the coal areas at once that company would forego its rights and use the A.H.B. Ry. (Mar., pg. 155.)

Edmonton, Dunvegan & British Columbia Ry.—The Alberta Legislature has passed an act providing that in the event of the Dominion Government not acquiring the company's lines, the Alberta Government may enter into an agreement with the company to take over, operate and improve the line, including the Central Canada Ry. The lines may be taken over by means of a receivership or a managership. The act provides that \$1,000,000 may be borrowed and paid out to the receiver or manager to carry out the terms of the agreement, which are under discussion, and will not be completed until the Dominion Government's intentions are fully known. A further sum of \$100,000 was also voted to assist in a similar way any other railway in the province the bonds of which have been guaranteed by the province. It is said that the railway to be benefited by this second vote is the Alberta & Great Waterways Ry., which, like the Central Canada Ry., is a branch of the E., D. & B.C. Ry.

A press report states that rails are to be laid for 12 miles west of Spirit River, on the E., D. & B.C. Ry. completed grade, in order to reach a block of timber land, where ties and other railway timber may be obtained. (April, pg. 175.)

Esquimalt & Nanaimo Ry.—The British Columbia Legislature has passed an act validating agreements made between the Victoria City Council and the Esquimalt & Nanaimo Ry., and between the Victoria City Council and the British Columbia Government, and the city's by-

law, passed in connection therewith, respecting the construction of the Johnston St. Bridge, Victoria, and to enable the city council to build the bridge. We are officially advised that the only change made in the bill as finally passed and the one passed originally and returned to the legislature by the Lieutenant-Governor for amendment, was in punctuation, that of the agreement forming the schedule to the bill, not being in agreement with that in the bylaw as published. (April, pg. 175.)

Great Northern Ry.—The Cawston, B.C., Board of Trade is reported to have been asked if 150 ft. of additional spur track, a cinder platform and a portable station would meet the demand for present improvements at that point. The board asked for further information respecting what was meant by a portable station. (Dec., 1919, pg. 604.)

Hudson Bay Ry.—The Minister of Railway, in reply to questions in the House of Commons recently, gave the following information:—The contract for the substructure of the bridge over the Saskatchewan River at Pas, Man., was executed, Nov. 5, 1910, and the general contract for the construction of section No. 1 of the railway was executed Sept. 25, 1911; construction was stopped on the railway in 1918, and on the terminals in 1917. The grade is nominally completed to Hudson Bay; some trestling and small structures remaining to be built, and the settlement of embankments and train filling at various points to be made up. This work was completed in 1917. Rails had been laid on 332 miles, up to the end of 1918; there are still 92 miles of rails to be laid. The cost of the bridge across the Nelson River at Manitou Rapids was \$215,596.34, and of that across the Nelson River at Kettle Rapids \$406,572.65, these works being completed in 1917 and 1918, respectively. The total expenditures on the railway and terminals at Mar. 31 in each of the followings years was:—

	Railway.	Terminals.
1914	\$1,569,908.01	\$1,517,124.66
1915	7,825,082.10	3,588,968.03
1916	10,809,407.37	4,940,560.55
1917	12,601,598.26	5,752,590.11
1918	13,890,887.87	6,343,499.50

The estimated cost of completing the track laying into Port Nelson is \$1,750,000, but to complete the railway would require \$4,000,000.

A press report states that as a result of a conference between the Minister of Railways and the western members of Parliament recently an opportunity will be given during this session of the House of Commons for a full discussion of the situation as to the H.B. Ry. The Yorkton Board of Trade has suggested that the Government issue \$5,000,000 of 20-year bonds for the completion of the line, the bonds to be sold in the west.

The Manitoba Legislature has passed a resolution asking for the completion of the line.

A press report from Ottawa states that a group of western members proposes to oppose the granting of supplies for the Welland Canal and other construction work, unless a vote is also approved for the completion of the Hudson Bay Ry. (April, pg. 175.)

The committee appointed by the Senate early in 1919 to investigate the navigability of Hudson Bay and Strait, and of Hudson Bay ports, with regard to their fitness as railway terminals, as well as on the fishery resources of the Bay,

was reappointed by the Senate April 22. The committee has power to continue its work between sessions. Senator Fowler, chairman of the committee, explained that it was nearly ready to make its report, and the reappointment was desired so that the report might be presented.

Kettle Valley Ry.—The British Columbia Legislature has confirmed an agreement between the B.C. Government and the Kettle Valley Ry. Co., with respect to the construction of a railway from Penticton towards the International Boundary.

The British Columbia Legislature has authorized the Government to enter into a contract with the Kettle Valley Ry. Co. to build a line from Coalmount, near Princeton to the Granite Creek coal mines.

We are officially advised that on account of labor conditions in British Columbia it is not possible to state definitely what construction will be carried on during this year. (April, pg. 175.)

Morrissey, Fernie & Michel Ry.—The annual report of the Crows Nest Pass Coal Co., which owns the railway, states that during 1919 the company expended \$29,647 on improvements.

The Northern Light Rys. Co. is the title of a company proposed to be incorporated by a bill which was approved by the Ontario Legislature's railway committee April 17. The promoters ask power to build a number of light railways in the mining districts of Northern Ontario, the routes of which were described in Canadian Railway and Marine World for April, pg. 194. The persons named as incorporators of the company are: E. T. Williams, manufacturer; Miss Isabel Gee, clerk, and H. R. Webster, student-at-law, Toronto. (April, pg. 194.)

Pabos, Amqui & Edmundston Ry.—The Dominion Parliament is being asked to incorporate a company with this title to build a railway from Pabos, Gaspe County, Que., along the Grand Pabos River valley across Pabos Seignory, an unorganized territory in Bonaventure and Matane Counties, Blais and Lepage Tps., crossing the Canadian National Rys. at Amqui station, thence on to Edmundston, N.B., with a branch from Grand Valle, a seaport on the St. Lawrence River, to the main line. The company's authorized capital asked is \$4,000,000, and power is asked to issue securities for \$75,000 a mile of line. The office is to be at Amqui, Que. The provisional directors are:—D. N. Dube, J. A. Brilliant, J. A. Desbiens, G. L. Dionne, M. Caron, L. A. Peduault, G. Langlois, of Amqui; J. Sirois, Val-Brillant, Que.; J. T. Bertrand, L'Isle Verte, Que.; J. A. Guy, Edmundston, N.B. (Mar., pg. 136.)

Pacific Great Eastern Ry.—A contract for a bridge over Deep Creek, B.C., is reported to have been given the Canadian Bridge Co. for \$350,220.

Quebec & Saguenay Ry.—Replying to questions in the House of Commons recently, the Minister of Railways said the work of bringing up the condition of the Quebec & Saguenay Ry. to standard was being carried on by the contractors, and that until they had ceased work the railway could hardly be said to be completed. During the time the contractors are at work it is deemed advisable that the operation of the railway be carried on under their superintendence. It is expected that the railway will be finally completed during this year.

The Board, according to the committee, is made up of the following: The Railway Board, 1919-1920.

Quebec Central Ry.—A press report states that the Quebec Central Ry. has been authorized by the Dominion Parliament to build a line from Montreal to the Gulf of St. Lawrence, and that the line will be built in stages. The first stage will be from Montreal to Quebec, and the second stage will be from Quebec to the Gulf of St. Lawrence. The line will be built in stages, and the first stage will be from Montreal to Quebec, and the second stage will be from Quebec to the Gulf of St. Lawrence.

The report also states that it is expected that the construction will be completed within a year, and that the line will be built in stages. The first stage will be from Montreal to Quebec, and the second stage will be from Quebec to the Gulf of St. Lawrence. The line will be built in stages, and the first stage will be from Montreal to Quebec, and the second stage will be from Quebec to the Gulf of St. Lawrence.

Quebec Rapid Transit Ry. Co.—The Dominion Parliament is being asked to extend the time within which the company may extend its projected railway. A. Taschereau, Quebec, is solicitor for the applicants. The company was incorporated by the Dominion Parliament in 1913 to build a railway from Quebec through Charlebourg, Jeune Lorette, Aurore Lorette, St. Foye, Cap Rouge, Silley and Montcalm; also from Charlebourg, through Riviere Jaune, Notre Dame des Laurentides, and Lake St. Charles to Jeune Lorette; also a line round Orleans Island and across the island, and a bridge from the north shore of the St. Lawrence River to Orleans Island. The company is authorized to enter into agreements with other railways, including the Quebec Ry., Light & Power Co., as regards its railways. The original incorporators were farmers and others along the route of the projected railway.

The Q. Ry., L. & P. Co. has recently been in negotiation with certain interests regarding a proposition for the construction of a line from Quebec to Loretteville.

Reid Newfoundland Co.—H. D. Reid, President, Reid Newfoundland Co., prior to leaving Montreal for Newfoundland recently is reported to have stated that it is proposed to build an hotel at St. John's at an estimated cost of \$500,000, in conjunction with local interests, and that progress will be made with the work of developing the company's lands, etc.

Timiskaming & Northern Ontario Ry. The Ontario Legislature has passed a resolution to the effect that a great impetus would be given to the development of New Ontario by the extension of the T. & N. O. Ry. from Cochrane to Moose Factory, on Hudson Bay. The resources of the area between these two points now being practically unattainable on account of transportation difficulties, which condition should be remedied at the earliest possible date. Premier Drury, in the course of the discussion, stated that the government had placed in the estimates \$125,000 for surveys and explorations in connection with this matter. The extension of the railway to James Bay would be the logical outcome and rounding out of the T. & N. O. Ry. system, but he believed that the government would be wise to commit itself to the immediate building of the railway for financial reasons.

On the same day a resolution was proposed by R. R. Hall, M.L.A., favoring the building of a branch of the T. & N. O. Ry. from North Bay to Parry Sound. The debate was adjourned and on a subsequent date the motion was withdrawn.

The government having promised to look into the matter. (April, pg. 149.)

Toronto, Hamilton & Buffalo Ry. The Board of Railway Commissioners has ordered that the company proceed with the construction of the highway bridge at King St., Hamilton. The existing bridge has been shown to be unsafe and

inadequate to present traffic requirements.

The Board of Railway Commissioners has made an order, amending a previous order, directing Barton Tp. Council to bear all cost of maintenance of a crossing over the railway at Barton Ave., Hamilton. (April, pg. 176.)

Canadian National Railways Construction, Betterments, Etc.

Prince Edward Island Ry.—The Minister of Railways, during a discussion of the Canadian National Railways, was asked in the House of Commons recently as to whether it is the government's intention to proceed with the widening of the gauge over the whole of the P.E.I. Ry. The Minister replied: "We shall not proceed with that work during the present year. By standardizing the gauge between Charlottetown and Summerside we can take care of about 75% of Prince Edward Island's trade. As soon as financial considerations permit standardizing the gauge of the whole railway will be proceeded with, but not this year. The other parts of the island have the narrow gauge system and the only inconvenience involved is where there is trans-shipment. This, however, is not serious, because it is done by the railway forces at Charlottetown. The widening that has been so far done is of great importance and I quite appreciate the necessity for completing the work over the whole line as soon as possible. But financial conditions, we felt, would not justify our doing it during this year."

Sydney Dry Dock.—A press report states that work is about to be started on the construction of a spur line to connect the C.N.R. with the site of a dry dock to be built at Sydney, N.S., by the Sydney Foundry & Machine Co.

Stewiacke District.—At a conference at Truro, N.S., April 5, it was decided to ask the Dominion Government to build a loop line from Brookfield, serving Middle and Upper Stewiacke districts, and connecting with the Musquodoboit Ry. at its terminus at Deans, N.S. It was stated that a line had been surveyed and partly graded some years ago through the district, and that the area contains large timber, coal, iron, silver and gold resources.

Gosford Branch.—A press report states that Edward Conway has leased the Gosford Branch of the Quebec & Lake St. John Ry., that he has bought a gasoline engine and several cars, and that he will put the line in condition for operation.

Fort William to Winnipeg Pits.—A press report states that work has been started on the repair, replacing and filling of trestles on the National Transcontinental Ry. between Fort William and Winnipeg Pits, preparatory to rebalasting the line. Work depots are stated to have been opened at Sioux Lookout, Vivian and Watcombe, Ont.

Lampman Coalfields.—At a meeting of the House of Commons railway committee April 15, O. R. Gould, M.P., urged the completion of an extension of the Canadian Northern Ry. to the Lampman coalfields, Sask., and the building of a half mile transfer switch to connect the C.N.R. with the C.P.R. at Carlisle, Sask. The Minister of Railways stated that the suggested extension of 9 miles was one among many other suggestions under consideration by the C.N.R. directors and would be built as soon as the board could

see its way clear to authorize the expenditure. With regard to the switch at Carlisle he suggested that application should be made to the Board of Railway Commissioners to order it to be put in.

North Battleford-Turtleford Branch Extension.—A press report states that it is proposed to build a 25 mile extension of the branch line from North Battleford, which at present is operated to Turtleford, 55.9 miles.

White Court to Grande Prairie.—A delegation of soldier settlers of the Grande Prairie district, Alberta, waited on the Dominion Government, April 16, and urged the building of a branch line from White Court, on the Peace River branch, to the Grande Prairie country. Grande Prairie is now reached by an Edmonton, Dunvegan & British Columbia Ry. branch from Spirit River.

British Columbia Terminals.—The B.C. Legislature has passed an act extending for a year the time within which the proceeds of the guaranteed securities held by the Finance Minister in respect of the works to be carried out under the Canadian Northern Pacific Ry. Extension Act, and the Canadian Northern Pacific Ry. Terminals Act, both passed in 1913, may be paid out. A statement as to the total amounts of guaranteed securities, the amounts expended and the amounts available for further expenditures were given in Canadian Railway and Marine World for April, pg. 195.

Vancouver Island.—A recent British Columbia press report stated that a freight service was about to be inaugurated on the Victoria-Alberni line between Victoria and the Koksilah River, to which point track had been laid. The bridge over the river was expected to be completed towards the middle of April, when tracklaying was expected to be resumed on the 16 miles intervening to the Canyon crossing of the Cowichan River. It is expected that the bridge across the river will be complete in about three months, and that track will be laid to the Nitinat River this year. (April, pg. 186.)

The Gowganda Engineering & Construction Co., Ltd. has been incorporated under the Ontario Companies Act, with \$40,000 authorized capital and office at Toronto, to carry on a general mining and construction company, with power to build tramways, railways, bridges, water courses, wharves, warehouses, etc. The provisional directors are: T. R. Ferguson, G. R. Sproat, and W. T. Jones, Toronto.

Canadian Transfer Co., Ltd. has been incorporated under the Dominion Companies Act, with \$500,000 authorized capital, and office at Montreal, to take over as a going concern, and carry on, the business of the Canadian Transfer Co., Ltd., with head office in Montreal, and offices at Toronto, Ottawa and Hamilton, and to carry on a general cartage contracting and forwarding business.

Mainly About Railway People Throughout Canada.

Harry Raymond Arthur, whose appointment as Trainmaster, Canadian National Rys., Lucerne, B.C., was announced in our last issue, was born at Lewisburg, Pa., May 25, 1875, and entered railway service June 15, 1890, since when he has been, to 1896, agent and operator at various points Chicago and North Western Ry.; 1896 to 1899, assistant to chief clerk, Local Freight Office, Sioux City and Northern Ry., Sioux City, Ia.; 1891 to 1904, chief clerk to Commercial Agent (Traffic), Illinois Central Rd., Sioux City, Iowa; 1904 to 1912, Division Freight Agent, traveling auditor and chief clerk to Auditor of Station Accounts, same road, Fort Dodge, Iowa, and Chicago, Ill.; Oct., 1912, to Feb. 1, 1913, Travelling C. Agent, Canadian Northern Ry., Winnipeg; Feb. 1, to Nov. 13, 1913, chief clerk, General Manager's office, same road, Winnipeg; Nov. 18, 1913, to Nov. 20, 1915, Inspector of Transportation, same road, Winnipeg; Nov. 20, 1915, to Dec. 18, 1918, Inspector of Transportation, same road, Vancouver, B.C.; Dec. 18, 1918, to Jan. 1, 1919, acting Superintendent, same road, Kamloops Jet., B.C.; Jan. 1, 1919, to Feb. 17, 1920, Trainmaster, Canadian National Rys., Saskatoon, Sask.

John Alton Audrain, who has been appointed station master, C.P.R., Winnipeg, was born at St. John's, Jersey, Channel Islands, Jan. 23, 1883, and entered C.P.R. service in April, 1897, since when he has been, to 1904, apprentice, car shops, Winnipeg; 1904, to July 1, 1905, mechanic, car shops, Winnipeg; July 3 to Aug. 31, 1905, express messenger, Dominion Express Co., Winnipeg to Gretna and Emerson; Aug. 31, 1905, to May 1, 1906, mechanic, car shops, C.P.R., Winnipeg; May 10, 1906, to July 25, 1910, brakeman and baggageman, main line and branches out of Winnipeg; July 28, 1910, to Sept. 7, 1915, station master, Winnipeg; Sept. 7, 1915 to Jan., 1916, Trainmaster, C.P.R., Minnedosa, Man.; Jan., 1916, to April, 1920, Trainmaster, Saskatoon, Sask.

H. H. Ayer, Special Auditor, Canadian National Rys., Montreal, died there, April 3, after a short illness.

J. H. Barber, who has been appointed Division Engineer, Toronto Terminals Division, Ontario District, C.P.R., Toronto, was born near Cobourg, Ont., Dec. 20, 1856, and educated in Toronto. He was an article pupil of James Ross, C.E., from 1875 to 1878, and was engaged as Assistant Engineer, and Division Engineer, on various sections of location and construction on the C.P.R. up to 1891. In 1891 he was appointed Resident Engineer, Maintenance of Way Department, C.P.R., Toronto, and was later appointed Division Engineer, Atlantic Division, C.P.R., St. John, N.B., holding that position until April, 1906, to 1916, Division Engineer, Eastern Division (now Quebec District), C.P.R., Montreal; 1916 to April, 1920, on special work at various points, including double tracking and grade separation, etc., Toronto.

Thomas J. Burns, Superintendent, Rolling Stock, Michigan Central Rd., died at Detroit, Apr. 18. He was born at Hillsdale, Mich., July 24, 1868, and was educated at Assumption College, Sandwich, Ont., and the Grand Seminary, Montreal. He entered M.C.R. service Apr. 4, 1890, as clerk in the Maintenance of Way Department, Bay City, Mich., and was promoted to locomotive dis-

patcher Nov. 1, 1896; appointed chief clerk to Master Mechanic, Jackson, Mich., Dec. 15, 1902; and was, from Aug., 1905, to July 1, 1909, chief clerk to Superintendent Motive Power; July 1, 1909, to June 1, 1912, Assistant to Superintendent, Motive Power; May 1, 1915, on the separation of the Locomotive and Car Departments, he was appointed Superintendent Rolling Stock, and held that position at the time of his death.

His Honor L. H. Clarke, Lieutenant-Governor of Ontario, and **R. Home Smith**, are spoken of as probable members of the commission to prepare for taking over the Toronto Ry., and to operate it after it becomes municipally owned. Sir John Woods and Mayor Church are also mentioned for the third membership of the commission.

S. W. Crabbe, Superintendent, Smiths Falls Division, Quebec District, Canadian Pacific Railway.

Stanley W. Crabbe, who has been appointed Superintendent, Smiths Falls Division, Quebec District, Smiths Falls, Ont., was born at Teeswater, Ont., Aug. 9, 1885, and entered C. P. R. service in 1903, since when he has been, to Mar. 11, 1918, section laborer, telegraph operator and agent, consecutively, at different points; Mar. 11, 1918, to Apr. 1, 1920, Superintendent, Schreiber Division, Ontario District, C. P. R., Schreiber, Ont.

Victor Albert George Dey, who has been appointed Division Engineer, Bruce Division, Ontario District, C. P. R., Toronto, was born at Aberdeen, Scotland, Feb. 4, 1883, and entered railway service in Sept., 1903, since when he has been, to June, 1907, draftsman, C.P.R., Montreal; June, 1907, to June, 1911, office engineer, Quebec, Montreal & Southern Ry., Montreal; June, 1911, to Aug., 1918, to Apr. 1, 1920, Division Engineer, Toronto Terminals Division, Ontario District, C.P.R., Toronto.

J. E. Duval, General Superintendent of Car Service, G.T.R., Montreal, died there

Apr. 28, after a very short illness, aged 60. He entered transportation service in Nov., 1884, as agent and operator, Canada Atlantic Ry., now part of the G.T.R., at Coteau Landing, Que., and from May, 1885, to 1902, was train-dispatcher; 1902 to 1904, Chief Inspector, Board of Railway Commissioners; and in 1906 he organized the Canadian Car Service Bureau, of which he was appointed Manager, holding that position until Aug. 1, 1913, when he was appointed General Superintendent of Car Service, G.T.R., and in Feb., 1917, General Superintendent of Transportation, G.T.R., Montreal, and from Feb., 1917, was General Superintendent of Car Service, G.T.R., Montreal.

James Ferguson, whose appointment as Trainmaster, Canadian National Rys., Prince Albert, Sask., was announced in our last issue, was born at Woodbridge, Ont., June 17, 1878, and entered railway service Oct. 10, 1892, since when he has been, to Nov. 1, 1893, assistant agent, G. T. R., New Lowell, Mass.; Nov. 1, 1894, to June 5, 1895, operator at various points, G. T. R.; June 5, 1895, to Jan. 1, 1899, agent and operator at various points, C. P. R.; June 1, 1899, to Sept. 1, 1902, agent, Canadian Northern Ry., Belmont and Winnipeg, Man.; Sept. 1, 1902, to Jan. 13, 1907, dispatcher, same road, Port Arthur, Ont.; Aug., 1907, to Feb. 11, 1920, in train service, same road, Port Arthur, Ont.

W. R. Fitzmaurice, who has been appointed Superintendent, New Glasgow Division, Maritime District, Canadian National Rys., New Glasgow, N.S., was born at Bedford, N.S., March 19, 1870, and entered I.R.C. service May 21, 1886, since when he has been, to 1889, operator at various stations in Nova Scotia; 1889 to 1897, assistant agent, Springhill Jet., N.S.; 1897 to 1898, agent, Oxford Jet., N.S.; 1898 to Aug. 12, 1913, agent, Amherst, N.S.; Aug. 12, 1913, to Sept. 28, 1915, assistant Superintendent, Moncton-St. Flavie District, Newcastle, N.B.; Sept. 28, to Nov., 1915, acting Superintendent, District 2, Campbellton, N.B.; Nov., 1915, to Aug. 31, 1916, Assistant Superintendent, Moncton-St. Flavie District, Newcastle, N.B.; Aug. 31, 1916, to Apr. 24, 1920, Superintendent, District 2, Intercolonial Ry., now Campbellton Division, Maritime District, Canadian National Rys., Campbellton, N.B.

Charles Harry Fox, whose appointment as Assistant District Engineer, Manitoba District, C. P. R., Winnipeg, was announced in our last issue, was born there, Apr. 2, 1885, and entered C. P. R. service in May 1902, since when he has been, to July, 1903, clerk, Construction Department, Winnipeg; Aug., 1903, to Sept., 1904, rodman, maintenance of way, Fort William, Ont., and Brandon, Man.; 1904 to 1910, at McGill University, and during vacations, transit man, maintenance of way and construction, Winnipeg; Apr. to Dec., 1910, Resident Engineer on construction, Winnipeg; Dec., 1910, to Apr., 1912, Resident Engineer, Maintenance of Way, Fort William, Ont.; Apr., 1912, to Oct., 1916, Assistant Division Engineer, Winnipeg; Oct., 1916, to May, 1918, Division Engineer, Winnipeg; May, 1918, to Jan., 1919, on military service; Jan., 1919, to Mar., 1920, Division Engineer, Maintenance of Way, Regina, Sask.

J. Graff, civil engineer, was asphyxiated, owing to a leakage of gas in his bed-

at St. John, N.B., Apr. 10. He was born at St. John, N.B., and was educated at the St. John's University. He was a member of the St. John's University and was a member of the St. John's University. He was a member of the St. John's University and was a member of the St. John's University.

G. G. Graham, Chief Engineer, Dominion Department, C.P.R., St. John, N.B., was born at St. John, N.B., and was educated at the St. John's University. He was a member of the St. John's University and was a member of the St. John's University.

Gordon Grant, Consulting Engineer, Dominion Department, C.P.R., St. John, N.B., was born at St. John, N.B., and was educated at the St. John's University. He was a member of the St. John's University and was a member of the St. John's University.

H. C. Grout, who has been appointed General Superintendent, Ontario District, C.P.R., Toronto, was born at Wausau, Wis., Mar. 14, 1881, and has been, to Feb., 1899, rodman; Feb., 1899 to Apr., 1901, leveller; Apr., 1901 to Apr., 1903, transit man; Apr., 1903 to Apr. 1, 1907, Resident Engineer, Toronto; Apr. 1, 1907 to Apr. 1, 1908, Assistant Division Engineer; Apr. 1, 1908, to Apr. 20, 1909, Resident Engineer, Toronto; Apr. 20, 1909 to Jan., 1910, Assistant Superintendent, District 3, Ontario Division, Toronto; Jan., 1910 to Feb., 1912, Assistant Superintendent, District 1, Ontario Division, Havelock; Feb. to July, 1912, Superintendent, District 1, Ontario Division, Toronto; July to Nov., 1912, Superintendent, District 1, Atlantic Division, St. John, N.B.; Nov., 1912 to May, 1913, Assistant General Superintendent, Atlantic Division, St. John, N.B.; May, 1913, to Sept., 1914, acting General Superintendent, Atlantic Division, St. John, N.B., and from Sept., 1914, General Superintendent, Atlantic Division, now New Brunswick District, St. John, N.B. Prior to leaving St. John, he was entertained at luncheon at the Union Club, Apr. 21, by a number of public officials and other citizens.

William C. Guthrie, who has been appointed Superintendent, Schreiber Division, Ontario District, C.P.R., Schreiber, Ont., was born at Arnprior, Ont., June 15, 1876, and entered C.P.R. service in 1892, since when he has been, to 1893, section laborer; 1893 to 1895, relieving section foreman; 1895 to 1898, section foreman; 1898 to Dec. 1, 1903, extra gang foreman, North Bay, Ont.; Dec. 1, 1903, to Feb. 1, 1911, Roadmaster, Chapleau, Ont.; Feb. 1, 1911, to Feb. 1, 1912, Roadmaster, North Bay, Ont.; Feb. 1 to Dec. 1, 1912, Roadmaster, Mattawa, Ont.; Dec. 1, 1912, to Apr. 1, 1920, Superintendent, Chapleau Division, Ontario District, Chapleau, Ont.

D. E. Hanna, President, Canadian National Ry., unveiled on April 16, an oil painting of Noel Marshall, President, Canadian National Ry., at a dinner presented to the National Club, Toronto, by a number of Mr. Marshall's fellow members. Mr. Hanna addressed the Landsay, Ont., Board of Trade on Apr. 13, and spoke at a dinner given by the Quebec Board of Trade, on Apr. 21.

Wm. C. Hawkins, Manager, C.P.R.,

and Secretary, Dominion Department, C.P.R., Hamilton, Ont., who, as mentioned in Canadian Railway and Marine World of April 10, 1919, has been spending some time in the south, has been on his way back to Hamilton, Ont., and will be back to Hamilton, Ont., where he is seriously ill.

Joseph Samuel Little, Assistant Superintendent, Land and Tax Agent, Western Lines, G. T. R., Detroit, Mich., was announced in our last issue, was born at Sullivan, Ind., Jan. 9, 1888, and entered C.P.R. service in 1911, when he has been, to Sept., 1911, rodman and levelman, Illinois Central Rd., Natchez, Mo.; June, 1913, to May, 1915, rodman and transit man, same road, Mattoon, Ill.; May to June, 1915, in valuation department, same road, Chicago, Ill.; June to Sept., 1915, levelman, same road, in Missouri, Arkansas and Kentucky; Sept., 1915 to Aug. 1916, in Land and Tax

J. E. Duval,
General Superintendent of Car Service, Grand
Trunk Railway, who died at Montreal, Apr. 28.

Commissioner's office, same road, Chicago, Ill.; Aug., 1916, to May, 1918, land accountant in charge of land work, Valuation Department, Western Lines, G. T. R., Detroit, Mich.; May to Oct., 1918, Assistant Land and Tax Commissioner, same road, Detroit, Mich.; Oct., 1918, to Mar. 1, 1920, Land and Tax Agent, Grand Trunk Western Lines Rd. (U.S.R.A.), Detroit, Mich.

J. W. Lyon, of Guelph, Ont., who has been an active worker for hydro electric railways in Ontario, fell on a slippery bridge recently, and broke his right shoulder.

William Edward Massie, whose appointment as Master Mechanic, Niagara, St. Catharines and Toronto Ry., St. Catharines, Ont., was announced in our last issue, was born at Elora, Ont., June 5, 1880, and entered electric railway service in 1895, serving in various capacities to 1907 on Toronto Ry., Toronto; from 1907 to 1915, he was General Foreman, Toronto and York Radial Ry., Toronto, and from 1915 to 1920, General

Superintendent, Sudbury-Copper Cliff Suburban Electric Ry., Sudbury, Ont., and in 1919, he was in charge of the first electric car in Sudbury.

M. T. McCraney, General Agent, Freight Department, Chicago, Rock Island and Pacific Ry., Pittsburg, Pa., died suddenly there, Apr. 7, and was buried at Toronto, Apr. 10. He was born at Oakville, Ont., and was educated for the law and called to the Ontario bar. He had been in C.R.I. & P.R. service for over 30 years.

M. H. MacLeod, Vice President, Operation and Maintenance, Canadian National Railway, Toronto, is spending some time at Victoria, B.C., for the benefit of his health.

R. P. Ormsby, Secretary, Canadian National Ry., returned to Toronto early in April after a trip to Great Britain.

W. J. Ptolemy, who has retired from the position of Deputy Provincial Treasurer for Manitoba, after 37 years service, was, a number of years ago, in the service of the Great Western Ry., now part of the G.T.R., and was later engaged in the construction of the telegraph line for the Dominion Government between Fort Pelly and Edmonton.

Allan Purvis, who has resigned as General Superintendent, Ontario District, C.P.R., Toronto, was born at Batavia, Java, June 29, 1878, and was educated at the Merchant Taylors' School, London, Eng. He entered C.P.R. service in Vancouver, B.C., at an early age, and was from Aug., 1890, to Feb., 1891, messenger, Stores Department; Feb. to Nov., 1891, storeman; Nov., 1891, to Sept., 1892, junior clerk, Vancouver, B.C.; Sept., 1892, to Aug., 1893, timekeeper, Donald, B.C.; Aug., 1893, to Oct., 1894, clerk, Vancouver, B.C.; Oct., 1894, to Mar., 1895, assistant storekeeper, North Bend and Kamloops, B.C.; Mar., 1895, to Sept., 1896, clerk and operator, Car Service and Fuel Department, Vancouver, B.C.; Sept., 1896 to Jan., 1899, Chief Clerk, Fuel Department, Vancouver, B.C.; Jan., 1899, to Feb., 1908, chief clerk to General Superintendent, Pacific Division, Vancouver, B.C.; Feb. to Nov., 1908, Superintendent, District 4, Central Division, Souris, Man.; Nov., 1908, to Oct., 1909, Superintendent, District 3, Pacific Division, Nelson, B.C.; Oct., 1909, to Oct., 1911, Local Manager, Fraser Valley Branch, British Columbia Electric Ry., Vancouver, B.C.; May, 1912, to Feb., 1915, Manager of Interurban Lines, same company, New Westminster, B.C.; May, 1915, to May 1, 1916, Superintendent, District 2, Ontario Division, C.P.R., London, Ont.; May 1 to Nov. 1, 1916, General Superintendent, Eastern Division, C.P.R., Montreal; Nov. 1, 1916, to Feb. 1, 1917, acting General Superintendent, Ontario District, Toronto; Feb. 1, 1917, to Oct. 15, 1918, General Superintendent, Quebec District, Montreal; Oct. 15, 1918 to Apr., 1920, General Superintendent, Ontario District, Toronto.

Gerard G. Ruel, who has been appointed General Counsel, Canadian National Ry., Toronto, was born at St. John, N.B., July 5, 1866, and studied law there, subsequently graduating in law at Harvard University, Cambridge, Mass., in 1889. He practised in St. John for a number of years, and was for some time a partner in the law firm of Blair, Ruel & Blair. From July, 1899, to Oct. 1, 1905, he was Law Clerk, Railways and Canals Department, Ottawa; from Oct. 1, 1905, to 1909, Assistant Solicitor, Canadian National Ry., Toronto; 1909, to Dec. 31, 1918, Chief Solicitor, Canadian Northern Ry., Toronto; Jan. 1, 1919, to Apr., 1920,

Counsel, Canadian National Rys., Toronto.

Lady Shaughnessy and Hon. Marguerite Shaughnessy sailed from St. John, N.B., Apr. 3, on the Canadian Pacific Ocean Services' s.s. Melita, for England.

Harold George Studd, whose appointment as Auditor for Europe, C.P.R., London, Eng., was announced in a recent issue, was born at Tottenham, Eng., July 10, 1883, and entered transportation service in 1898, since when he has been to 1903, clerk, Great Eastern Ry., Stratford and London, Eng.; Mar. 4, 1903 to Aug. 31, 1905, clerk, C.P.R., London, Eng.; Sept. 1, 1905 to Nov. 30, 1913, cashier, Passenger and Management Departments, C.P.R., London, Eng.; Dec. 1, 1913 to Dec. 31, 1919, assistant chief clerk, European Manager's office, C.P.R., London, Eng., and acting accountant, Dominion Express Co., Liverpool, Eng.

E. R. Thorpe, formerly City Freight Agent, G.T.R., Toronto, was entertained at dinner by a number of his associates and presented with a gold and platinum watch chain and locket, on leaving to become General Agent, Freight and Passenger Traffic, Lehigh Valley Ry., Toronto.

Guy Toombs, Manager Transportation Department of the Canadian Export Co., Montreal, and formerly in the Canadian Northern Railway Freight Department, gave an address on transportation recently at the Laurentide School, Grande Mere, Que., tracing the development of transportation from the earliest date to the present day and illustrating it by moving and other pictures.

William J. Uren, who has been appointed Assistant General Superintendent, Quebec District, C.P.R., Montreal, was born at St. Marys, Ont., Jan. 23, 1872, and entered railway service Sept. 6, 1888, since when he has been, to June, 1890, telegraph operator, C.P.R., Hawk Lake, Rat Portage, Ont., and various other points; June, 1890, to Nov., 1892, agent and operator, C.P.R., Marcy and Dexter, Ont.; Nov., 1892, to Nov., 1898, Terminal Agent and Yardmaster, C.P.R., Ignace, Ont.; Nov., 1898, to June, 1903, dispatcher, C.P.R., Fort William, and Rot Portage, Ont.; June, 1903, to Apr., 1904, Chief Dispatcher, C.P.R., Rat Portage, now Kenora, Ont.; Apr. to June, 1904, Night Chief Dispatcher, C.P.R., Winnipeg; June, 1904, to May, 1905, Chief Dispatcher, C.P.R., Moose Jaw, Sask.; May, 1905, to Nov., 1908, Chief Dispatcher and Relieving Trainmaster, C.P.R., Winnipeg; Nov. 1908, to Nov., 1909, Superintendent, C.P.R., Brandon, Man.; Nov., 1909, to June, 1910, Superintendent C.P.R., Moose Jaw, Sask.; June 1910, to Sept., 1912, Superintendent, C.P.R., Cranbrook, B.C.; Sept., 1912, to Nov., 1913, Superintendent, C.P.R., Calgary, Alta.; Nov., 1913, to Nov., 1918, Superintendent, and relieving General Superintendent, C.P.R., Toronto; Nov., 1918, to Apr., 1920, Superintendent, Farnham Division, Quebec District, Farnham, Que.

Barton Wheelwright, whose appointment as Engineer, Maintenance of Way, Portland Division, G. T. R., Portland, Me., was announced in our last issue, and whose resignation is announced in this issue, was born at Minneapolis, Minn., March 12, 1888, and entered G.T.R. service July 1, 1911, since when he has been, to May, 1912, draftsman, Toronto; May, 1912, to Nov., 1918, signal inspector, Assistant Signal Engineer, and acting Signal Engineer, successively, Montreal; Nov., 1918, to March 1, 1920, Engineer, Maintenance of Way, Grand Trunk Lines

in New England (U.S.R.A.), Portland, Me.

T. A. Wilson, who has been appointed Superintendent, Sudbury Division, Algoma District, C. P. R., Sudbury, Ont., entered railway service in Jan., 1885, since when he has been, to July, 1892, successively, call boy, Stratford, Ont.; operator and brakeman, G.T.R.; July, 1892, to Oct., 1900, agent and operator at various points, Lake Superior Division, C.P.R.; Oct., 1900, to Oct., 1912, General Yardmaster, C.P.R., Ottawa, Ont.; Oct., 1912, to June, 1916, Assistant Superintendent, District 3, Lake Superior Division, C.P.R., Schreiber, Ont.; June, 1916, to Oct. 16, 1918, Assistant Superintendent, Smiths Falls Division, Quebec District, C.P.R., Smiths Falls, Ont.; Oct. 16, 1918, to April 1, 1920, Superintendent, Smiths Falls Division, Quebec District, Smiths Falls, Ont.

Andrew Williams, who has been appointed Superintendent, Farnham Division, Quebec District, C.P.R., Farnham, Que., was born at Mono Road, Ont., Feb. 22, 1872, and entered C.P.R. service, Jan. 1889, since when he has been, to 1892, telegrapher; 1892 to 1893, relieving agent; 1893 to 1894, assistant to car distributor and fuel agent, all Atlantic Division; 1895 to 1896, relieving dispatcher, St. John, N.B.; 1896 to 1904, Chief Dispatcher, Woodstock, N.B.; 1904 to 1905, rule instructor, Atlantic Division; 1905 to 1909, Trainmaster, Atlantic Division; 1909 to 1911, Assistant Superintendent, Atlantic Division; 1911 to Jan. 5, 1914, Assistant Superintendent, District 1, Lake Superior Division, North Bay and Sudbury, Ont.; Jan. 5, 1914, to Jan., 1916, Superintendent, District 2, Atlantic Division, Woodstock, N.B.; Jan., 1916, to Apr., 1917, Superintendent, District 1, Atlantic Division, Brownville, Ont.; Apr., 1917, to Apr., 1920, Superintendent, London Division, Ontario District, London, Ont.

James Miller Woodman, who has been appointed General Superintendent, New Brunswick District, C.P.R., St. John, N.B., was born at St. Marys, Ont., May 15, 1866, and served as brakeman, yardmaster, conductor and trainmaster, until 1910, when he went into the insurance business in Indiana. In 1911 he entered C.P.R. service and was appointed Superintendent of Terminals, Winnipeg, and in 1916 was appointed Superintendent of Terminals at Montreal, retaining that position until Oct., 1918, when he was appointed General Superintendent, Quebec District, Montreal, which position he held at the time of his present appointment.

Return of Empty Freight Cars from the United States.—The Railway Association of Canada has issued the following circular: The new codes of Car Service and Per Diem Rules of the American Railroad Association, effective Mar. 1, 1920, having been adopted by Canadian railways, regulations governing the handling of freight cars between railways operating in Canada, and between Canadian and United States railways, embodied in circular 98, issued by Canadian Railway War Board, Jan. 31, 1919, are cancelled. In present circumstances it is considered most desirable that no obstacle should be placed in the way of prompt return of empty Canadian cars to home rails and, therefore, until further notice, Canadian railways will continue to accept empty Canadian equipment from U. S. railways at any junction point, regardless of ownership.

Grand Trunk Railway Construction, Betterments, Etc.

Ottawa Cross Town Tracks.—N. Cauchop addressed the Engineering Institute of Canada's Ottawa branch recently, urging the removal of the G.T.R. cross town tracks, and the members passed a resolution endorsing the proposal. The Ottawa City Council also had the matter brought before it recently by a deputation from city business organizations. It was arranged to promote the signing of petitions to the government, asking that the cross town tracks be removed. Two plans for the removal of the tracks are suggested, one for G.T.R. trains going west to leave the city over Canadian National Rys. lines, and the other that all trains cross the city through a tunnel.

Palmerston Car Shops and Yards.—The Palmerston, Ont., Town Council has been asked to close up certain streets in order to permit of the enlargement of the company's yards and the building of car shops. The council on April 4 decided to ask for full particulars of the proposed works before deciding.

Stoney Creek Road Bridge.—The Ontario Railway and Municipal Board's engineer is reported to have found that the bridge carrying the G.T.R. over the Stoney Creek road, near Hamilton, Ont., does not comply with the provisions of the act as to width and clearing height, and to have recommended that steps be taken to have it conform to the regulations.

London, Ont., Grade Crossings.—The Board of Railway Commissioners is reported to have been asked to send a representative to confer with the London City Council and representatives of the company regarding the construction of two subways and the question of track elevation. (April, pg. 182.)

Record Run on a Michigan Central Rd.

We are officially advised that on Mar. 29 a special train, consisting of 2 cars and a locomotive, ran from Windsor, Ont., to Buffalo, N.Y., over the Michigan Central Rd.'s Canadian Division, 233.46 miles, in 3 hours and 29 minutes. The train, on board which were A. H. Smith, President, New York Central Lines, and H. Shearer, General Manager, Michigan Central Rd., left Windsor at 9.10 a.m., arriving at St. Thomas, where the locomotive was changed, at 10.40 a.m., leaving there at 10.46 a.m., arriving at Bridgeburg 12.20 p.m., and reaching Buffalo at 12.30 p.m. The mileages between these points, with the speed of the train, are as follows:—

	Mileage	Min.	Average miles an hour
Windsor to St. Thomas	109.50	30	73.06
St. Thomas to Bridgeburg	118.20	36	73.87
Bridgeburg to Buffalo	5.97	17	66.06
	233.46	203	69.00

G.T.R. Station Employees.—A board of conciliation consisting of Justice MacLennan, Chairman, U. E. Gillen, representing the company, and F. Bancroft, representing the men, began an investigation April 12 into the demand of G.T.R. clerks and station employees for an increase of wages. The investigation affects some 1,400 employees who are connected with the Canadian Brotherhood of Railway Employees, which made the application for the board of conciliation.

Railway Rolling Stock Orders and Deliveries.

Electro Metal Co. has ordered 2 flat cars from Canadian Car & Foundry Co.

The Pacific Great Eastern Ry. is stated to be in the market for three Mikado type locomotives.

The Grand Trunk Pacific Ry. has received 157 repaired box cars from Canadian Car & Foundry Co.

Canadian National Rys. has received 4 repaired baggage cars from Canadian Car & Foundry Co.

Canadian National Rys. has ordered 350 stock cars, 30 tons capacity, from Canadian Car & Foundry Co.

The G.T.R. has received 7 dining cars, 7 steel mail cars, and 47 repaired box cars, from Canadian Car & Foundry Co.

Canadian National Rys. has received 6 dining cars of an order placed June 26, 1919, from Canadian Car & Foundry Co.

F. H. Hopkins & Co., Montreal, have ordered 6 sets of car trucks, 50 tons capacity, from Canadian Car & Foundry Co.

The G.T.R. has ordered 1,000 automobile cars, 50 baggage cars, and 15 express refrigerator cars, from Canadian Car & Foundry Co.

The G.T.R. has ordered 1,000 flat cars, 50 tons capacity, from National Steel Car Corporation. They will be approximately 40 ft. overend sills, 8 ft. 10 in. over side sills, with plate girder center and side sills, of 10 in. channel, pressed steel bolsters and crossies, arch bar type of truck, journal bearings $5\frac{1}{2}$ x 10 in., standard M.C.B. class D couplers, Westinghouse air brakes, and 33 in. cast iron wheels.

C.P.R. orders.—Canadian Railway and Marine World was able to give in the April issue, some preliminary details of orders for rolling stock placed by the C.P.R. for delivery during this year. Since then, we have been officially advised of orders placed as follows: 3 dining cars, the bodies to be built complete by Canadian Car & Foundry Co., and the interior finishing to be done in the C.P.R. Angus shops; 43 sleeping cars, the steel frames for 18 to be built by National Steel Corporation, Ltd., and for 25 by Canadian Car & Foundry Co., the interior finishing to be done at C.P.R. Angus shops; 67 second hand air dump cars bought from Cook Construction Co., Montreal; 2,500 box cars, 60 tons capacity, 1,500 of these to be built by Canadian Car & Foundry Co. and 1,000 by National Steel Car Corporation; 500 refrigerator cars to be built at C.P.R. Angus shops, and 5 Santa Fe (2-10-2) locomotives to be built at Angus shops.

The C.P.R. 35 steel frames for sleeping cars which are being built by Canadian Car & Foundry Co., as mentioned in our last issue, will have underframes composed of 4 bottom flange angles $3 \times 3 \times \frac{3}{8}$ in., 2 top flange angles $6 \times 4 \times \frac{3}{8}$ in., with 5/16 in. webs and 9/16 x 30 in. top cover plates; depth over flange angles at center of cars 30 ft., and at each end there will be a steel buffer casting and a 2 ft. 9 in. platform. The end-framing will consist of two 6 in. x 23.9 I beams at buffer beam and body end, with four 4 in. x 8.2 Z bars at each body end. The side construction will consist of $\frac{3}{4}$ in. channel shaped pressed posts with belt rail $3\frac{3}{4} \times 15 \times \frac{1}{2}$ in. rolled steel side plates $4\frac{1}{2} \times 2 \times 2\frac{1}{2}$ x 3/16 Zees with 3/16 side guide plates $\frac{1}{4}$ in. pier plates and $\frac{1}{2}$ letter plate. The roof will be composed of $\frac{3}{4}$ in. pressed Z shaped upper deck and channel shaped lower

deck carlines, 0.078 steel upper deck and 0.063 lower deck roof sheets, vestibule roof slats 0.109 thick. The chief details of the cars will be:—

Length inside coupler knuckles	83 ft. 10 $\frac{1}{2}$ in.
Length over end sills	75 ft. 6 in.
Truck centers	39 ft. 6 in.
Width over side sills	9 ft. 9 $\frac{1}{2}$ in.
Width over eaves	10 ft. 0 $\frac{1}{2}$ in.
Height, rail to eaves	11 ft. 1 $\frac{1}{2}$ in.
Height, rail to top of roof	11 ft. 0 $\frac{1}{2}$ in.
Height, rail to side sill	8 ft. 7 $\frac{1}{2}$ in.
Truck wheel base	11 ft.
Truck, type	Commonwealth with clasp brakes
Journals	5 x 9 in.

The Timiskaming & Northern Ontario Ry. has invited tenders for supplying 4 Mikado (2-8-2) locomotives and two 8-wheel switching locomotives of the following general specifications:—

	Mikado.	Switching.
Cylinders	25 x 30 in.	28 x 28 in.
Driving wheel diam.	63	58
Boiler pressure	180 lbs.	180 lbs.
Weight on drivers	197,000 lb.	202,000 lb.
Weight on front truck	25,500 lb.	
Weight on rear truck	31,000 lb.	
Weight on engine, total	268,000 lb.	
Driving wheel, base	16 ft. 6 in.	16 ft. 6 in.
Engine wheel, base	34 ft. 8 in.	
Fire box length and width	96x75 $\frac{1}{2}$ in.	89x75 $\frac{1}{2}$ in.
Grate area	50 sq. ft.	46.25 sq. ft.
Boiler, diam., front end	71 in.	71 in.
Boiler, diam., back end	78 in.	78 in.
Tubes, no. and diam.	202 2 in.	202 2 in.
	32 5 $\frac{1}{2}$ in.	32 5 $\frac{1}{2}$ in.
Tubes, length	20 ft.	14 ft. 6 in.
Arch tubes, no. and diam.	4 3 in.	4 3 in.
Heating surface, tubes	3,016 sq. ft.	2,186 sq. ft.
Heating surface, fire box	298 sq. ft.	218 sq. ft.
Superheating surface	757 sq. ft.	570 sq. ft.
Weight of tender loaded	143,000 lb.	143,000 lb.
Coal capacity	12 tons	9 tons
Water capacity	6,500 imp. gal.	6,500 imp. gal.

Canadian National Rys. 12 dining cars ordered from Canadian Car & Foundry Co. will be C.N.R. standard, except when non vestibule ends are to be applied, making a more simplified arrangement. The interior finish will be quarter cut oak, except in the kitchen and pantry, which will be painted; the air pressure water system will consist of longitudinal tank 96 x 26 in. diam., connecting with 2 overhead copper tanks in the kitchen. Following are the chief details:—

Length over end sills	79 ft. 1 in.
Length between truck centers	57 ft. 6 in.
Width over all at eaves	10 ft. 7 $\frac{1}{2}$ in.
Width over side posts	9 ft. 9 $\frac{1}{2}$ in.
Width over upper deck at eaves	5 ft. 11 $\frac{1}{2}$ in.
Height, track to roof at center	14 ft. 2 in.
Height, rail to side at eaves	11 ft. 2 $\frac{1}{2}$ in.
Height, track to sill at center	3 ft. 7 $\frac{1}{2}$ in.
Heating	Vapor Car Heating Co.
Lighting	Electric
Couplers	Sharon bottom end operating
Draft gear and buffing device	Friction
Air brake	Westinghouse
Hand brake	Miner ideal staff at both ends
Trucks	Commonwealth 6 wheel type with clasp brake

Canadian National Rys. 20 baggage cars ordered from Canadian Car & Foundry Co. are to be built to the C.N.R. standard. Following are the chief details:—

Length over end sills	73 ft. 6 in.
Length between truck centers	55 ft. 7 in.
Length over buffers, approximate	77 ft. 6 in.
Width over side sills	9 ft. 9 $\frac{1}{2}$ in.
Width overall at eaves	10 ft. 1 $\frac{1}{2}$ in.
Width at clerestory	5 ft. 11 $\frac{1}{2}$ in.
Height, track to center of roof	14 ft. 2 in.
Height, over smoke jacks, approximate	14 ft. 2 in.
Height, rail to eaves	11 ft. 2 $\frac{1}{2}$ in.
Height, track to sill at end	3 ft. 7 $\frac{1}{2}$ in.
Height, track to sill at center	3 ft. 9 in.
Couplers	Sharon bottom end operating
Draft gear	Miner friction
Buffing device	Miner B-10
Side bearings	Miner roller
Heating system	Vapor Car Heating Co.
Lighting	Safety Car Heating & Lighting Co.
Air brakes	Westinghouse K1
Hand brake	Miner double acting for non clasp brake
Trucks	Commonwealth 6 wheel type with clasp brake
Wheel, diam.	Steel tire 36 $\frac{1}{2}$ in.
Journal boxes	McCord

Canadian National Rys. 18 drawing room sleeping cars, ordered from Cana-

dian Car & Foundry Co. will be built to C.N.R. standard, with the latest standard air pressure water system, having a 26 x 96 in. water tank, with a temperature control device for heating water for wash stand; standard system of hot water heating and piping in addition to the Vapor heating system. The electric light system will consist of a body hung, belt driven, generator of 4 k.w. capacity and one 350 ampere hour battery. Following are the chief details:—

Length over end sills	73 ft. 6 in.
Length between truck centers	57 ft. 6 in.
Length over buffing, approximate	82 ft. 4 $\frac{1}{2}$ in.
Width over side sills	9 ft. 9 $\frac{1}{2}$ in.
Width overall at eaves	10 ft. 1 $\frac{1}{2}$ in.
Width at clerestory	5 ft. 11 $\frac{1}{2}$ in.
Height, track to roof at centers	14 ft. 2 in.
Height over smoke jacks, approximate	14 ft. 5 in.
Height, rail to eave moulding	11 ft. 2 $\frac{1}{2}$ in.
Height, track to sill at end	3 ft. 7 $\frac{1}{2}$ in.
Height, track to sill at center	3 ft. 9 in.
Heating	Vapor Car Heating Co.
Couplers	National steel
Draft gear and buffing device	Miner friction
Trap doors	National steel
Air brakes	Westinghouse
Hand brakes	Miner ideal staff type at both ends
Trucks	Commonwealth 6 wheel type with clasp brake

Canadian National Rys. 600 refrigerator cars ordered from Canadian Car & Foundry Co. will have La Flare insulation and Miner door fixtures. The floor will have removable floor racks, built of 3 x 1 $\frac{1}{2}$ in. stringers, and to each will be fastened 3 $\frac{3}{4}$ x 1 $\frac{1}{2}$ in. thick wood slats. They will be equipped with 4 brine tanks at each end, supported by Union Railway Equipment Co.'s Ureco brine tank supports, handhole and brine valve. The height of one brine tank at each end will be reduced to leave room for a heater, to be used when transporting perishable products during winter. Brine tanks will be iced from hatches in the roof, and ventilators will be operated from outside of the roof. The underframes will be of wood, with 5 x 8 side sill, and center of intermediate sills, reinforced by a center sill construction of two 7 in. 21.8 lb. ship channels, with 5/16 in. thick covered plates top and bottom. The sides and underframing will be of wood, and the body bolster and cross bar of built up steel construction. Following are the chief details:—

Capacity	60,000 lb.
Length over end sills	79 ft. 3 $\frac{1}{2}$ in.
Width over side sills	8 ft. 11 in.
Top of sill to underside of plate	7 ft. 8 in.
Length inside between brine tanks	28 ft. 9 $\frac{1}{2}$ in.
Width inside	8 ft. 2 $\frac{1}{2}$ in.
Height, top of floor to underside of ceiling	7 ft. 6 $\frac{1}{2}$ in.
End sill, outside to center of body	5 ft.
Width of side door opening	5 ft.
Height of side door opening	6 ft. 3 in.
Height, top of rail to center of coupler	2 ft. 11 $\frac{1}{2}$ in.
Trucks, center to center	28 ft.
Draft gear	Miner tandem spring
Couplers	M.C.B. type D
Air brakes	Westinghouse K1
Trucks	Diamond arch bar
Bolsters and brake beams	Simplex
Side bearings	Miner balance
Journal boxes	McCord

Canadian National Rys. 1,000 box cars, 40 tons capacity, ordered from Canadian Car & Foundry Co. will have underframes of two 15 in. 33 lb. journals with one 19 $\frac{1}{2}$ x $\frac{1}{4}$ x 33 in. top cover plate, side sills 8 in. 11 $\frac{1}{2}$ lb. channels, end sills 10 in. 15 lb. channels, floor stringers 3 in. 6.7 lb. Z bars running longitudinally and spaced equidistant between centers of side sills. The corner posts of the superstructure will have 5 x 5 x $\frac{3}{8}$ in. angles, door post, front 86 x 3 $\frac{1}{2}$ x 5/16 in. angles, door post, rear, 4 x 3 $\frac{1}{2}$ x 5/16 in. angles and the door will be Camel improved type top hung. The roofs on 500 of these cars will be Chi-

[illegible]

Algoma Central & Hudson Bay Ry.—The formation of the proposed arrangement for the sale and release of all defaults upon the Algoma Central & Hudson Bay Ry. and Algoma Central Terminal bonds has been announced in a circular from the Lake Superior Corporation to its stockholders. Among other things the Lake Superior Corporation undertakes that the Algoma Steel Corporation will complete a new rail and structural mill unit, so as to bring its capacity of standard steel products up to 500,000 tons annually. Meetings of the railway and terminal bondholders will be held in London, Eng., to ratify the agreement, and meetings of the Lake Superior Corporation shareholders and of the subsidiaries concerned will be held in Toronto or Sault Ste. Marie, to take similar action.

Central Vermont Ry.—Application has been made by the Central Vermont Ry. Co. to the Massachusetts Public Utilities Department for permission to issue \$15,000,000 of bonds to retire and refund \$12,000,000 of outstanding bonds due May 1; to pay off other outstanding debts and to provide funds for certain improvements.

Lacombe & North Western Ry.—The Alberta Railways Department's report for 1919, laid before the legislature recently, is stated in a press report to give the following information relative to the Lacombe & North Western Ry.:—The line has been extended from Bentley to Rimbey, 13 miles, bringing its total length up to 33 miles. The total revenue for the year was \$28,268.04, an increase of 50.3% over 1918, and the operating expenditure was \$36,541.65, an increase of 94.7%. The year's deficit was \$8,273.61, which added to the deficit of \$219.97 for 1918, makes a total deficit under government ownership of \$8,493.58.

Morrissey, Fernie & Michel Ry. — The Crows Nest Pass Coal Co., which owns this railway, states in its annual report for 1919, that the profits of the railway for the year were \$1,572.61, which was carried to reserve for depreciation.

Nakusp & Slokan Ry.—A special general meeting of the shareholders of the Nakusp & Slokan Ry. Co. has been called to be held in Montreal, May 4., to consider and, if deemed advisable, to approve a proposed agreement to lease the company's railway, etc., to the C.P.R., and to consider the advisability of em-

The company was directed by James Bondy, who had been the president and chairman thereof, and it agreed to lease the railway from the C.P.R. The railway was built by a company, the name of which was not disclosed. It is British Columbia, and was subsequently operated by the C.P.R. under an agreement. It was for the purpose of the face value bonds issued in 1918, and an arrangement was then made and confirmed by the B.C. Legislature in 1919, under which the bonds were to be acquired by the government and sold to the C.P.R. at face value. The present lease to the C.P.R. expires June 30.

In the course of his budget speech in the British Columbia Legislature the Finance Minister is reported to have said: "Included in the deferred assets is \$993,332.08 paid on account of principal and interest of N. & S. Ry. bonds under the authority of the N. & S. Ry. Aid Act, 1894. Of this sum there has since been paid to the province by the C.P.R. in accordance with the agreement ratified by the legislature last session, \$647,070, leaving the province with a net loss, as a result of the guarantee given, to the extent of \$346,262.08." A resolution was passed authorizing the writing off of this loss against the consolidated surplus account.

	Jan. 1920	Jan. 1919
Passenger earnings	\$ 9 872.42	\$ 4 600.00
Freight earnings	197 216.72	100 907.64
	\$ 207 089.14	\$ 105 507.64

In the course of his budget speech in the Ontario Legislature April 13, the Finance Minister is reported to have pointed out that on an investment of \$23,000,000 in this railway no revenue was derived last year, and it was a question whether it could be regarded as an asset.

A motion expressing the opinion that it is expedient and in the interest of Canada for the government to substitute electricity for steam as a motive power upon the railways owned by the government, as soon as, and wherever practicable, was submitted to the Senate, April 15, by Senator E. D. Smith, who pointed out that 10,000,000 tons of coal a year are used on Canadian steam railways, costing about \$4 a ton at the International Boundary, a large proportion of which could be saved if the lines carrying the heavier traffic were electrified. There are many arguments in favor of electric traffic in contrast with steam railway traffic, which are summed up in an article describing the results of the electric operation of 44 miles of railway in the Rocky Mountain district by the Chicago, Milwaukee & Puget Sound Ry. After having referred to the fact that so far as the electric operation of railways in Canada is concerned there is not very much guidance to be obtained from experience, Mr. Smith pointed out that some 57 municipalities in Ontario have voted in favor of building electric railways under the Hydro Electric Power Commission of Ontario. These plans represent about 1,600 miles of new lines, and it appeared to him to be impossible to build new lines in Ontario without duplicating or paralleling existing steam railways. It is said that these new electric lines will be built as soon as the Chippewa power development plans are completed, and the 400,000 h. p. available. The government has taken

over the Canadian Northern Ry. and it takes over the Grand Trunk Ry. and it does appear that the proposed electric railway construction will materially decrease the earnings of these steam railways. It would cost about \$2,000 a mile, a year to construct existing steam railways and be agreed that it would be in the public interest to undertake the construction of many sections of the government owned steam railways.

Several other Senators having spoken, the debate was adjourned, and was resumed April 21, when Sir James Loughheed suggested that it might be inexpedient to pass a general resolution of the kind, without having more definite information as to the probable cost of electrification, and Canada's financial position to enter upon so great a responsibility. The intention of the mover, to draw the government attention to the matter, had been accomplished, and no great purpose could be served by committing the Senate in this very general way to so important a proposition. The motion was then withdrawn.

Replying to questions in the House of Commons, April 15, Right Hon. A. L. Sifton said the total amount expended and charged to capital account for the construction of the Quebec bridge is \$21,707,889.34. There is no railway constructed in connection with the bridge. There has been charged to capital account, as having been paid under par. 18 of the agreement forming the schedule to chap. 54 of the statutes of 1903, \$6,424,781, the details of which are: principal, \$5,016,453.66; special account, \$162,360.46; accrued interest on principal, \$800,454.16; accrued interest on special account, \$13,560.48; interest on accrued interest, \$75,673.18; remuneration to Royal Trust Co. re bond issues, two amounts of \$500 each, \$1,000; cash indemnity to shareholders, including interest, \$355,279.07. Interest has been included in the amount charged to capital account only in respect to the amounts mentioned above, the total being \$954,896.88 at 5%.

Paragraph 18 of the agreement attached as a schedule to the act of 1903, reserves to the Dominion Government the right to take over the company's undertaking at any time on paying par value to the shareholders for their stock, not exceeding \$265,585.70, with simple interest at 5% from the time of taking over the stock until payment. The purchase is declared to be subject to the payment of such obligations of the company as may have been sanctioned by the government, and of the company's bonded indebtedness.

Changing Station Names.—The Board of Railway Commissioners has issued the following circular: Applications are from time to time made to the board by the residents of different localities for orders requiring railway companies to change the names of stations along their respective lines of railway, to which replies have invariably been made that the board has no power to make the orders applied for; that the railway companies themselves are the proper, in fact, the only parties to afford relief in such cases, unless, as has happened in some instances, a change in the name of a post office is desired, when, of course, the application would be to the post office authorities at Ottawa.

Pacific Great Eastern Railway Construction.

The Pacific Great Eastern Ry., which is owned by British Columbia, and is under that province's Railways Department's charge, consists of the completed portion of 180.7 miles, and the section under construction from Clinton to Prince George. The completed portions are from North Vancouver to Whytecliffe, 13 miles, and from Squamish Dock to Clinton, 167.7 miles. The B. C. Railways Department's report of the calendar year 1919, laid before the Legislature recently, states that in addition to the regular maintenance-of-way work done by the section and bridge and building crews, to maintain the roadbed in good operating condition, and the bridges and buildings in good state of repair, an extra gang of an average strength of about 20 men built 1,100 ft. of cribbing, of an average height of 15 ft. at miles 53.5 and 65.0 Squamish Division; cleaned slopes at mile 15.5 Squamish Division, and cuts north and south of Mackinnon, Lillooet Division, and resurfaced 34.2 miles of track on Squamish Division from mileage 24.4 and mileage 54 to 76.7. This gang also lined out 409 ft. of track for 8 ft. from bank at mile 54 Squamish Division, and put in 13,000 new ties, in addition to the 8,000 ties put in by the regular section crews. On the North Shore Division, viz., between North Vancouver and Whytecliffe, four wing dams were built on Capilano Creek to divert the force of flood flow from weak spots along the west bank. A crib was built on the east bank, to help remove a gravel bank which was blocking the channel of the east Howe truee span, and the east abutment of the bridge was protected by laying a double brush mattress up stream along the toe of the river bank to connect with the center. Considerable repairs were carried out at five bridges on the division, where floods had weakened piers, etc. On the line from Squamish to Clinton, considerable work of a similar character was done for the protection of the line and the bridges, during sudden floods. The bridge across the Cheakamus River Canyon, mile 19.1 north of Squamish, was destroyed Sept. 27 by a forest fire. This bridge consisted of a 130-ft. deck Howe truss span, on framed towers, with trestle approach at each end. Temporary provision was made by Oct. 4, for carrying on traffic and the new bridge was completed and ready for traffic Nov. 8. Considerable work had to be done on tunnel 3, at mile 18, north of Squamish, where there was a cave in of the roof at an unlined part of the tunnel, Nov. 30. The debris was cleared and traffic resumed Dec. 5. Orders have been given to remove the material now being supported by the timbered section at the south end, thus making an open cutting; the south portal will then be removed further north, and the remaining portion of the rock section widened and timbered. This will give a completely lined funnel, safe while the timbering lasts. Fencing was erected on 10 miles of line, principally north of East Lillooet, and between East Lillooet and Kelly Lake, and the 166 bridges between Squamish and Chasm Station were given a thorough examination with a view to repair during 1920.

Construction on the lines from Clinton to Prince George was prosecuted throughout the year, and is still going on. During the winter of 1918-19 there were got out for the summer's work 300,

000 ties, 2,000 telegraph poles and fence posts for 75 miles of fencing, and a large material yard was laid out at Lone Butte, 6 miles north of Horse Lake summit. About 24,000 tons of construction material were unloaded there. Lone Butte was the farthest point to which track could be laid, as only the clearing of the right of way had been done on the next six miles, and there was a further 12½ miles of right of way, six miles beyond that. Grading and bridge work was pushed actively, and track laying was commenced July 15, Williams Lake, the objective being reached Sept. 15. This necessitated the laying of 66 miles of main line track and 7 miles of secondary track. Ballasting and surfacing was then proceeded with, but owing to the difficulty in securing good ballast, and the inability to get sufficient labor the work is very much behind. The year's work included the grading of 23 miles of new line, laying 113 miles of track (main line, secondary and spur lines), hauling 250,000 cu. yd. of ballast, and train fill, building 102 miles of telegraph line, putting up 49 miles of fencing, building 15 bridges containing 1,750,000 ft timber; erecting three 40,000-gal. water stations, and the erection of station buildings, section houses, etc. A 4-stall locomotive house, a first-class station building, with operating officials' quarters is being built at Williams Lake.

The 1920 construction programme contemplates the completion of the line to Prince George. Tracks had been laid to about 10 miles north of Williams Lake at the end of 1919, and the roadbed was ready for the laying of a further distance of 7 miles to Deep Creek, at which point a steel viaduct is being built. A description of this viaduct was given in Canadian Railway and Marine World for Dec., 1919, pg. 654. The construction headquarters for 1920 will be at Williams Lake, where materials are being assembled. The year's construction programme covers first the completion of the line through to deep creek, and ballasting operations will be started in April, at the point where work was stopped in 1919. It is expected that the Deep Creek Bridge, which the report states may be classed among the important bridges on the continent, presenting peculiarly difficult problems in foundations and in erection details, due to its great height, and the wide spread of the lower legs—will be completed by the middle of July, and the line ballasted thereto. A bridge has to be built at Quesnel to consist of 3 deck plate girder spans, on concrete piers and abutments, whence track laying and ballasting will be pushed to Cottonwood Canyon, which is expected to be reached Dec. 1. There is about 20 miles of new construction to be done between Deep Creek and Cottonwood Canyon.

As early as the weather will permit tracklaying will be started at Prince George, on the grading done towards Cottonwood Canyon, and gangs will be employed regrading the right of way, and in building bridges. The engineers reported that practically the whole of the right of way, between these two points has been covered by brush and small trees, and a great many large trees have blown into the original clearing from the sides, and many new culverts are required. The estimated quantity of material required to be shifted to re-

store the grade to a condition ready for tracklaying is 710,000 cu. yd., and the estimated cost of the work was \$588,000. The Railway Department's Chief Engineer states that the experience of the work to Deep Creek has shown that these estimates are too low. The cantilever bridge across Cottonwood Canyon will be of considerable magnitude, and will be built out from both ends. The other bridge construction includes 41 timber structures for the erection of which it is estimated that 8,000,000 ft. of timber will be required. It is expected that all this work will be completed by Dec. 31. It is not intended to do any ballasting between Cottonwood Crossing and Prince George this year. This portion of the line will simply be lined up and side surfaced and put in a condition to be operated at a low rate of speed.

The 20 miles of new construction referred to, which will be done this year, consists of relocation north and south of Quesnel. The estimated cost of completing the line as originally planned was \$1,821,825, while the cost of the line on the new location is estimated at \$1,210,340. The new location is said to be in a better country than the original one.

A project was laid before the B.C. Government in 1918 to build a branch from Clinton to connect with the Canadian National Rys., at Ashcroft, and a reconnaissance survey was made in that year by H. E. C. Carry. A survey was made during 1919, the field work being completed Nov. 10. The starting point of the projected line is 0.85 mile west of Clinton station, and connection will be made with the C. N. Rys. near Ashcroft yard limits, the distance between these two points being 41.5 miles. With the exception of a portion of the line between miles 5 and 6 a gradient of 1% compensated is maintained for 33.8 miles to the siding at the top of a pusher grade from Ashcroft, and 4,400 ft. on the level is allowed for passing tracks at this point. The 2.2% compensated pusher gradient from Ashcroft up to this point is 6.8 miles long. The top of the 1% compensated gradient at Clinton is at an elevation of 3,278 ft. (Pacific Great Eastern datum), and at the junction with the C.N. Rys. at Ashcroft the elevation is 1,100 ft. (P.G.E. datum), this equals an elevation of 1,000 ft. (C.N.R. datum), giving a fall from Clinton to Ashcroft of 2,178 ft. The curvature is not excessive and 10° curves have been adopted as a maximum. The main engineering difficulty to overcome was the development of distance to maintain a 1% compensated gradient from Clinton to join up with a pusher gradient of reasonable length out of Ashcroft. Trestle work is comparatively light, the greatest being over Allan Creek, 140 ft. high and 800 ft. long. Other large trestles are that over Madden Creek, 500 ft. long by 100 ft. high, and over Hat Creek, 600 ft. long by 85 ft. high. Six steel bridges will be required in the Bonaparte Canyon. Three of them will consist of single 100 ft. deck plate girders, one of a single 80 ft. deck plate girder; one of an 80 ft. and two 40 ft. deck plate girders, and the sixth of three 80 ft. and three 44 spans deck plate girders. There will be six tunnels, the longest being 1,000 ft. The material to be moved is estimated at 56% solid rock, 15% loose rock, 27% hard pan, and 2% earth. An alternative route via Boston Flats has

Recollections of Early Surveys for the C.P.R.

By R. Houghton, Montreal

During the summer of 1881, we were locating and running trial lines for the new line of the Canadian Pacific Railway along the Northumberland Strait and down the Vase Creek towards Lake Nepesiga. A Mr. Houghton was in charge of the party, that glutton for work, E. J. Duchesnay was transitman, and Emile Tetu leveller. At that time there was but one settler on Northumberland Lake, and what fishing there was in it!

While we were camped along the lake we used a lumberman's red boat to take us to and from our work, when we invariably trawled with a hand line and common spoon. I recollect while rowing to work one morning, Duchesnay trawled. I sat looking on. Suddenly there was a tremendous tug at the line. Uttering an exclamation Duchesnay began hauling it in, but it was no easy matter. 'Twas evident he had hooked a big one. Fortunately, however, the line was a stout one and the fish securely caught. After a brief and desperate struggle on the part of the fish, he was brought alongside of the boat. The question then was, how to get him on board, for we had neither gaff nor landing net. At his belt, Duchesnay carried a neat little 32 caliber Smith and Wesson revolver. A brilliant idea occurred to me. "Shoot it, Mr. Duchesnay," I called out. Promptly acting on my suggestion, at a range of a couple of feet or so, he broke his back with a bullet, killing him immediately and a maskalunge of 32 lb. weight—weighed on our return to camp in the evening—was lifted into the boat without any trouble.

The following Sunday morning Duchesnay and I took a bark canoe and went trawling. We had but one line and took it turn about to fish and paddle. I do not recollect how many we caught, but I do remember that after fishing for only a portion of the morning, we brought back to camp more black bass and dore than the whole party of about 22 healthy men could eat, before a good part of the catch went bad and had to be thrown away.

I do not know how many settlers may now be living about the lake, or how much fishing has been done since those days, but unless it has been much fished it should still well repay a visit of any enthusiastic disciples of the gentle art. Recollect we had but one common, large red, and silver spoon. How the fish must have swarmed in the lake, then. What sport might not expert fishermen have today, with rods and proper tackle? Where could they find finer camping grounds, either, or lovelier wild scenery of lake and woods?

When we had left the lake a few miles with our survey we got into the undulating brule country along the Vase Creek. What a paradise that country was for sportsmen, then, before its world old silence had been disturbed by the locomotive's whistle. Moose, bear, lynx abounded. Never a day passed that we did not see fresh tracks of them. The bear and lynx we never saw. What animals are more shy or wary? A moose occasionally we did. One day, while running the line along a side hill, in the open brule country, we saw six magnificent moose. But, of course, no rifle was ever carried on the line and we could only watch them trot away. What strides they took, with what ease they nego-

lated fallen timber!

I have not seen moose, if I remember last night, at least, somewhere along the Vase. We had gone out to work one morning, I was an ordinary fish and my only that morning, but, alas, one of the chainmen was laid off, for sickness or something, and I was told to fill his place. As usual, that morning, Duchesnay set up his transit, and an usual the axemen lolled about with whetstones to their axes, while they waited for line. In a few moments the transit was in readiness and Duchesnay turned to me.

"Get a good stake 4 x 4 (or 4 ft. any stake, like a hubstake, blaze it like a hub stake, and mark on it with red keel, in big letters, 'C.P.R. Station O.' From now on this line will be known as the Canadian Pacific Railway, not The Canada Central." He turned to the men. "All right, boys, stick up a picket and get line now."

Thus I had the distinction of making and driving in the first station stake marker, C.P.R. I think there is a station now somewhere about there, called Calendar.

Canadian National Railways Earnings.

	1920	1919
January	\$ 7,704,562	\$ 6,767,717
February	6,214,099	6,265,562
March	7,761,028	7,290,086
	\$21,679,689	\$20,323,365

Approximate earnings for these weeks ended April 21, \$5,138,887 against \$4,615,770 for same period in 1919.

Canadian Northern Railway System.

Dolly Varden Mines Railway Dis- pute.

A memorandum from the Dominion Minister of Justice at Ottawa is reported to have been laid before the British Columbia Government, April 12, respecting the Dolly Varden Mines Co.'s application for the disallowance by the Dominion Government of the act passed in 1919 by the B.C. Legislature, providing for a settlement of difference between the company and the Taylor Engineering Co., which carried out the contract for the construction of the railway, under which act the Taylor Engineering Co. acquired possession of the mines and the railway. The memorandum reviews the history of the case from its inception to date. The Dolly Varden Mines Co.'s application for disallowance of the act is refused on various grounds, among them being the fact that about a year was allowed to lapse before any application for disallowance was made; and that the company has a right to resort to the courts which could give a mandatory remedy against compulsory proceedings which have not legal sanction.

The Dolly Varden Mines Co. is reported to have issued two writs against the Taylor Engineering Co. and the Taylor Mining Co., one asking for a series of declarations setting aside the act of 1919 and all proceedings taken under it, and the second asks for damages for trespass and for payment to the Dolly Varden Mines Co. of all money realized from ores produced at the mines. In the first set of actions C. M. Rolston is named as a personal defendant, in addition to the two Taylor companies.

The British Columbia Legislature on April 17 passed an act confirming and validating the act of 1919 and all that had been done under it.

The history of the case may be shortly stated as follows:—The Dolly Varden Mines Co., a United States corporation, some years ago obtained a charter from the B.C. Legislature to build a light railway from its mines to tide water at Alice Arm, running for the main part of the distance along a public highway. The contract for building the railway was let to the Taylor Engineering Co., which financed the construction, about which there was some dispute, and finally had a claim of about \$500,000 against the Dolly Varden Mines Co. The time for the construction of the railway expired in 1918, and as the line was not completed, the company in 1919 made application to the B.C. Legislature for an extension of time. Prior to this application there had been some attempts to sell the property on terms which it is alleged did not protect the Taylor Engineering Co. for its outlay. This company, when the application came before the Legislature, asked to be protected, and following an investigation by a special committee an act was passed extending the time for the construction of the railway, providing that the Taylor Engineering Co. was to be paid for the work theretofore done, and making provision for other payments. The Dolly Varden Mining Co. was given time to make payment, and on its default, the Taylor Engineering Co. was given permission to take over the property and make sundry payments, including \$613,000, to the Dolly Varden Mines Co. for its investment in the mines. The property was taken over by the Taylor Engineering Co., and the Taylor Mining Co. was formed to finance the undertaking. The wages claims were at once

paid off; the railway was finished by Sept., 1919, and the property developed. By Dec. 1, the company had shipped \$600,000 worth of ore to the smelter, and had made provision for further development this year. The development plans for the year include the raising of \$1,000,000 of debentures for the purpose, among other things, of paying the \$613,000 to the Dolly Varden Co. under the provisions of the act of 1919.

The officers and directors are:—President, A. J. T. Taylor; Vice President, H. C. Cheine; Treasurer, C. M. Rolston; other directors:—R. P. Butcher, C. Spencer and W. Lees.

D. B. Hanna and the Canada Steamship Lines.

In the House of Commons on Apr. 26, during a discussion on the Minister of Railways refusal to answer a number of questions in connection with Canadian Government Merchant Marine Ltd., on the ground that the Railways Department had no returns in its records showing the information asked for, and that the transactions about which information were asked were carried on by Canadian Government Merchant Marine Ltd., as an incorporated company, Wm. Duff, M.P. for Lunenburg, said: "Is the Minister of Railways or the Government aware of the fact that Mr. Hanna, who is President of Canadian Government Merchant Marine Ltd., and practically General Manager, is also a director of Canada Steamships, Ltd.? We have been told tonight about not letting our competitors know what we are doing, but here is a man who is President of our Canadian Government Merchant Marine, who, if I am correctly informed, is also a director of the Canada Steamships, Ltd."

On Apr. 28, Mr. Duff said that, after making his statement in the House on Apr. 26, as quoted above, he had received many enquiries as to whether Mr. Hanna actually was connected with the company competing with Canadian Government Merchant Marine, Ltd. The Minister of Railways replied that Mr. Hanna was not in Toronto, but the question was of such great importance that he would make enquiries and answer the question the following day.

The matter came up again on Apr. 29, when the acting Premier, Sir Geo. Foster, said:—"Mr. Hanna was appointed a director of Canada Steamships, Ltd., some years ago to represent the Canadian Northern Ry. on the Canada Steamships Board, for the purpose of protecting the interests of the railway in connection with the interchange of traffic on the Great Lakes, and he has continued to be a director of the steamship company. He has no financial interest in the Canada Steamships and is there simply to protect the interests of the railway. Mr. Dalrymple, Vice President of the Grand Trunk Ry., is also a director of Canada Steamships for the same purpose. He has no financial interest in the company."

Lotbiniere & Megantic Ry.—We are officially advised that the Lotbiniere & Megantic Ry., extending from Lyster to Deschailons, Que., 30 miles, was taken over by the Canadian National Ry. April 1. For operating purposes the line has been attached to the Levis Division, under the supervision of E. L. Desjardins, Levis, Superintendent.

Canadian Pacific Railway Construction, Betterments, Etc.

New Brunswick District.—A special meeting of the April 18, 1920, and the following day, the C.P.R. District Engineer, Mr. J. B. Macdonald, was in the city of Saint John, N.B., to discuss the proposed extension of the C.P.R. line from the city of Saint John to the city of Miramichi, N.B., and the proposed extension of the C.P.R. line from the city of Miramichi to the city of Grand Falls, N.B.

St. John River Bridge.—J. B. Macdonald, District Engineer, and P. B. Macdonald, Engineer of Bridges, C.P.R., are reported to have been in the city of Saint John, N.B., April 11, in connection with the bridge at the reversible falls of the St. John River, which are being made to determine the site for the main piers of the proposed new bridge.

Angus Shops, Montreal.—A Montreal press report of April 20 states that plans have been filed at the City Hall there by the C.P.R. for an extension of the Angus shops, at an estimated cost of \$1,000,000. The plans are said to pro-

vide for such a line starting from the main building, on St. Mary and East, and extending to the city of Montreal. There have been held in the various municipalities, and considerable correspondence is being had with the various municipalities, representatives of local business interests and C.P.R. headquarters. It is reported that E. W. Bently, K.C., President, C.P.R., will make a trip at an early date through the territory proposed to be opened up.

Fort William Coal Dock.—We were officially advised April 12 that the company's plans for the proposed new coal dock at Fort William, Ont., were not definitely settled.

Western Branch Line.—The directors' annual report, which is published in full on pgs. 228 and 229 of this issue, gives complete information as to the provision made for branch line construction in Saskatchewan and Alberta, and of the appropriations for betterments and other

work. The new coal dock is a 20 ft. wide, spanning over the tracks and having stairs at each end leading to the platform. At each end of the waiting room will be the men's smoking room, women's room and the luncheon room. The 4 story office building will be built parallel with the main side of Main St. At the back of the entrance on the ground floor, will be the city telegraph office, at the left will be the elevator and stairs to the upper stories, and the balance of the office building ground floor will be given to the baggage room. On the upper floors will be offices of the Superintendent, and District Superintendent, Paymaster, Sleeping and Dining Cars, Department, investigation and claims, and telegraph operating rooms. The exterior of the building is designed in a rather free type of Italian renaissance and will be built of Tyndall or Indiana limestone and red brick, laid in a grey joint. The roofs will be of copper. The public portions of the interior of the building will be finished principally in ceramic materials. The entrance vestibule, waiting room and ticket alcove will

Steel rails for Roumanian Railways.

The illustration above shows the section and drilling, of 7,500 tons of 60 lb. steel rails, which the Dominion Iron & Steel Co., Sydney, N.S., is supplying to the Roumanian Government.

vide for additions to the passenger and freight car building shops, as well as to the machine shops. The new buildings will, it is said, be one story high, to conform to the present buildings. Construction will, it is stated, be started at once.

London Division.—Work is reported to be in progress on the London Division relaying the track west of Guelph Jct., Ont., with new 85 lb. rails.

A press report states that a second track will shortly be built between Woodstock and Zorra, Ont., 13 miles.

Owen Sound to Utopia.—Representatives of municipalities along the southern shore of Georgian Bay met at Meaford, Ont., recently to discuss the advisability of asking the C.P.R. to build a line from Utopia, on the Toronto-Sudbury line via Thornbury, Collingwood and Meaford to Owen Sound. A committee representative of all the municipalities was appointed to negotiate with the company. Meaford is now served by the G.T.R., and both the C.P.R. and the G.T.R. reach Owen Sound. Several plans have been suggested within recent years for the building of a line between Owen Sound and Meaford, but none of them materialized. Some years ago the C.P.R. was reported to have surveyed a line from Baxter, or Utopia, to Collingwood on the one hand and to Barrie on the other.

London to Sarnia, Ont.—A considerable discussion is taking place in the municipalities between London and Sarnia as to the company's reported plans to build a line from London to Sarnia. This matter has been considered for several years past, and some years ago surveys were

work to be carried out during this year on the various western lines.

We were officially advised April 4 that a decision had not then been reached as to what construction, if any, can be undertaken this year on the Wilkie-Cutknife line or the Coronation-Empress line, which depends to a large extent on the labor situation.

In connection with the construction of this section of the Acme-Empress line, which it is expected to complete this year, a press report states that in the building of the line many engineering difficulties have been encountered between Acme and Caribou, Alta., and that owing to the cost of construction it is termed the "million dollar road." A site is reported to have been laid out at Caribou for a station and yards.

Moose Jaw Station, Etc. The company's new station and office building at Moose Jaw, Sask., is to be built on the axis of Main St., between Manitoba St. and the present station. When the new building is completed, the existing station and express house will be demolished, and the space occupied by them used for extension of station trackage. The entrance to the station will be on the axis of Main St. and through the base of a clock tower approximately 90 ft. high, which will have an 8 ft. dial on each face. The dials will be flood lighted at night. At the right, after entering the station, will be the public telephones, city ticket office, C.P.O.S. office, baggage and parcel rooms and transfer office, arranged in the order mentioned, and all facing the west end of the waiting room. Directly opposite the entrance will be

have heater brown floors, grey tile wainscoting, and grey brick walls, with moulded and ornamental members in polychrome terra cotta, and ceilings in Guastavino tile. The luncheon room will be finished with heater brown floors and grey tile walls, the upper portion of the room in tinted enamel. The women's room will have heater brown tile floor and wood panelling to the ceiling. The woodwork generally will be in the birch stained walnut. The plans have been prepared by Hugh G. Jones, architect, Montreal. Tenders for the erection of the building were received to May 1.

Moose Jaw to International Boundary. A press report states that about 36 miles of 85 lb. rails will be laid on the line from Moose Jaw to the International Boundary at Portal, Sask., replacing 72 lb. rails, and that a considerable amount of ballasting will be done on the line, particularly, between Lang and Wilcox.

Vancouver Pier Construction.—Work was reported to have been started on the dredging and filling in connection with the foundations of the new pier at Burrard Inlet, Vancouver, between the present A and D piers. F. F. Busted is reported to have been appointed engineer in charge of construction. (April, pg.

R. P. Ormsby, Secretary, Canadian National Rys., Toronto, writes: "Please, in future, send me two copies of Canadian Railway and Marine World instead of one, as I want to keep one copy on file and to cut out certain matter from the other copy. You give such a lot of useful information in the paper, in very convenient form."

Traffic Orders by Board of Railway Commissioners.

Free Transportation Regulations.

General order 290. April 12.—Re Sec. 345 of the Railway Act, 1919, and regulations to be prescribed for the issue and recording of free transportation by railway companies: Upon reading the submissions filed and the report of the board's Chief Traffic Officer, it is ordered as follows:

1. That the Regulations to Govern the Issue and Recording of Free Transportation by railway companies, attached hereto, marked A, be approved and prescribed for the use of such companies; and that each and every company be required to issue all free transportation, and keep all free transportation records, in conformity therewith.

2. That the said regulations are, and by virtue of this order do become, the lawful rules according to which all free transportation is to be issued, and all free transportation records are to be kept.

3. That each and every person directly in charge of the free transportation of any such company be required to see to, and he is hereby made responsible for, the correct application of the said regulations in the issue and recording of free transportation; and that it shall be unlawful for any such company, or for any person directly in charge of the free transportation of any such company, to issue any free transportation, or to keep any free transportation records, except in the manner and form in the said regulations set forth and hereby prescribed, and except as hereinafter authorized.

4. That the foregoing regulations shall, so far as the same are applicable, apply as well to all free transportation issued by express, telegraph, or telephone companies.

Increased Sleeping and Parlor Car Tolls.

General order 292. April 22.—Re application of various railway companies, under Secs. 330, 333 and 334 of the Railway Act, 1919, for approval of increased standard tariffs of maximum sleeping and parlor car tolls: Whereas, for the approval of the board, the applicant companies have filed from April 1 to April 20, standard tariffs of increased maximum sleeping and parlor car tolls, and have given publicity thereto through the medium of the press, and no objections thereto having been received by the board; and an increase in the existing tolls appearing to the board to be justified by existing transportation conditions, it is ordered that the following tariffs of the applicant companies be approved, and may be put into force after publication thereof, together with a reference to this general order, in two consecutive weekly issues of The Canada Gazette, viz.:

Canadian National, C.R.C. W-51 and E-51.
Canadian Pacific, C.R.C. S9.
Dominion Atlantic, C.R.C. S5.
Esquimalt & Nanaimo, C.R.C. S6.
Grand Trunk, C.R.C. S7.
Grand Trunk Pacific, C.R.C. S6.
Kettle Valley, C.R.C. S4.
Maine Central, C.R.C. S4.
Michigan Central, C.R.C. S4.
Niapierville Junction, C.R.C. S2.
New York Central, C.R.C. S4.
Toronto, Hamilton & Buffalo, C.R.C. S5.

Joint Freight Tariffs for Interline Traffic.
29,495. Mar. 23.—Re application of Canadian Freight Association, on behalf of Grand Trunk, Canadian Pacific and Canadian National Rys., for a postponement and reconsideration of order 28,618, Aug. 1, 1919, re joint freight tariffs to apply to interline traffic between points on the said railways, respectively: Upon hear-

ing the application at Ottawa, Jan. 20, 1920, the Grand Trunk, Canadian Pacific and the Canadian National Railways, the Montreal and Toronto Boards of Trade, the Canadian Manufacturers' Association, and the Dominion Cannery Association being represented, and what was alleged, it is ordered that the order 28,618 be rescinded.

Lumber Rates from British Columbia.

29,539. April 15.—Re complaints of Lake Lumber Co., J. C. Wilson Lumber Co., and merchants of Qualicum Beach, British Columbia, against alleged unjust discrimination in the matter of the differential of 3c per 100 lb. over rates from Vancouver on lumber shipments from Qualicum Beach and Dashwood to destinations between the British Columbia-Alberta boundary and Port Arthur, compared with the differential of 1½c per 100 lb. from Victoria on shipments to the same destinations: Upon hearing the complaints at Victoria, Nov. 24, 1919, in the presence of representatives of the complainants and counsel and representatives for the Esquimalt & Nanaimo Ry., and what was alleged, and upon the report of the Board's Chief Traffic Officer, it is ordered that the complaints be dismissed.

Industrial Siding at Fahler, Alta.

29,501. Mar. 25.—Re application of United Grain Growers, Ltd., Calgary, Alta., for an order permitting them to use the industrial siding at Fahler, on the Edmonton, Dunvegan & British Columbia Ry. Upon hearing the application at Edmonton, Nov. 28, 1919, the appellants, residents of Fahler district, the Great War Veterans Association, and other parties interested being represented, and upon reading the written submissions filed after the hearing, both in support of, and in opposition to, the application, and the report and recommendation of an inspector of the board, it is ordered that the application be refused.

Additional Passenger Tolls Suspended.

29,502. Mar. 27.—Re tariffs filed by railway companies to take effect Mar. 29, imposing additional tolls on passenger traffic from Canada to destinations in the United States, Cuba and other foreign countries, where tickets are routed directly through U.S. ports or gateways, the adverse rate of exchange and the requirements of the U.S. railways for settlement in U.S. funds being stated in the tariffs as the reason for the additional tolls. In pursuance of the powers conferred upon the board under the Railway Act, 1919, sec. 325, and of all other powers possessed by it in that behalf, it is ordered that the following tariffs of the designated railways be suspended until further order:

Canadian Pacific C.R.C. no. 156
Grand Trunk C.R.C. no. E-2381
Canadian National C.R.C. no. E-123
Toronto, Hamilton & Buffalo C.R.C. no. 1288
Dominion Atlantic C.R.C. no. 476
Quebec, Montreal & Southern C.R.C. no. 276
Niapierville Junction C.R.C. no. 125
Pere Marquette C.R.C. no. 597
Rutland C.R.C. no. 670

Commutation Passenger Fares.

29,512. April 1.—Re complaints of the City of Toronto; residents of Oakville and stations between Oakville and Toronto; residents of Laval des Rapides, Que.; Gatineau Residents Association; E. N. Brown of Montreal; the Town of Weston, Ont.; and residents of Lasalle, Que., against the proposed increase in commutation fares published by railway companies, to become effective Mar. 1, 1920; and order 29,407, dated Feb. 27,

suspending the said fares pending a hearing by the board. Upon hearing the matter at Montreal, Feb. 25; Toronto, Mar. 5; Montreal, Mar. 9, and Ottawa, Mar. 16, citizens of Lachine and of the Town of Lasalle, the City of Montreal, the Citizens' Committee and the Town Council of Oakville, the Town of Weston, the City of Toronto, the Town of Bridgeburg, the Village of Port Colborne, the Township of Bertie, the Brampton Board of Trade, the Town of Brampton, the Canadian Manufacturers' Association, the Canadian National, Grand Trunk and Canadian Pacific Railways being represented at the hearing, and what was alleged, it is ordered as follows:

1. That the following tariffs, viz.:

Canadian Pacific C.R.C. 139, 140, and 145
Grand Trunk C.R.C. no. E-2822
Canadian National C.R.C. nos. W-90 and E-114
Toronto, Hamilton & Buffalo, C.R.C. 1275, 1281 and 1284
New York Central Supplement 4 to C.R.C. 9
Central Vermont Supplement 1 to C.R.C. 625
be disallowed.

2. That the said railways be permitted to file new tariffs of fares, for commutation passenger traffic, applicable between the points included in the now existing tariffs of commutation fares, as follows,

- (a) 50-trip tickets, good for 30 days, on the basis of 8½ mills a mile of travel, subject to a minimum charge per ride of 7½c.
- (b) 40-trip tickets (scholars' tickets), good for 30 days, on the basis of 4½ mills a mile of travel, subject to a minimum charge per ride of 7½c.
- (c) 10-trip tickets, good for three months, on the basis of 2.5c. per mile of travel, subject to a minimum charge per ride of 7½c.

subject to the provisions of the Railway Act, 1919, sec. 327.

3. That the application of the City of Toronto, the Town of Brampton, the Harris Wood Products Co., Toronto, the Town of Weston, Woodbridge Municipal Council, W. H. Cross and A. Newman of Bolton, Ont., for an order requiring commutation passenger fares to be extended to other territory than covered by the existing tariffs, be dismissed.

Additional Passenger Fares Suspended.

29,514. Mar. 30.—Re tariffs filed by railway companies to take effect Mar. 29, imposing additional tolls on passenger traffic from Canada to destinations in the United States, Cuba and other foreign countries, where tickets are routed directly through United States ports or gateways, the adverse rate of exchange and the requirements of the U.S. railways for settlement in U.S. funds being stated in the said tariffs as the reason for the said additional tolls. In pursuance of the powers conferred upon the board under the Railway Act, 1919, sec. 325, and of all other powers possessed by it in that behalf, it is ordered that the following tariffs of the designated railway companies be suspended until further order:

Quebec Central C.R.C. 177
Wabash Railway C.R.C. 1048

Free Transportation for Certain Cars and Attendants.

29,565. April 23.—Re application of Railway Association of Canada, on behalf of railway companies for free transportation under sec. 345 of the Railway Act, 1919: Upon reading the application and considering what has been urged in support thereof, it is ordered that rail-

The information speaks that food which is gathered and stored away from other sources is considered to be the greatest source of the disease observed in the birds. Although some birds have been observed to feed on the ground, it is not a typical behavior.

C. H. WORBY, heretofore District Commissary Agent, has been appointed

Canadian Pacific Ry.—A. C. ADES has been appointed Roadmaster, Crowsnest Subdivision, Lethbridge Division, Alberta District, vice G. Peck, resigned. Office, Lethbridge, Alta.

S. W. CRABBE, heretofore Superintendent, Schreiber Division, Algoma District, Schreiber, Ont., has been appoint-

W. M. DOHERTY, heretofore night chief dispatcher, London, Ont., has been appointed chief dispatcher there, vice A. F. Sharpe, promoted.

J. H. EDWARD, Local Treasurer, Portland, Me., is acting as agent there, pend-

ing the appointment of a successor to the late J. A. Riddell.

F. GOULD, heretofore Travelling Freight Agent, Toronto, has been appointed City Freight Agent, there, vice E. R. Thorpe, resigned to enter Lehigh Valley R.R. service.

S. HAZZARD, heretofore conductor on Ontario Lines, has been appointed General Yardmaster, Brockville, Ont., vice C. F. McEwan, assigned to other duties.

W. H. HOWARD has been appointed Special Agent, Montreal Division, Eastern Lines, vice J. McVeigh, resigned. Office, Montreal.

W. J. LITTLE, heretofore Trainmaster, Districts 13 and 14, Barrie Division, Ontario Lines, Allandale, Ont., has been appointed Trainmaster, Districts 11 and 12, Barrie Division, Ontario Lines, vice W. J. Piggott, whose appointment as Superintendent, Stratford Division, Ontario Lines, Stratford, Ont., was announced in our last issue. Office, Allandale, Ont.

G. McBRIDE, heretofore night foreman, York, Ont., has been appointed Locomotive Foreman, Allandale, Ont.

A. B. McNAUGHTON, Superintendent, Portland Division, Portland, Me., has been given jurisdiction over all matters pertaining to maintenance of way on the division. B. Wheelwright, heretofore Engineer, maintenance of way, having resigned. The latter position has been abolished.

W. J. MATHISON has been appointed Trainmaster, District 16, District 17, Hamilton to Niagara Falls, District 19, Port Dalhousie to Port Robinson and Welland Jct., to Port Colborne, vice W. Hall, deceased. Office, Hamilton, Ont.

R. F. NICHOLSON has been appointed Assistant Engineer, Portland Division. Office, Portland, Me.

W. K. ROGERS, heretofore dispatcher, London, Ont., has been appointed night chief dispatcher there, vice W. M. Doherty, promoted.

A. L. SHANLEY has been appointed Industrial Agent, Western Lines. Office, Detroit, Mich.

A. E. SHARPE, heretofore Chief Dispatcher, London, Ont., has been appointed Trainmaster, Districts 13 and 14, Barrie Division, Ontario Lines, vice W. J. Little, transferred. Office, Allandale, Ont.

JNO. A. WRIGHT, formerly chief clerk to General Foreign Freight Agent, Montreal, and during the past year loaned to Canadian Wheat Board, has been appointed Assistant Foreign Freight Agent, G.T.R. Office, Montreal.

Great Northern Ry.—E. A. DYE, heretofore General Agent, Chicago North Western Ry., Vancouver, B.C., is reported to have been appointed District Freight and Passenger Agent, G.N.R., there, vice H. E. Watkins, transferred.

H. E. WATKINS, District Freight and Passenger Agent, Vancouver, B.C., is reported to have been transferred to Toronto.

New York Central Rd.—FRANK FOY, formerly Canadian Passenger Agent, and who, since the closing of United States railway offices in Canada, has been acting as Passenger Agent at different points in New York State, has again been given charge of Ontario territory, with headquarters, for the present, at Buffalo, N.Y.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—J. C. PETERSON has been appointed General Agent, Winnipeg, Man.

Pacific Great Eastern Ry.—G. E. MacDONALD, General Manager, has resign-

ed, as reported in our last issue. The appointment of a successor has not been considered when we were advised at the middle of April.

Union Pacific Rd.—L. J. CANFIELD has been appointed General Agent, Calgary, Alta.

J. H. CUNNINGHAM has been appointed General Agent, Vancouver, B.C.

Increases in Sleeping and Parlor Car Rates.

A 20% increase in sleeping car fares, to meet an increase of from 100 to 200% in the cost of these services, will be effective on May 1, between points in the United States and on international traffic between Canada and the United States, and probably shortly thereafter between points in Canada.

The rates paid for sleeping car berths, and parlor car seats, except for the war tax, are to-day practically the same as 20 years ago. In 1911, sleeping and parlor car rates were adjusted to a standard basis per mile, involving certain slight advances, and certain slight decreases, but no general advance was made.

During the war, material for new cars could not be provided. Today, there is a marked shortage of sleeping and parlor car equipment, and the railways must provide many new cars. A sleeping car which could be obtained in pre-war days for \$20,000 now costs from \$45,000 to \$50,000. The linen, of which there must be a big supply, now costs more than four times what it did in pre-war days. All the incidentals that enter into the cost of upkeep have doubled or trebled. The cost of operation is three times what it was 10 years ago.

By the new tariffs the minimum charge for a lower berth in standard, or first class, sleeping car is set at \$2, for an upper, \$1.60, for a drawing room \$7, and for a compartment \$6, and the existing fares are raised about 20%. This means that, in the new tariffs the lower berth fare between Toronto and New York will be \$3, between Toronto and Detroit \$2, both effective May 1, and, when the advance becomes effective between points in Canada, the lower berth fare between Toronto and Montreal will be \$2.50, between Toronto and Ottawa \$2, and between Toronto and Winnipeg \$9. The new berth fares will be 80% of these figures, respectively. The minimum charge for a parlor car seat is fixed at 50c., which is felt to be a reasonable charge for the accommodation offered, but no other advances are proposed in parlor car fares.

See Board of Railway Commissioners' general order 292, on another page of this issue.

Railways Department Estimates for 1920-1921.

The estimates for the year ending Mar. 31, 1921, submitted to the House of Commons recently, contain the following items:—

Chargeable to Capital, \$23,346,695.

Canadian Government Ry. Construction and betterments (to be expended under the direction of and upon such terms and conditions as the governor in council may from time to time provide), \$6,321,191, including a revote of \$5,006,005 expended in the balance of the 1919-1920 appropriation of \$11,121,681.

Miscellaneous railway equipment: To acquire directly or indirectly, or to assist in acquiring during the current fiscal year, railway equipment and materials for the purposes and upon the terms (save as herein varied) mentioned in the Statutes of 1918, chap. 38. The assistance herein pro-

vided may be by way of advances to the Canadian National Rolling Stock Co., or any company comprised in the Canadian Northern Ry., or by way of equipment or materials acquired by the Minister, \$16,925,501, including a revote of \$8,503,322 unexpended balance of the 1919-1920 appropriation of \$25,000,000.

Hudson Bay Ry., Port Nelson Terminals, \$100,000, including revote of \$70,000 unexpended balance of 1919-1920 appropriation of \$100,000.

Chargeable to Income, \$49,147,174.33.

Arbitration and awards and costs of litigation, \$2,000.

Board of Railway Commissioners—Maintenance and operation of, including \$800 for Clyde Leavitt as Chief Fire Inspector, \$190,000.

Board of Railway Commissioners: To pay expenses in connection with cases before board, \$5,000.

Contribution to International Association of Railways Congress, \$97.

Commissioner of Highways—To provide for organization and payment of staff of Commissioner of Highways, including A. W. Campbell, C.E., as Commissioner of Highways at \$5,000 per annum, \$25,000.

Governor General's cars: attendance, repairs and alterations, \$5,000.

Loan not exceeding \$48,611,077 repayable on demand with interest payable half yearly at 6% to be used to meet expenditures made or indebtedness incurred in paying deficits in operation or interest on securities issued, or on advances available from net earnings, or paying maturing loans of the Canadian Northern Ry. Co., or any company included in the Canadian Northern Ry. System, and for construction and betterments: said loan to be secured by mortgage on the undertaking of the Canadian Northern Ry. System, containing such terms and conditions as the Governor in council may approve, \$48,611,077.

Miscellaneous works not provided for, \$2,000.

Printing and stationery, outside service, \$7,000.

Surveys and inspections, and general expenditures, railways, including salaries and expenses of experts employed temporarily, \$100,000.

To provide for payment of expenses in connection with the acquisition of the Grand Trunk and associated railway systems, \$200,000.

Authorized by statute—Salaries of Board of Railway Commissioners, \$58,500.

Chargeable to Collection of Revenue, \$5,200,000.

Canadian Government Railways, toward deficit of working expenditure for 9 months ended Dec. 31, 1920, the management of the railways being hereby authorized to apply the receipts and revenues toward payment of the working expenditure, \$5,000,000.

Compassionate allowance to widow and children of J. L. A. Probe, who was killed while in discharge of his duty as brakeman on Canadian Government Ry. at Aston Jct., Que., Sept. 11, 1918, \$2,000.

Under the head of "Civil Government" the department is voted \$194,162.50 for salaries, and \$28,000 for contingencies.

United States Railway Notes.

W. D. Hines, Director General, U.S. Railroad Administration, has resigned, effective May 1.

The U.S. Federal Reserve Board has announced the appointment of a railway loans advisory committee, consisting of F. A. Delano, formerly Vice Governor of the board; Paul M. Warburg and Bradley Palmer. The committee was organized immediately, and has received railway executives who have applied for cash advances.

C.P.R. Pension Fund.

On Dec. 31, 1919, there were 912 persons on the C.P.R. pension roll, of whom 456 were over 70 years of age; 420 between 60 and 70, and 36 under 60. The position of the fund was as follows:—

Balance to Dec. 31, 1919.....	\$1,166,266.65
Amount contributed by employees.....	500,000.00
Amount received as interest.....	45,906.65

Payment of pension allowances for year.....	\$1,712,173.20
Balance in cash and investments.....	\$387,434.49

Balance in cash and investments.....\$1,324,788.71

The C.P.R. is reported to have given Acadia University, Dalhousie, N.S., the original burnt clay model of "Evangeline," designed by the late Philippi Hebert and used for the statue being erected by the company at Evangeline's Well in the Annapolis valley.

Orders by Board of Railway Commissioners for Canada.

29,482. Mar. 23.—Approving revised location of C.P.R. Lanigan Northwestern Branch, mile 6.12, between mile 5.12 and 7.12, at mile 6.12.

29,483. Mar. 24.—Authorizing Bledet, Stewart & Welsh, Ltd., to carry logging railway over Vancouver Island, B.C.

29,484. Mar. 24.—Approving the application of the G.T.R. to operate trains over the G.T.R. and Nanaimo Ry. to build spur for Bell & Reynolds in Sec. 10, Range 6, Vancouver Island, B.C., at mile 1.51L and 5.97 to 10.97L, and authorizing the same.

29,485. Mar. 23.—Authorizing Esquimalt & Nanaimo Ry. to build spur for Bell & Reynolds in Sec. 10, Range 6, Vancouver Island, B.C., at mile 1.51L and 5.97 to 10.97L, and authorizing the same.

29,486. Mar. 19.—Approving Canadian Northern Saskatchewan Ry. revised location from mile 0 to 1.51L and 5.97 to 10.97L, and authorizing the same.

29,487. Mar. 24.—Authorizing Canadian National Ry. to build spur for Bell & Reynolds in Sec. 10, Range 6, Vancouver Island, B.C., at mile 1.51L and 5.97 to 10.97L, and authorizing the same.

29,488. Mar. 24.—Ordering Grand Trunk Pacific Ry. forthwith to appoint caretaker at Winter, Sask., to see that station is kept clean, heated and lighted.

29,489. Mar. 22.—Extending for four months from date within which C.P.R. may build two sidings for Fraser Co., Edmonton, N.B.

29,490. Mar. 23.—Amending order 29,024, Nov. 29, 1928, authorizing C.P.R. to build spur for Fraser Co., Edmonton, N.B., at mile 1.51L and 5.97 to 10.97L, and authorizing the same.

29,491. Mar. 25.—Authorizing Kettle Valley Ry. to build spur for Kitsumakall Timber Co., at mile 1.51L and 5.97 to 10.97L, and authorizing the same.

29,492. Mar. 25.—Authorizing Grand Trunk Pacific Ry. to build spur for Kitsumakall Timber Co., at mile 1.51L and 5.97 to 10.97L, and authorizing the same.

29,493. Mar. 25.—Authorizing C.P.R. to build spur and sidings for Log Supply Co., Berthier, Que.

29,494. Mar. 25.—Authorizing Canadian National Ry. to build spur for Log Supply Co., Berthier, Que.

29,495. Mar. 23.—Re-opening order 29,618, Aug. 29, 1928, authorizing C.P.R. to build spur for Log Supply Co., Berthier, Que.

29,496. Mar. 24.—Approving Bell Telephone Co. in Victoria and Ontario Counties, Ont., Mar. 6; East Grey Telephone Co., in Grey County, Ont., Mar. 12; and Derby Telephone Co., in Grey Co., Ont., Mar. 12.

29,497. Mar. 24.—Approving Bell Telephone Co. in Victoria and Ontario Counties, Ont., Mar. 6; East Grey Telephone Co., in Grey County, Ont., Mar. 12; and Derby Telephone Co., in Grey Co., Ont., Mar. 12.

29,498. Mar. 24.—Approving Bell Telephone Co. in Victoria and Ontario Counties, Ont., Mar. 6; East Grey Telephone Co., in Grey County, Ont., Mar. 12; and Derby Telephone Co., in Grey Co., Ont., Mar. 12.

29,499. Mar. 24.—Approving Bell Telephone Co. in Victoria and Ontario Counties, Ont., Mar. 6; East Grey Telephone Co., in Grey County, Ont., Mar. 12; and Derby Telephone Co., in Grey Co., Ont., Mar. 12.

29,500. Mar. 25.—Dismissing application of United Grain Growers Ltd., Calgary, Alta., for a right of way over the C.P.R. tracks.

29,501. Mar. 27.—Sustaining until further order the application of the C.P.R. to build a spur for the United Grain Growers Ltd., Calgary, Alta., for a right of way over the C.P.R. tracks.

29,502. Mar. 27.—Sustaining until further order the application of the C.P.R. to build a spur for the United Grain Growers Ltd., Calgary, Alta., for a right of way over the C.P.R. tracks.

29,503. Mar. 27.—Authorizing Canadian National Ry. to cross and divert highways in s. w. 1, Sec. 25, Tp. 14, Range 9, west 2nd meridian, Sask.

29,504. Mar. 25.—Authorizing C.P.R. to build spur for the United Grain Growers Ltd., Calgary, Alta., for a right of way over the C.P.R. tracks.

29,505. Mar. 24.—Extending to Sept. 1, authority granted Hydro Electric Power Commission of Ontario, by orders 28,341 and 28,591, May 20 and July 28, 1919, respectively, to build temporary spur across Niagara, St. Catharines & Toronto Ry. in Stamford Tp., Ont.

29,538. Ordering that crossing of G.T.R. Don Belt Line and C.P.R. spur on Eastern Ave., Toronto, be protected by watchman appointed by G.T.R. between 7 a.m. and 11 p.m.

29,539. Apr. 15.—Authorizing Canadian National Ry. to operate over spur across Bonar St., Parry Sound, Ont.

29,540. Apr. 19.—Authorizing Ottawa Electric Ry. to file within seven days date tariff effective Apr. 6, showing passenger fares between Holland Ave. and Britannia-on-the-Bay, and between Cloverdale Road and the Rifle Range, Ottawa, Ont.

D. B. Hanna Sues for Slander.—F. S. Cahill, M.P., for Pontiac County, Que., in addressing the Montreal Reform Club, April 17, is reported to have made certain charges against D. B. Hanna, President Canadian National Ry., among others that he is favoring Mackenzie-Mann interests and that they are making large profits out of the Canadian National Ry. Mr. Hanna has instructed his solicitor to institute proceedings for slander against Mr. Cahill, for unstated damages.

Railway Lands Patented.—Letters patent were issued during March for Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:

Company	Location	Area
Canadian Northern Alberta Ry.	Acres	
Canadian National Ry.	Acres	
Canadian Pacific Ry.	Acres	
Grand Trunk Pacific Branch Lines Co.	56.67	
Norfolk Ry.	140.00	

C.P.R. Equipment Trust Certificates.

The following prospectus has been issued of the \$12,000,000 C.P.R. equipment trust 6% gold certificates, referred to in Canadian Railway and Marine World for April, which will be issued under Philadelphia plan, in denominations of \$1,000, to mature \$500,000 semi-annually Oct. 1, 1920 to April 1, 1932. Dividend warrants will be payable semi-annually April 1 and Oct. 1. Principal and dividends will be payable at New York, N.Y., and Pittsburgh, Pa., in U.S. gold coin. The certificates will be specially secured by standard new railway equipment costing \$15,000,000 delivered. The title to this equipment is to be vested in the Union Trust Co. of Pittsburgh, as trustee, and it will be leased to the railway company. Pending receipt of the equipment, which is to be delivered in Canada, the trustee will hold for the benefit of the certificate owners \$15,000,000 in cash at the Bank of Montreal, subject to the trustee's order.

The C.P.R. Co. controls a transcontinental railway system of about 18,500 miles extending from St. John, N.B., to Vancouver, B.C., penetrating the U.S. as far as Chicago and St. Paul, and connecting by its own steamship lines with European and Asiatic ports. Of the 8,300 miles of road directly owned, only about 180 miles, branch lines, are mortgaged. The C.P.R. has been able to maintain its earnings on a very substantial basis, in spite of increased operating costs, as evidenced by the following income accounts reported by the company:

Years ended Dec. 31:

	1917	1918	1919
Gross earnings	\$152,389,335	\$157,347,694	\$176,929,060
Operating expenses	105,849,317	123,935,310	143,936,024
Net earnings	46,546,018	34,502,388	32,993,036
Other income	8,744,617	7,994,775	9,049,343
Total income	55,290,635	42,437,163	41,982,379
Fixed charges	10,229,143	10,177,513	10,161,510
Balance after charges	\$45,061,492	\$32,259,650	\$31,820,869
Times charges earned	5.40	4.17	4.13

The dividends on the \$12,000,000 6% equipment trust certificates will be \$705,000 in the first year. Had fixed charges in 1919 been increased by this amount, total charges would have been earned about 3.85 times, without allowing for any benefit from the proceeds of this issue. Dividends have been paid on the company's ordinary stock since 1883 and since 1910 the rate has been 10% a year. The equity junior to funded debt and equipment issues is represented by over \$80,000,000 of 4% preference stock and by ordinary stock having at present quoted prices an indicated market value of \$320,000,000.

The prices for the certificates range from 99% for those due Oct. 1, 1920, to 34% for those due April 1, 1932. The first 12 maturities yield approximately 6 3/4% and the last 12 maturities approximately 6 1/2%.

Grand Trunk Railway Acquisition Legislation.

A bill was introduced in the House of Commons, April 12, by the Minister of Railways, to confirm the agreement dated March 8, 1920, between the Crown and the Grand Trunk Railway Co., for the acquisition by the Crown of the company's capital stock, with the exception of the four per cent. guaranteed stock, and was read a first time.
